TEN CENTS

SHOULD UNIONS INCORPORATE?

SYMPOSIUM BY REPRESENTATIVES OF EMPLOYERS, WAGE EARNERS AND THE GENERAL PUBLIC—
OPINIONS OF MEMBERS OF THE BAR

In view of the many recent proceedings against trade unions by way of injunctions and suits for damages, the National Civic Federation addressed inquiries to a number of representative men asking for a statement of opinion regarding the proper course for trade unions to take in the matter of incorporation. Attention was called to the Taff Vale decision in Great Britain and to several cases in the United States where members of unincorporated unions have been held personally liable for damages and costs of prosecution. The question was asked whether, in defending such suits, the unions would be placed in a better or in a worse position if they were incorporated than they are at present when unincorporated. Inquiry was also made as to whether a special law should be enacted for the incorporation of unions, one differing from the law for business corporations, and if so, what should be its terms.

In preparing this symposium for the press we have been compelled to omit much interesting matter from the various contributions, being limited as to space.

EMPLOYERS

Don C. Seitz, Member of the American Newspaper Publishers' Association and Business Manager of the New York "World":

When an employer recognizes a labor union, he ceases to recognize the individual. The latter has no place in the economy of his establishment. He must deal with the concrete idea represented by unionism and forsake the theory that he can handle the individual as such. This we have done, and the results, I think, are satisfactory, so far as anything that interferes with liberty of action and freedom of purpose can be satisfactory. When, however, we do get ourselves into this attitude we certainly increase the responsibility of the union, and expect this responsibility to be met.

Coercive as most unions are, they naturally cannot learn to respect the rights of the employer or men who will not affiliate with them. I think there is now less tyranny in the printing trade than formerly, and we have the insurance of our admirable arbitration agreement. Certainly, too, there are more intelligence and a greater appreciation of what is right among most of our employes than in any other grade of labor, and the proposition I am about to present is not specific to our own interests. I believe that we shall have constant and more menacing troubles unless the newspapers, whose duty it is to arouse public sentiment and bring issues home to the minds of the people, shall insist that labor unions be made legally responsible bodies by incorporation. This done, a vast deal of trouble would disappear. It would, no doubt, be difficult to organize

unions, because of the responsibilities involved by such legislation, as men would stop and do some thinking before assuming a legal liability, but in the end the unions that were brave enough and honest enough to comply with the conditions would benefit largely by the result. In short, legislation should be had to provide for the incorporation of the trade unions just as we have it for forming other corporations or trusts, and self-constituted bodies founded to coerce employers would have no status under the law and would become conspiracies, where they failed to comply with the requirement to incorporate.

You cannot properly establish the Merry Toughs' Social Club without incorporating it. You cannot join with a few friends to promote the simplest business enterprise without incorporating it. You cannot even establish a church without going through a legal process. But it is perfectly possible to get together a body of workmen, who, without regard to your contracts or their obligations, take you by the throat with intimidation and boycott, without any serious fear of interference by law or any collection of damages from the courts.

Large sums of money are raised by the unions from individual assessments, but not one cent of this is reachable to recompense the industry that bears the brunt of the conflict. When the suggestion is made to the average labor leader that such incorporation ought to be enforced, we at once meet with the answer that it would be fatal to their methods, which is an open confession that their methods are illegal and wrong. Business men incur millions of responsibility in obedience to the law, while labor, much more closely knit, is immune.

It is only recently in overburdened England that the court of last resort ordered the Amalgamated Society of Railroad Servants to pay the Taff Vale Railroad £28,000 damages for a strike and boycott. The appellate court held that, incorporated or not, an organized body could not keep itself outside the law, and that it must be held pecuniarily responsible for its acts. This decision of vast importance to all concerned swept away the pleasant fiction that lawlessness and boycott are always to be condoned where the "workingman" is trying to "elevate" himself. In short, in England the worm has turned, and hereafter the unions will be forced to meet the responsibility they incur, just as the railroad does when it wrecks a train and kills or injures its passengers. The playful incendiaries, the murderous boycotters, and the delightful dynamiters may escape as individuals, but the union which precipitated the conflict which brought this all about must settle. This is what we must come to here, if there is to be any human right or human liberty left in the land.

The argument in favor of incorporating is a simple one. A certain number of carpenters desire to get together for the betterment of their condition. They must raise a fund, elect officers. They must have a concrete existence, if they would incorporate as a busi-

ness body. This would be the situation: When an employer called upon the guild, as it would best be named, the condition of employment could be made plain; the responsibility of taking the work would be incurred and the duty of performing it would be enforced. Can there be any honest objection to this practice? We have now in this city the most chaotic conditions. Men drop out every day at will in the building trades, and great losses are incurred by the contractor and owner, and the situation is fast becoming intolerable.

Judge Parker, in a recent decision, holds that the laborer has the right to do as he pleases about working or not working. This is incontestably true, yet I should say that when the laborer had agreed to perform a certain task for a certain price, there should be some method of making him keep his agreement. The employer is responsible for wages, and if he has agreed to hire a man for a year and uses him only one day, the law makes him pay for the whole period. But the plasterer can throw down his trowel and quit in the middle of his employment because he dislikes the expression on his foreman's face. If, however, we had an incorporated union of plasterers instead of a guerrilla one, the union would have to come forward and complete the task.

James A. Miller, Chairman Legal Committee of Building Contractors' Council, Chicago, Ill.:

Without being a lawyer, and without having consulted one on the subject, I should say that a law might pass the scrutiny of the courts that would make criminal certain acts done by a combination (unincorporated) that would not be so if done by a corporation having capital stock, or, perhaps, having bonds on file with the Secretary of State that could be reached for damages. In this way the unions might decide it to be to their advantage to incorporate.

The advisability of such a law is another question. As I understand it, the Taff Vale decision does not have much bearing upon the question under discussion. Its great importance is to the registered unions of Great Britain, who thought that by the law that provided for their registration, etc., they could not be sued. Acting on this theory, most of those unions have large funds, really intended for insurance benefits, etc. There is no doubt that those unions would not have had on hand such large funds to be seized for damages if they had not been firmly of the opinion that those funds could not be reached. Nor would they have committed so openly (that is, in such a way as to easily fasten the responsibility upon them) the acts that made them liable.

I should say that if the responsibility of trade unions can be increased by requiring them to incorporate, without at the same time increasing their power, it might be well to advocate such a plan. If, on the other hand, they can only be required to incorporate by granting

additional power to those that do incorporate, I am afraid the result would be productive of more harm than good. Before any plan for requiring incorporation is indorsed, it should be decided what form of incorporation is to be advocated, whether a capital stock is to be required or whether it is to be such as can be had in this State "not for profit"—with no or a nominal capital stock. If there is to be no capital stock, I do not see what is to be gained by incorporating. If there is capital stock or a fund that can be reached for damages, then it must be considered what acts and whose acts will make the union and its fund liable.

Will it simply be the breaking of a contract entered into by the union, or will it be any unlawful act done by the union causing damage? Will the union be liable only for what it does as a union, or will it be liable for the acts of its officers and of its individual members? If liable for the acts of its officers and members, must it be shown that those acts were authorized by the union? This would often be difficult, if not impossible. I can understand how a union might make a contract to furnish men of a certain standard of skill and at a certain rate of wages up to a certain number of men under a penalty of damages if it failed, which would make the union a contractor for labor.

Aside from such arrangement as that, I think the responsibility of the union for breaking of contracts entered into by it would not be worth much, as it could avoid that liability by secretly advising or permitting its members to do individually what the union would be liable for if done by the union. Whether any of these devices for increasing the responsibility of the unions to the employers, where that end is to be attained by increasing the power of the unions over the workman by enabling these organizations to farm out labor, as do the Chinese companies, will tend to improve the character of the working man, may well be questioned.

Again, as I understand it, what society and employers want is not damages from unions for injuries unlawfully inflicted, but they want the unions restrained from committing these unlawful acts. The courts have a way to do this when their aid can be invoked—by injunction.

The law in this State as to the liability of the members of a union for damages to an employer is that if an officer or member of a union in the course of any unlawful strike does damage to such employer then every member of the union is liable for such damage. He is liable in tort, which enables the employer, judgment having been obtained and unpaid, to send him to jail and keep him there as long as the debt is unpaid and the employer pays his board.

In my opinion, that is all the law the employer needs. What society needs is not more or different laws, but an honest and courageous enforcement of the laws as they are. If the laws that we now have can not be enforced because the judges fear the union vote, or because the whole machinery of justice in our State courts is paralyzed for that same reason, what is the use of bothering about more laws?

Marcus A. Hanna, of M. A. Hanna & Co.:

I do not believe under the present condition of things in incorporation of trade unions. I heard the argument that it was an absolute necessity that such incorporation must be had, because a contract with workingmen was worthless. The test has come, for, when in their dire extremity, the anthracite miners of Pennsylvania appealed to their fellows in the bituminous fields in the West to come out and strike in sympathy, in order that conditions might be forced upon this country which would enforce a settlement of the trouble, it is known to many others that the bituminous coal miners thus appealed to were under contract for a year, known as the Interstate Contract, between the producers and the operators of those sections of the country. Under the constitution of the United Mine Workers it became the duty of their president to call together a delegates' convention to act upon that question. Those of us who had followed this trouble from the beginning with interest and anxiety felt that it was an important moment in the history of the labor question as to how that would be settled. For my part I had confidence as to the outcome. The convention met at Indianapolis, represented by persons or proxies of 1,000 delegates, and the appeal was made coming from the striking miners

of the anthracite region to their fellow workmen under most distressing circumstances and conditions, under influences which are so potent among that class—brotherhood sympathy. That convention appointed a committee of twenty-three to consider the application. They spent nearly a whole night considering it; they were confronted with the fact that they had made a contract with their employers, which for the fourth time had been made, to work for a scale agreed upon, to be in operation for one year, upon which the sales of coal were made and contracts binding upon the operators were made. After full consideration, allowing sentiment to play its part upon the minds and hearts of those men, with calm, cool judgment and loyalty to their agreement, that committee reported unanimously against a sympathetic strike. That report was made to that convention the day following, and was adopted unanimously by 1,000 votes. They agreed to stand by the word they had given in making that contract.

Now, that case came up at a time when all the conditions surrounding it were as aggravating and forcible as could be brought into play. Therefore I say that the test has come and the men have won the confidence of the whole people of this country, and as far as I am concerned, satisfied me that we want no incorporation of labor organizations.

Wm. Green, Chairman Executive Committee, New York Typothetae:

We think that the incorporation of labor unions would undoubtedly add to their responsibility. The bone and sinew of any labor organization lies in its ability to support its members when out of work, whether they be out of work on account of sickness, stagnation of business or strikes. To accomplish this, it is necessary for the organization to have a well-filled treasury. In the case of an incorporated union, we think that its treasurer and other officers could be held to stricter account in law than if the organization were not incorporated. As for suing of individual members, that, we think, would be unprofitable and fruitless. A union that is an incorporated body certainly has more dignity in the eyes of employers than an unincorporated one; particularly so when its members in the latter case frankly acknowledge that in order to evade responsibility they decline to incorporate.

S. R. Callaway, President American Locomotive Company, New York:

I do not see any great advantage to be derived from the incorporation of labor unions. It is more important, in my opinion, to have reasonably fair-minded men at the head of the organizations, who will give some consideration to the other fellow's side of the case. This remark might also be made applicable to employers of labor.

H. B. Parsons, Vice-President Wells Fargo & Co., New York:

It is desirable, from my point of view, that labor unions should incorporate, and it will be an added advantage if, in doing so, they embody beneficial, financial features, such as sick funds, insurance, and, possibly, pensions. Unions generally, as now constituted, have little or no financial responsibility. In cases where, as has been done, employers secure damages, they will be reluctant to attempt to recover from individuals, and if they did, the courts would be likely to deal with all possible lenience as respects the employees, since there might seem to be an element of persecution in attempting to hold one person responsible for the misdeeds of many. It would also seem to be reasonable to expect that unions, when once incorporated, and being subject to legal responsibility, would exercise more care and restraint in adopting the suggestions of its members, and in acting upon impulse.

Otto M. Eidlitz, Secretary United Building Trades, New York:

In my opinion the incorporation of unions would add to their responsibility in that in case of difficulty the trade, as an organization, would have to answer for its vote in meeting. And if a union felt that its treasury and standing might be jeopardized, it would tend to make it more conservative and to see that its actions

were strictly within the law. The assessing of damages on individuals for the act of the union seems to me unfair, and would only tend to increase our list of martyrs. Furthermore, the very act of incorporation would make the body subject more or less to State supervision and the regulations of the law, and through this very fact tend to bring home to the officers and Executive Committee the fact that they are not free lances.

J. Kruttschnitt, General Manager and Fourth Vice-President Southern Pacific Company:

In my opinion, many of the illegal acts committed by officers of labor unions and by the members individually are prompted by a lack of sense of responsibility, and anything that will bring home to the members and officers of such organizations the fact that no damage or injury can be inflicted without incurring responsibility, for reparation thereof, is not only very much to be desired, but is, in my opinion, imperatively necessary to check the spirit of lawlessness that now at once develops on the inauguration of a strike. We have frequently found in dealing with subordinates that the quickest way to make them abandon a radical or ill-considered policy is to give them free permission to carry it out, with the distinct understanding that the responsibility for success or failure will rest on their shoulders: the responsibility for failure, of course, being followed by loss of official position, and we have never failed in such cases to secure much more conservative action on the part of the officer involved. Conservatism must necessarily follow responsibility, and however this can be brought about, whether by incorporation of the unions or by decisions of the courts against members, I am firmly of the belief that establishing the principle that a party inflicting an injury must pay the resulting damages will confine the efforts of labor leaders to their legitimate functions and will discourage the present practice of declaring actual war on persons and property as soon as any contention arises on any industrial question.

Oscar C. Davis, Second Vice-President George E. Keith Company, Campello, Mass.:

We heartily indorse any measures which would result in the incorporation of unions and in that way add to their responsibility. They are almost a corporation as they are managed to-day, in that they employ officers, pay salaries and make contracts, and we see no reason why, if the employers are incorporated and can give perfectly good financial security for all their contracts, the labor unions should not do likewise, and become corporate bodies. We think this would hasten the day when we would have fewer strikes and greater prosperity. In a recent article by the president of the Boot and Shoe Workers' Union, the writer noticed that about the only argument against incorporation was, firstly, we don't need to; secondly, we might lose our money; but from the standpoint of the employers we see no reason why, if the unions are acting in good faith, they should not furnish as good security as they now demand of the employer. When we have contracts the breaking of which will result in the loss of dollars to the unions as well, as to the employers, we will have a distinct step in advance of the present method of absolute security on one side and insecurity on the other.

Henry R. Towne, President Yale & Towne Manufacturing Company, New York:

I have for some time urged that both the unions and the employers' associations should be incorporated, and that the latter can well afford to set an example in this respect to the former. The functions of these bodies have become of great importance to their constituents and to the public, equally so at times with the function of the courts so far as practical effects are concerned. With the power which this implies there exists, and must be recognized, the resulting responsibility. The Taff Vale decision recognizes this fact.

Employers are increasingly discovering that the law affords remedies for many of the injuries heretofore inflicted by organized labor. It is earnestly to be hoped that the law will be appealed to increasingly in such cases, and if so I believe the result will be to establish the responsibility in damages of any organization which has the power to inflict injury and exercises that power

in ways not authorized by law. When this point is reached it will be immaterial, so far as responsibility in damages is concerned, whether the unions are or are not incorporated, and as incorporation will give them protection and strength in other directions it seems reasonable to anticipate that it will be availed of. It is certainly desirable and should be encouraged.

E. F. Du Brul, Commissioner National Metal Trades Association, Cincinnati, Ohio:

I do not see that incorporation would increase the responsibility of the unions in any particular. You cannot compel them to incorporate, and if they did they would have no more property as a union than they have now. The incorporation of the union would probably relieve the members of personal liability, which, in view of the Taff Vale decision and the Dayton and Indianapolis Drop Forging Company cases, would be a hardship on the employer who suffers damages.

Walter L. Pierce, General Manager Lidgerwood Manufacturing Company, New York:

I can see one advantage in its favor from the standpoint of manufacturers, and that is that if a union wants an agreement with any body of manufacturers they are certainly more likely to get favorable consideration if incorporated. As I am on record as being in favor of such agreements, and as the first objection of those not in favor is the "irresponsibility of the unions," it seems to me such incorporation will be of distinct advantage in procuring agreements now impossible to obtain, and, in view of the Taff Vale decision, I see no objection to it.

W. H. Pfahler, of Philadelphia, National Founders' Association:

I have no doubt whatever that the laws which we have in this country could hold a labor union as a body, and no doubt its members individually, liable for damages which may occur during a strike; but it is my sincere hope that the settlement between employer and employee may never reach the necessity of an appeal to the civil courts. The advance that is being made along the line of personal interest on the part of manufacturers in the relation which they bear to their employees is daily establishing the fact that the whole problem is one of bargain and sale. The only question involved in labor disputes is the question of wages; no matter what demands are made by the manufacturers, it invariably resolves itself into a question of earnings of mechanical labor. This being the case, the only plain rule is to negotiate with the labor element collectively, or through their recognized union, or its representatives. To bring this about, the greatest work is to reduce the employer from a position of sentimental opposition to trade unions to one of recognition of the force which they exert in the problem. When this occurs, the buyer and seller meet upon the same level that the parties to any other commercial transaction do, and negotiate for the one simple matter of wages. I think the extent to which the National Civic Federation can aid the accomplishment of this condition, and to that extent only, can it hope to be successful.

WAGE EARNERS

Samuel Gompers, President American Federation of Labor:

Some years ago the Federal Congress passed a law for the incorporation of our trade unions. Beyond question, the advocates of that bill really believed they were doing the organized workers a real service; but at the time, and since, we have repeatedly warned our fellow-unionists to refrain from seeking the so-called protection of that law, which, in the cases referred to, justified the suspicion and conclusion that the courts would in time have declared our unions liable to be mulcted in damages and their funds confiscated—a repetition of the history of the robbery of the guilds a few centuries ago. It is the same species of legislation as the enactment of the law to regulate interstate commerce and the so-called anti-trust law, both of which

were ostensibly enacted for the protection of the interests of the people, when, as a matter of fact the only uses to which they have been put have been to furnish some pretense or excuse for the issuance of injunctions against organized workers engaged in disputes with their employers, and for the indictment and the possible imprisonment of men for the exercise of their natural and lawful rights.

Recently the unfounded charge against organized labor has been repeated to the effect that trade unions violate agreements entered into with employers; and the uninformed, and particularly those antagonistic employers to organized labor, urge as a remedy for this imagined evil the compulsory incorporation of the trade unions, so that, as those referred to urge, "the trade unions may be held legally responsible" for the faithful carrying out of agreements, and to be liable in damages in the event of their violation. On the surface this proposition seems fair; but when we bear in mind the fact that often judges have deep-seated prejudice against organizations of labor, that the far-fetched interpretation in the Taff Vale case, where an organization of labor in Great Britain was mulcted in damages for the actions of an individual member, under the law passed by the British Parliament as a "concession to labor," and that the enunciation of judicial principles is mutually interpreted and held by the judiciary of all English-speaking countries, it is not difficult to divine the purpose that the advocates of compulsory incorporation of trade unions have in view. They would mulct or outlaw our unions, the organizations which are the factors in our modern life to work for human progress by natural, rational, peaceable and evolutionary means.

E. E. Clark, Grand Chief Conductor Order of Railway Conductors:

I have never understood or heard that corporations were formed for the purpose of taking on added responsibility; on the contrary, I have understood that they were formed for the purpose of escaping personal responsibility. The existing laws permit of the formation of corporations for pecuniary profit or for charitable purposes, and in each instance the exemptions and liabilities of the corporations and their stockholders or members are clearly defined. It seems to me very inconsistent for any one to demand that labor organizations shall incorporate under existing laws. If incorporation of labor unions is desired it is, to my mind, incumbent upon the State Legislatures to enact healthy laws under which the members of labor unions are given exemption from corporate responsibilities, in substance just as stockholders of corporations for pecuniary profit are given exemption from liability for corporate debts or acts, and under which the incorporated trade union shall have the same exemption from responsibility for personal acts of members in violation of law which a corporation for pecuniary profit has from liability for individual acts of its stockholders. While I have never been disposed to take an arbitrary or positive stand against incorporation of trade unions under any and all conditions, I feel that I should be obliged to oppose any effort to force them to incorporate until the proper foundation has been laid as above suggested.

Herman Grossman, President International Ladies' Garment Workers' Union, New York:

It is my opinion that incorporation can under no circumstances be injurious to trade unions. The United Brotherhood of Cloakmakers, the most important local of the International Ladies' Garment Workers' Union, which is an organization incorporated under the membership corporation law of the State of New York, has found it much easier to defeat claims of employers for damages caused by members of the organization than those trade unions which are voluntary associations. In 1901, several applications were made for injunctions against the brotherhood. Numerous affidavits alleging acts of violence on the part of persons who were claimed to be members of the brotherhood were presented in support of the application. The court refused, however, to grant the injunction, on the ground that there was no proof that the acts complained of were authorized by the organization.

Since no corporation can be held liable for individual acts of its members, acts not authorized by the corporation, incorporated trade unions have no reason to fear a lawsuit against them for wrongful acts of their members.

Our organization has had very few lawsuits against manufacturers. I don't remember a single case which came to trial. We had about half a dozen cases in the Supreme Court several years ago; they were all settled or compromised. In almost all of the said cases the question of the legality of our contract with the employers was raised, and uniformly decided in our favor. The points raised against the contract were that it was unconscionable, in restraint of trade and against public policy. As I said before, these points were overruled.

The only serious disadvantage the trade unions are working under now is the complete absence in the statutes of various States of laws defining the rights, powers, duties and limitations of trade unions. For example, in the State of New York there is really no law under which a trade union can be incorporated properly.

Those trade unions which have incorporated under the New York laws have incorporated under an elastic section, (section 30 of the membership corporation law) which limits the organization under that section of corporations which cannot be incorporated under any other laws. The trade union is by no means the favorite of the law. What is needed is a systematization of the laws relating to trade unions and to labor generally. The laws should permit trade unions to incorporate on the same basis as co-operative societies, and the right should be given to the organization to declare the stock of an offending member forfeited for a violation of the rules of the organization. They should also have the privilege of organizing sick and death benefits. This would give the trade union a certain degree of control over its members, and contracts entered into between the organizations and employers could be enforced by either side without resorting to the courts.

James M. Lynch, President International Typographical Union:

Those well versed in the idea of incorporation and the methods of lawyers and courts well know the menace contained in the suggestion. It would take a trade union antagonist with money at his command but a short time to wreck a labor organization through judicial procedure. . . . Regardless of the innocence of an incorporated trade union of charges preferred by an antagonist, it would take much money to establish that innocence. It may be said that trade unionists should be willing to contribute liberally for their defense, but it must be remembered that where the toiler is able to contribute one cent the corporation can without strain put up a dollar. We must continue to depend upon public sympathy and public support, and not on courts, the course of which in the past displays corporation and capitalistic sympathy, if not dictation. We should have no hesitancy in upholding our present methods, and instead of excusing we should justify them. If we are opposed to trade union incorporation we should not be afraid to assert that opposition boldly, confident in the belief that our cause is just and that it should not be retarded by legal trickery and judicial subservience. The International Typographical Union has had some rather unpleasant and costly legal experience.

Charles O. Sherman, General Secretary United Metal Workers' International Union, Chicago:

I do not hesitate to emphatically state that I am opposed to the incorporating of any trade union, for I consider that incorporation proceedings would be only a step nearer the danger line which would put the trade organizations at the mercy of the courts, and it is unnecessary for me to apprise you of what this means. Under the system in which we live it is not a case of justice in court; it is a case of law, and the law is so framed by those who are cunning that it is in the shape of a drag net which is so contrived that the minnows are all captured while the whales escape. I mean by this that it is seldom that labor unions can go into court and expect justice, but they always expect plenty of law; for that reason, I am opposed. I believe that great danger confronts all trade unions in the United States, and if they do not adopt a different policy at an

early date the organizations will be completely at the mercy of the courts, which are owned and controlled by the money powers in most instances, and the only policy I could recommend under this system would be to vote for no man for public office, no matter be it for judge down to common constable, unless he be a thorough trade unionist, one who is in good standing and in good repute with the movement. When I say a trade unionist I do not mean a lawyer who claims to be in sympathy with the union, because in most cases they are not, but conduct themselves in a way that will bring to them the greater remuneration.

W. O. Powell, President Shirt, Waist and Laundry Workers, Troy, N. Y.:

I cannot see where the incorporation of a union would benefit the union, since the greater number of laws on our statute books are not only favorable to the element represented by capital, but their dispensation is also in the hands of the same power. This fact is recognized by the manufacturer and consumer alike, and I think is so recognized by the Civic Federation. Either with or without incorporation, the danger to the trade union will be remedied, since all unions are founded on the principle of arbitration, through trade agreement, and there would be no chance for loss on the part of the employer, as a strike would thus be avoided. No strike has taken place where a trade agreement has been in force. Strikes only take place where there are no trade agreements, or when trade agreements have willfully been broken by the employer. No labor union fears a loss from this source. Unions are not money making institutions; they are schools for teaching certain principles. They neither have nor hold shares of stock or bonds of gold. Their stock in trade is their inherent right to work or not and when at work to receive a wage that they have set on their labor as a value for that labor.

The American laborers of to-day fear nothing. Should the framers of laws compel them to incorporate, let those framers look to it well that the laws are not misconstrued to the disadvantage of the incorporated laborers.

John McNeil, President Boiler Makers and Iron Ship Builders of America, Kansas City, Kansas:

Under the present conditions I am not in favor of the incorporation of labor organizations in this country. There is not discipline enough among the men, and the employers do not in any way assist the national officers to establish same; while in the old country, of which I am a native, the employers did everything in their power to assist the national officers to establish discipline among the members by helping them to enforce fines upon the members who violated the law. My opinion is that the Taff Vale decision in Great Britain in no way affects the labor organizations in this country.

Edward A. Moffett, Editor "The Bricklayer and Mason," New York:

I am not aware that in this country unincorporated trade unions can be mulcted for damages the same as in partnerships. True, there have been one or two such decisions made here and there; but these decisions have not been followed by other courts. If these decisions had been generally accepted there would not be the present agitation to have trade unions incorporated. This agitation is predicated upon the irresponsibility of trade unions in the courts. Some half-dozen of our subordinate unions are incorporated. Philadelphia (bricklayers) Union No. 7, New York City, Boston (bricklayers), and perhaps two or three others. But I believe the feeling of our membership generally is strongly against incorporation.

A. S. Hughes, President National Brotherhood of Operative Potters, East Liverpool, Ohio:

Our organization was incorporated under the laws of Ohio in 1895. We allowed our charter to lapse some eighteen months ago, as we had been threatened with damage suits by several manufacturers where some of our members had disputes and were about to strike had they not succeeded in settling the matters at issue.

J. H. Patterson, Secretary Paving Cutters' Union of America, Lithonia, Ga.:

I am opposed to the incorporation of trade unions, because it would mean the destruction of our unions, from the fact that the employers would keep us in court all the time. It would not be a question as to the right or wrong of it, but simply a question of the longest purse. Whether we gained or lost the decision would have no bearing on the results whatever, as litigation would never cease, and the never-ending legal proceedings could have but one ending, and that would be death and despair to labor organizations, and the birth of anarchy in their stead. I believe that the present conditions do not call for new laws on the subject, as the laws now in force are able to afford ample protection to the employer, if he really has a bona fide case.

John Tobin, Editor "Shoe Workers' Journal":

Objections to incorporated trade unions rest, first, upon the needlessness of such a move, and, second, upon the danger of bankrupting the treasuries of trade unions by and through litigation if they should become incorporated. It is not necessary to incorporate a trade union to insure the inviolability of contracts that may be entered into between trade unions and employers. During the four years that the Boot and Shoe Workers' Union has been in existence we have made contracts with employers from all parts of the country. Our contracts, as all contracts that are worthy of the name, involve mutual obligations and mutual advantages. In our agreement with shoe manufacturers we surrender the right to strike. Our employers surrender their arbitrary right to enforce conditions to their liking by such arbitrary methods as the lockout. . . . Leaving out of consideration all questions of honor, it appears that our own best interests will prompt us to live religiously up to our agreements. . . . It is not on record that we have in any single instance given our employers occasion to regret that we were not incorporated so that we might be compelled to do that which we otherwise would not do. . . . The danger of such a move to trade unions is clearly indicated in the investigation which took place before President Roosevelt's arbitration commission. A glance at the dizzy array of legal talent at the command of the coal operators gives us a forecast of what trade unions will be called upon to do in order to protect their interests in a court of law. Coal operators count their resources by the million and hundreds of millions. Trade unions are not so well fixed. Their treasuries are not so abnormally large as that of the designing employer who may find it to his interest to first bankrupt the trade union by legal procedure and then when it is impoverished proceed against it in the industrial field by lockout or otherwise.

Geo. W. Perkins, President International Cigarmakers' Union:

Organized labor has nothing to fear from any of its acts, but it will not consent to become incorporated and placed in a position where it will be unable to transact its lawful business and discharge its full duties to its members. We object to being placed in a position where we cannot do business that is strictly lawful without the consent of the judiciary. We object to being placed in a position where we would have to wait the result of cumbersome law proceedings before we can do things that are perfectly lawful. We object to spending large sums of money to fight for the right to do things that are now conceded to be right and lawful. We protest against being compelled to again fight over the ground that it has taken years of ceaseless agitation and great sacrifice to achieve. We have by the force of right and justice battered down the laws of repression and oppression. We have overcome deep-seated prejudice that was nursed by the privileged few, and used against every honest effort of labor to better its condition. We protest with all the vigor at our command against being compelled to battle all over again against legal fogysm and prejudice. We will never incorporate until our legal status is well established and laws enacted that fully protect the rights we have secured as the result of years of trade union activity. If we were incorporated a board of directors would have a legal right

to transact all of our business between conventions. We are too jealous of our liberties, our rights, and the initiative and referendum to surrender them to a board of directors, even if it was composed of angels. Not that we would dispute the honesty of the board of directors, but because we are opposed to surrendering the life of joint self-government, such as now prevails in the international unions.

Daniel J. Keefe, President International Longshoremen:

The intellectual faculties rule in labor organizations to-day and are guided by a moral obligation in our relations with each other and with our employers. This moral obligation enters into all our contracts and agreements. True, the contracts are expected to be such as will stand in law, but rarely has either party resorted to the courts to compel a performance of a contract. In our organization I feel free to state that none of the employers who sign annual contracts with us as an organization would feel any more secure, or that the obligation was any less binding on us because they were dealing with a labor organization not incorporated by law. It therefore is not the legal obligation, it is the integrity, the sense of fairness, the spirit of justice, the faithful performance of our former obligations that is the sole and only guarantee of our employers, who regard our word as good as our bond. In a word, it is the intelligent application of strict business principles and a recognition of our honor in every contract or agreement. No business man does business without first ascertaining and satisfying himself as to the financial standing and rating of a firm or corporation. The fact that a company can be sued and a judgment recovered does not warrant a desire for trade, in the absence of other important considerations. The reputation of a company for fair dealing, how they respect an obligation, etc., and whether they are safe people to do business with, are the considerations. The commercial world does not move solely because of law courts and court officers, and the acts of men are guided, after all, more from a sense of moral obligation than in violation of the same.

No, I do not recognize any crying need of labor organizations becoming incorporated, nor have I found any demand for the same on the part of the corporations and employers doing business with our organization. I do not wish to be understood as opposing such action by those believing it essential to the well being of all concerned. Only, I fail to recognize any solution of the labor problem by any statute or legal enactment. I certainly maintain that more ample redress is obtainable to-day for damages where liability of labor organizations can be proved than can be hoped to be obtained by labor organizations where corporations have violated the law.

Henry White, General Secretary United Garment Workers of America:

Incorporation would afford no advantage to labor unions for the chief reason that they have no standing in court as a contracting party, and their legal status would not be improved by it. The object, therefore, of incorporating would be lost, while on the other hand, the funds of the unions could be more readily attached either by workmen having a grievance against the union, or by employers subject to loss on account of the union's action. I have yet to learn of an instance where a union has succeeded in recovering damages for violation of an agreement on the part of an employer, and in the very nature of things, as I will attempt to explain, it will be impossible. Our own national union, for example, has hundreds of agreements with manufacturers in which bonds were given to insure their faithful performance, and in every case where the union sued for the forfeiture of the bonds it failed, although the violation of the contract was not questioned. It was held by the courts that the agreement was not valid because obtained under duress, that the employer was not free to refuse to sign the contract presented, as it would be impossible for him to continue in business otherwise. "Duress" could always be alleged because the trade unions represent an aggressive movement. The working class, on account of its former dependent state and the ground it has still to cover, has got to

force its way. The pressure of society is normally against the wage worker, the point of least resistance, and this pressure can only be neutralized by counter-resistance, which implies a struggle.

We would not have gone into court to obtain redress for violation of contract were it not for the bonds referred to, as there is no disposition on the part of the unions to hold an employer to the terms of an agreement by legal procedure. The observance of a contract between an employer and a union must necessarily depend upon the honor of either side. The remedy for breach of contract lies in an appeal to public opinion, the intercession of a third party, or the offensive or resisting power of each, acting, of course, within legal bounds.

Even if such contracts were enforceable in law, there could be no basis for estimating the amount of the damage either side would be entitled to, because of the indefinite quantities involved and the problematical nature of the disputes. An agreement between an individual workman and an employer is something definite and tangible, but in the case of associated workmen treating with associated employers new problems of equity arise, so that legal rules, based upon precedent and the previous experience of society, could hardly apply. Hence the subject is beyond the province of courts of law to deal with, and that also explains why compulsory arbitration is untenable.

An additional reason why unions cannot have the same standing in court with the other side is because the union itself is not an entity to sue or be sued civilly, as it does not agree to perform any service in consideration of the conditions of labor stipulated in an agreement. The union simply acts as an intermediary for the individual workman. The only guarantee the union gives is that the workman will not, during the term of the agreement, make any further demands, that it will intercede in the event of any difference arising in the interest of peace, and enforce the same terms upon competitors wherever possible.

J. W. Sullivan, Typographical Union, New York:

A union has ways of its own in conducting the affairs that relate mainly to itself and its membership. It is a big self-governing family. In periods of strike the prescribed order of written constitution or by-law sometimes proves less desirable than the short cut obvious as a war measure. The members then become aware that in drawing up their laws they were unable to foresee the situation confronting them, and they may, for example, unconstitutionally confide absolute power temporarily in an officer or a committee. In times of peace a union often reaches conclusions and interpretations dictated by the common sense of a meeting rather than by the statutes as written, leaving the majority either satisfied or in a mood to accept the judgment for better or worse. Such proceedings may relate to trials of members, to executive session work, to appropriation of funds, to informalities or irregularities in elections or referendum votes, to the opening or closing of books for inspection, to the reading or the silencing of reports, to appointing or dismissing committees, to maintaining discipline, to accepting or rejecting candidates for membership, to suspending or expelling or reinstating members, to passing judgment on aggressions of employers tending to end in strike, to investigating the conduct of members prejudicial to the organization, and to settling questions in which rule or precedent or necessity of the local union conflicts with international union law. In all such proceedings two principles usually govern—self-preservation of the union and good fellowship. A popular employer, in general fair, who in a fit of temper has wilfully violated a clause in a contract or the union scale, will be adjudged innocent. A sound and active union man who has misappropriated a small sum will be found not guilty and given time to refund. In these matters an unincorporated union is in the main a law unto itself. It is free. It may make many changes in its internal methods and in administration without lessening its responsibility as a contracting party.

But an incorporated union would in all these steps be subject to much revision and correction through the agencies of the law. Work, here, for judges, lawyers and enemies. The incorporated body, as a creature of the State, must be kept in health by the State. Dis-

turbers, instigated by influences inimical to a union, might kindly aid the State. In incorporating, a union would have admitted non-kinsfolk as masters at the family table—the judge, of another blood, come to set things right; the sheriff, with keys to a jail and a money-sack for fines; the policeman, with a club and handcuffs.

These officials occasionally regulate family affairs now in the unions, but the courts, only acting when called upon, refuse to interfere if the union's proceedings are in accordance with its own rules, which are subject to change at the will of the majority. But if these rules depended for regularity upon the terms of incorporation, and if informers were sent into the unions to report infractions, the sins of unions would be multiplied and the lawsuits ensuing would work pleasure to scabs. The knowing are fully conscious of what they are saying when they express a desire for an increase of the authority of the law over trade unions. They would wreck them from within.

THE PUBLIC

Charles W. Eliot, President Harvard University:

Incorporation with a limited liability has always seemed to me to be a measure of protection for the individual stockholder. As a rule incorporation does not expose the shareholders to new and larger risks, but on the contrary diminishes or restricts his liability. The unions, however, do not take this view of the matter, and will not, until the courts hold unincorporated unions, or the members thereof, liable for the damages which they inflict, or for the damages inflicted in their interests. If the courts in considerable number pursue this policy, and succeed in collecting damages, the unions will wish to be incorporated in order to limit the legal responsibility of their members. I am not in favor of compulsory incorporation for unions, or for anybody else, because incorporation is to my mind a privilege and not a duty to which the people should be forced.

Warren A. Reed, Chairman Massachusetts Board of Mediation and Arbitration:

I understand the law in this country to be that the members of an unincorporated trade union can be sued as well as the union itself could be in its own name if incorporated, but under proceedings somewhat more complicated than would be used if the corporation were sued.

The law in relation to proceedings against unincorporated societies or voluntary associations is well stated by Lord Lindley in the Taff Vale Railway case. He says:

My Lords, the problem how to adapt legal proceedings to unincorporated societies consisting of many members is by no means new. The rules as to parties to common law actions were too rigid for practical purposes when those rules had to be applied to such societies. But the rules as to parties to suits in equity were not the same as those which governed courts of common law, and were long since adapted to meet the difficulties presented by a multiplicity of persons interested in the subject matter of litigation. Some of such persons were allowed to sue and be sued on behalf of themselves and all others having the same interest. This was done avowedly to prevent a failure of justice.

I have myself no doubt whatever that if the trade union could not be sued in this case in its registered name, some of its members (namely its executive committee) could be sued on behalf of themselves and the other members of the society and an injunction and judgment for damages could be obtained in a proper case in an action so framed. Further, it is in my opinion equally plain that if the trustees in whom the property of the society is legally vested were added as parties, an order could be made in the same action for the payment by them out of the funds of the society of all damages and costs for which the plaintiff might obtain judgment against the trade union.

In a suit against the members of a union, I suppose that both the property of the union and the property of its members could be reached. If the union were incorporated, only the property of the corporation could be reached. It appears to me that from a purely legal standpoint the responsibility would not be increased, for the reason that, when incorporated, only the property of the corporation can be reached, but when not incorporated, the property of the association, held by trustees or otherwise, and also the property of the private individuals can be reached.

While I do not think that incorporation would add to the legal responsibility of the unions, still, for some reason, probably because it is somewhat more difficult to reach the funds of a union when it is not incorporated, there have been comparatively few suits against them. There seems, therefore, to be a practical immunity from liability to suit which, at present at least, serves the purpose of actual freedom from liability. As long as this continues it may fairly be claimed that incorporation would practically increase the liability of the unions.

John M. Gray, Professor, Northwestern University, Evanston, Illinois:

While it is a perfectly recognized fact that in applying either the principles of common law or of interpretation to statutes the courts always attempt to resolve the genuine doubts in favor of what they consider the practically desirable thing. I am not a lawyer and make no pretense of being able to unravel the finer distinctions of judicial reasoning. As it appears to my lay mind, the decision in the case referred to has gone considerably further than has ever been done before in applying the principles of incorporation to the unincorporated, voluntary associations of laborers known as unions. Personally I question if our courts would at present care to go so far. As I understand that decision, it treats the labor union exactly as if it were incorporated. Although the question of incorporation in this country is one in which there is considerable difference of opinion, personally I do not believe that incorporation would be either in the interests of the laborers themselves or of society as a whole. It follows from this necessarily that I should not like to see the Taff Vale decision applied to our own labor unions, nor would I like to see the unions compelled by law to take out formal acts of incorporation. I believe that much educational work will be necessary before actual incorporation is desirable. I do not believe that this education will be acquired without considerable friction and many hardships.

Henry W. Farnam, Professor, Yale University, New Haven:

I have had no experience which would justify me in stating whether or not incorporation would add to the responsibility of trade unions. If the statement which I have seen frequently made is true, according to which they can be sued even without incorporation, then it would perhaps not add to their legal responsibility in case of a lawsuit. But I believe that it would add to the feeling of responsibility which the leaders would be governed by, and that is, after all, the main point. My own opinion is that if we emphasized collective responsibility, the result would be somewhat like the principle of limited liability applied to a corporation. The trade union as a whole would be under bonds, but it would not be possible to enjoin, as has been done in some cases, individual members of the union. You understand, however, that I am not a lawyer and do not speak ex cathedra on a legal question.

Henry Demarest Lloyd, author of "Wealth Against Commonwealth," "A Country Without Strikes," "Labor Co-partnership," etc.:

Incorporation has never, so far as I know, been forced upon any class of the community. It is, on the contrary, a privilege granted by the law to those who comply with certain provisions for the purpose of gaining the benefit conferred. The suggestion, so freely made by some of our divines and other eminent peace-makers, that the workingmen should be compelled to incorporate, is merely the crack of the slave master's whip heard again.

The trade unions of New Zealand and Australia have incorporated almost universally, because by doing so they have been given valuable privileges, such as the power to hold real estate, sue members for dues, punish officers—most of all, to secure arbitration in case of dispute with employers. If the leaders of the American world desire our trade unions to incorporate, let them offer them inducements which will make it worth their while to do so.

Wm. Stainsby, Chief, Bureau of Statistics, New Jersey:

There have been no cases in this State that illustrate the point, but I am of the opinion that damages can be recovered in a court of equity or by an action in tort in a court of law from individual members of unions that are not incorporated. There is nothing in the statutes authorizing the formation of labor unions which shields individuals comprising these organizations from responsibility under the common or statute laws for injuries inflicted upon others. It does not seem to me that anything of value as a remedy can be added to existing law by the incorporation of unions. Only a comparatively few of them have funds, and these are, generally speaking, the most conservative in the matter of undertaking trade movements which would be likely to furnish a basis for legal action against them. A large number of unions are organized that pass out of existence in less than one year. These are to a large extent the outgrowth of incidents that have caused temporary friction between employers and workmen. When these are settled, the organizations which grew out of them pass away as a general thing. This bureau made an inquiry in 1901 to ascertain the membership, age, benefit features and some other information of trade unions in New Jersey. Out of the one hundred and ten blanks sent out, only sixty-three were returned. From the data which these reports contained it was shown that twenty-three of the organizations making them were organized less than one year, and eleven others between one and four years. The total membership of the sixty-three unions at the time their reports were made was 13,380, and the total aggregate amount of money in their treasuries was found to be \$13,339.06, or less than one dollar for each member. Solicitude for this trifling sum of money would add little, if at all, to the responsibility of the unions. In my opinion, there is nothing to be gained by compulsory incorporation, as it would not increase to any appreciable extent the civil remedies for abuses by trade unions which I believe are available under the law as it stands at present.

A. F. Weber, Chief Statistician, Department of Labor, Albany, New York:

The compulsory incorporation of trade unions does not seem advisable to me at the present time. The principal argument in favor of that policy is the impossibility of holding unincorporated unions to their contracts. No one familiar with industrial operations is disposed to deny that local unions have been wont to keep or break agreements at their own convenience. But the remedy for this lack of control may be found in the organization of employers, without resorting to experimental legislation which might introduce greater evils than the existing ones. The contracts so frequently broken by unions are almost always contracts with individual employers. Just as rapidly as the employers have come together for concerted action and replaced these individual agreements with one general agreement between the association of employers and the union of workmen, they have been able to hold the unions strictly to the terms of their agreement. It is in this way that the mason builders in New York and Boston have for some fifteen years preserved industrial peace with the journeymen bricklayers and masons. In those cities the single annual agreement entered into by representatives of the two bodies of employers and employees has been kept inviolate, while in cities where agreements have been signed by individual employers there have been frequent strikes, lockouts and violations of contract.

The experience in the coal mining industry has been the same. In the anthracite district, agreements, so far as they have been entered into at all, have been signed by individual operators and have not proved satisfactory to either side. But in Illinois and other central States, the agreement is between an employers' association and the international union of miners. All the testimony available goes to show that during the five years' duration of this arrangement industrial relations have been more stable and satisfactory in every way than they ever were before 1898, or than they are at the present time in regions where such an arrangement is wanting. Considering the fact that a large proportion of the workmen

in the mining industry are unskilled and uneducated, that experience seems to afford a complete answer to the affirmation that responsibility can be secured among such workmen only through the incorporation of their unions. Other tests of loyalty to the joint agreement are familiar—such as that of the longshoremen's union when the International President sent non-union men to work in the place of members who had gone on strike contrary to the agreement—while the history of railroad transportation in this country shows that stability has been achieved in the degree that the principle of collective bargaining and the joint agreement have been recognized. Contracts would not be treated with greater respect by incorporated unions of the engineers, conductors, etc., than they are now by the unincorporated organizations.

On the other hand, compulsory incorporation might discourage the movement toward organization, which we all recognize as the basis of the economic independence of wage workers. Such would be the effect if that policy promoted litigation, which it would probably do; for it would be difficult to frame a law that would make the union responsible for the acts of its officers or committees and not hold it responsible for unauthorized acts of its individual members. In the affairs of the ordinary business corporation, the unauthorized acts of an individual stockholder cannot embarrass the corporation because all power is lodged in the hands of the directors. But authority in a trade union cannot be so readily concentrated in a board of directors, since an agreement with employers necessarily calls for the co-operation of every individual member; and if the courts should entertain suits against the union for unauthorized acts of individual members, the field for intrigues between designing employers and avaricious members would be very large. The unions might find it impossible to maintain any funds whatsoever and that would of course spell the death of unionism and collective bargaining.

Any such movement to injure or destroy trade unionism would be disastrous to the best interests of the people, because collective bargaining through the organization of labor is an indisputable necessity in modern industry. If a frank, open policy of organization is prevented or seriously embarrassed by legal restrictions, there will probably come into existence secret and unlawful combinations such as agitated England before the repeal of the combination laws. And if the trade unions' educational work among the emigrants—an educational work that ranks second only to the work of the public schools in American life—should be stopped or seriously hampered, we should soon witness a revolution in our politics only dimly foreshadowed in the Socialism engendered by the recent coal strike. The effect of the Taff Vale decision in England has been a markedly increased participation in politics by the organized workers, as a class.

David Ross, Secretary, Bureau of Labor Statistics, Illinois:

The present opposition of labor men to the incorporation of labor unions is based on the fact, first, that the membership is necessarily of a heterogeneous character, and second, the financial liability resulting to the union from the possible indiscretion of individual action. If the courts of this country, however, hold that the fact that they are not incorporated does not exempt them from the liability of money damages growing out of the act of individual members, then they should avail themselves of the legal advantages which incorporation insures.

J. G. Schonfarber, Maryland Bureau of Statistics:

I cannot see how the incorporation of unions will increase the responsibility of the individuals composing the unions. In the State of Maryland, when they are not incorporated, the members of the organization are individually responsible as co-partners before the law. When incorporated, the individual is relieved to some extent of the responsibility, and the incorporated unions are responsible as an organization. I think that there is much to be said in favor of the incorporation of unions for the reason last noted.

E. Dana Durand, Former Secretary Industrial Commission:

In my judgment, based on considerable study of the cases in which labor organizations have been sued as such, the incorporation of labor unions would tend to make them more readily subject to legal responsibility than they are at present. It is possible to sue them, in some States, at present, but owing to the lack of definite legal organization it is rather more common to sue individual officers or members than the body as such, while doubtless in other instances employers and others aggrieved refrain altogether from bringing suit for fear of the difficulty of enforcing judgment. I doubt very much, however, whether it would be to the interests of the working class to insist on the incorporation of trade unions, except in conjunction with other provisions of law, defining the acts which unions may lawfully do, in a more liberal manner than the courts have been accustomed, in many cases, to define them. If unions are to be sued for engaging in a strike, as appears possible in view of recent injunctions, or for peaceful picketing, it seems desirable that the suits should encounter as much difficulty as possible, rather than that the way for them should be made easier. At the same time, I believe that in the long run, with proper safeguarding of their rights, unions will gain by accepting additional responsibility, especially in regard to their agreements with employers.

Hamilton Holt, Office Editor "Independent":

My own impression is that unless we have compulsory arbitration (which I personally favor), it would not be wise to incorporate trade unions, but if we have compulsory arbitration, the union should be incorporated in much the same way as New Zealand.

Rev. Thomas R. Slicer, Pastor All Souls, New York:

In my judgment, the only way to remove all doubt and conflict of authority in the matter of the responsibility of labor unions, is that the national organization shall direct that each union be incorporated in the State in which it has been formed, just as though it were free from all sentimental considerations. That would define by terms of incorporation, their responsibility, and require the issue to them of charters, which would fix their status before the law. If the unions wish fair treatment, and are willing to make their contribution to a responsible business arrangement, this seems to me the only path for them to pursue; and I say this as profoundly interested in their well-being. It would tend to conservatism in their action, would assist in making contracts that should be binding, and leave each union free to control the character of its membership. I have also an impression that any irresponsibility in the individual union would be linked in this way to the national organization, so that it might be controlled.

Thomas F. Woodlock, Editor "Wall Street Journal":

It is clear that by incorporation a labor union becomes a legal entity with full power of making contracts and with full responsibility for obligations thus entered into. Other things being equal and in view of the uncertainty of the law with respect to the responsibility and liability of unions not incorporated, I can see no valid reason against the principle of incorporation for labor unions. The objections urged by the labor leaders are not objections in principle but arise out of circumstances which the leaders believe exist in the relations between capital and labor. The description given in your letter of the uncertainty surrounding the question of liability of unincorporated unions seems to me itself the best argument for incorporation.

F. A. Halscy, Associate Editor "American Machinist," New York:

It seems to me the discussion is of academic interest only. I can see no value in the discussion of the incorporation of labor unions so long as the unions themselves are determined they will not incorporate. From their standpoint, it seems to me clear that the incorporation would be against their own interests, and hence their attitude is perfectly understandable.

John Graham Brooks, Author of "The Social Unrest":

I am absolutely certain that in the trade union, to which come the foreign classes (and in the anthracite regions there are some nineteen of such classes), the larger part of which are afraid of the judge, the policeman and the law—let it once be known that they are incorporated and instantly the large class that is now making the strength of the unions will refuse to join them.

To weaken the trade union is in my opinion as great an affront as we could put upon any form of social development at present. . . . I do not believe at anything that weakens the trade union is socially safe, because on the whole, the stronger a trade union, the more socially responsible it becomes. Remember the lawlessness of the locomotive engineers twenty years ago. With more strength, they have learned conduct. I could mention scores of unions, which when their strength became sufficient to keep their best men in the front showed good behavior, on the whole, in proportion to their increase of strength. That process should go on. I can prove that if we can get responsibility passively or voluntarily instead of by legal enforcement, the result will be educational, and we shall get a higher standard. To weaken the unions leads precisely to the failure of things throughout the United Mine Workers; was at the weakest point of the anthracite workers that the ratio of strikes was highest; and where the leaders had real power lawlessness was less frequent and strikes fewest.

If you go among the bituminous miners you will find that just in proportion as a joint agreement is reached among the men strikes disappear, and that the endline toward the joint agreement grows in proportion as the union grows in strength. You will find that after the joint agreement—and this is my substitute for incorporation—is established between the bituminous operators and the men, the representatives of the employers and the employed come together systematically, and that strikes are stopped until an understanding is arrived at. . . . More than seventy per cent. of the awards of decisions under the Bituminous Coal Fields Arbitration Board—representing the miners on one side and the operators on the other—have been in favor of the miners. They have accepted these with alacrity and have gone on with their work. . . . I wanted to do just as much harm as I could to the unions, I should incorporate them to-morrow; it would harm the social state as well. I do not need to discuss it here, but, in my opinion, it would drive the unionism, because it would weaken it, straight forward and a crude form of political Socialism. From the conservative point of view, from the point of view of one that wants incorporation, that must be reckoned on. Just as fast as any force cripples any trade union, it gets the appearance of the Socialist Mayor. I have seen a good many, "You may take your choice." Ultimately, therefore, on the basis of the principle of "power and responsibility" we may expect, when we have had trade unions, as the English spinners have been told, that they will say: "Well, we are willing to do what you want; we are doing what incorporation will do." It seems to me that the educational influence of the solution is so precious that to preclude it by legal incorporation is simply a mistake.

MEMBERS OF THE BAR

Charles J. Bonaparte, Attorney-at-Law, Baltimore:

There is certainly nothing new in the doctrine that members of labor unions can be sued individually for any illegal interference with the business either of employers or any other persons. As long ago as the time of the Year Books it was held that: "Where a violent or malicious act is done to a man's occupation, profession, or way of getting a livelihood, there an action lies in all cases." And Lord Holt (Keeble vs. Hickeringill, 11 East, 576, Note) says: "If a man should lie in wait and fright the boys, from going to school, that the master might have an action for the loss of his scholars."

The principles, therefore, on which actions against members of labor unions for any form of violence or

intimidation or for conspiracy have been sustained by the courts is as old as the common law. The responsibility of individual members of such unions depends upon the question whether they can be shown to have participated in or authorized the illegal acts. If, for example, these acts were authorized at a meeting of the union, those members present and voting for the resolution authorizing them would be responsible; those members who were absent, or, if present, voted against the resolution, would not be responsible, unless they afterward participated personally in the illegal acts. The mere fact of a man's belonging to a union or to any other association formed for a lawful purpose would not of itself make him personally responsible for the illegal acts of the association. If the union is incorporated, it will be responsible to the extent of its corporate property for illegal acts done under its corporate sanction; this, however, will not relieve the individual members of the corporation from responsibility likewise. Indirectly, in such a case, even innocent members of the union would, of course, be held responsible to the extent of their interest in the corporate property. It must be remembered in this connection that, for any one to be responsible, he must be shown to have committed an illegal act. I do not think it is to the well considered interest of any member of the community to be allowed to violate the law with impunity, and for this reason it seems to me that the more readily and satisfactorily those guilty of violations of law can be made to respond in damages, the less danger there will be of innocent persons suffering or of persons of good intentions being led into illegal acts through ignorance, bad advice or lack of reasonable self-control. I do not think, therefore, that the possibility of evasion of legal responsibility for acts which, *ex hypothesi*, must be illegal, otherwise no responsibility for them would accrue to any one at all, is a legitimate argument either for or against the incorporation of trade unions.

It is a general principle of the law of torts that there is no right to contribution among wrong-doers, therefore each individual against whom a judgment is recovered under such an action is responsible for its full amount without regard to the number of his co-defendants; although, of course, the plaintiff can have but one satisfaction. It is, however, inaccurate to describe this responsibility as "the same as in a partnership."

Levy Mayer, General Counsel Illinois Manufacturers' Association:

A corporation exists as such only by virtue of a grant from the State, and the acceptance of such grant by the persons composing the corporation. No one can be compelled to accept such a grant, nor be compelled to become a member of the corporation against his will. To compel labor unions to incorporate is to compel individuals composing the union to become members of a corporation, and to assume the burdens and responsibilities of that relation without their consent, or to prohibit such members from voluntarily associating themselves together for a lawful purpose. It is not within the province of the Legislature to say to a person: "You cannot join a union unless that union is incorporated." That would be equivalent to saying that a person desiring to become a member of a labor union has to become a member of the corporation, or cease to be a "union" laborer. Such persons would thus be prevented from pursuing a lawful purpose, and would be deprived of a right to assemble together for a purpose not in violation of law. The proposed law would interfere with the liberty of the citizen, the right of lawful assembly, and the freedom of contract. This view is supported by authorities. Chancellor Kent, in his Commentaries (Vol. 2, p. 277), says:

"It requires the acceptance of a charter to create a corporate body; for the government cannot compel persons to become an incorporated body without their consent, or the consent of at least a major part of them."

In *Mason vs. Finch*, 28 Mich., 282, the Supreme Court of Michigan laid down the law as follows:

"It would not be competent for the legislature . . . to compel any person or society to become incorporated without its consent."

In *Hampshire vs. Franklin*, 16 Mass., 76, 87, the Supreme Court of Massachusetts said:

"No man can be compelled by the legislature to become a member of a corporation without his consent."

See also *Angell & Ames on Corporations* (11th Ed.), Secs. 31, 81, 86.

Again, the proposed law, if applicable only to "labor unions" and not to all other unincorporated associations similarly situated, would probably violate the constitutional inhibition against "class legislation." There is nothing in the nature of a "labor union" which requires special regulation, which does not equally apply to other unincorporated associations. The members of a labor union are joined together in furtherance of a common enterprise, in which the public at large is not directly interested or concerned. If the public is affected, it is only indirectly. Such union, therefore, is not a public association in the same sense that it is subject to public regulation and control.

I have heretofore, on April 12, 1902, given an opinion to the association that the members of a labor union are legally responsible for damages caused by an illegal boycott. The compulsory incorporation of a labor union would not make the members of the association any more responsible than they are at present, except in so far as the corporation might possess property. The creation of a corporation not for pecuniary profit does not and would not ordinarily create any more financial responsibility than now exists on the part of individuals who would constitute the corporation.

For the reasons above stated, I am of the opinion that the proposed law, if enacted, would be unconstitutional. Even if the law were constitutional, I do not believe it would accomplish the purpose for which it would be designed. If a law could be devised to compel the formation of such corporations, it would soon be discovered that such corporations could readily avoid accumulating or possessing any property.

Fred. H. Cooke, Attorney-at-Law, New York, Author "Trade and Labor Combinations":

The importance of the decision of the House of Lords in *Taff Vale Railway Company vs. Amalgamated Society of Railway Servants*, L. R. App. Cas. 426 (1901) resulting in the recovery for a large amount of damages against the defendant trade union, has, in my opinion, been much exaggerated. That an association of this character should be mulcted in so large an amount is, to say the least, unusual, and may be a sociological fact of interest and importance. But from a strictly legal standpoint the decision is comparatively insignificant. The doctrines applied are trite, and it was simply a narrow question of statutory construction that was really involved.

The effect of the decision was that the defendant trade union was liable in an action for damages, that is, in tort, for unlawful acts of its agents in the course of the management of a strike.

Before considering the precise ground of such decision, let us consider the general principles applicable in determining the liability of a trade union or its officers, members or agents for such acts.

In the absence of statutory provision a trade union is nothing but a number of persons associated for a particular purpose. As in the case of such association generally, (frequently termed voluntary associations) the law ignores the circumstance of association in determining liability for unlawful acts of members of the association. That is to say, if the members of a trade union, whether acting singly or in combination, assault a person or trespass upon his property, or otherwise injure him, it is merely as individuals that they can be held liable. For instances of members being thus held liable, injunctions being allowed, see *Hopkins vs. Oxley Stove Company*, 83 Fed. 913; 49 U. S. App. 709 (8th Cir. 1897); *Cumberland Glass Manufacturing Company vs. Glass Bottle Blowers' Association*, 59 N. J. Eq. 49; *Atl. 208* (1899); *Reinecke Coal Mining Company vs. Wood*, 112 Fed. 477 (Cir. Ct. Ky. 1901); *Sherry vs. Perkins*, 147 Mass. 212; 17 N. E. 307 (1888); *Murdock vs. Walker*, 152 Pa. St. 595; 25 Atl. 492 (1893); *Wick China Company vs. Brown*, 164 Pa. St. 449; 30 Atl. 261 (1894). So in action for damages; *Temperton vs. Russell*, 1 L. R. Q. B. (1893) 715; *Quinn vs. Leathern*, L. R. App. Cas. (1901) 495. See also *Thomas vs. Cin-*

(Continued on Page 18.)

THE CHICAGO BOARD OF ARBITRATION

A unique and probably the most successful and scientific voluntary body of arbitrators in this country to-day is the Chicago Board of Arbitration, composed of the heads of seven employers' associations and the heads of the seven corresponding labor organizations.

It is unique in that while there are seven labor organizations and the corresponding associations of employers, they are all connected with one industry, teaming.

It is successful in that it settles nearly every trouble that arises in Chicago in any line and in a manner satisfactory to both sides.

It is scientific in that it recognizes the full value of joint trade agreements between associations of em-

The Teamsters are:

Albert Young, President of the Teamsters' National Union of America.

James B. Barry, Secretary of the Teamsters' Joint Council.

Charles Robb, National Organizer of the Teamsters' National Union of America.

John M. Rowan, Business Agent of the Commission Teamsters' Union.

Samuel Johnson, Vice-President of the Teamsters' National Union of America.

Fred C. Bender, Chairman of the Teamsters' Joint Council.

Charles G. Sagerstrom, Secretary of Local No. 2, Teamsters' National Union of America.

either a settlement or the submission of the matter to their Board of Arbitration. This is a common weekly occurrence. If the conciliatory efforts of this joint committee do not prevail and the strike continues, the teamsters, honoring their contract with the team owners, decline to be interfered with by the pickets, and in some instances have even attacked them when they persisted in their interference.

The genius who is responsible for the organization of this board is John C. Driscoll, the General Secretary of the Associated Teaming Interests of Chicago. He first organized the Coal Team Owners and was made their secretary. He then allied himself with Albert Young, President of the Teamsters' National Union of America, and they worked out a joint trade agreement for the

ployers and organizations of employees, each side seeing the justice and necessity of the other being completely organized.

The membership of this organization is as follows:

Harry G. Selfridge, Manager of Marshall Field & Co., representing the Dry Goods Stores.

Henry B. Steele, President of Steele-Weddes Company, representing the Wholesale Grocers and kindred lines.

John S. Field, President of the Knickerbocker Ice Company, representing the Ice, Stone, Lime and Cement Interests.

Arthur Dixon, President of the Arthur Dixon Transfer Company, representing the Transfer Companies.

S. T. Edwards, President of S. W. Edwards & Sons, representing the Board of Trade and the Hay, Grain and Feed Dealers.

Frank H. Hebard, President of Hebard's Express & Van Company, representing Express and General Delivery Owners.

F. G. Hartwell, President of the F. G. Hartwell Coal Company, representing the Coal Team Owners.

The Board elected Harry G. Selfridge Chairman, and James B. Barry, Secretary.

Just how a board made up of teamsters on one side and team owners on the other could become involved in a strike of the Garment Workers, or of the Bakers' Union, or the Rubber Workers' Union, is highly interesting, but not at all surprising when one considers that there are few industries in this country that do not employ teamsters. The common mode of procedure is as follows: A strike may occur in the plants of a manufacturing company. At once the strikers throw out picket lines. Soon a teamster approaches with a load of coal or flour, or a drayman starts away with a load of the manufacturer's product. The picket immediately stops him and intercedes in behalf of his brethren on strike, asking the driver not to deliver anything to or for the manufacturer. The teamster telephones to his local president and the manufacturer telephones to the team-owner, who in turn notifies the president of the association for the subdivision of teaming concerned. Officers of both sides then go to the seat of trouble and try to bring about

industry of coal teaming. As the work developed Mr. Driscoll saw the necessity of organizing all the branches of employers engaged in teaming and of aiding Mr. Young in organizing the various subdivisions of teamsters. He is the conciliator of the arbitration board and is continually preventing strikes by his great tact, indomitable energy and enthusiastic faith in his work.

The moral power which is the outgrowth of independent investigation and awards made by the Chicago Board of Arbitration has proved of great value in settling strikes and lockouts by mediation. In many instances the board has gone out of its way to secure concessions from both sides before calling employer and employee to a joint meeting. The board, as one of its first duties, if possible brings about a conference between the two contending factions, and in these efforts, supported by the influence of its members and the standing it has attained in the eyes of the Chicago public, it is generally successful. It has found in a majority of cases that the chief requisite is a frank conference between employers and representatives of employees. In general there are points of misunderstanding which can

cared up in no other way. At these conferences the members of the board, with their extensive experience, usually able to make suggestions of value in promoting a settlement.

The three strikes first adjusted—those of the department store delivery drivers, the packing house teamsters, the freight handlers—attracted widespread attention and their effect was felt by the public directly and seriously.

For the purpose of carrying out its projected work broadening it to cover every dispute between labor and capital in Chicago—which in every instance except the messenger boys' strike has affected the teamsters directly or indirectly—the Chicago Board of Arbitration made a permanent body. It is doing its good work as the following summary of cases it has disposed shows:

The formation of the board was completed in detail on June 23, 1902. The first case to come before it was that of the Parmelee Transfer Company, on July 1, against the Teamsters' Union. The company requested arbitration when threatened by a strike, the result being amicable adjustment and an agreement for one year. The great freight handlers' strike came next. On July 7 the Freight Handlers' Union called a general strike on all railroads in Chicago. Suspension of work continued several days, the teamsters of the city becoming more and more involved. On July 10, when the commerce of the city was practically at a standstill, arbitration was brought about by the board, yet through the efforts of Arthur Young, President of the Teamsters' National Union, who insisted and demanded that the teamsters inviolate the agreement they had made just previous to the team owners, in connection with the efforts of the Secretary of the Associated Teaming Interests and the individual members of the Board of Arbitration, a quantity of freight was moved on July 16, and the strike ended.

Since that time the board has prevented and arbitrated strikes and difficulties as follows:

Teamsters' Organization vs. the Furniture Makers and Expressmen's Association.

Arthur Bassett vs. W. G. Livingston, President of Van Team Owners' Association. Settlement made by the board on September 9.

Lumbermen's Association vs. Local Union No. 19, the Teamsters. Threatened strike of Lumber Teamsters against the Lumbermen's Association. The question of a wage scale for one year was brought before the board and settled December 22.

Newspaper Delivery Drivers' Union vs. Western News Company, Joseph Russell vs. Western News Company. Settled in the board December 27.

Lincoln Park Commissioners vs. Park Teamsters. Case of John Meyer vs. Lincoln Park Commissioners. Case called and lasted three days. Park Board refused arbitration from the board. Settled January 23.

Building Managers' Association vs. Office Building, Doors and Window Washers' Union and the Chicago Motor Conductors and Starters' Union. Strike called and lasted eight days. Board requested to arbitrate and case was settled on February 13.

Chicago City Railway Company vs. Street Car Employees' Union. Arbitration requested of the board by street car company and refused by the union. When teamsters backed up the request of the company for arbitration the street car employees receded from their position. February 16.

The board holds employers and employees to a strict observance of contracts. It contends that compacts be kept, with honorable action on both sides. It is a working agreement or contract as a covenant which the integrity of all concerned is at stake.

The contests thus far settled by the board neither in controversy has been dissatisfied. Both have been concluded that they received justice and fair treatment. The agreements reached through the good offices of the board are remarkable, in that they cover a number of workers and greater business interests have been similarly dealt with in the other industries of the country.

It would be difficult to arrive at an estimate of the aggregate saving effected by the board's adjustment of strikes. Three distinct interests are considered in every case—the employers, the employees and the general public. The loss to the public occasioned by a strike or lockout is often immense as compared with that which falls upon either the employers or the workmen. This was notably true in the freight handlers' strike, which, according to estimates generally accepted, was conducted at an aggregate cost of \$1,000,000 a day. Considering the loss suffered throughout the vast territory tributary to Chicago through the suspension of traffic into and out of the city, it is safe to say that the value of the board's work in hastening the end of that strike cannot be computed.

The Chicago Board of Arbitration has thus performed timely and important services to employers and employees and to the general public. Merely as an educator, encouraging and promoting the ideas of consultation, conciliation and arbitration, its existence has been of great value. With the increasing attention paid arbitration by both employers and employees, and with the steady growth of public sentiment in that direction, and of recognition by the public of the usefulness of arbitration tribunals, the future of the Chicago Board of Arbitration as an agency for industrial peace would appear to possess great possibilities.

JOHN C. DRISCOLL
Mediator, Chicago Board of Arbitration

Mr. Driscoll, as Secretary of the Board, has acted as mediator in settling many disputes without calling a meeting of the board. The following are to be mentioned:

Van and Express Teamsters of Chicago vs. Employers, April 10. Threatened strike on account of wage scale. Satisfactory agreement for one year entered into April 18, 1902.

Truck Teamsters' Local vs. J. C. Pennoyer Company's barns, May 1. Strike lasted two days, adjusted and agreement made for one year on May 3.

Stromberg-Carlson strike May 31. Strike had lasted for three months. Mr. Driscoll's services requested on May 30. Satisfactory settlement made next day with five labor organizations for one year.

Master Boiler Makers and Employees, Thursday, August 7. Call for sympathetic strike of teamsters. Prevented by Secretary and strike called off.

Kellogg-Switchboard Company, strike, August 9. Strike lasted fifteen days; settlement made after three days' conference.

Keith Lumber Company, August 26. Teamsters strike for two days. Settled in four hours by Secretary.

Montgomery Ward & Co. vs. Shipping Room Employees. Sympathetic action of teamsters called for; prevented by the Secretary and arbitration suggested and satisfactory settlement made September 18.

Strike of Stablemen's Union vs. Department Stores, September 1. Strike lasted three weeks. Attempted

sympathetic strike of teamsters prevented by Secretary. Strike adjusted by committee in office of the board.

Retail Furniture Dealers' Association and Drivers and Helpers' Union. Strike declared by teamsters and helpers. Secretary brought it to a stop and helped to bring about a satisfactory agreement for one year. September 25.

Schmidt Bakery (National Biscuit Company) vs. Drivers. Question of wages and threatened strike. Matter adjusted in three hours by Secretary on September 27.

Rubber Workers' Union vs. Morgan & Wright (first settlement). Original strike lasted one day. Agreement brought about; broken four days later; strike declared and lasted six weeks. Endeavors of Secretary forced settlement and strike ended January 3, 1903.

South Chicago Team Owners vs. Teamsters. Strike of Coal Teamsters. Lasted ten days, settled by Secretary November 3.

Newspaper Local No. 6 of Newspaper Delivery Drivers. Question of wages. Difficulty adjusted and agreement signed about November 10.

Wholesale Shoe Manufacturers and Employees. Strike on for four weeks. Satisfactory adjustment made by Secretary on November 11.

Piano Team Owners' Association formed November 12, and an agreement until April 1, between employers and employees drawn up by Mr. Driscoll.

Auditorium Hotel, December 19. Strike of engineers and firemen prevented and a satisfactory scale and agreement for that plant brought about.

Strike of elevator men at The Fair; lasted ten hours. Sympathetic strike of teamsters and firemen prevented by Secretary and satisfactory settlement made December 20.

Strike at Bremner Bakery (National Biscuit Company). Strike called; lasted seven days; adjusted satisfactorily by Secretary on January 20.

Sibley Warehouse vs. Freight Handlers. Threatened strike of freight handlers; trouble prevented by Secretary and satisfactorily settled January 22.

Kennedy Biscuit Company (National Biscuit Company). Strike lasted three days. Teamsters refused sympathetic action and strike settled January 30.

Globe Iron and Wire Works vs. United Metal Workers. Question of wages and hours. Strike lasted three days. Satisfactory settlement and agreement made in Secretary's office on January 31.

"Special Order" clothing makers' strike, February 4. Strike lasted four weeks. Various conferences held. Agreement broken and efforts of Secretary, with national officials of the American Federation of Labor, at last settled the trouble.

Truck Team Owners' Association and Truck Teamsters' agreement. New agreement for one year, made in Secretary's office, December 27.

Dernberg Manufacturing Company, strike of cloak makers to enforce wage scale, settled and agreement signed for one year, March 7.

Settlements between individual team owners and teamsters are daily occurring. From three to seven cases or disputes are handled on an average in Mr. Driscoll's rooms day in and day out.

In the earlier days of the teamsters' organization the actions of the members promised little good for the peace of Chicago. Other unions that struck on any pretense whatever counted on the teamsters' assistance, which was given without much hesitation. The climax in the aggressions of the coal teamsters was reached when they made the extraordinary demand that unless the managers of the large office buildings agree to give up the use of fuel gas during the summer they would not deliver coal at any time. But in the course of time the teamsters themselves felt seriously the burden thrown on them by unions unable to win their own battles. Hence a teamster on approaching the scene of a strike came to change his attitude. Instead of joining in the strike with little ceremony, he would wait until his union instituted some inquiry into its merits and the methods by which it had been authorized. This deepening wisdom at length crystallized into a law which has been growing in favor with all the teamsters of the city.

RALPH M. EASLEY, Editor

Vol. I. New York, April, 1903 No. 1

Ten Cents per Copy; One Dollar per Year

The National Civic Federation

281 Fourth Avenue, New York City

Marcus A. Hanna, Chairman.
Samuel Gompers, First Vice-Chairman.
Oscar S. Straus, Second Vice-Chairman.
Cornelius N. Bliss, Treasurer.
Ralph M. Easley, General Secretary.

EXECUTIVE COMMITTEE.

ON THE PART OF THE PUBLIC.

Grover Cleveland, ex-President of the United States, Princeton, N. J.
Cornelius N. Bliss, ex-Secretary of the Interior, New York City.
August Belmont, banker, New York.
Oscar S. Straus, member of the Court of Arbitration at The Hague, New York City.
Charles Francis Adams, former President of Union Pacific Railroad, Boston.
Archbishop John Ireland, of the Roman Catholic Church, St. Paul.
Bishop Henry C. Potter, of the Protestant Episcopal Church, New York City.
Spencer Trask, banker, New York.
Charles W. Elliot, President Harvard University, Cambridge, Mass.
Franklin MacVeagh, merchant, Chicago.
James H. Eckels, former Comptroller of Currency of the United States, Chicago.
John J. McCook, lawyer, New York City.
John G. Milburn, lawyer, Buffalo.
Charles J. Bonaparte, lawyer, Baltimore.
Ralph M. Easley, General Secretary of the National Civic Federation, New York City.

ON THE PART OF EMPLOYERS.

Marcus A. Hanna, coal mines, iron, shipping and street railways, Cleveland.
Charles M. Schwab, President United States Steel Corporation, New York City.
William L. Eikins, director Pennsylvania Railroad, Philadelphia.
John B. McDonald, contractor Rapid Transit Subway Construction, New York.
Frederick D. Underwood, President Erie Railroad, New York.
S. R. Callaway, President American Locomotive Works, New York City.
Charles A. Moore, President The Shaw Electric Crane Company, New York City.
Edward P. Ripley, President Atchison, Topeka & Santa Fe Railway System, Chicago.
J. Kruttschnitt, Vice-President Southern Pacific Company, San Francisco.
H. H. Vreeland, President National Street Railway Association, New York City.
Lewis Nixon, President United States Shipbuilding Company, New York City.
Samuel Mather, Picans, Mather & Co., Cleveland, O.
Charles H. Taylor, Jr., President American Publishers' Association, Boston.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
James A. Chambers, President American Window Glass Company, Pittsburgh.
William H. Pfahler, former President National Founders' Association, Philadelphia.

ON THE PART OF WAGE EARNERS.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President United Mine Workers of America, Indianapolis.
Edgar E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
Theodore J. Shaffer, President Amalgamated Association of Iron, Steel and Tin Workers, Pittsburgh.
James Duncan, General Secretary Granite Cutters' National Union, Washington.
Daniel J. Keefe, President International Longshoremen's Association, Detroit.
James O'Connell, President International Association of Machinists, Washington.
Martin Fox, President Iron Molders' Union of North America, Cincinnati.
James M. Lynch, President International Typographical Union, Indianapolis.
J. J. Hannahan, Grand Master Brotherhood of Locomotive Firemen, Peoria, Ill.
Henry White, General Secretary United Garment Workers of America, New York.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit.
Denis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.
John Tobin, General President Boot and Shoe Workers' Union, Boston.

THE LABOR OUTLOOK.

While there has been the usual "spring crop" of petty strikes throughout the country, mostly in the building trades, the industrial situation is particularly free at this time of any national strikes. The textile strike at Lowell is local, and with the settlement of the Wabash and the New Haven and Hartford difficulties there passed away any danger of serious trouble among the railroad workers. The renewal of the agreement between the operators and the miners in the bituminous fields and the three years' award in the anthracite field furnish a stable situation in that universal necessity. The convention of the Amalgamated Iron, Steel and Tin Workers now in session is not expected to develop any unreasonable demands. With the coal and iron industries and the railroads free from troubles the manufacturing world has the assurance of a favorable labor outlook.

THE CONCILIATION COMMITTEE'S POWERS.

There is more or less misunderstanding as to the mode of procedure adopted by the Conciliation Committee of the Civic Federation in case of a strike, and surprise has several times been expressed because the committee did not rush in at every strike that occurred. The confusion arises somewhat from the fact that in the case of State Boards it is made the duty by law to investigate, and in Massachusetts, New York, and several other States the power is given to subpoena witnesses and to compel the production of books. A voluntary board, however, has no power, and unless it proceeds with caution will be rebuffed by one side or the other, or by both sides, certainly by the side that thinks it can win if let alone. The method pursued by the committee is laid down in the by-laws, from which the following quotation is made:

The Committee of Conciliation shall upon notice from the Chairman of threatened strike or lockout of more than local magnitude use its good offices in restoring harmonious relations, reporting its action to the Executive Committee.

Should the efforts of the Conciliation Committee prove ineffective, and should both parties to the dispute desire the services of the Executive Committee of this Department, they may be invited to select two employers and two wage earners from said Executive Committee, to serve as an Arbitration Board. Should the four find it necessary to appoint an umpire to finally decide the dispute, they may select a fifth member from the group representing the public. Nothing in this Article shall be construed to prevent the Conciliation Committee from securing, when desirable, arbitrators outside of the Executive Committee.

MACHINISTS' ANNUAL CONVENTION.

The International Association of Machinists will hold its annual convention at Milwaukee May 4, and its official organ urges the selection of delegates with "cool and clear judgment" to handle the questions of great importance which are to come up. Among these are the piece work and premium systems, the shorter work day in the railway service, and the organization of the less skilled men in machine departments.

Piece work is strongly opposed by the Machinists' Union, and the constitution contains a clause to the effect that any member accepting piece work in any shop where it does not exist shall be subject to expulsion. The subject has been debated at every convention of the organization and is prominent in many of its disagreements with employers. At the recent conference of the National Civic Federation both sides of the question were forcibly presented by labor representatives, while the secretary of the machinists' organization in Great Britain, the Amalgamated Society of Engineers, advocated what he called the "safeguarded premium system," lately adopted by his society. In commenting on the attitude of the coming convention of the machinists toward piece and premium systems, the editor of their official journal says:

The way it will be settled means much for our organization. The *Journal* has always advocated its recognition and control as being the better way to settle the question. This has been demonstrated over and over again by the leading and most successful labor organizations of our time. If the organization acts wisely and conservatively it will adopt this policy with good grace. We must face the inevitable sooner or later.

A BUREAU OF INFORMATION.

In answering many requests for information regarding arbitration, trade agreements, organizations of employers and workmen, addresses of officers of such organizations, and similar subjects a bureau of information has gradually been established, which it is intended to enlarge in order to be made as widely useful as possible.

The MONTHLY REVIEW will contain answers to many of these inquiries, and a pamphlet is in preparation containing copies of the principal arbitration and trade agreement contracts. This will be furnished free when published, and will be followed by similar publications.

THE INDUSTRIAL DEPARTMENT. NATIONAL CIVIC FEDERATION.

The Industrial Department of the National Civic Federation was organized at a national conference held in Chicago under the auspices of that organization in December, 1900, and to a committee of twelve, styled the "Conciliation Committee of the National Civic Federation," was committed the work of promoting the movement. This provisional conciliation committee, however, after an experience gained in dealing with the threatened coal strike in March, 1901, in aiding in the settlement of the Albany street car strike in June of that year, and in the course of its efforts in the United States Steel strike which soon followed, discovered that it could be of permanent value only in so far as it was able to go below the surface and reach the causes of strikes and lockouts. Then it was that the more comprehensive title, the "Industrial Department," was adopted, the membership increased to three hundred and an Executive Committee of Thirty-Six chosen at the annual meeting December, 1901. At this meeting, in conformity with the larger view then taken, a broader programme, mainly educational, was laid out. It included—

First—Joint national conferences, where representative employers, labor leaders and men representing the general public would discuss face to face the various questions involved in the industrial disturbances so frequently arising.

Second—The publication and wide distribution of an industrial journal treating broadly of the same questions and promoting conciliation, arbitration, collective bargaining and a general spirit of broadness and fairness.

Third—The organization of local affiliated bodies in all large industrial centres, to be composed of the more conservative representatives of capital, labor and the public, which should not only act in case of local disturbances but serve as a medium through which the National Committee might reach a larger constituency.

Fourth—The organization of permanent boards of conciliation to use their good offices where possible before strikes should be declared and to endeavor to settle strikes under way.

It was conceded that if the United States is to maintain its commercial supremacy it must not be handicapped by industrial disturbances at home, but rather must "capital" and "labor" recognize that in the largest sense their interests are mutual, and that if American institutions and popular government are to have successful development they require as a first consideration a peaceable understanding between employers and workmen.

EDUCATIONAL WORK.

It was agreed that the large and in many respects more fundamental work of the committee would be that of inquiry and education regarding the causes of industrial disturbances. "Mutuality of interests" is the goal, but it must be worked out through solving such concrete questions as "fair wages," "shorter hours," "restriction of output," "minimum wage," "apprenticeship," "employment of non-unionists," "jurisdictional quarrels between unions," "sympathetic strikes," "boycotts," "piece work and premium systems of payment," "government by injunction," "the incorporation of unions," and similar practical questions.

Many of these questions arise in every dispute and every agreement between employers and employees. For instance, the Union Pacific Railroad has been confronted for several months by a general strike of machinists over the question of "piece work," and it is a "burning issue" in thousands of factories to-day, yet so little is it understood by the general public that in several letters received from prominent men referring to the programme of the annual meeting the word was spelled "peace" work. This question is so complicated that some unions differ diametrically from others upon it, and so do the employers. The question of "restricting output" is one of such vital importance to American industry that a thorough investigation is being made to determine just how much and what kind of restriction is imposed and what, if any, are the justifications. There can be no denial of the charge that some unions impose restrictions for no other apparent purpose than to make places for more men, while there are some restrictions that employers concede can be justified upon humanitarian principles. To solve such practical questions is to build a solid foundation for stable industrial conditions, and in no other way can it be done.

The Civic Federation, in line with this programme, has taken up these intricate human problems in its national conferences, as may be seen in the "Report" of the one held in New York, December, 1902. The widespread demand for this report, from labor leaders, superintendents, foremen and employers throughout the country is a proof of the serious attention now being given by practical men to such economic issues. This aroused interest has paved the way for the second part of the programme, the publication and distribution of this REVIEW, through which these problems may be further discussed in detail by those who are directly concerned therein.

That educational work with both employers and employees is the highest need of the hour is manifest to any one who has had experience in dealing with industrial troubles, and is well explained by the following utterances of representatives on each side:

A large employer who tried to perfect an organization of the firms of his industry whose purpose should be to deal with labor said to the writer after the first meeting of some sixty employers:

"I never saw such a narrow, selfish, ignorant set of men on labor matters as the ones we got together. They could not agree to any one proposition; each was suspicious of the other and was ready to go out of the room and knife every other member if he could gain some advantage thereby. Talk about 'fair' and 'intelligent' dealing with labor, they had not the first idea of it. Only one of them had ever heard of a joint trade agreement, and he was against it because he said he did not believe in discussing the matter of wages and hours with his employees, that being the province only of the directors of the corporation."

The need of this education for the workmen is well stated by Mr. Clarence S. Darrow, late counsel of the United Mine Workers before the Anthracite Coal Strike Commission, in a recent article in *Boyce's Weekly*. He says:

"Trade unionism was never in a more critical condition than it is to-day. The phenomenal growth of labor organizations within the last few months has brought into its ranks a large number of men who are utterly unfamiliar with the principles of trade unionism, and with the discipline that must go with organized labor. It has also brought into its ranks a large number of men who have no positive views in reference to trade unionism, and no sympathy with its principles; but who have joined the movement for the purpose of 'buying peace,' as many men join the church who are not positive believers in the Christian religion. Then, too, the power of trade unionism has caused many of its members and organizations to be arrogant and overbearing: to make unreasonable demands and to indulge in all sorts of trouble between themselves, and petty annoyances to employers and the public. This could not possibly be avoided, as labor organizations have grown so rapidly that the leaders have not been able to properly take care of the members and place them upon a substantial working basis. It will take a considerable time for this great mass of new recruits to be properly disciplined and thoroughly organized and made to understand the principles of trade unionism so that they may work in harmony with each other and for the interests of the general public."

"This condition has brought much adverse criticism to the trade union movement. Many kindly disposed people who wished to be favorable to trade unions have been subjected to petty annoyances, and have formed opinions hostile to labor unions, because they have not

considered the difficulty encountered by labor leaders in bringing all these raw recruits into the labor organizations."

LOCAL ORGANIZATIONS.

The organization of the local branches provided for in the original programme was not begun until this spring, when the first one, the New York Council, was organized (in March, 1903). St. Louis, Chicago, Buffalo, Cleveland, Pittsburg, Philadelphia, Boston and Baltimore will be organized during the summer. These local councils promise to be important organs of the movement, for they come close to the rank and file of workers and employers on whom depend the execution of all plans for conciliation and education. They include the business agents and prominent members of local unions, as well as employers, "commissioners" of employers' associations, and representatives of "the public," and the work already done by the New York Civic Federation in dealing with a half-dozen strikes and threatened strikes is conclusive of the large field for usefulness of similar bodies in other industrial centres. Through these local committees it is possible to reach the men actually at work in factories, shops and mines, as well as their employers, and to bring to both sides the experience and assistance of those who have been longer in the work of conciliation and collective bargaining. It is expected that the REVIEW will furnish the needed means of communication between local Civic Federations throughout the country.

CONCILIATION COMMITTEE.

The Conciliation Committee, to deal with strikes and lockouts, was appointed in March, 1902. As disturbances of that character are always conspicuous the efforts of this committee became correspondingly conspicuous, and the public unfortunately, but naturally, gained the idea that the "Committee of Thirty-Six," so-called, was the entire organization and had been created only for arbitration purposes, it being frequently spoken of as a "Hague Commission," "Board of Arbitration," etc. But it was not contemplated that the Executive Committee, as a whole, should arbitrate anything; if so, it would have been organized on a different basis. The declaration of principles has only one reference to arbitration—namely, where all means of conciliation fail and both sides wish to avail themselves of the good offices of individual members of the committee. When a controversy reaches the arbitration stage there is generally no trouble in finding arbitrators. Only once in more than one hundred cases has the committee been asked to arbitrate a question. It is through conciliation and mediation that the committee has been able to do its best work, and it is a kind of work the purpose of which would be entirely defeated if given publicity. For instance, one of the "labor chiefs" notified the Federation officers that he was fearful a strike was imminent in his organization which would involve 12,000 men, unless he could get a conference with the representatives of the employers. He said he had written to the President asking for such an interview but had received no reply. A member of the Conciliation Committee found a friend who was a director in this particular corporation, and as there was a meeting of the directors the next day he saw to it that this matter reached the board. The President was not averse to meeting the man on the score of principle, but he had not realized that it was important. The day after, the "labor chief" received a courteous reply to his request and an appointment for a conference. This occurred in due time, and the strike did not take place.

One day recently there were three conferences going on at the Civic Federation headquarters at the same time, one relative to an important controversy in San Francisco, another to one in New Orleans, and a third concerning New York. Two of these proved very successful and the third has been continued. In each case the parties in interest would have resented publicity of the questions in dispute, regarding them as of a character not yet passing beyond the limits of private business. Most of the work done by the Conciliation Committee is of this character.

Probably the committee's most valuable work, from a public standpoint, and yet the public knows little if anything about it, occurred in connection with the threatened sympathetic strikes during the steel strike of 1901 and the coal strike of 1902. Had either of these

occurred all industries would undoubtedly have been tied up, with effects far more disastrous to the country than those that actually followed the original strikes. After the steel workers went out the coal miners and railroad men seriously threatened to follow. The Conciliation Committee at this juncture, through conferences in New York, Atlantic City, Pittsburg, Buffalo and Cleveland, succeeded not only in checking this movement but in enlisting national labor leaders in the work of bringing about a settlement. When the recent anthracite strike had aroused among the mine-workers such an enthusiastic sentiment toward sympathetic action in the bituminous field, the labor members of the Conciliation Committee, through conferences and field work in several States, joined in turning the current that led to that unanimous and notable declaration of the Indianapolis convention to stand by its contracts at all hazards.

All the educational work referred to is essential to another important function of the department, the promoting of what are known as "joint trade agreements" between associations of employers and associations of employees.

Such agreements now exist between twenty-five or more joint associations, and so successful have they proved that those best acquainted with their operations believe that it is along this line that "the way out" will eventually be found, and that as long as both organized capital and organized labor are permanent social factors the sooner they can be brought to recognize and deal with each other the better for all interests.

The work of the Conciliation Committee is unquestionably of great value and will increase in importance as its auxiliary committees are appointed in the large industrial centres to deal with local disturbances; yet the promotion of the "joint trade agreement" system, based upon the educational work outlined above, is probably the fundamental and most lasting work which can be done by the Industrial Department.

THE CONTENDING FORCES

The growing strength of labor organizations in the United States is something that employers and the public have come to recognize. Beginning as local unions in different cities, all of the different crafts, to the number of 120 or more, have effected national or international organizations, and 105 of these bodies have united in the American Federation of Labor. Local unions of the various trades of a single industry have also federated in local councils, such as those of the building trades, metal trades, marine trades, teamsters and clothing workers. There are also State federations and city central labor unions, composed of delegates from all crafts within their jurisdiction, and subordinate to the American Federation of Labor.

With this centralized organization of labor it becomes possible to put organizers in the field, in order to increase membership and multiply the number of local unions. The American Federation publishes a list of more than 1,000 salaried and unsalaried organizers throughout the country. It reports 1,608 local and "Federal" labor unions organized as feeders for existing and future national unions. The labor press has also had a remarkable growth, the national organizations usually having their official organs, supplemented by local papers, the entire number being nearly three hundred. Here is a well developed and powerful machine for agitation and co-operation, with increasing discipline over individuals and locals, all working to one purpose, "the increase of wages, the shortening of hours and the betterment of conditions."

The fact that membership in these labor organizations is variously estimated at only 10 to 15 per cent. of the total number of wage earners in the country should not be used to blind the observer to their influence. The great majority of unorganized wage earners are scattered in agriculture, in small towns and in domestic and personal service, but in several large concentrated industries, like the building trades and the textile mills, an organization often includes nearly all the workers, and in other industries, such as railroads, it includes nearly all the skilled workers, on whom the unskilled

depend for employment. It is also frequently the case that non-unionists are in full sympathy and act with the union, as when the 8,000 organized anthracite mine workers in 1900 took out on strike nearly 140,000 men.

It is natural, and, indeed, inevitable, that the rise of such an organized power in American industry should lead employers also to organize in order to meet it. The Stove Founders' National Defense Association and the American Newspaper Publishers' Association, for example, are bodies of employers who deal respectively with the international unions of molders and the international union of compositors. Where the competitive field is narrower, as in the building trades, we have local associations, such as the Master Carpenters', Master Plumbers' and Master Painters' associations, to deal with the district councils of the Carpenters', Plumbers' and Painters' unions, and so on.

While these unions of employers are organized to negotiate with labor unions, by no means are they non-resistant and submissive associations. They are also equipped both to withstand and to attack the unions. They prepare themselves for strikes and lockouts; they accumulate a treasury and enforce discipline and strive to enlist every employer in their line of business. They prepare to meet force with equal force. But before going to these extremes they resort to negotiation and bargaining with the representatives of the unions, making trade agreements for one or more years, with provisions for settling disputes by conference or arbitration.

This policy is very different from that of another class of employers' associations which deal with labor problems and have sprung up in the last few years for the purpose of defending themselves against the "tyrannical and unjust demands of unions." The largest employers' organization of this class is that of the National Association of Manufacturers, which until a year ago was largely devoted to matters of commerce. It became interested in the labor situation through its vigorous and successful opposition to the "eight hour" and "anti-injunction" bills in the last session of Congress. Its hostile attitude is clearly shown in the annual address of its President at New Orleans, in indorsing the statement that organized labor is "a system which seems to be hopelessly and irredeemably bad, a bar to all true progress, a danger to the state and a menace to civilization." He follows this by saying:

To my mind, this is not the proper time to talk conciliation. . . . Conciliation implies a yielding attitude and a recognition of the validity of destructive demands made by the opposing side. Since the principles and demands of organized labor are absolutely untenable to those believing in the individualistic social order, an attitude of conciliation would mean an attitude of compromise with regard to fundamental convictions. . . . Neither is it the time to talk arbitration or "joint agreements." To arbitrate questions of wages and hours is to introduce artificial methods of determining what they shall be, and an equitable arrangement as to either cannot be effected artificially. . . . The truth is that arbitration to employers means a surrender to the demands of labor as surely as yielding to them direct. Will the employers of this country allow the apparent peace, bought at the price of arbitration, lull them into a feeling of security? If they do, they will awaken some day to find their rights have been stolen while they slept. Arbitration is only putting off the day of reckoning. It means that more arbitrations are to follow, that the peace purchased in the first instance must be repurchased over and over again, and that the price paid will be higher each time. Does it not point to inevitable disaster? And is it not the course of wisdom to check an evil in its inception?

The Employers' Association of Dayton was organized for the specific purpose of "smashing the unions," and its President says: "The only way to settle a controversy with organized labor is to have absolutely no dealings with it." This organization has twenty or more branches, principally, if not entirely, in towns under 50,000 inhabitants, and claims to be rapidly growing.

The National Metal Trades Association is composed of several hundred employers. It formerly had a national agreement with the International Association of Machinists, but this was broken, and was followed by what is known as the Machinists' strike of 1901. The association deals with the machinists' organization in many localities, but, as a national organization, is more or less hostile to organized labor. The breaking of the contract in 1901 was deplored by the conservative element on both sides, and it is hoped by many that it will

eventually be renewed, but the National Metal Trades Association cannot now fairly be classed with either the National Founders' Association or the National Association of Manufacturers.

A national anti-boycott association of employers was organized in New York last November. It is a secret organization, having for its purpose the defense of any member who is boycotted. The original idea was to have a fund of \$500,000 ready to fight for any one of its members.

Numerous employers' associations are springing up in different localities, which, while they do not openly declare against organized labor, are largely in the control of employers who are more or less unfriendly.

Co-incident with this movement of employers is an organization styled the "National League of Independent Workmen of America," with headquarters at Elmira, N. Y., and locals in several places. This league is an organization of non-union men. It has recently been indorsed by the National Metal Trades Association.

Two of the above mentioned employers' associations, the National Association of Manufacturers and the National Metal Trades Association, publish periodicals, ably edited and largely devoted to attacks on organized labor. The Dayton organization has also announced the publication at an early date of an official organ.

The attitude of this extreme class of employers and employers' associations is quite similar to that of the extreme wing of the labor movement—the Socialists. Socialists denounce the unions and the leaders of the unions for entering into agreements with employers, just as extremists among employers denounce all movements looking toward dealing with unions. The Socialists affirm that the class struggle is irrepressible, and that the workingmen must fight their employers to the bitter end and make no compromise. There are also a number of labor organizations controlled by the Socialists which take similar ground respecting employers. The community of sentiment between the Socialists and this class of employers' associations appears plainly in an editorial in the Socialist *Daily People* (New York, April 7, 1903), commenting upon the foregoing extract from the annual address of the President of the National Manufacturers' Association. The Socialist editor says that the president is correct in holding that an "equitable arrangement" cannot be effected by the "artificial" method of conciliation or arbitration. An "equitable arrangement," he says, "can only be effected by allowing the class struggle full scope; and as a means to this end nothing is so much to be welcomed as the straight-out tactics" of that association. "Socialism," the editor concludes, "will triumph as a result."

If these two extreme wings of irreconcilables have their way the outcome will be either arbitrary control by labor or arbitrary control by capital. If all employers stood for intolerance and bigotry, or if all unions stood for tyrannical and unreasonable methods, the end would necessarily be a revolution. But the American people, as a whole, are not willing to enter upon such a permanent warfare of "capital" and "labor." They have enough practical sense to recognize conditions as they exist, and they have the courage and patience to deal with them. That there is a common ground where both employer and employee can meet with honor and satisfaction to each is amply proved by the success of existing national trade agreements as well as numerous local agreements. One of the national employers' associations now a party to a trade agreement was organized for the purpose of destroying the union, much like the new associations just mentioned, but after three or four years' experience it decided in favor of the greater advantages of a treaty with the union. Another employers' association was organized at the request of the union itself. Whatever their origin they all now recognize the right of organization on both sides and the advantages of "collective bargaining."

A Business Conference.

The Stove Manufacturers' Association and the Iron Molders of North America met in their sixteenth joint annual session last month and after a week's conference unanimously readopted the scale of the previous year. The Molders demanded a 10 per cent. increase, but, as is their practice, the two organizations took up the matter and settled it in a business manner.

JOINT TRADE AGREEMENTS

At three national conferences on conciliation and arbitration held under the auspices of the National Civic Federation resolutions were adopted recommending the system of "joint trade agreements" as the most satisfactory method of securing industrial peace. The conference of December, 1900, issued an address containing the following:

To the end that tranquillity in the industrial world may prevail, this Conference on Conciliation and Arbitration would make the following recommendations to the American people:

First—That employers and wage-earners should enter into annual or semi-annual agreements or contracts.

Second—That all industries in the United States should establish boards of conciliation within the several and varied interests, to which boards of conciliation all differences and disputes arising between employer and employee, if not readily adjusted between the immediate interests concerned, may be referred for settlement.

The National Committee appointed at the convention of 1900, in a statement of purpose, scope and method for the prevention of industrial disturbances, expressed this opinion:

Trade agreements between employers and workmen where established for a definite term of years have so fully demonstrated their value in maintaining industrial peace that they should be generally adopted.

The Committee of Thirty-Six appointed at the conference of December, 1901, also adopted a "statement of purpose," which declared—

That mutual agreements as to conditions under which labor shall be performed should be encouraged, and that when agreements are made, the terms thereof should be faithfully adhered to, both in letter and spirit, by both parties.

"Industrial peace," "harmony of capital and labor," "arbitration," "conciliation," all somewhat vague and indefinite terms, indicate in general a hope that strikes and lockouts may be avoided, but a "trade agreement" has come to indicate a definite and specific method, which, above all others, leads to the realization of this hope. The resolutions and policy of the National Civic Federation in this regard are not based merely on theoretical grounds, but are the result of experience in various industries through a period long enough to bring conviction to those who have participated in the work. It is not asserted that by means of trade agreements all the problems of employee and employer may be solved, nor even that a trade agreement can readily be framed and faithfully observed in any and every industry. Chauncey H. Castle, President of the Stove Founders' National Defense Association, speaking of twelve years' practical working under agreements with the Iron Molders' Union, said a year ago: "The results have been satisfactory beyond all former expectation of possibilities, and it is my impression, gathered from such experience, that a strong organization of workmen which is of age sufficient to have participated in many strikes and lockouts, which is officered by skillful and earnest men, who have at heart the best interests of their constituents, can and will hold out and maintain agreements made with employers or with organizations of employers." Unfortunately, several of the existing trade agreements were entered on only after prolonged strikes and lockouts as a means of preventing such disasters in the future. But there are indications that the lesson of these experiences is being observed in other industries, and that in the future there may be expected an increasing number of trade agreements without the preliminary test of a general strike or lockout.

A successful trade agreement system presupposes organization on both sides—a union of workmen and a union of employers. The agreement is made by the representatives of each side, and there can be no representation without organization. This does not necessarily mean that the two organizations shall be incorporated in order that their agreements may be enforced by the courts. Hitherto incorporation has been effected by very few, if any, of the associations, either of employers or workmen, that have successfully carried out trade agreements. More important than incorporation is strong organization on each side. There always will be found individual employers and individual workmen or unions that will break an agreement if they can. These may be held in check whenever they belong to

an organization which covers a large part of the industry. An agreement between an organization of employers and an organization of workmen is backed by the machinery and the power to enforce observance. In the thirteen years of the Iron Molders' and Stove Founders' agreements there has not been a contract violation nor a strike or lockout, except occasionally in a single shop, soon settled by the national officers of the two organizations. The bituminous coal operators testify to the integrity and even sternness of the district and national officers of the United Mine Workers in compelling local unions to live up to the annual interstate and district agreements. These officers, as in all labor unions, have power to fine and expel members and to revoke the charters of local bodies that interfere with the enforcement of trade contracts.

The longshoremen's organization in their contracts with the dock managers on the Great Lakes have occasionally been called upon to discipline their members for violations, and in the case of the Buffalo strike in 1900 the International President, after revoking the charter of the local union and supplying the places of a majority of the strikers with union men from other locals, filled the remaining places with non-union men. Mr. Samuel Mather, of the Dock Managers' Association, which includes such firms as the Standard Oil Company, the United States Steel Company, M. A. Hanna & Co., says regarding their agreements with the Longshoremen's Union:

I am very happy to be able to testify that since that continuous arrangement was inaugurated, about three years ago, our business has been conducted with very great advantage compared with what prevailed before. . . . If any occasion of dispute arises, it has not caused the work to terminate, but it has been first locally settled, if possible, and if occasion necessitated as gone up to the chief council. That has worked satisfactorily, as I say, for three years, and is a great improvement over the arrangement, or rather lack of arrangement, that existed before. I can testify a little to the improvement, for before that, as I said at first, each dock claimed different wages, frequently different terms, and it had to be fought out individually.

Every successful trade agreement contains an arbitration or adjustment clause which provides that where there is an alleged violation the representatives of the two parties shall be called in to decide and interpret the agreement. An essential part of this clause is the requirement that there shall be no strike nor lockout pending investigation and appeal. The officers of the union and the commissioner of the employers' association, who together investigate local troubles, are usually able to reach a decision without calling in a third party, and this unanimity goes far toward bringing united action of both associations in dealing with the offending member.

One of the permanent advantages of the trade agreement system is the influence which organized employers have in improving the organization of the workmen. As long as employers are hostile, or as long as an association of employers exists solely to fight the union, the latter is forced to put forward its fighting men. But when employers organize for conference and agreement, and are able to remove the long standing suspicions of the workmen, a change comes in union leadership. The officers become negotiators and bargainers—business men, like their employers. The Anthracite Coal Strike Commission, after five months' investigation of labor conditions in the coal regions, reached this conclusion on that point:

Experience shows that the more full the recognition given to a trade union the more business-like and responsible it becomes. Through dealing with business men in business matters its more intelligent, conservative and responsible members come to the front and in general control and direction of its affairs. If the energy of the employer is directed to discouragement and repression of the union he need not be surprised that the more radically inclined members are the ones most frequently heard.

This conclusion of the strike commission is nowhere more vividly emphasized than in the attitude of labor leaders regarding the coal strike itself. When large numbers of the rank and file had demanded a sympathetic strike of the bituminous miners, who were working under agreements with their employers, Mr. Henry White, secretary of the United Garment Workers of America, in addressing the miners' representatives, etc:

The desperate expedient of a general strike every

one would regard as sheer madness, because it would only intensify the distress, impose great suffering upon non-combatants without rendering any direct aid to those now involved. It would shake confidence in organized labor and create a feeling that it cannot be trusted with power; that the good it may do will be more than offset by the harm. Besides, the violation of agreements, which such an act implies, would be a blow at the integrity of the labor movement, from which it could not hope to recover. If the unions are to ignore agreements whenever it is to their advantage, the other side would be justified in doing likewise, and consequently they would have no binding force, and there would be no method by which understandings could be carried out and peace insured for stated periods. As agreements are the means by which employers are held to the terms conceded to the workers, the vitiating of the principle of agreements would be far more detrimental to the workers than to the employers.

Mr. John Mitchell, President of the Mine Workers' organization, in addressing the convention called to consider the petition for a sympathetic strike, took the same ground, and his advice prevailed. He said:

I have during all my life in the labor movement declared that contracts mutually made should during their life be kept inviolate, and while at times it may appear to the superficial observer or to those immediately concerned that advantage could be gained by setting agreements aside, such advantage, if gained, would in the very nature of things be temporary, and would ultimately result in disaster, because a disregard of contracts strikes at the very vitals of organized labor. The effect of such action would be to destroy confidence, to array in open hostility to our cause all forces of society, and to crystallize public sentiment in opposition to our movement.

The elevating effects of the agreement system upon the intelligence and character of the union leaders is clearly shown in a communication received from Mr. Francis L. Robbins, President of the Pittsburg Coal Company, in writing of the sixth annual joint convention of operators and mine workers of the interstate bituminous field, held at Indianapolis in February, 1903. He says:

Looking back over the recent convention, and comparing it with the conventions held at the inception of the movement, one is struck by the change in the personnel of the miners' delegates. Instead of seeing flannel shirts, hob-nail shoes, no vests and often no coats, you meet a body of men as well dressed as any body of men gathered from the middle class in any Eastern city. There has been a corresponding change in the intelligence, as shown in the faces of the delegates, and particularly perceptible to those who have argued scale questions before these meetings for the past fifteen years. It is a critical audience of practical workmen, who are quick to detect sophistry or misleading statements. It used to be that the discussion of questions before the convention was quite general, but it is now confined to a few leaders on both the operators' and miners' sides. The discussion is for the purpose of molding opinion, but the result is reached in the scale committee, which is composed of an equal number of operators and miners, subject, however, to the indorsement of the joint convention, which under the rules requires the unanimous indorsement of the operators and miners of each State represented. That these agreements are to be considered sacred and inviolate was settled in the miners' convention of last July, when by unanimous vote the miners declared against any sympathetic strike and in favor of a strict observance of contract agreements.

The heads of nearly every association of employers who have had experience in trade agreements will say of the union officers as Colonel Frederick Driscoll, Commissioner of the American Newspaper Publishers' Association, says of the typographical and pressmen's officers: "I have always found the International Presidents ever ready to co-operate with me in adjusting differences and settling trouble when it first arises. By means of this policy of mutual conciliation, it is gratifying to be able to state that since the establishment of our industrial bureau there has not been a single strike in any one of the offices of our members, covering a period of two years and eight months;" or as Mr. H. W. Hoyt, ex-President of the National Founders' Association, says of the iron molders: "The consequence has been that a more experienced, intelligent and tolerant body of men have been called into action, and that the rank and file of union men are rapidly becoming educated to the new method of dealing with their affairs individually and collectively, while the manufacturers have been educated to a more liberal and just consideration of the employees' interests." Mr. Hoyt also says, speaking to fellow employers:

As long as the wage-earner believes, or is taught to assume, that society is in league to rob him, as an individual, of some of the purchasing power of his

services, so long must society reckon with him in his collective capacity. The employer who elects to ignore this fact is often as much of a menace to the industrial peace as is the agitator who plays upon the prejudices and inflames the passions of the men he falsely serves. But the conditions are improving on both sides. The progressive manufacturer has learned that a union is not an altogether reprehensible evil in social economics, and readily admits that when organized wage-earners are dominated by strong, conservative men they will meet the employer half-way in arbitration.

When the two organizations have reached the point of mutual confidence they are prepared to take up the alleged abuses of labor unions and to deal with them effectively. The National Founders and the Iron Molders, in addition to their regular joint conferences, have recently instituted other conferences on questions of apprentices, restriction of output, limitation of a man's earning capacity, the flat minimum wage and other issues of a similar nature. While these conferences have not always led to practical results, yet, as stated by the president of the association, Mr. Frederick T. Towne, "they have been educational to both parties, and, as such, have been of great value. Progress has been slow, but none the less sure, and the disposition evidenced by both sides to give full consideration to the claims of the other and the openly expressed desire to reach a settlement on the many points of difference which will be mutually acceptable is the best assurance that the day is not far distant when many of these issues will be adjusted to the satisfaction of both organizations."

As an evidence of the solicitude shown by national officers of unions for the proper education of their members in the enforcement of agreements, the practice of the International Longshoremen's Union is significant. In order that every one of the 70,000 members of the association may be fully informed as to the terms of the joint agreement under which he is working, each is furnished with a copy of the agreement in book form, printed in his own language, and the rules of the organization require that he must have a copy with him at all times while at work, so that if a question arises he can consult his book of agreement and see what is expected of him.

The practical operations of the trade agreement systems disprove the criticism that they mean a surrender to unjust or uneconomic demands of labor. This criticism is based on a confusion of the term "arbitration" with that of "joint trade agreement." In the case of arbitration a third party, believed to be disinterested, is called in, and he is often tempted to "split the difference" without reference to the merits of the case, but as an easy way out of it. But joint trade agreements are almost never determined in this way. It is usually only where the public is forced to take a hand, as in the anthracite coal strike, or where the terms of the agreement are to be interpreted in case of its alleged violation that a third party is sometimes, but not often, called in. It is exactly because the third party inclines to compromise that the two parties to the agreement provide their own committees for investigation when a dispute arises, with the object of making a finding on its merits. In the case of the stove manufacturers their findings have frequently resulted in a decrease of wages instead of the increase demanded by the workmen, and on this account the employes have learned to be careful in repeating such demands.

The different trade agreement systems in the United States are, of course, not all identical in detail, though in essential points, such as provision for arbitration, all are alike. Some differences arise from the nature of the industry or the conditions of the unions. The Amalgamated Association of Iron and Steel Workers, the first organization to secure a national system, beginning in 1865, made its agreements with different associations of iron and steel manufacturers. When these were all incorporated in the Republic Iron and Steel Company and the United States Steel Corporation the Amalgamated Association continued to make separate agreements with the two great consolidated bodies.

The trade agreement is not new. As early as 1874 coal miners' unions and coal operators made agreements, which with the disruption of the unions were discontinued, but they were revived on a much larger scale in 1898, when the United Mine Workers secured its first agreement with the bituminous coal operators in the

four States, Ohio, Indiana, Illinois and Pennsylvania. The Iron Molders' Union entered into its first agreement with the Stove Founders' National Defense Association in 1891 and with the National Founders' Association in 1898. The longshoremen on the great lakes secured their first agreement with the dock managers in 1898.

Agreements are more widespread than is commonly known. The Lithographers' International Association has agreements with associations of employes, and the Glass Bottle Blowers' Association of the United States and the Flint Glass Workers' Union have for many years had agreements with associations of manufacturers. The great railroad brotherhoods have many agreements with individual railway systems.

Another class of agreements is that made by local unions guaranteed by the international union. This is the characteristic of the two agreements between the International Typographical Union and the Pressmen's Union on the one side and the National Publishers' Association on the other. The national agreement stipulates the terms on which the local agreements shall be made, and the two associations guarantee their enforcement. Similar to these are the agreements made by the United Garment Workers of America, the Boot and Shoe Workers' Union, the United Hatters of North America, the United Brewery Workers, and the International Cigar Makers' Union, in all of which, in return usually for the privilege of using the label, and for the obligation on the part of the union to keep the employer fully supplied with all the help required, it is provided that only union members shall be employed. The United Garment Workers in January, 1903, for the first time, made a written agreement with an association of employers, the National Wholesale Tailors' Association. The Garment Workers have also a system of conferences and verbal agreements with the National Clothiers' Association. The Amalgamated Association of Street Railway Employees is guarantor to agreements with companies entered upon by local unions, but recently in instances the National Association itself has made agreements directly. The International Association of Machinists enforces some 2,000 local agreements.

There are a large number of local agreements in the building trades in various cities, twenty-four unions in New York City having agreements with associations, as is the case with a large proportion of the unions in San Francisco, Chicago and other cities.

These are the leading agreement systems at present in operation in the United States, and the testimony of both employers and workmen indicates that in dealing with the problem of organized labor they have been remarkably successful, often far beyond the expectations of those who first entered upon them.

It is the conviction of members of the National Civic Federation that in placing trade agreements foremost in the plans for industrial peace and in basing these trade agreements on the educational work outlined in a preceding article, its programme is in the highest degree constructive rather than destructive. Instead of retarding the advance of organized capital and labor, this association joins with those who would reach a higher state of industrial civilization through a system of agreements which recognize the power and the rights of these great contending forces. Its members are not averse to criticising whatever is false and mistaken in the methods of each, but have the larger purpose of making both really responsible and worthy of mutual confidence.

Iron Workers' Referendum.

At the Toronto Convention of the Iron Molders' Union of Northern America last September a resolution was adopted instructing the incoming officers to refuse to allow their names to be used in connection with the National Civic Federation.

This resolution has been submitted to a referendum vote initiated by the Iron Molders' Conference Board of New York and Vicinity.

The vote has not yet been received from all the local unions, but it is learned that the returns at hand indicate that the Toronto resolution will be rescinded by a very large majority.

THE SYMPOSIUM ON INCORPORATION OF LABOR UNIONS.

With the apparently increasing power of trade unions it is to be expected that a demand should arise for their proportionate responsibility. The grounds of this demand vary, but they usually turn on different meanings of the word responsibility, as will be seen in our symposium on the incorporation of unions. Some of our contributors advocate incorporation in order to hold the unions responsible for violation of contracts; others do so with the intention of fixing responsibility on them for unlawful acts—known legally as "torts." The latter group is again to be sub-divided accordingly as the members have in mind the acts of different parties in varying conditions—some contemplating the acts of officers and members authorized by the union; others the acts of members unauthorized by the union; and still others the acts of sympathizers not members and not authorized by the union.

Certain of the legal contributors to the symposium hold that for illegal acts—"torts"—such as trespass, intimidation, boycott, violence, etc., authorized by the union or its officers, the unions can already, even though not incorporated, be held legally responsible to the extent of their treasuries, and also that each member of the union can be held legally responsible to the extent of his private estate. They also hold that the incorporation of the union would not relieve the individual member of legal responsibility for illegal acts. Incorporation "would not in the least protect individual leaders and members from being 'joined' as defendants in suits for damages for conspiracies and other 'torts.'" (Adams.) Incorporation "will not relieve the individual members of the corporation from responsibility likewise." (Bonaparte.) According to these views incorporation of a union would not increase its responsibility for illegal acts of its members.

One of the employers (Seitz), however, seems to hold that by incorporation the union could be held for illegal acts done by sympathizers in the prosecution of a strike. Other contributors hold exactly the opposite view, that incorporation would relieve the union of liability for damages inflicted in its interests (Eliot), and the only answer received from an incorporated union cites this as the main advantage gained by incorporation. (Grossman.) Extending responsibility of a corporation to cover the unauthorized acts either of members or non-members does not seem to be advocated by the legal writers, and they hold that an unincorporated union would not be held in damages for the unlawful acts of members or non-members committed in sympathy with the union's cause, but without authorization from the union or its officers. This does not apply to the acts of officers themselves, since their acts are held to be those of the union. One employer (Miller) holds that what society and employers want is not damages from unions for injuries unlawfully inflicted, but restraint from committing these unlawful acts, and this, he says, can be had through the injunction.

The other kind of responsibility is for violation of contracts. Those who desire it hold that employers cannot enter on contracts with unions on fair terms, because, while the employer is financially and legally responsible, the union is only morally responsible. Here, again, two very different kinds of responsibility are in view. The one responsibility is for individual members, the other for joint action of all the members. One contributor (Seitz) seems to maintain that the union should be held financially liable for a violation of contract by a member who, for example, leaves his work without consent of his employer. This would seem to be a kind of responsibility which very few unions would care to assume, and it is a misapprehension of the whole nature of a union agreement with employers. By such an agreement the union would become a contractor to farm out labor. Certain unions, such as the Garment Workers and the Longshoremen, agree to furnish what labor is required by the employer, but they relieve themselves of the usual responsibility of a contractor by a proviso that the employer may hire non-members if the union cannot supply the force required. But this class of union contracts is exceptional. Union agreements are not contracts to furnish labor; each laborer makes his own labor contract directly with his employer. The union agreement is simply an understanding by which the parties represented agree to make

similar contracts respecting hours, wages and work. The employer enforces his side of the agreement through his right to discharge the workman, and the union enforces its side by its right to strike. One employer (Miller) fears that should the unions thus become contractors to farm out labor, as do the Chinese companies, their greatly increased power would be productive of more harm than good, and would not tend to improve the character of the working man; and, on the other hand, if they should not become contractors for labor their responsibility could be easily evaded, even though they were incorporated.

Other contributors hold the customary view that the union should be held responsible only for the joint action of its members, such as a stoppage of work by a strike, or the support of a member who violates his agreement. Here the question arises, Would incorporation of unions lessen the number of strikes in violation of agreements not to strike? Answering this in the affirmative, several writers refer to the probable added feeling of responsibility on the part of leaders and members which would come through incorporation. Others, replying in the negative, point out the very small funds in the union treasuries. (Stainsby.) But more generally it is held that incorporation is not necessary in order to promote the observance of contracts. Several union representatives assert that unions do not violate their agreements and that only employers do. Others do not go so far. One employer, a prominent member of the National Founders and the Stove Founders' Association (Pfahler) argues that where employers free themselves of sentimental opposition to trade unions and then deal with their agents on a business basis, the unions are in a better position to be held accountable. Other contributors (Hanna, Brooks) strongly urge that the trade agreement is the proper substitute for incorporation. A statistician (Weber) asserts that nearly all violations occur in the field of agreements with individual employers, and that there have been very few violations of trade agreements made between associations of employers and associations of workmen. Certain union representatives admit the lack of discipline within some unions, but hold that all are gradually being educated to higher standards and that this education will be the more rapid as employers show a greater willingness to make and observe agreements.

Supposing it is not necessary to have incorporation in order to compel unions to abide by their contracts, the converse proposition is presented by a union representative (White), who contends that unions, even if incorporated, cannot secure damages from employers who violate their contracts with the unions. Referring to the experience of the Garment Workers, who have brought suits on bonds given by employers, he argues that the employer can raise in defense the plea of duress, since he was compelled, in view of the alternative of seeing his business ruined, to agree to the terms laid down by the unions. On the other hand, a representative of another branch of the clothing industry (Grossman), whose union is incorporated, states that the legality of their contracts has been sustained in the courts; but a former counsel of this union (Hourwich) thinks the union would have fared better if it had given up its corporate organization.

The objections raised to incorporation by the unions are, of course, first of all, the liability of exposing their treasuries to attack. But if the trend of legal answers is correct, as stated, these treasuries are already liable for unlawful acts even without incorporation, and there is even an intimation (Adams) that they are also liable for violations of contract.

If this be true the danger which the unions may meet through incorporation must be found elsewhere. Several writers (Frankenheimer, Sullivan, Williams, Weber) contend that the real danger lies in the internal affairs of the union. The union must have almost arbitrary control over its members in the way of discipline, and were it incorporated its constitution and by-laws would be subject to judicial inquiry, and it would be continually in court on suits brought by dissatisfied or expelled members, oftentimes instigated by employers. It is pointed out (Frankenheimer) that the New York Stock Exchange, under advice of the ablest legal talent, avoids incorporation in order that it may enforce complete discipline upon its members without interference by the courts.

Some of the writers (Perkins, Williams) fear also that judicial interference would operate against the democratic character of union management, would do away with the initiative and referendum and would make the directors and officers powerful and oligarchic. This result would stand in the way of growth in membership, which would be unfortunate both to the unions and to society. To incorporate the unions would drive them into politics and a crude form of Socialism. (Brooks.)

There is a curious contrast in the opinions regarding the attitude of the courts. The union spokesmen in general speak of the hostility of the courts to unions and their bias toward the employers, mentioning the interstate commerce and anti-trust laws as having been perverted from their original object to the injury of unions. Yet some of the employers speak of the whole machinery of justice in our State courts as paralyzed by fear of the union vote. Not more law is needed, they say, but more honest and courageous enforcement of the laws as they are (Miller), and incorporation would not add responsibility, since prosecuting attorneys, judges and juries would, through their sympathies with the unions, temper the laws even more than now.

Other contributors, while not emphasizing the attitude of the courts toward either side, believe that their edious processes place the unions at a disadvantage. At present there is a disparity between the treasuries of unions and corporations, the latter having an unlimited all on high-priced legal counsel.

Of those who answer the question as to the need of special law for the incorporation of unions, the legal writers all agree that such a law is necessary, but there is only one writer (Hourwich) who offers suggestions as to its necessary provisions. One union officer (Clark) would have the benefit funds separated from the other funds, and would have the union exempt from responsibility for the personal acts of members in violation of law. It is pointed out (Cooke) that the federal law providing for the incorporation of unions exempts members as well as the corporation itself from liability for "the acts of members or others in violation of law." Other contributors think it would be difficult and even impossible to frame a special law making the union responsible for authorized acts and not responsible for unauthorized acts.

Compulsory incorporation is rejected by all who refer to it, one legal writer (Mayer) pointing out that it could be equivalent to prohibiting workmen from enjoying the liberty of the citizen, the freedom of contract, and the right of free assembly.

Finally, several union representatives dismiss the whole subject by boldly asserting that, whatever the arguments presented, the unions *will not* incorporate. His assertion is hardly vital, since it is conceivable that special law could be so framed that the unions would choose incorporation as an alternative to increasingly drastic decisions against them when not incorporated. One writer (Lloyd) suggests that under a compulsory arbitration law, like those of New Zealand and Australia, the unions would find a decided advantage in incorporation.

The symposium as a whole seems to indicate that the customary arguments for and against incorporation of unions are invalid, since they turn on the responsibility of unions for unlawful acts. Incorporation would not increase or decrease their responsibility in this respect. Both the treasury of the union and the property of the members are liable in damages on account of such acts whether the union is incorporated or unincorporated. In this respect the symposium is a valuable contribution to the subject.

As regards the enforcement of contracts, the opinions of the symposium are at wide variance, both from the standpoint of the union in enforcing the agreement upon employers and from the standpoint of employers in forcing the agreement upon the workmen. That existing laws governing corporations are not adapted to the needs of labor unions is generally admitted in the suggestion that special laws should be enacted for the purpose. These suggestions and propositions will be submitted to the meeting of the Executive Committee of the National Civic Federation in May for such action as may be decided upon in the way of further investigation and reports by a special committee on labor legislation.

THE ANTHRACITE COAL STRIKE AWARD.

BY JOHN R. COMMONS.

The report and award of the Anthracite Coal Strike Commission is generally recognized as the most important document ever issued on the modern labor question. It is such, not because it grants an advance in wages or a reduction in hours, but because it frames a constitution for the government of a great industry.

A distinction must be made between the "report" of the Commission and its "award." The report includes a general discussion of the rights and duties of unions and employers, but the award deals with the situation at hand. They are in contrast at three or four points. The report states that the evidence does not show that wages are lower than those in the bituminous field or in other occupations requiring equal skill and training, yet the award grants an increase of 10 to 20 per cent. in wages. The report argues against recognition of the existing union, but the award grants it actual recognition. The report declines to recommend a trade agreement, but the award is itself a trade agreement. The report rejects compulsory arbitration, but the award is the result of practically compulsory arbitration. On one large issue—the rights of the non-union workmen—the report and award coincide.

Although the commission stated in its report that the question of recognition of the United Mine Workers of America was not within its jurisdiction, yet it was confronted by a definite situation. It was required to provide a settlement that would prevent strikes for three years, but its own existence would terminate at once. It had no authority to create a permanent government commission to interpret the award whenever disputed; neither could it leave the enforcement of the award to the employer through the ordinary process of dismissing the workman who disobeys, because the union had already taken from the employer his unlimited right to dismiss. Here was a new self-governing power in the anthracite industry, and this power had to be enlisted to hold its members to the award. The United Mine Workers of America had divided the anthracite field into three districts. With these divisions in view the award says:

If there shall be a division of the whole region into three districts, in each of which there shall exist an organization representing a majority of the mine workers of such districts, one of said board of conciliation shall be appointed by each of said organizations, and three other persons shall be appointed by the operators, the operators in each of said districts appointing one person.

This is a common-sense recognition of conditions as they exist. The board of conciliation, thus constituted with equal representation of the mine workers' union and the operators, is the permanent court to which all disagreements respecting the award, and all disagreements not covered by the award, must be appealed. This board is similar to those already created in the voluntary systems of trade agreements, and is such as would necessarily have been created in the anthracite field had the operators recognized the union of their own accord. Should the board be unable to decide an appeal, it must be referred to an umpire, appointed, at the request of the board, by the Federal Judge designated in the award. Meanwhile there must be no lockout or strike. These are the usual provisions in the voluntary systems, with the single exception that the choice of umpire is prescribed in advance. It is evidently expected that when this board of conciliation gets into working order very few, if any, points will need to be referred to the umpire.

In the section of the award relating to the non-union workmen the commission deals with the most difficult problem of the whole situation. It says:

No person shall be refused employment, or in any way discriminated against on account of membership or non-membership in any labor organization; and there shall be no discrimination against or interference with any employee who is not a member of any labor organization by members of such organization.

By the award the non-unionists get the advance in pay granted to the unionists, many of them without the expense and suffering of the strike, and without contributing to support the union. This, as recognized by the Commission, provokes hostility toward them. But by the award the non-unionists can look only to the employer for protection, since he has no represent-

ative on the board of conciliation. The employer can protect him only while at work, and only the law, as the Commission recognizes when condemning the boycott, can protect him outside the colliery. On the other hand, the employer is forbidden to discriminate in his favor as against the unionist. On the whole, the entire award in no way diminishes the strength of the union, and if the union adopts certain recommendations of the report the award will serve to strengthen it.

These recommendations are for a diminished voice of boys in the affairs of the locals, a two-thirds vote instead of a majority, and vote by ballot instead of show of hands in ordering a strike. If the award is faithfully obeyed and the parties thereby learn to deal with each other through the board of conciliation, and if the above recommendations are adopted by the union, the hope of the Commission will be well grounded that a voluntary trade agreement will in due time commend itself to both sides.

THE CHICAGO BOARD OF ARBITRATION.

(Concluded from Page 9.)

By resolutions passed by the Teamsters' Joint Council March 27 this law was thenceforth to be rigidly observed. It is that no local union shall go on a sympathetic strike unless with the approval of two-thirds of the local unions in the vicinity of the point at which the strike is in progress, or of two-thirds of a joint council where one is organized. An individual member violating this law is to have charges preferred against him, and a local union is to be subjected to discipline by the National Executive Board. President Young declared: "We shall show no mercy to any teamster or any local that dares to go on a sympathetic strike which we have not indorsed. This constant striking has got to cease." Four unions the same night asked the council for aid in strikes, but were all refused. They were offered the services of the teamsters to procure arbitration, which they were constrained to accept. When one of the four cases came up, President Young asked the committee if the union would arbitrate. The reply was: "We have nothing to arbitrate." A teamster called out: "Then we have nothing to do with you." The committee thereupon changed front and expressed a desire to meet the employers through President Young, who consented to act for them. The Council had determined that the teamsters' unions were not to be used to win strikes unless all honorable means to bring about a settlement had been exhausted.

Albert Young, president of the Teamsters' National Union of America, the recognized leader of the workers' representative on the board, is at the head of nearly 35,000 organized teamsters in Chicago. He is cool, calm and shrewd. Himself a coal team driver in Chicago for years, he was active in forming a union of coal teamsters about three years ago. The move proved speedily successful. To-day in Chicago every teamster, from the garbage man to the undertaker's driver is in a union. As a worker and organizer Mr. Young is tireless.

The seven business men members of the Chicago Board of Arbitration are of stable reputation in the commercial world. Among the more prominent is Harry G. Selfridge, the chairman. For many years he has been manager of the retail house of Marshall Field & Co. Mr. Selfridge is popular with both the millionaire and the workingman, and through his personality and wide acquaintance has been instrumental in bringing the right men together, man fashion, to promote peace. The fact that busy men will give their time to the patient adjudication of labor contests is fresh proof of the love of fair play and the readiness to strive for the public good always characteristic of notable elements in American Society.

Chicago feels the better for the existence of the board. The ideas on which it is founded, the steps by which it proceeds in bringing about peace, are attracting attention in every city in the United States. The labors of the board have served to prove that the judicial quality is to be found among men in every walk of life. The board in its various branches, of which, as has been said, there are at present seven, is capable of quickly taking hold of any form of the work for which it was organized. That is to say, Chicago is responding with heart and brain to the most recent demand for a public duty.

JURISDICTIONAL ARBITRATION IN THE NEW YORK UNITED BOARD OF BUILDING TRADES.

Among the obstacles that block the road to an understanding between employers and employed few are more vexatious to either side than "jurisdictional quarrels" between unions. The employer may wish to give work to union workmen, and union workmen may want his work, but that is not enough. Another question yet arises: To which union shall the work be allotted? The various subdivisions of an industry being each organized separately, the dividing line is in many cases not easy to draw. In this matter there has been difficulty in probably every city in this country. How the problem is being worked out in practice is shown in one notable instance by the experience of the New York United Board of Building Trades.

For six years prior to March 11, 1902, the unions of the New York building trades were divided into two unfriendly consolidated bodies. The one sent representatives to the Board of Delegates, the other to the Building Trades Council. United in the Board were the trades engaged mostly in outside work—the house-smiths, brownstone cutters, granite cutters, derrickmen, sheet metal workers, bricklayers and their laborers, cement layers and their laborers, and the encaustic tile layers; in the Council were mostly inside trades—painters and decorators, carpenters and joiners, electrical workers, marble mosaic workers, plasterers, steam and hot water fitters.

The employing builder suffered acutely from this division. In the morning he might arrange as to wages and workday with the business agents of the outside men only to have the agents of the inside men make conflicting demands in the afternoon. The unions claimed overlapping jurisdictions, each agent energetically seeking work for his own members. The employer who had decided to give work only to union men not infrequently failed to hire them, as two unions, each claiming a part of his work, would strike against each other. As a consequence, the Board might bar the Council's men or the Council declare war on the Board. Cessations of work by large forces of workmen through these causes were of almost weekly occurrence. Construction on some of the largest of New York's great modern buildings came to a standstill, not because of lockouts, low wages, employment of non-union men, not even on a question of unionism, but through the counter-claims of clashing unions.

Attempts to merge Council and Board in one central body failed time and again. But the point was finally reached at which the unions having the largest interests saw that more was to be gained in combination than by wrenching work from the other unions through striking. The members in general wanted regular work. All the unions were therefore brought to unite in a new central body, the United Board of Building Trades.

The new Board, whose delegates had settled into earnestness through experience, adopted a strictly practical constitution. This accords two votes to each union, which may be represented by five business agents, no credentials being received for less than three months, and a two-thirds vote being required to admit a union to membership. By its rules the Board excludes alleged unions not formed in good faith or lacking financial means—the strays or petty schemers of the political or industrial field.

Discipline in routine matters is exacting. Delegates directed to serve as committeemen failing to report at an appointed place thirty minutes after the stated time are fined \$3; delegates must be present at every meeting of the Board or be fined \$1; at Board sessions indecorum brings a fine of \$1 and disobedience of the Chair \$3. Fines must be paid within eight days. Delegates refusing to comply with the procedure prescribed in the constitution for grievances are suspended for six months.

The unions may independently arrange their differences with employers, but when a grievance is brought before the Board by a delegate it becomes the affair of the Board. A controversy is investigated by a committee of all the delegates from the unions having men on the work concerned, and a two-thirds vote is required to call a strike. If the committee fails to agree, the union aggrieved may bring the subject before the Board, where a majority of the delegates having men on the work may bring the question to an issue. If these delegates refuse to do so, the aggrieved delegate may select as a committeeman a delegate having men on the work, a delegate refusing to strike may select another, and with the president of the Board as a third member the committee reinvestigates the complaint, its decision being final. No grievance is received from unions not associated with the Board, nor can they be tendered any assistance. By these various means the causes of many strikes in years past are avoided.

The Board refuses indiscriminate support to unions asking for advances in wages or for a shorter workday. To acquire the right of assistance in such cases a union must submit to the Board its demands in writing a month previous to the proposed change. A committee of five deliberates on the question and makes its recommendations to the Board, which then considers it at a special meeting. For the coming 1st of May the steam fitters, marble cutters and iron shipbuilders are asking an increase of fifty cents a day, and the plasterers a scale of \$5.50 a day. Last year the bricklayers' helpers made demands which the Board refused to indorse until the increase asked for was cut down one-half.

But the highly important labors of the Board are an outcome of the conditions which gave it life. It requires unions in controversy to submit their disputes to Board arbitration. Each party in a difference appoints three Board members as arbitrators, a seventh being selected

as umpire by the six, or, they failing, by the Board itself. A union disregarding the decision of an arbitration committee is suspended, to be reinstated only on payment of not less than \$100 and abiding by the decision. Pending an arbitration the other allied unions remain neutral, thus protecting alike the interests of the builders, the owners of buildings under construction and the public.

The first result of this arbitration law was largely to prevent disputes between unions, the delegates ceasing their aggressions on one another's jurisdictions. Differences that arose despite individual delegate diplomacy passed, not under the might of the stronger, but under the law of careful investigation and impartial judgment supervised by the entire body. In all, fifteen cases have been adjusted in the year since the formation of the Board.

Only one case went to the length of requiring the Board of Delegates itself to elect the umpire. In a dispute between the steam fitters and the plumbers over the work of pneumatic tubing the two committees of three were unable to agree on the seventh member. The Board chose a hoisting engineer. His opinion was that pneumatic tubing was not essentially either steam fitting or plumbing, but by reason of priority of action in unionizing the work and of effective action in obtaining higher wages he awarded labor of this character to the steam fitters.

Of the other cases, the following serve to show the victories of the system of arbitration as well as the intricacies that on occasions nearly baffle the arbitrators:

April 9, 1902—Mosaic and Encaustic Tile Layers (300 members) vs. Marble and Enamel Mosaic Workers (200 members). The question was as to which union should lay a certain ceramic tile. The Marble and Enamel Mosaic Workers claimed it, as the piece measured less than a square inch. But the committee unanimously awarded it to their opponents. The defeated union refused to abide by the decision. It was suspended. It issued a protest to the Board and a printed appeal to all associations in the building trades. Not until January 14, 1903, was this union readmitted to membership. It re-entered on paying its fine of \$100 and on accepting the restrictions imposed by the Board, such as working only with union helpers recognized by the Mosaic Helpers.

April 18—Laborers' Protective Union (12,000 members) vs. Cement and Asphalt Laborers (700 members). Disputed jurisdiction. Decision: All rough concreting on brick arches and cellars to be done by the first named union; all rough concreting on patent arches to be done by the last named. A feature of this contested case is that the Laborers' Protective Union is composed of laborers for the bricklayers, whose union is not connected with the United Board.

May 2—Electrical Workers (2,000 members) vs. Gas and Electrical Fixtures Union (300 members). Infringement. The latter claimed as their work the

electric wires running through gas fixtures. The umpire decided in favor of the electric workers. As a consequence the defeated union decided to give up its separate organization, and it was merged in that of the electric workers.

May 16—Portable Hoisting Engineers (250 members) vs. Safety Association of Steam Engineers (700 members). By the award in this case the first named union was granted the exclusive right to the hoisting of all brick, mortar, iron and other material not already controlled by the United Derricks. To the Safety Association was given the right to all engineering work in connection with excavations.

July 28—Electrical Workers vs. Elevator Constructors (1,000 members). Question of electric wiring in elevators. The Elevator Constructors, refusing to arbitrate, were suspended. The Otis Company being interested, the question was submitted to one of its representatives as unofficial umpire. He awarded the wiring to the electricians, whereupon the Elevator Constructors fought and obtained re-admission to the Board.

August 6—Plain and Ornamental Plasterers (3,000 members) vs. Cement Masons (600 members). Decision: All cement base run for sanitary purposes that do not exceed six inches over the floor is to go to the cement masons; all run after the floor is laid, to the plasterers.

September 19—Electrical Workers vs. Portable Hoisting Engineers. Decision: The installation and running of electric pumps awarded to electrical workers. By this verdict the board recognized the introduction of improved machinery and ranged itself against the restriction of output through the employment of unnecessary workmen on machines of inferior efficiency. One electrician may tend three or even four electric pumps that replace steam pumps each managed by an engineer.

October 1—Salamander Association of Boiler and Pipe Coverers (500 members) vs. Housesmiths and Bridgemen's union (4,000 members). The decision in this case was so complicated and heavily weighted with technicalities that the Board recommended that the Salamander Association become a branch of the Housesmiths and Bridgemen's Union, with the right to labor at any branch of the trade. The Metallic Lathers were placed in the same relationship.

January 14—Amalgamated Sheet Metal Workers (1,000 members) vs. Housesmiths and Bridgemen's Union. Question: Which union shall handle ten-gauge iron, in metal furnishings? This inquiry is still pending, requiring much investigation.

January 16—Plain and Ornamental Plasterers vs. Salamander Association. Decision: The disputed work belonged to the plasterers, but if they were unable to employ workmen the Salamander Association might do it.

January 23—Plumbers and Gasfitters (4,000 members) vs. Steam and Hot Water Fitters. Question: Which union should run the pipes for the ice making machinery used in hotels and apartment houses? The

committees failed to agree. The Board awarded the work to the steamfitters. There was menace of a large strike over this question, and suspension on large buildings actually occurred, but the plumbers yielded in the end.

Two cases are in the hands of arbitrators at present, in the one the machinists and housesmiths being involved, and in the other the elevator constructors and the portable engineers. Meantime, all the workmen concerned are at their employment, the parties to the dispute maintaining a status quo and the other unions remaining neutral. March 23 a constitutional amendment was adopted by which arbitration decisions must be reached within two weeks.

Questions other than those relating to arbitration or to the routine of the agents' work are constantly arising. One of the most important in the Board's first year has been the old rivalry between the two general organizations of carpenters. Previous to the formation of the Board a large construction company had decided to employ only members of the National Brotherhood of Carpenters. This body as well as the Amalgamated Society of Carpenters and Joiners came into the new United Board of Building Trades. A committee which essayed to settle the differences between the two unions failed. The Board decided to remain neutral. The Brotherhood, dissatisfied, withdrew from the Board in July. The Board, seeking peace with the employers, permits Brotherhood carpenters to work with the allied unions, but in case the Brotherhood attempts to discriminate against Amalgamated men the Board shuts out Brotherhood members. This is the only jurisdictional fight now on. The American Federation of Labor is attempting to arrange the long-standing differences between the two carpenters' unions, having at the New Orleans convention in November last arranged for their arbitration. The vital cause of continued separation, it is said, lies in the benefit features of the two bodies. The Amalgamated Society, associated with the great English Society, possesses proportionately a large treasury and pays high benefits.

On April 7 the Brotherhood began in New York a general strike against the Amalgamated Society.

While the Brotherhood of Carpenters was represented in the Board it asked indorsement of a demand for an increase in wages from \$4 to \$4.50 a day, to take effect July 1, 1902. The Board deemed the notice to the employers insufficient. The Brotherhood, accepting the decision, changed the date to September 1. This period was approved by the Board, and the increase took place.

A constitutional question arose in the Board on the interpretation of the phrase "other buildings" as applied to the East River bridges. The Board decided that the work might go to the organization first on the spot to obtain it. Here much depends on the activity of the various business agents, who thus become employment mediators.

Smaller matters are brought before the Board. A

housesmith complained that an electrician was punching a hole in an iron beam that belonged to him. Before the business agent reached the scene of action the hole was punched.

The Board makes no agreements with employing builders. It favors agreements between each union and its own employers. There is no general employers' association in the building trades. Each branch, however, has its association. The Board advocates arbitration in each branch between association and union.

Inasmuch as the United Board meets three times a week, with an obligatory attendance of members, and the interests of each trade are jealously guarded by its own agents, the possibilities of trade quarrels, of interruptions in work, of irresponsible action by individual agents, of oppressions of employers are reduced to a minimum. The delegates of to-day declare that they are animated by a desire for peace with employers and for a mutual confidence productive of a high standard of honor on the part of all interests engaged in the building trades.

The REVIEW is under obligations to Secretary William H. Farley of the United Board for the data herewith produced.

The unions at present represented in the Board are:

Amalgamated Painters and Decorators.
Amalgamated Society of Carpenters and Joiners.
Amalgamated Sheet Metal Workers.
Building Material Drivers.
Brotherhood of Painters and Decorators.
Brick and Building Material Handlers.
Boilermakers and Iron Ship Builders.
Cement Masons' Union, No. 1.
Cement and Asphalt Laborers.
Dock Builders.
Electrical Workers, No. 3.
Elevator Constructors.
Granite Cutters' Union.
Housesmiths and Bridgemen's Union.
House Shorers and Movers' Union.
International Association of Machinists.
Journeyman Stone Cutters' Association.
Laborers' Protective Union.
Marble Cutters.
Marble Polishers and Rubbers' Union.
Marble Cutters' Helpers.
Metallic Lathers' Union.
Marble and Enamel Mosaic Workers.
Mosaic Helpers.

that the maintenance of the standard rate of commissions and of the established rules of the trade are due to the untrammelled power of suspension and expulsion vested in the Governing Committee of the exchange. Members have been suspended or expelled for "splitting" commissions, "bucketing" orders, "fraudulent" sales and other acts deemed detrimental to the best trade interests of the association, and although frequent appeals have been made to the courts in such cases the invariable answer has been that the court cannot interfere if the proceedings are regular. It stands to reason that a powerful and wealthy trade organization—such as the Stock Exchange—which commands the best legal talent, would not persist in remaining an unincorporated association unless it derived great advantage therefrom.

The fundamental advantage of an unincorporated association over a corporation is the greater power the former possesses over its members and over the management of its internal affairs, and its greater freedom from interference by the courts in these matters.

I take it that from the trade union standpoint the object desired is untrammelled disciplinary power over its members and freedom from interference in its internal affairs by the courts. This can undoubtedly be attained more completely in the form of a voluntary association than in that of a corporation, and for this reason, if for no other, trade unions should oppose incorporation.

Were a trade union to be incorporated, every member who may have been disciplined, suspended or expelled would appeal to the courts for redress, and the organization would be constantly embroiled in litigation of this kind. Moreover sinister influences might be brought to bear upon a sufficiently strong minority to justify interference by the courts in the internal affairs of the association, if incorporated, which would not be justified, however strong the minority, if the association were a voluntary one.

As to the legal liability of a trade union for the authorized acts of its members or officers, there is no difference, under the laws of the State of New York, in this respect between a voluntary association and a corporation. The former can sue and be sued as well as the latter.

In my opinion, considering the whole question from the standpoint of the labor unions—and this is the only practical point of view to take of the question—incorporation of trade unions is inexpedient. It will weaken the power of the association over its members and over its management of its internal affairs, and will increase greatly the power of the courts over the association in all its affairs. Let the trade unions follow the example of the New York Stock Exchange—which is essentially a trade union and a very successful one—and persist in maintaining their present voluntary and unincorporated organization.

(New York Times, March 4.)

THE CIVIC FEDERATION OF NEW YORK CITY. Lewis Nixon Elected Chairman of the Newly Organized Body.

List of Members in the Three Sections Representing the Public, The Employers, and the Workmen.

The Civic Federation of New York City was organized yesterday afternoon in the rooms of the New York Board of Trade and Transportation, 203 Broadway. This is the local committee of the National Civic Federation, organized in the pursuance of the policy of establishing local federations which was adopted at the last meeting of the National body.

Oscar S. Straus, Vice-President of the National Civic Federation and President New York Board of Trade and Transportation, called the meeting to order and spoke briefly of the aims of the Civic Federation and of the benefits to be derived from the arbitration of questions arising out of the competition and strife between capital and labor.

"The stronger each side grows," he said, "and the stronger the leaders they have, the fewer will be the occasions for conflict."

Ralph M. Easley, Secretary of the National Civic Federation, then read the names of those composing each of the three sections of the committee. "Each of the persons named," he said, "had given his word to serve in the work."

The following is a portion of the list of acceptants:

ON THE PART OF EMPLOYERS.

John B. McDonald, contractor Rapid Transit Subway.
S. P. McConnell, President the George A. Fuller Company.
Frederick D. Underwood, President Erie Railroad.
Lewis Nixon, President United States Shipbuilding Company.
Charles T. Wills, builder.
W. C. Brown, Vice President New York Central Railroad.
William H. Baldwin, Jr., President Long Island Railroad.
S. R. Callaway, President American Locomotive Works.
Otto M. Elditz, President Master Mason Builders.
Robert C. Ogden, John Wanamaker & Co.
John H. Starin, President Starin Transportation Line.
William Brewster, Brewster Carriage Manufacturing Company.
Peter Doelger, Jr., Peter Doelger Brewing Company.
Louis B. Schram, India Wharf Brewing Company.
Hosmer B. Parsons, Vice President Wells, Fargo & Co.
R. W. Nelson, President American Type Founders' Company.
J. W. Dunn, President International Steam Pump Company.
William D. Baldwin, President Otis Elevator Company.
Charles A. Moore, Manning, Maxwell & Moore.
Edward R. Ladew, Fayerweather & Ladew.
Marcus M. Marks, President National Clothiers' Association.
Edward Payson Call, President New York Publishers' Association.
J. Alexander Hayden, Chairman Association of Interior Decorators and Cabinetmakers.
William H. Parsons, Parsons Paper Company.
Charles Wilhelms, President United States Lithographers' Association.
Walter L. Pierce, Lidgerwood Manufacturing Company.
Frank B. Chambers, Manager Rogers, Peet & Co.
J. W. Williams, Williams Drop Forgings Company, Brooklyn.
William Green, Chairman New York Typothetae.
Warner Leeds, Vice President American Tin Plate Company.
A. Beverly Smith, Secretary United States Lithographers' Association, East.

ON THE PART OF THE PUBLIC.

Cornelius N. Bliss, Bliss, Fabyan & Co.
August Belmont, banker.
The Right Rev. Henry C. Potter, Bishop Protestant Episcopal Church.
The Right Rev. John M. Farley, Archbishop Roman Catholic Church.
Oscar Straus, President New York Board of Trade and Transportation.
Spencer Trask, banker.
James Speyer, banker.
Emerson McMillin, banker.
John J. McCook, lawyer.
Albert Shaw, editor Review of Reviews.
The Rev. Dr. William S. Rainsford, rector St. George's Church.
Nicholas Murray Butler, President Columbia University.
V. Everit Macy, capitalist.
The Rev. Dr. Thomas R. Slicer, pastor All Souls' Church.
R. Watson Glider, editor Century Magazine.
The Rev. John P. Peters, rector St. Michael's Church.
Felix Adler, professor, Columbia University.
Hamilton Holt, editor Independent.
John R. Commons, statistician.
Walter H. Page, editor World's Work.
Lyman Abbott, editor Outlook.
George Gunton, President Institute of Social Economics.
H. H. Cammann, real estate.
T. F. Woodcock, editor Wall Street Journal.
H. C. Watson, editor Dun's Review.
John B. Clark, professor, Columbia University.
Charles Sprague Smith, director People's Institute.

ON THE PART OF WAGE EARNERS.

William H. Farley, Mosaic and Encaustic Tile Layers.
Edward Kelly, Electrical Workers.
M. A. McConville, Engineers' Subway Conference Board.
M. J. Ford, Machinists.
R. Pattison, Sheet Metal Workers.
Henry White, Garment Workers.
William Davis, Brotherhood of Locomotive Engineers.
Samuel B. Donnelly, Typographical Union.
J. J. Pallas, Patternmakers, Subway Conference Board.
W. A. Perrine, Molders.
John J. Donovan, Plasterers.
G. H. Warner, Machinists.
Marsden G. Scott, President Typographical Union No. 6.
George E. Pepper, President Amalgamated Association Street Railway Employees, New York Division.
James Daly, Dock Builders.
Edward A. Moffett, editor Bricklayer and Mason.
James P. Archibald, Brotherhood Painters and Decorators.
Robert Thompson, Brotherhood of Carpenters.
William Fyfe, Amalgamated Carpenters.
W. Long, Lithographers.
John Phillips, Hatters.
A. J. Boulton, Stereotypers.
Francis J. McKay, Boilermakers and Iron Shipbuilders.
Herman Robinson, Retail Clerks.
J. B. Wilson, Machinists.
James Roach, Steam and Hot Water Fitters.
Robert E. Neldig, Housesmiths.
James P. Holland, Stationary Firemen.
Charles Delaney, Granite Cutters.
J. W. Sullivan, Typographical Union.

Nearly all of those named were present. When the names of the committee had been read the following permanent officers were elected:

Chairman—Lewis Nixon.
First Vice-Chairman—William H. Farley.
Second Vice-Chairman—Col. John J. McCook.
Treasurer—Cornelius N. Bliss.
Secretary—Samuel B. Donnelly.

In taking the chair Mr. Nixon said in part:

"The acceptance of a place on this committee means to each of you an obligation the demands of which cannot be ignored, and under which active service cannot be shirked. The meeting a few weeks ago of a parent

Federation brought to the public a realization of the possibilities of its work. The active participation here to-day of leaders in all lines of human endeavor is an earnest of the sincerity of the movement and an evidence that they will use every effort to extend its sphere of usefulness. The make-up of this committee can be taken to mean that no misuse of the committee can or will be permitted for selfish advancement of the claims of either side."

Mr. White offered resolutions, which were adopted, authorizing the chairman to appoint an executive committee of fifteen, five representing each group, who with the officers of the Council, and the resident members of the National Executive Committee, ex-officio, shall direct the general affairs of the Civic Federation of New York City; also to appoint a committee composed of three members from each group to draw up by-laws.

(New York Herald, March 15, 1903.)

SHIPYARD STRIKE ENDS.

First Triumph of the New York Civic Federation.

One Union Had Decided to Fine Any of Its Strikers for Disorder About the Affected Yards.

The threatened general strike in all the yards, which would have tied up the entire shipbuilding trade in New York and vicinity and have driven a great part of the shipbuilding trade permanently from the metropolitan district, was averted yesterday. After a conference lasting for over four hours between representatives of the New York Metal Trades Association, the New York Civic Federation, and the Marine Trades Council, an agreement was reached by which all sympathetic strikes of all the trades in the Townsend-Downey yard and the sympathetic strike of boilermakers in the other shipbuilding yards are to be declared off, pending negotiations for a settlement of the original strike of the boilermakers in the Townsend-Downey yards, which started all the trouble.

The Marine Trades Council will hold a special meeting to-morrow night, and is expected to ratify this agreement and declare the sympathetic strikes off. A joint committee of employers and employees will meet probably about Wednesday, when it is expected the entire trouble will be ended and the original strike, which was to force the discharge of two non-union men, declared off.

The New York Civic Federation, which has only recently been organized, has been working for several days in trying to bring about the result that was reached yesterday. This is considered a signal victory for the Federation, as it is the first local labor trouble it has had anything to do with.

It looked for a while yesterday forenoon as if all negotiations for a settlement were off. The same committee which met the Executive Committee of the Metal Trades Association Friday called on the Executive Committee early in the day, and found it apparently against meeting the representatives of the strikers. The committee finally agreed to meet the representatives of the men. The latter, however, objected, and it looked again as if no conference could take place. The conference was finally arranged, and began at 2:30 P. M., in the office of the Civic Federation, 281 Fourth Avenue.

The following attended the conference:

For the Metal Trades Association: Charles H. Smith, President; H. N. Covell, Vice-President; Wallace Downey, W. H. Atkinson and M. K. Bowman.

For the employers' department of the Civic Federation: Lewis Nixon, Marcus M. Marks, Emerson McMillin and A. B. Smith.

For the employees' department of the Civic Federation: Henry White, Garment Workers; W. H. Farley, Secretary of Building Trades, and Edward Kelly, Electrical Workers; Edward A. Moffett, editor "Bricklayer and Mason," and J. W. Sullivan, Typographical Union No. 6.

For the Marine Trades Council: Francis J. McKay, Brotherhood of Boilermakers and Iron Shipbuilders; Richard Pattison, Amalgamated Sheet Metal Workers; Samuel B. Donnelly, Secretary New York Civic Federation, and John R. Commons, Assistant Secretary National Civic Federation.

The conference was secret and the telephone was kept busy while it was going on. The labor delegates, it was said, had to communicate with the representatives of the respective unions involved. At about 8:30 P. M. the meeting broke up and everybody looked happy.

"It's nearly all settled," said one of the labor men as he went out. An hour later a statement was given out by Ralph M. Easley, of the National Civic Federation, in which he said, after stating the names of those who attended the conference:

"After a session of four hours an agreement was reached whereby the sympathetic strike of all the boilermakers and helpers in all the shops of members of the New York Metal Trades Association and of the carpenters, joiners, painters, machinists, blacksmiths, and patternmakers who went out of the yards of the Townsend-Downey Shipbuilding Company in sympathy on March 10, is to be declared off on or before March 18. It was agreed that a joint conference between committees of the New York Metal Trades Association and the Marine Trades Council is to be held for the purpose of discussing the original strike of the boilermakers and shipbuilders at the Townsend-Downey yards and to consider other matters relating to trade conditions.

"The original misunderstanding was caused by the misinterpretation of the meaning of letters which passed between the two organizations. When this misunderstanding was cleared away during the conference, better relations were at once established, which led up to the settlement as stated. Mr. McKay of the Marine Trades Council and the committee of the Metal Trades Association, who had up to that time been unwilling to meet for the discussion of the differences, were congratulated by the members of the Civic Federation on the spirit of conservatism they had shown and their willingness to reach an honorable settlement."

TEN CENTS

THE MOSELY INDUSTRIAL COMMISSION

ITS REPORT AN EXTRAORDINARY COLLECTION OF TESTIMONY RELATIVE TO THE SUPREMACY
OF THE UNITED STATES

The reports of the Mosely Commission, issued in London a month ago, have not by far obtained the attention they deserve in this country. They form in fact a highly important contribution to the works of the day that treat of America's working people and its resources and industrial accomplishments. The writers of the reports know their several subjects intimately, they have made their comparisons at first hand from actual observation, and their verdict leaves no room for doubt as to their intention to give the truth as they see it.

As is known, the members made their trip in the United States as guests of Mr. Mosely, an English capitalist. On their arrival here the Civic Federation undertook the task of planning their itinerary, of appointing a committee to attend them in their travels, and of seeing to it that they should be introduced in the various cities under favorable auspices. While some of the members also made independent trips, the entire party visited Niagara, Buffalo, Cleveland, Chicago, Dayton, Pittsburg, Philadelphia, Washington and New York. In this city they attended the

Civic Federation's conference of last December, contributing to its success by their impromptu discussions, fortified as they were by fresh facts from their experience at home and in this country.

The members arrived from England in small parties at the ports of Philadelphia, New York, Boston, and Quebec, on or about Nov. 8, and, assembling at Niagara Falls, Nov. 12, for the most part journeyed afterward in a body. As they sailed for England Dec. 19-25, their general observations were necessarily hurried.

Upper Row (from left to right)—Messrs. Lapping, Dyson, Wilkie, Hornidge, MacDonald.
In Front—Mr. Samuel B. Donnelly (Typographical Union), New York.

Second Row—Messrs. Coffey, Cummings, Powerman, Taylor, Deller, Holmslaw, Steadman, Wilkinson, Sutherland (Central News Agency), Flynn.

Third Row—Messrs. Walls, Crawford, Ham, Ashton, Marks (President National Association of Clothiers, United States), Mosely, Jones, Kelly, Cox, Barnes.

(Photographed at Niagara Falls Power Plant.)

The members of the commission were:

Thos. Ashton, Amalgamated Association of Operative Cotton Spinners;
G. N. Barnes, Amalgamated Society of Engineers;
C. W. Bowerman, London Society of Compositors;
W. Coffey, London Consolidated Society of Journeymen Bookbinders;
Jas. Cox, Associated Iron and Steel Workers of Great Britain;
H. Crawford, General Union of Operative Carpenters and Joiners;
D. C. Cummings, United Society of Boiler Makers and Iron Shipbuilders;
M. Delier, National Association of Operative Plasterers;
Wm. Dyson, Amalgamated Society of Paper Makers;
T. A. Flynn, Amalgamated Society of Tailors;
Harry Ham, National Amalgamated Furnishing Trades Association;
R. Holmshaw, Sheffield Cutlery Council;
W. B. Hornidge, National Union of Boot and Shoe Operatives;
Thos. Jones, representing the Midland Counties Trades Federation;
G. D. Kelley, Amalgamated Society of Lithographic Printers of Great Britain and Ireland;
G. J. Lapping, Amalgamated Society of Leather Workers;
Jas. MacDonald, London Trades Council;
J. Maddison, Friendly Society of Ironfounders of Great Britain and Ireland;
W. C. Steadman, Trades Union Parliamentary Committee;
H. R. Taylor, Operative Bricklayers' Society;
P. Walls, National Federation of Blastfurnacemen;
Alex. Wilkie, Associated Shipwrights' Society;
W. H. Wilkinson, Northern Counties Amalgamated Associations of Weavers.

All the members (with one exception) sent in reports, each writing after his own plan, especially of matters relating to his occupation, but at the close of his report giving replies to a schedule of forty-one questions, some of them subdivided, relating to labor and other economic conditions in the United States as compared with those of England.

Taking up first the questions of immediate interest to the wage-earners, we have the following:

WAGES IN AMERICA FAR HIGHER.

"How does the value of the American wage in your trade compare with that of the English, cost of living being taken into account?"

To this, the main question among wage-workers, all the members of the commission give a verdict for America. The carpenter says money wages are "very much higher," but as to the value, "everything averages about equal, except rent and clothes." But he also says the thrifty man can certainly save more in America than in England; he "found there was plenty of employment and generally much better paid." He compares in a table the wages and expenses of an unmarried joiner or carpenter in New York with those of one in London. His result is: "The American can save nearly double, though he works four hours less per week." Other members are all more unqualifiedly of the opinion that, in their respective trades, the American working man is the better paid. The blast furnace man says: "The American is fully 25 per cent. better off." The iron founder: "Undoubtedly the American has a great deal the best of the English worker." The machinist: "About 15 or 20 per cent. higher on the base line and proportionately more on the maximum." The boilermaker: "Average wages of time-workers are 75 to 100 per cent. higher in our trade than at home, and I am inclined to the opinion that, notwithstanding the greater cost of outer clothing, housing accommodation, and fuel, a careful, sober, steady man could, whilst keeping himself efficiently provided for, save more in America than in England, foodstuffs being certainly cheaper." The cutlery worker: "Wages are generally about 100 per cent. higher;" . . . "it will cost the American wage-earner 50 per cent. more to live than the English worker." The cotton spinner thinks the advantage of the American over the English spinner in wages is 40 per cent. The weaver, speaking for his trade, says 10 to 15 per cent.; the tailor, 50 per cent.; the bricklayer, 50 per cent.; the plasterer, 25 per cent.; the lithographer, 60 per cent.; the bookbinder, 20 per cent. Mr. Steadman, representing the Parliamentary Committee of the Trade Union Congress, says "50 per cent. better off."

LITTLE DIFFERENCE IN HOURS.

"What are the hours of work in your trade in America, and how do they compare with the hours in England?"

The replies to this question will bring some surprise to those Americans who have accepted the prevalent idea that English trade unionists have a uniform eight hour day. In the building trades ten hours seems to be the rule in England, while in this country, in the larger cities at least, it is eight. When the greater proportion of the union men in the building trades here is remembered, the comparison becomes the more favorable to America. The plasterer of the commission reports: "The hours worked in America are some two hours per day less than those worked in England." The replies of the bricklayer and carpenter refer to the eight-hour day in American cities without stating the length of their own work-day. The bookbinder says: "The hours worked in our trade are generally slightly in excess of the usual practice here. There are, however, some important exceptions, where the eight-hour day is established." The steel worker reports of wages and hours: "There are all the elements of a fair comparison in the sheet trade, tinplate trade, and puddling. In both countries there are standard tonnage rates governing this class of work, and a comparison works out at practically two, two-and-a-half, and three times respectively in favor of the American workman. Very elaborate wages lists and scales are annually agreed to between the employers' and the workmen's associations, copies of which I have. Sheet and tin-bar mills work eight-hour shifts, with a limited output, and at some places puddlers also work eight-hour shifts; in most other departments the double shift is worked similar to this country." Elsewhere he notes that in the tin plate mills the workers "can often get their limited turns work out in seven hours." The leather worker reports: "The hours worked in the States leather industries are for the most part 60 per week; in a few cases, 59 hours. In one firm, where over 75 per cent. of the employees were on piecework, I believe the hours were 54, but this was an exception. In this country the hours vary from 54 to 57 per week, and in some cases they work 58½." The tailor reports for his trade that hours in America and England are "very similar." "Counting the Saturday half holiday our hours are shorter." The compositor reports: "The hours are somewhat longer than those prevailing in this country." He gives no figures for comparison. The printer in America would have derived more satisfaction from his report had he done so, keeping in mind the fact of the far greater relative number of compositors in the daily newspaper branch here, in which perhaps 1,000 have a seven-hour day and fully 10,000 eight hours, while in the book and job branch the eight-hour day has been attained in several cities, while in all the rest the nine-hour day is uniform. The lithographer reports the workday "the same practically." Of the other trades, the blast furnace man reports the ratio as twelve in America to eight and ten in England; the iron founder, nine and a half to nine; the machinist nine and a half to eight and a half; the boilermaker and the shipwright, ten to eight and the cutler, the tube worker, the spinner, the weaver, the boot and shoe worker, and the furniture worker ten to nine. To make the comparison of the national workdays complete one must observe that the Mosely Commission did not represent the cigar makers, of whom 33,000 in this country have the eight-hour day; nor the coal miners, whose union, with more than 250,000 men, has of recent years shortened the workday here to eight hours; nor silver or copper miners, whose thousands in America work eight hours or less; nor the railroad men, who in general have shorter hours than in England and outnumber the English railway servants as ten to one.

THE SAME SPEED.

"Does the American workman do more, or less in an hour, on average, than the English workman?"

To this the steel worker replies: "Much has been made of the statement that men are so rushed in American works that only the young and strong can stand the strain, and that only for a short time. No statement could be wider of the actual truth." He also

reports "greater productiveness with less physical exertion, consequent upon greater adaptability of machinery and labor-saving appliances." The blast furnace man says: "We failed to find ocular evidence of the American workman running at high pressure." The boilermaker writes: "As for working hard, it was generally admitted that it was impossible for men to work harder than the piecework shipyard worker does in Great Britain." "As to whether more work is done in an hour than in England, I unhesitatingly say no." The shipwright: "By those from whom we made inquiries, many of whom have worked both in this country and America, we are assured that they worked no harder in the American shipyards than they do in the British yards." The cutlery worker: "The American does not actually work harder than the English workman in an hour." The cotton spinner: "Very little difference between them when they are employed under similar conditions." "Generally speaking, American workmen attend to a larger number of machines than is the case in England, but taking quantity and quality of work into consideration I don't think they work any harder than the English workman." The weaver: "I do not think there is much difference." But he says further: "The output in the American cotton mills is less per loom per week than in the English mills, though shorter hours are worked in the English mills." The tailor: "In the best New York and Chicago firms a journeyman tailor earns £6 in less time and in a more easy and leisurely manner than a London tailor earns £3." "The labor performed by the American is less than in England, as a consequence of improved and selected machinery. The machine is the recognized working man of America." The plasterer: "Plasterers complain that the rushing, at least in New York, is done chiefly by 'new chums' from this country, Scotsmen being the greatest delinquents in this respect. I failed to observe the great rush at work that I expected to see. Upon inquiring at one job the time taken to complete the work and comparing same with a similar amount in this country, I found that in many cases which came under my personal observation—when at work at the trade—we did equally as much." The carpenter: "I thought now was my opportunity to ask from a man who had worked on both sides of the Atlantic whether the men worked harder in America than in the old country? His answer was emphatic: 'The machinery does the work here; I never worked so hard in all my life as I did in London.'" And he says further: "In every shop I went into the great majority of the men had worked in the old country, and their opinion was that they did not work so hard in America as in England." The furniture worker remarks of a billiard table factory: "The men in this shop, although they kept moving, did not in any way appear to distress themselves." The paper maker reports: "The working at high pressure and the everlasting hustle ascribed to American workshops is a myth and exists in imagination only." The compositor: "In the offices I visited the men appeared to be working comfortably, and there was a distinct absence of the 'hustle' which one had expected to find without having to hunt for it." Of a daily newspaper office he writes: "I failed to find any trace of the feverish 'bustle' which unconsciously I had been led to expect—in fact, I have seen men at home working at much higher pressure upon a precisely similar class of work." And further: "American printers compared with English, as a general rule do not appear to work harder, if as hard." The bookbinder: "I failed to find any grounds, so far as our trade is concerned, for the assertion that the men work so much harder. Everywhere men were working fairly, with little show of that feverish haste that one would expect to find after reading some statements that have been spread abroad. I am quite sure that the average rate of work in London is quite as rapid as that prevailing in New York."

The bricklayer throws light on charges made by the London "Times" against the British bricklayers: "In attempting to make comparisons as to output, it must be borne in mind that this cannot be done equitably without taking into consideration the whole of the factors which govern the amount of work produced, the chief of them being the class of materials used, the conditions under which the work is per-

formed, and the class and stability of the work produced. In other words, if the average number of bricks laid per day by the workman in America is compared with the average number of bricks laid per day by the workman in this country, the conditions not being equal, the comparison would be an unfair one, as the class of work produced in the two countries is not at all comparable—because, as I pointed out before, the proportion of faced work in America is infinitesimal compared with that produced in this country; and I am quite certain that if the American workman was called on to produce the same class of work under the same conditions as regards the number of angles, the bond, perpends, flushing and grouting up, selection of material and clean finish, he would not be able to produce more than the British workman, if as much. That the average output (in bulk) of the bricklayer in America is greater than the average output here is in my opinion correct, but to compare two such entirely different classes of work would be obviously unfair and misleading. . . . After considering the whole of the facts and circumstances relative to the question, I am convinced that the bricklayer here gives better value for the low wage he receives than the bricklayer in America gives for a much higher wage. The one gives a smaller quantity but better quality for a low wage; the other gives a larger quantity of lower quality for a much higher wage."

AMERICAN SANITARY CONDITIONS SUPERIOR.

"Are the needs of the workers in the matter of sanitation, ventilation, and general comfort in the factory better met in America than in England?"

On this question there is some difference of opinion, but on the whole the balance is much in favor of America. The machinist reports: "The needs of the works in the matters mentioned are no better provided for in America than in England; in fact, I should say that, excepting the workshops which have been mentioned as being well found, the American workshops, so far as I could see, are dirtier, more unsanitary, and more congested than the ordinary English workshop. But it should be said for the American workshops that they are generally well heated by hot-air blasts or piping in winter time, and cooled by fan or other arrangement in summer. This is a matter almost entirely ignored in this country." The spinner says: "From what I saw, I should say they are not." And the weaver: "Not so good in America as in cotton mills in England." The boot and shoe worker: "In some instances the condition in relation to baths, etc., are superior to anything I have seen in England; otherwise there are factories and conditions that would not be tolerated in any industrial centre in England." The leather worker replies: "Not as a general rule." The plasterer reports: "Undoubtedly the building operatives in both America and Canada work under conditions much inferior to those at home or even the rest of the American workmen." The foregoing constitutes the body of opinion unfavorable to America in this respect. Nearly all the other delegates are more or less strongly of the opinion that workshop conditions are better in America than in England. Several of them simply answer the question by "yes." The blast furnace man says: "Generally." The iron founder: "So far as my experience goes, they are better cared for in America." The steel worker: "Yes, on the whole." The boilermaker: "Sanitary comfort, ventilation, and general comfort are to a great many employers something worthy of attention, and wherever possible work is inclosed in shops sufficiently heated to permit of the men working in their shirt sleeves in comfort in midwinter." The cutlery worker says: "In the cutlery trade the workshops, as a rule, are better fitted up than the generality of Sheffield workshops." "Speaking generally the comfort of the worker is more considered there than here." The tailor reports: "We have nothing in England to equal in ventilation, sanitation, light and general comfort the best which obtains in America. Ironmolder and clerk leave the works spick and span. A grimy workman is a strange spectacle in American cities." The carpenter's statement is: "The workshops generally are

kept much cleaner, and the appliances for warming the shops in the winter make it much better for the workman and the work than in England." The bookbinder remarks: "The shops in the States were noticeable for the frequency with which they were swept and the precaution taken to prevent accumulation of dust and litter." The compositor reports: "In the case of the larger, and what may be termed special, factories—such as at Dayton—the sanitation, ventilation, and general comfort of the workers were far ahead of anything I have seen in this country; and in the majority of the offices I visited the general conditions were decidedly good, the method and style of building throughout the States assisting greatly so far as light and air are concerned—two most important and essential features so far as the worker in the printing trade is concerned." . . . "I was greatly struck with the cleanliness of the printing offices I visited, as well as with their light and lofty appearance."

AMERICAN OPPORTUNITIES INCOMPARABLY THE BEST.

"Speaking generally, are there greater opportunities for the working man to rise in America than in England?"

Every one of the members of the commission answers this question in the affirmative, several of them with emphasis and replying at length.

"Do you consider the general conditions of life of the workman better in America than in England?"

A. MOSELY.

The majority, considering mainly the economic situation, reply yes; several, however, apparently on patriotic grounds, or from a more general view of society, reply no.

Thus, on the whole, in matters of which the members may be taken as best qualified to judge—matters of prime importance to the wage-earner,—wages, the workday, the rate of speed exacted, workshop conditions, opportunities, and general social conditions,—the Mosely Commission tells the American workingmen they are much better off than the English workmen, and consequently than those of any other nation.

ADVANTAGES OF AMERICAN CAPITAL.

A Land of Great Resources, the Latest and Best Machinery, and Almost Perfect Methods.

The delegates saw wonders in American natural resources, and to some extent in American machinery and administrative methods. But of the quality of the product they have occasionally criticism.

The blast furnace man writes: The Americans "have immense mineral resources, unparalleled waterways, and railway communication." The steel worker: "To give some idea of the American natural resources I

may state a fact in connection with this work. The coal mine—a drift mine—is in close proximity to the works. The seam is about five feet thick, and the coal is conveyed to the works by electric traction, and also round the works, being emptied into the various furnace coal bins from these overhead trucks. The total cost of mining, royalty, conveying coal from mine to furnace, including everything, is 75 cents per ton, and I was assured that within a few months they would be producing a ton of finished tin plates with one ton of coal consumed. I would like, in concluding, to indicate three general features of American industry to which I largely attribute their success. 1. The enormous mineral deposits, waterways, and cheap transit. 2. The control or ownership by the manufacturer (through combination or direct purchase) of the raw materials—ore, lime, coal and coke. 3. The marvelous engineering ingenuity and initiative, remarkable through every phase of manufacture in its reduction of manual labor, combined with great productiveness."

The machinist says: "Americans have, of course, natural and other advantages over us. They have great resources of raw material and a protected home market for manufactures. But, on the other hand, we have social advantages over Americans in the form of good roads, trained hands, and all the accumulated accessories of civilization which are relatively lacking in newer communities."

The cutler's report contains this passage: "The natural advantages of America and the uses made of them play no small part in developing the industrial life of the country. Natural oil and gas, which are gotten so easily and cheaply from the earth, must of necessity give a great impetus to certain industries. At the Homestead steel works all the heating of the ingots for the rolling mills is done by the aid of natural gas, not one ounce of coal being used for this purpose. The usual sidings full of coal wagons that one is so familiar with at works of this description are absent. The saving of labor in stoking alone must be enormous. The splendid waterways are of great use and provide a cheap and ready means of conveyance both inland and to the ocean. Thus the iron ore is brought from Lake Superior by the great lake steamers, which on their return take back a cargo of coal. At Buffalo this use of the waterways is illustrated by the way the corn is brought down and coal taken back from lake to lake."

The delegate from the Midland Counties Trades Federation offers as an opinion: "As to how America is able to pay higher wages and yet successfully compete with us in the markets of the world, I believe it is due to the vast natural resources she has in mines and minerals, improved methods of mining, the utilization of her vast waterways, and the superior railways she possesses."

The leather worker observes: "We cannot compete with any certainty of success with the States for the markets of the world, as with their great natural advantages they can undersell us."

The compositor speaks of the "huge natural resources at the command" of Americans.

The bookbinder mentions America's "enormous natural resources." "For instance, the iron ore is found in immense quantities, cropping up on the surface, and is obtainable by the simplest outlay for labor, no mining being necessary. Again, splendid waterways are ready to the hand of the enterprising promoters of the industry for which they can be best utilized. These and many other advantages, provided by the bountiful hand of nature, enable the American manufacturer to produce cheaply and in large quantities at lower rates than is possible in countries where heavy cost of mining, construction of roads and canals, add so materially to the charges upon output."

The lithographer thus expresses his views on this point: "The prosperity of the United States is attributed to various causes. Those which, in my opinion, operate most strongly in effecting it, are, in the first place, the splendid natural resources of the country, rich in mineral and natural productiveness; in the second place, the superior education given to the American youth, which better fits him for the industrial contest into which he must enter; and in the third place, the advantage of better machinery of the newest

and most approved type. The number of labor-saving appliances in use for almost everything is perfectly astounding."

Of the machinery in use in America, the machinist's report naturally has most to say. Following are passages: "Here lies the distinctive feature of American industry, viz., the hankering after the latest machinery and best methods of working, which pervade American industrialism. In some respects American workshops are better equipped than English. They are equipped with a greater variety of special tools made for special work of repetition character, and on the other hand there is less range in regard to the size of tools in the workshops, and, therefore, because of that I think greater production. . . . American engineers have been able to do things wholesale; in fact, they have been pressed to do so, and this has led to the adoption of plans for the manipulation of parts in a wholesale way by operating upon a number at a time, and by all sorts of little contrivances for securing uniformity and dispatch. The American manager is more enterprising and more ready to introduce the latest and best of everything. . . . The spirit of enterprise is more general in America, and, as I have previously stated, there is an all-round readiness to accept new ideas, and a general hankering for machinery and appliances."

The steel worker, after remarking that the best equipped works for manufacturing plates, rails, sheets, wire rods, etc., "are far ahead of us in the outlay of their plants and their productiveness," says: "There is no doubt that the leading mills of American manufacture are far ahead of our own best mills in their arrangement and outputs. I have seen nothing like it in this country—either in the matter of output or labor-saving appliances. To the average British iron and steel workers the output of these mills will be incredible. . . . Another important item in successful mill work is the facilities of 'feeding' the mills. Such a thing as waiting for the furnace is unknown, and the charging and drawing appliances are perfect. . . . It is almost impossible to overstate the arrangements of these mills, the perfect dispatch with which everything is done, and the incredibly small amount of manual labor required in comparison with our own mills. Everything is straight and continuous. Not only are the mills well fed, but such is the space and equipment that there is no hitch or block through to the finish. From leaving the furnace there is no handling of material until the rail is slipped on the straightener's block."

The shipwright says the greater output of the American "is due to the organization of the works, the class of work, and the superior tools and machinery placed at his disposal."

The spinner writes on this point: "Comparing American factories with English factories and their equipment for production, I can only say, so far as the cotton spinning industry is concerned, that the only advantage that I found to obtain in the American mills is that a much better material is used than is the case for the same counts of yarn in the English mills. I don't think the American cotton mills are better managed than the English mills." And the weaver: "The keen appreciation which Americans have for up-to-date machinery, and the readiness with which they adopt labor-saving machinery of any kind, is remarkable." And the tailor: "No money is spared in the equipment of American factories; the best only is good enough. Production is correspondingly increased and insured." The carpenter and joiner found "machines doing what we entirely do by hand labor at home." "Employers in America vie with each other to get the latest up-to-date machines."

The furniture worker ventures this opinion: "If employers having the means would speculate in laying down as perfect plants as those I saw in Grand Rapids I am sure we should hear less about American competition."

The paper maker has this: "When we leave the natural resources and go in the mill, there is no doubt we are also lagging behind, the mechanical equipment of the American mills being superior to the great majority of the mills in this country, not only in the machinery actually necessary for paper manufacture, but for labor-saving also. The idea of the American is,

from the time the raw material enters the mill, to get as much of it made into the finished article in the shortest possible time, everything necessary in its manufacture being regulated by this desire."

The lithographer reports: "Assuming that our employers will provide machinery and other necessary means of production equal to those in use in America, this country need have no cause for alarm with respect to a transference of trade to the United States, so far as applies to lithography."

On the general question as to whether factories in America are better equipped for production than in England, all the replies were in the affirmative, except four, two being "no" and two "perhaps."

AMERICAN PRODUCTS NOT SUPERIOR.

As to quality of American product, while there is praise, especially for the output of some of the metal trades, considerable fault is found. Following are extracts from the reports:

The machinist: "From the point of view of quality I feel quite sure that British goods have nothing to fear, providing that British designers are encouraged." "The factories certainly do not turn out better work. Qualitatively the work is inferior to British work. This is marked in industries other than engineering, notably in cutlery and newspapers. It is also true to some extent as applied to the engineering industry, not so far as fitting parts are concerned, these being largely standardized, but in the dispensing with all polish and finish not absolutely necessary, and in skimpiness of material, which is also softer and less durable than that used in Great Britain."

The boiler maker: "The life of an American locomotive is not to be compared with the life of a British one. . . . Summing the whole matter up, American locomotives compared with our own are extremely ugly, and of inferior work and finish, and although it may be argued that they serve their purpose, yet I should be sorry to see such an age of utility in our country that would sacrifice all beauty and finish, believing, as I do, that if anything is worth doing at all it is worth doing well."

The shipwright: "So far as could be ascertained from interviews with representative workmen and others of reliable authority, the work carried on is not so substantial as with us, and there does not appear to be the same regard for completeness as there is in the yards of this country. The vital distinction between the yards of this country and America appears to be that the work in the British shipyards not only has a better finish but is of a much more stable and enduring character."

The spinner: "The system of working in the spinning and carding departments of the American mills is much different from what obtains in the English mills, and my opinion is that the advantage is on the side of the English system, both in respect to the cost and the quality of production—all other things being equal."

The boot and shoe worker: "Machinery in the boot trade is run at a greater speed with advantage in relation to quantity, but loss of quality in production." The leather worker: "I am of the opinion that taking the goods all round we produce a better article than they do in the States."

The plasterer found many faults in American methods in building. In Washington, even in the room in which the President received the delegates, "the plastered walls were very poorly finished, although it is only fair to say that some decent work was to be found in the Congress House and Library." In New York: "The work was both good and bad; the latter could not be worse, but here let it be said that the good was on a par with our best. I rejoiced to find at least some real plastering, it being the first seen during my stay, either in Canada or the States."

The furniture worker reports: "I spent an hour or two in inspecting the furniture department of stores, but found (with one exception) nothing half so perfect in design or workmanship as is to be found in a second-class shop in Tottenham Court Road, London."

The paper maker: "In many cases the quality and finish of the manufactured article is inferior to English make."

SOCIOLOGICAL QUERIES.

The common school education of the youth of America elicited general admiration from the delegates. The tailor thus begins his report: "It is a humiliating fact that the children of our industrial population receive an education very much inferior to that given to the children of the United States of America. Not only is education in that country free, but it is continued up to the age of eighteen, and in some States even university education is free. So far as American law is concerned, every boy and girl starts life with at least a high school education." "With us the poverty of parents means compulsory ignorance of the children."

One of the forty-one set questions was: "Does gambling or horse racing, etc., enter as largely into the life of the American as of the English working man?" To this three of the delegates gave no answer, sixteen say, some of them emphatically, it does not, while three say it does. The cutler avows: "It is undoubtedly true that there is less drinking among American workmen than we find among our own." "There is a remarkable absence of bad language in the streets." The Midland Counties delegate says: "There is not so much horse racing as here, and, so far as one could see, but little gambling, except at some clubs one could read about at times."

Several delegates are of the opinion that whereas in England the introduction of machinery moves the employer to reduce wages, in America it brings an increase. None of them found evidence that increased output through efficiency at piecework was a forerunner of wage reduction. Most of them believe the American employer is ready to increase wages with increased output. They also heard that suggestions for improvements are welcomed and rewarded, while American employers are in general more accessible than are the English. The building trades delegates and those of the cotton mills think the worker is thrown out of work before he grows old in their occupations, but the other representatives saw no evidences of the fact in their trades.

MR. MOSELY'S VIEWS.

The preface to the volume is written by Mr. Mosely. Following are noteworthy passages: "My personal conclusion is that the true born American is a better educated, better housed, better fed, better clothed, and more energetic man than his British brother, and infinitely more sober; as a natural consequence, he is more capable of using his brains as well as his hands. Many of the men, however, holding leading positions are either English or Scotch, and the American himself is justly proud of his British descent."

"One of the principal reasons why the American workman is better than the Britisher is that he has received a sounder and better education, whereby he has been more thoroughly fitted for the struggles of after life; and I believe all my delegates were themselves immensely impressed with the generally high standard of education in the United States—a standard it would be well for our own nation to copy as far as practicable." "Labor saving machinery is widely used everywhere and is encouraged by the unions and welcomed by the men, because experience has shown them that in reality machinery is their best friend."

"My own observations lead me to believe that the average American manufacturer runs his machinery at a much higher speed than is the usual practice in England—in other words, for 'all it is worth,' and the men ably second the employers' efforts in this direction. In England it has been the rule for generations past that as soon as a man earns beyond a certain amount of wages the price for his work is cut down; and he, finding that working harder or running his machine quicker (naturally a greater strain) brings in the long run no larger reward, slackens his efforts accordingly." "In many trades, a joint committee of employers and employes meet periodically to settle rates for piecework, by mutual consent, and if such an arrangement were adopted all round I am sure it would be found beneficial; and this is what is practically done in all American industries."

"Of course the true solution of the whole problem is profit-sharing in some shape or form, and it is to-

wards this goal that I feel both masters and men alike should turn their eyes."

"The United States is advancing by leaps and bounds. She is beginning to feel the beneficial effects of the education of her masses, and an enormous territory teeming with natural resources as yet but meagerly developed." "At the present time the home market of the United States is so fully occupied with its own developments that the export trade has as yet been comparatively little thought of; but as time goes on and the numerous factories that are being erected all over the country come into full bearing America is bound to become the keenest of competitors in the markets of the world." "That already she has her eye on the export trade is plain to every one except the wilfully blind; but at present she is only getting ready. When America wishes to export goods she intends to dictate freights, which she could not do if she had no mercantile marine of her own."

"That the American workman earns higher wages is beyond question. As a consequence, the average married man owns the house he lives in, which not only gives him a stake in the country but saves payment of rent, enabling him either to increase his savings or to purchase further comforts."

"Food is as cheap (if not cheaper) in the United States as in England, whilst general necessities may, I think, be put on the same level. Rent, clothes made to order, and a variety of things, including all luxuries, are considerably dearer. Luxuries, however, do not enter much into the every day consumption of the average working man in this country, and if in the United States he can get them at all (even though he have to pay a high price for them) that is surely an advantage by comparison."

"The American workman drinks but little, and his house is usually well furnished and fitted with luxuries in the way of bathrooms, laundries, hot water and heating systems, and other items mostly unknown to the British workman."

"One of the points the delegates were invited to investigate was whether or not the workman in the United States wears out faster than the Englishman. Personally, I think so. It is generally admitted that the American workman, in consequence of labor saving machines and the excellence of the factory organization, does not need to put forth any greater effort in his work than is the case here, if as much. He is infinitely better paid, therefore better housed, fed, clothed, and moreover is much more sober. Under such conditions he must naturally be more healthy, a proposition that I think cannot be denied. In American factories, speaking generally, great attention is paid to the necessities and comfort of the workers. Separate lockers (of which the workman has the key) are provided for working clothing; consequently the man can arrive at and leave his work well clad, changing at the factory. The shops are usually very well ventilated, although it is customary to keep them at a temperature many degrees above the average in this country; but this is liked or would not be done, and is in fact a national characteristic; and there is after all a good deal to be said in favor of being able to walk into a factory which is well warmed and where the tools do not freeze the hands as soon as touched. Excellent lavatories with shower baths, etc., and many other comforts for the employes, are the rule rather than the exception in the large factories; and in fact the American manufacturer has realized that if he wishes the best results from the hands he employs he must provide for their comfort and cleanliness. It is not a question of philanthropy, but of practical business."

"One point that has struck me with enormous force, as I believe it has all the delegates, is the close touch and sympathy between master and man, which is carried a step further in the enlistment of the men's good offices to improve factory methods."

"Fuel and raw materials are much the same price in the United States as in Europe, and it therefore cannot be claimed that she has very much advantage on this score; but facilities for transport, both by rail and water, are undoubtedly both better and cheaper, and I think one of the points absolutely necessary to the success of British industry is a close examination

and revision of our railway rates as against those of our competitors."

"In conclusion, I can only say that if we are to hold our own in the commerce of the world, both masters and men must be up and doing. Old methods must be dropped, old machinery abandoned. Practical education of the masses must be instituted and carried out upon a logical basis and with efficiency."

THE CIVIC FEDERATION.

The delegates who were present in New York at the time of the meeting of the Civic Federation signed the following document expressing their desire to see some similar organization established in England:

"In the course of our travels and investigations in the United States the excellent results achieved by the National Civic Federation of America have been brought to our notice, the Federation having been successful, among other things, in bringing capital and labor into closer touch, thus providing a practical solution of many of the difficulties and vexed questions that arise between the two.

"One of the most important features of the Federation is the section whose duty it is to get information of the first sign of impending trouble, and in the earliest stages of dispute to step in for the purpose of bringing the contending parties together at a round-table conference before any breach has actually taken place and before either side has assumed a position from which it can recede only with difficulty, and, in our opinion, it would be of benefit to both workers and employers were some similar organization brought into being in Great Britain.

"In expressing this view we do not desire in any way to interfere with the bodies which already exist for mediation and conciliation in the Board of Trade, Chambers of Commerce, Trade Conciliation Boards, etc., or agreements between employers' associations and workmen's organizations, but, if possible, to establish a further means, not so much for the adjustment of troubles after they have arisen as for their prevention.

"As representatives of our respective trade unions, it will be our duty on our return to our own country to place before our members the objects of this branch of the work of the Civic Federation, and we also hope to have the co-operation of other trade organizations, large and small, throughout the United Kingdom."

Delegate Walls writes of the Civic Federation: "I was much impressed with the good work done in America by the Civic Federation, more particularly when I had an opportunity of attending its meetings at the Board of Trade Hall, New York. When the Civic Federation was first spoken of to the members of the commission, several seemed to have an idea that it was a kind of Board of Arbitration. If I thought that such a body would attempt to assume the role of arbitration, or in any way interfere in the technicalities of a dispute, I would have nothing to do with it; but its sole function is to use every means possible to bring contending parties together, particularly before the real rupture takes place, or before it becomes too great to be easily healed. I have no hesitation in saying that, had there been a similar institution in this country, it would have saved many thousands of pounds to both capital and labor and many a bitter tear. We have yet the more or less isolated employer, who has not been accustomed to a union and dreads the thought of it. He has read of the agent as the paid agitator and has a kind of holy horror of him. On the other hand, we have the workman to whom a union is new and who has no more idea how to handle it than a three-year-old boy has to manage a toy locomotive. The existence of such conditions form a sort of industrial powder magazine, where the smallest spark is certain to create an explosion. When it takes place both parties stand on their dignity, and every hour the gulf grows wider. The function of a similar body to the Civic Federation would be to bring the contending parties face to face. Such a body could not fail to do good in this country."

Delegate Barnes: "Of course, I had full opportunities, so far as three days' attendance at its annual convention could give them, of getting to know the men at the head of it. These are the representatives of American organized labor, of American employers, organized and unorganized, and of the best elements in American public opinion. I saw and conversed with many of them, and had every reason to respect their ability and sincerity. . . . An organization of the character suggested in this country might at all events bring in the best elements of public opinion,

and thus tend to bring parties together and help to breach over the chasm between man and man which so far has been a condition of modern industry brought about by larger corporations and workshops."

Delegate Cummings: "I heartily approve of the formation of such bodies as the Civic Federation, and would at all times lend my assistance to the formation of any similar body at home having for its object the obtaining of industrial peace by reason and common sense aided by intelligent public opinion. . . . The Civic Federation of America, or rather its industrial department, certainly sets out in a direction new to us. . . . Although willing to act as a conciliation committee and also to arbitrate, if desired by both sides, yet that is not their principal function; the chief object is to step in before an actual strike or lock-out takes place and try to bring the contending parties together with the object of securing a reasonable settlement. The formation in Great Britain of a body similar to the Civic Federation is well worthy of a trial."

Delegate Wilkie: "I am in entire sympathy with its aims and objects."

Delegate Ashton: "I quite approve of its aims in trying to avoid strikes and lockouts by conciliation and other methods which employers and workpeople may be agreeable to adopt."

Delegate Wilkinson: "I fully approve of the working of the Civic Federation. I see no reason why such an organization, if one is not already in existence, should not be introduced in England on the same lines as the American organization. I am in favor of taking steps to establish such an organization."

Delegate Flynn: "To my mind it appears that work of the description carried on by the Civic Federation confers lasting benefits upon all sections of the community. Run on such lines, there is a boundless field of operations before the Civic Federation. The confidence of the working classes is neither easily given nor easily withdrawn, and while the wage-earner must in the main hammer out the metal of his own life, it is pleasant and cheering to know that outside industrial strife there is a weight of public opinion which may be used to bring about and maintain just and honorable settlements of what would otherwise become bitter and disastrous disputes. The Civic Federation has my vote."

Delegate Deller: "I approve of any method of preventing strikes or lockouts that does not interfere with the collective bargaining of the worker."

Delegate Crawford: "Any independent body of gentlemen who would form themselves into an association, so as to bring the two contending parties together to discuss their grievances in an amicable way, as the Civic Federation of America did in the case of the coal strike, would have my approval in principle."

Delegate Bowerman: "With respect to the question as to whether I approve of the working of the Civic Federation, and if any organization on the same or somewhat modified lines could be introduced into England, I should welcome any movement having for its object the bringing together of employers and employed for the purpose of settling terms and conditions of employment or of amicably arranging disputed points."

Delegate Coffey: "In England we have for many years been familiar with the work accomplished by boards of arbitration and conciliation. It was with very favorable disposition, therefore, that we gave attention to the work of the Civic Federation of America. This Federation has for its object the prevention of trade disputes by means of influencing the contending parties to confer in friendly discussion upon their points of difference. It seems, upon reflection, that there is room for such a body as the Civic Federation, and that its establishment would be likely to result in much benefit to trade and commercial interests generally. In a general way the public takes but a cursory and superficial interest in labor questions, regarding them as matters to be settled by experts. The Civic Federation aims at introducing this third element, or, at least, of inducing it to assist in bringing about the peaceful solution of labor problems. This would not be by taking sides

but by friendly persuasion, inducing the contending parties to meet and discuss their difficulties in each other's presence and so arrive at a friendly settlement. This organization would, therefore, embrace not only the experts, not alone the keen man of business intent on securing at all costs the terms that he requires, not only the workmen's representative, anxious and even eager to stand out for the full concession of the demands of his organization, but also the statesman, the churchman, the professional man; in fact, the

representatives of the great class that is usually seriously affected by the disturbance of the ordinary course of business on the occurrence of trade troubles. For this reason alone, I am completely and decidedly in favor of moving for the formation of a body on similar lines to the Civic Federation."

Delegate Cox: "There was a time in our own trade union movement when the jingo spirit was dominant. Saner methods now prevail, and a strike over a wage question is the exception rather than the rule.

Whether the Civic Federation will succeed in educating American opinion up to the same level, I cannot say. An organization of that character should be purely educational; there are times when both workmen and employers resent any outside interference. When both parties are educated up to the ideal that strikes and lockouts are both futile and criminal, that justice to both can be secured by other methods, there will be no difficulty in arriving at satisfactory mutual arrangements."

FOR INDUSTRIAL PEACE

REPRESENTATIVES OF EMPLOYERS, WAGE EARNERS AND THE PUBLIC SPEAK IN FAVOR OF CONFERENCE AND CONCILIATION

A remarkable gathering was that at the dinner given on Wednesday evening, May 13, by the Executive and Conciliation Committees of the New York

SENATOR MARCUS A. HANNA.

Civic Federation to the members of the Executive Committee, National Civic Federation, in attendance at their semi-annual meeting in New York.

The following list of the men who sat together at the tables in itself speaks volumes for the work already accomplished by the organization and of its possibilities for the future:

Lewis Nixon, Chairman.
 Senator Marcus A. Hanna.
 Archbishop John Ireland.
 President John Mitchell, of the United Mine Workers.
 Spencer Trask, of Spencer Trask & Co., bankers.
 Wm. H. Farley, Secretary United Board of Building Trades, New York.
 Frederick D. Underwood, President Erie Railroad.
 Emerson McMillin, banker.
 Otto Eidlitz, Secretary United Building Trades.
 Marcus M. Marks, President National Clothiers' Association.
 Franklin MacVeagh, of Franklin MacVeagh & Co., wholesale grocers, Chicago.
 W. W. Miller, Manager of New Orleans Street Railway Company.
 H. H. Vreeland, President National Street Railway Association.
 M. M. Garland, ex-President Amalgamated Association of Iron, Steel and Tin Workers.
 Daniel J. Keefe, President International Longshoremen's Association.
 W. D. Mahon, President Amalgamated Association of Street Railway Employees of America.
 Col. John J. McCook.
 H. C. Watson, Editor "Dun's Review."
 Edward A. Moffett, Editor "Bricklayer and Mason."
 Louis B. Schram, President Associated Brewers.
 T. H. Smith, President New York Metal Trades Association.
 George Gunton, President Institute of Social Economics.
 Walter H. Page, Editor "World's Work."
 Henry White, General Secretary United Garment Workers.
 H. C. Hunter, Commissioner New York Metal Trades Association.

Patrick Calhoun, street railway director.
 Phil. G. Brady, Vice-President, and Francis J. McKay, local business agent, Brotherhood of Boiler-makers and Iron Shipbuilders of America.
 Ralph M. Easley, General Secretary National Civic Federation.
 John Philips, Secretary United Hatters of America.
 Charles Delaney, Granite Cutters.
 R. E. Neidig, Housesmiths.
 R. W. Nelson, President American Typefounders' Company.
 J. B. Wilson, Machinists.
 T. F. Woodlock, Editor "Wall Street Journal."
 James P. Archibald, Brotherhood of Painters and Paper Hangers.
 Wm. Fyfe, Amalgamated Society of Carpenters and Joiners.
 Joseph Mulaney, Salamander Boiler and Pipe Coverers.
 A. J. Boulton, Stereotypers.
 John R. Commons, Secretary Conciliation Committee, New York Civic Federation.
 Henry L. Cargill.
 Samuel B. Donnelly and J. W. Sullivan, Typographical Union.

Chairman Nixon, in calling the guests to order after the dinner, tersely referred to the organization of the Civic Federation, its work thus far, and its opportunities for the future. His remarks carried the assemblage to a high plane of thought and sentiment, which was uninterruptedly maintained the entire evening. In introducing Senator Hanna as the first speaker, Mr. Nixon said: "I am going to ask him to say to you to-night something about his experience and give you the benefit of some of his wisdom."

SENATOR HANNA'S SPEECH.

Mr. Hanna spoke as follows:

Mr. Chairman and Gentlemen: It is certainly a great pleasure to me to be able to attend this meeting, composed as it is, in large part, of the members of the newly chosen committee of New York which has undertaken this great task. I do not know that you fully appreciate, gentlemen, all that you have undertaken, but, in the light of the experience of the national organization I feel at liberty to hold out to you every encouragement for the future. When I joined the national organization two years ago, I must confess that I myself had some doubts with reference to the practicability and efficiency of such an organization. I had been in touch with labor all my life. I had witnessed the many vicissitudes, and many times the troubles, that crept into industrial life, but I learned my lesson thirty years ago when after a disastrously long strike in the coal regions of Ohio I was impressed with the idea that there ought to be a better way to settle disputes between employer and employee than by strikes and lockouts. This idea was an inspiration to me, because as I went on and became connected with different industrial interests that brought me in touch with all classes of labor and made a trial of my theory I found how easy it was when men could be brought face to face to find a middle ground upon which all could agree. It is with some pride that I often make the statement to the public that, having learned that lesson and having put into practice what I have learned and preached, I have never had a strike since. [Applause.] It was because of the faith established by that experience that I entered into this work, and I was encouraged when I found that the men engaged in it were experienced, that they viewed the question with good common sense and were imbued with the same spirit that filled me, and

that we could rely upon their efforts and loyalty to the principles of the federation.

I stated in the meeting to-day that there are no real discouragements as to the future, although under present conditions we seem confronted with almost insurmountable difficulties. There has not been a failure, with one exception, and that not entirely a failure, in the efforts of this organization. We are not yet perfect in our organization, because we have not reached a point where the people interested fully appreciate and understand all there is in this great question. We are approaching better things rapidly and successfully, and I may speak of this organization as a success now, surrounded as I am by the men in New York who have undertaken the auxiliary work in this city. When I see around me men representing all classes, equally interested, a class of men that do things, and when they undertake a mission will accomplish it, I feel justified in making such a claim. Multiplying such organizations as yours, establishing them in all the centres of the country, step by step all these difficulties which seem to beset our path to-day will fade away, and each man who is a pioneer now in this work will live to see the time when he will be called blessed by his fellowmen. We shall need solid common sense, practical business methods, pure motives, and a spirit to settle questions, not for the advantage of one side, but to the mutual advantage of both. I feel hopeful as to the success of these efforts. Much depends upon the success of this auxiliary in New York City. You are the first in the field, and it is a field ripe for your labors. You confront conditions calling for serious consideration, and I emphasize that reflection in the

JOHN MITCHELL.

presence of trade unionists. What brings up almost a crisis, gentlemen, in this question, is the recognition of organized labor. I have been connected and dealt with organized labor for thirty years. I have seen it grow in strength just in proportion as it has proceeded along the lines of good judgment and common sense. Its position to-day is very much stronger than ever before in our industrial history, but it will require the soundest judgment, the greatest

amount of forbearance, and the strictest loyalty to the principles which are the foundation of the work of the National Civic Federation to meet this crisis. I wish to make an appeal to-night to you gentlemen who have undertaken the work in this city to stand firmly upon the principles which this federation has put forth. I mean by that a recognition of the rights of both classes and a determination by those who represent either class in the organization to stand firmly for those principles and insist upon their observance. No army ever succeeded without discipline, not only discipline in the ranks but in the leadership, and that discipline must come from experience. No general

ARCHBISHOP JOHN IRELAND.

can command an army without experience as a soldier as well as a leader, and on the representatives of labor and capital will devolve the greatest responsibility in times like this. To-day I have learned through various sources of the situation in New York. I am not surprised that there are disagreements. I am not surprised that there should be conditions which should lead to serious difficulties, with feeling on both sides, but, in view of the experience of our organization I should say there is not anything before you insurmountable, any more than there has been before the national organization; and my advice is, be conservative and, above all things, be patient. It is just as important to organized labor that its modes of government and methods of operation should be on sound business principles as that it should succeed in its efforts temporarily. We are building a structure not for to-day. Success is not for to-day. It is for the future, and the success of a movement like this, contributing to the advantage of all classes, has a higher motive and better objects than the mere gaining of a point or points to a controversy. Looking into the future, this movement means the elevation of the laboring class to a higher plane. It means better citizenship, better government; a feeling of humanity underlies this movement, and those of us who are missionaries in the field are aware of a growing interest as we meet with success in grappling with difficulties that are hard to overcome. I beg leave to suggest to those representing employers and employees that under these conditions in New York, for the moment and for the immediate future everything else in your business, in your everyday life, should be made subsidiary to the important task which lies before you. Don't say you have not time; don't feel that you have not the inclination; take hold of this question, because, believe me, my friends, the results will be successful if the efforts are loyal to principle, and in the end you will be more than repaid a thousand fold for the time that you may give and the effort you may expend.

It is all wrong to suppose that the laboring element of this country is not ready and willing to join in this movement. I speak from experience. In all the cases that have come to me, many of them entirely outside of the national committee work here, I have found the labor organizations ready and willing to go more

than half way. I have found some difficulty in overcoming the prejudices that have been growing up for years in the minds of men who have not appreciated and not fully understood the importance of this work for mutual benefit. Our progress is a work of education. We cannot expect that all classes of men, coming from all the nations of the world, even from countries where from their earliest days men are led to believe that they are little better than slaves, shall be able in a day to free themselves from their earlier influences, which have been all against the employer, while their associations have been simply the basis for the creation of a prejudice. They have come to this country, known to be a land of liberty and equality, and they do not immediately fully appreciate and understand America's free institutions or our American government, and it is only fair for those of us who pride ourselves upon our American citizenship, upon nativity in this great country, and upon a higher plane of education and enlightenment, that, when we come to study these questions of mutual interest, we shall study them from the standpoint of the "other fellow," and take into consideration his conditions in early life and have a care before attributing to him selfishness entirely. At the same time, that very spirit of our American institutions demands of all citizens a rigid adherence to our constitutional rights and the observance and execution of every law. The peace of our people depend on the enforcement of our laws, and the protection of life and property must be taken into account and fully observed. It becomes the duty of you who are at the head of labor organizations to spread this doctrine, and in the way of education insist that it shall be carried out, in order to break down the prejudices that have grown up against organized labor as the result of strikes, of cases of lawlessness, and of even destruction of life and property. It is the duty of those who have influence with organized labor and have to an extent in their hands the discipline over their organizations, first, to obey the laws of the land, and, secondly, to recognize equal rights among all people.

I tell the operators that it is their business, it is a part that belongs to them, to set the example in that direction. It is supposed that, from education and experience and higher conditions of citizenship and enlightenment, they should be better able to judge, better able to lead, in these things than many who follow in the ranks of organized labor. Wherever the greater proportion of intelligence and enlightenment lies belongs also the greater responsibility. It is the object lessons that we give to those in our employ, the examples we furnish to those whom we ask to join with us, that will bring success in obtaining their confidence.

My interest in all this work, gentlemen, has led me to believe that, if we can by any method establish a relation of mutual trust between the laborer and the employer, we shall lay the foundation stone of a structure that will endure for all time. Absolute confidence must be the foundation stone, because, unless the employer can establish such a relation between himself and his employees, when we come to consider a disagreement as to the wages or other conditions, men being naturally selfish, the employees will think of an employer's statement of facts, "Well, that's his side of the question, and he is arguing from a selfish standpoint." If I have been successful in dealing with labor unions for our organization, it has been because I have been successful in establishing the relation of mutual confidence. If I have been influential to-day in the share of the work that I am undertaking, it is because I have striven to obtain not only the confidence of the capitalists but also that of the wage earners. I would not have any heart in this work could I not be able to say conscientiously that the only object I have in undertaking it—and it is no small part of the work of my life—is to improve the condition of the classes who need help in this country, to elevate them in every way, to obtain for them a wider scope of education and welfare and through that to make them better citizens of a happier land. [Applause.]

I am glad to be able to say to-night that establishing this organization has had an immediate influence on other cities. St. Louis and Chicago have already fallen into line, and other cities which held back

are now making arrangements to organize branch organizations. It is a source of great satisfaction to me to find that every man who originally enlisted in this work has grown more and more interested, has found it a work that brings a realization that he is doing good to his fellowmen, and this is now no small part of his inspiration. I have yet to know a man in labor or other circles who when results have proved beneficial has failed to realize the compensations. There is Christianity in the work, and the higher ambition of every true man will be stirred in the enjoyment of it.

Our national commercial supremacy is an object dear to every patriot, and, gentlemen, its continuance depends upon the solution of the labor problem. There is every reason why we should consider "self" as secondary in every conference. There is every reason why every man who represents a labor organization should put aside the feeling as to whether he individually is going to win or lose in a conference. And in my experience, in all the settlements of difficulties in which I have been concerned in thirty years I have found the highest appreciation of the benefits of industrial peace coming from the laboring class. That should be encouraging to you who have responsible positions in these labor organizations. In doing your missionary work among your fellows, you should incite in them the ambition to be better than they have been, to take a higher place in this city and in the industrial world. How true it is that all of our industries which have grown great through our natural resources and under our beneficent laws were first begun by the men who worked with their hands! The foundations of the great iron and steel industries of the United States were laid by men who came from England, practised and experienced in their art. Capital came to their aid, and that combination—of experience, of the hands of the working man, and of capital—has made us to-day the greatest industrial nation of the world. We have only entered upon a great world-wide commercial career. The future is all before us. With wisdom and patience, with the strict observance of economic laws and fidelity to American principles, there can be no other settlement of the social question than that there shall be a fair division of profits. To bring about that condition first of all—I repeat, soberly, emphatically—we must establish mutual confidence. For this we are laying the foundation by every single organization we make. There

LEWIS NIXON.

will be no failures if we enter upon our labors with the proper spirit. The golden rule is our motto, gentlemen. Stand by it, and we shall win. [Applause.]

Mr. John Mitchell was the second speaker. Mr. Nixon, in introducing him, said: "We have heard from a representative American employer, and now we want to hear from a representative American wage earner. It has not been so many months since one hearing of John Mitchell would expect to see 'a man with hoofs and horns,' and you see him a modest, unassuming American gentleman, unwearying in his

demands for what he considers right, but willing and anxious to concede the rights of others."

Mr. Mitchell said, in part:

I have so recently recovered from the bruises of industrial war that it may seem somewhat satirical for me to say I am in favor of industrial peace. However, I believe that more strikes and more lockouts and more labor disturbances have grown out of the failure on the part of capitalists and labor men to meet in conference, to tell one another the truth, than from any other one thing. I believe there should be a greater bond of confidence between employers and employes. . . .

From my experience, I would say that trouble frequently occurs not because either side doesn't want to do what is right, but because we don't know one another. I have, I believe, as extensive an acquaintance with labor men as any one in this country, I know about as many employers as most men do, and my experience teaches me that the vast majority of both employers and employes and representative trade unionists want to do right. The trouble is that we don't understand what is right. We too often assume that we ourselves are infallible, but when we have a chance to sit down as we are to-night and talk things over, we are likely to make agreements.

Gentlemen, those who don't understand what we trade unionists stand for often misunderstand our movements and judge us by our faults alone. They are disposed to think that the trade union movement depends upon physical force for success. It is unfortunate that we are sometimes judged by our faults—and I am free to confess that we have them—God did not make perfect men. We have our faults and are sorry for them. We hope to grow better all the time, and we are growing better, but if I believed for one moment that the trade union movement depended upon physical force for its success I would leave it. If I believed that there were no other means of gaining success, or one thing un-American, in the trade union movement, I would not be a trade unionist. The trade union movement—ours—is an American movement. We do not in our country have the same principles of trade unionism that they have in some of the other countries. It is a rare thing in America to have an unreasonable restriction in the amount of work a man shall do. The American trade union believes in one restriction—the hours of labor—and that is the only restriction except in so far as it is necessary to protect the health of the operatives, and I think no manufacturer will object to restrictions of that kind.

In holding conferences, it is certainly necessary that the unions be represented by union committeemen. It must be apparent to every fair-minded man that a labor organization, like any and every other institution, must have trained men, specialists, indeed, to direct its affairs; and in these days of industrial concentration the organizations require and employ as officers the most skilled and best-informed persons they can find in their respective trades; and particularly it is essential that the unions be represented by men of wide experience and honest motives; men who are fearless in the prosecution of their duties; men who will insist upon labor receiving that portion of the profits of industry which properly belong to it; but who, at the same time, will recognize the right of the employers to receive that portion of the profits to which their investments entitle them.

The contracts made between the union representatives ought to be observed as sacredly and their provisions carried out as religiously as though it were a penal offense to violate them; and I am sure that experience has demonstrated that in those trades and industries where the employes are best organized and where the trade union is recognized and contracted with, strikes and labor disturbances have been least numerous.

It goes without saying that every strike and every lockout affects seriously others than those directly engaged in the strike or lockout. Great public interests are involved, and it is certainly a matter of no small concern to the public that some method be adopted through which strikes and lockouts may be entirely avoided, or at least reduced to the minimum. Experience has demonstrated that the most practical

plan which the ingenuity of man has been able, up to this time, to devise is for employers to recognize the union; meet its representatives in conference; enter into trade agreements which define in detail the conditions of employment which shall obtain during the life of such agreements. The constitution and laws of nearly every labor organization make it an offense punishable by expulsion for any member to violate a trade agreement or even by subterfuge to evade any of its provisions. The officers of the trade organizations of the present day recognize the great responsibility resting upon them, and they are few, indeed, who dare, even if they were so inclined, ruthlessly to disregard the sacred obligations of a contract. I know of many instances where contracts which were in conflict with the constitution and laws of trade unions have been entered into with employers, and yet the officers and members of the trade organizations have insisted that the contracts superseded the constitution and laws and took precedence of them; in fact, I recall several specific cases where the members of a local union connected with a national organization went on strike for the purpose of enforcing a higher rate of wages than was provided for in the contract made between the national organization and an employers' association, in which the officers of the national union promptly filled the places of the strikers with other men in order that the union could not be charged with or convicted of breach of faith.

As the unions have grown in numerical strength, as their power and responsibility have increased, they have become correspondingly conservative in their administration. The labor unions are here; they are here to stay; they are a power which must be reckoned with; they were not formed from sentimental ideas; they do not advocate Utopian theories or impractical policies; they have not grown to their present vast magnitude without good cause. The time has passed when wages and conditions of employment can be fixed satisfactorily at the door of the factory or at the mouth of the mine; the workers insist—and justly, too—that their wages shall be agreed to in conference halls where reason and logic, conservatism and equity shall be the controlling influences; they insist upon being represented in these conferences by men qualified by education and experience to defend their interests in as able a manner as the interests of capital are defended and protected by its representatives.

I don't know that the joint conference is the solution of the labor problem, but it is the nearest that has been instituted among men. I believe that we will have strikes and lockouts as long as the world lasts. I don't look forward to the time when we shall all live in paradise. But I do believe it is the solemn duty of every good American citizen, be he workman or capitalist, to do his level best to bring about an honorable adjustment of this great question.

I believe the great question before the American people to-day is the labor question. It is the question that is brought home to every man and every woman. We ought to get our heads together and join in every effort to help solving. I believe the National Civic Federation is the best channel through which we can bring the apparently hostile forces of society together. It has men in it whose influence will reach throughout the country, if not the world.

I am glad to be with you to-night and pleased to know that the local branch in New York is doing so much good work. The Civic Federation is a good deal like some of the secret societies. People hear of their faults but often don't hear about the good things. The Civic Federation has averted many strikes through bringing men into conference with one another. Such events cannot usually be made public through the newspapers, but I know New York would not be doing business as it is to-day if the Civic Federation had not accomplished what it has. [Applause.]

In introducing Archbishop Ireland as the next speaker Mr. Nixon said: "There is a triple alliance, and we want to bring about a proper understanding among the three. It is natural we should want to hear from that other factor, the general public, and also naturally we turn to that first consideration with the general public, the church."

Archbishop Ireland said:

I assure you it is a great pleasure to be here this evening, and I came all the way from the Mississippi River in order to hear the wisdom spoken and mingle a voice with those words.

I am [referring to Mr. Nixon's introduction] here as a representative of the church, and I am glad to be here. I think that it is the place of the church to come forward in all such efforts as are being made to-day to bring together the different elements of society and to establish peace throughout the country. The church says, be just; give to every one his due; it says, love one another, rejoice in lifting up humanity; it says, give peace and happiness to all men; and those principles observed we will have peace and happiness, and whatever we are doing at present is really with the intention of applying those general precepts of the church. So I am at home as a minister of the church, when I find myself in conferences such as those of the Civic Federation. I am here as a lover of humanity and as a lover of my country. As a lover of humanity, I should wish, indeed, to see the sunlight of social peace beaming upon every countenance. I am not afraid of those labor movements which honored the latter part of the nineteenth century and which will honor the twentieth century. We need not go very far back in history to see the evidences of the need of some such movements. The conditions of the working classes of many countries of Europe, especially in the early part of the nineteenth century, were such as to stir up the heart of any one who loved his kind. So there has been work for the labor unions in bringing men together and saying, "Let us strive to lift up ourselves; let us strive to have justice and charity done to us." In all these things, why would not any one join who loves humanity? We wish to see no class oppressed. We wish to see no class unnecessarily impoverished. We wish to see the family life respected. We wish to have education brought to the homes of all our people, and this I am sure is the leading motive in the labor unions. This, I am sure, is what has been to a very large extent accomplished.

In the name of our country, I must do my best if I am a faithful American to contribute to the peace and harmony between the different classes. . . . We are a great country, and as an industrial, commercial country, we lead the world. Why? Because we have the natural resources which no other country has, and then we have an intelligent people. We Americans can invade the markets of foreign countries with our products and sell cheaper than the manufacturers of those countries where labor is cheaper. Why? Because our workingmen are more intelligent, our employers, too, are more intelligent and display this intelligence by getting better machinery; and our men at the machinery can do more work in a given number of hours, far exceeding what men in other countries can do, and so we continue on these lines of commercial economic supremacy, and the world is assured to us. There is but one danger before us, and it is this, that, in the midst of our prosperity we should begin quarreling one with another. While traveling abroad I had once a very thoughtful man say to me: "You have labor troubles in America." I said: "Yes, I am sorry." He said: "I am not sorry; it will be to our benefit if they go on quarreling in America." And it is true. This demands that all classes should come together and say, we shall smother all our difficulties and maintain peace, otherwise we shall lose our economic industrial supremacy, and what a misfortune to the world if we do, and to ourselves. Think of the future opening to America. We invade the markets of every country, and now the Pacific ocean is preparing to bear American ships even in greater number than the Atlantic itself, sending our products throughout all Asia, so that the American workman and the American capitalist are really becoming the monarchs of the world. But for the accomplishment of that we must come together and live in peace and work together.

Now, as well as many others, I know the two classes that are constantly said to be in opposition—the laborers and capitalists. I know the laborers. My ministry largely is passed among them. My time

largely is taken up in hearing their complaints and giving comfort to their wives and children. I know them well, and I know them all the more that I love them and that I listen with tender affection to all that they have to say. Surely it is the wish of my heart that the working people should be lifted to a higher plane and have their full part of all that is good and promising upon the land. At the same time, I am allowed from time to time to talk to my other friends—the employers and capitalists—and I hear their story, and sometimes I listen to the objections that they may, some of them, make to the laborers of the country, to their trade unions, and I have to repeat what has been said so well by Mr. Hanna and Mr. Mitchell, that generally the cause of difficulties comes from misunderstanding.

It is to the advantage of the capitalist and of the country to build up a happy, intelligent working class.

was said, that however the world is to be fashioned, whatever may come, there will be the employer and employe. It is impossible that it should be otherwise; there will be those who have more than others. . . . I believe far more, let me tell you, in justice than even I do in charity itself for the solution of this question.

There are two classes in the other countries, one that loves you and believes that American institutions are being tested, and their hearts will be broken if you make a mistake; and there are the others, envious of you, feeling that in equal battle they must be vanquished by you, and their hope is that you will break asunder the timbers of your continent. Their hope is that there will be industrial battles. I have heard them say, "Well, never mind, we can wait—you will have industrial wars, and then what then? Then you will have to have a strong hand and then the Republic will die." That is their hope. They are jealous of

neath it all, underlying it all, is this question, What is to be the outcome of this labor problem? I must say that, after being present at this meeting the greater part of the day and to-night, personally I feel greatly relieved in regard to this very matter, and I could only wish that the words that have been said to-night could be heard throughout the length and breadth of the country. I know and believe that if there could be more opportunities given for contact between capital and labor many of these fancied difficulties would be dissipated entirely. When we first came in here the question happened to be mentioned in regard to calling each other 'Brother' among the various associations. I think it makes very little matter whether the term 'brother' is used, if the sentiment at the heart is there—if we feel that we are all a part of this brotherhood of man, of the federation of the world. When we once begin to feel that we

WM. H. FARLEY.

OTTO M. EIDLITZ.

EMERSON McMILLIN.

COL. JOHN J. MCCOOK.

DANIEL J. KEEFE.

On the other hand, I also say to them, that the labor unions have their great purpose to serve. At any rate, they are here. It is a condition, whether we like it or not, and it is folly to be knocking our heads against a stone wall dreaming of what we would like to have, instead of seeing what we have. Now, it is a fact with those great principles before us we ought to agree, and the way to agree is to come together.

I have learned immensely since I have become a member of the Civic Federation, and really one of the purposes in coming to the meetings is to go to school. I learn more in one of these meetings than I do in sitting in my rooms and reading volumes for hours and days. And I am becoming so well informed on these things that I can talk better to my hearers and with more satisfaction to myself. What I learn others will learn, representatives of labor will learn and vice versa. I am sure if I could pick out fifty or one hundred of the leading employers of the country and as many laborers of the country and keep them at school, through our good chairman, four or five times a year, we would come nearer to the solution than in any other manner. Mr. Mitchell said to-night that he would not encourage violence. Reproaches have been made that this was the tendency of labor unions, and, of course, if such were the tendency it would be all over. Both sides must remember that there is in America a supreme tribunal, public opinion. Sooner or later it comes right and public opinion in America aims at justice, aims at charity for all. Public opinion aims at the recognition of the right of all. It wants no class to be put down, however poor it is to-day, I say whatever its origin, whatever its color. Any movement to put down a class of people in America will ultimately fail, and consequently, you representatives of labor, of the poor and distressed may invoke public opinion; but, in order to make public opinion, be just and right yourself, make claims, but before making them be sure that you are right, and when you find that you are not right have the courage to recede. Remember that you are educating public opinion and that patience is one of the greatest virtues that you must have. I know the difficulties of leaders; it is very difficult to control crowds, because in the crowds there will be some unthinking radicals, but counsel patience and use your efforts to gain public opinion in your favor. Let public opinion realize that you condemn everything wrong or injurious to industry, and you will have it with you. And so it is with the employer. Let us give every one his due and let us above all aim at being right or at understanding, as it

the republic; jealous of the immense advantages it gives its citizens and the hope they have is that the employers and employes cannot agree. They build their hopes with reference to industrial America upon quarrels. Well, then, let us come together and admit that we will not have these quarrels, for I admit myself that unless we come together God only knows what will happen, for we know that our prosperity comes from the fact that we have this great self-governing power.

Now let us say, bad as we are at times, there is no country in the world where employers and employes will come together as pleasantly, as lovingly, as they do here to-night. The spectacle which you see here this evening in this room is something that would amaze people in other countries. They would not believe me if I were to tell them face to face what I see. There is no other country where a man is a man, so much because he is a man, as here. There is no other country where there are opportunities for the laboring man, where he is industrious, as much as here in America. There is no other country where there are such rewards for capital invested, controlled and managed for the rights of, the justice of all. It is a country so great in promise that it dazzles you. We can only say God preserve it, and we, under God, each one of us, will do our share to protect it and guard it. [Applause.]

BRIEF REMARKS BY OTHERS.

The remarks of the other speakers of the evening were of an informal character, hardly intended for publication. But, as the utterances of each in some manner illustrated the spirit of the occasion and expressed hopes common to all present, they are in part herewith given:

Mr. Spencer Trask, being introduced by Chairman Nixon as "a capitalist of the highest class," said in part: "I hardly feel equal to the task, the great responsibility of responding for capital. But I must say that if the capitalist were disposed to be very timid, I would feel more than ever that it was the time for capital to be very quiet. But I only want to add one word to that which has been said, and I hesitate to say anything that would dampen the enthusiasm and cause any of us to go away with the influence of this meeting in any way weakened. And yet I have heard recently from some of the leading representatives of capital that the great obstacle in regard to the immediate future, if not the far future, is this labor question. We hear a great deal about threatened tight money, the trusts, the tariff, etc., and yet under-

are all striving for one great purpose, one great end, we shall not then question as to the outcome nor the means. It makes very little matter what side we are on, whether that of the capitalist or that of the laboring man, as long as we feel that we have but one life here, one duty before us, that God is overhead and that we are laboring for one another, and I know that those who come in contact with one another can but feel that. Those who have the right motives will feel it in time, and I want to reiterate that I have never felt so strongly the promised future welfare as I do to-night after listening to the words I have heard." [Applause.]

Of Mr. Farley, the next speaker, Mr. Nixon said: "He works for industrial peace every day of the year." Mr. Farley said: "Mr. Chairman and (I am going to use the word) 'Brothers,' since one of the speakers has referred to the use of the term 'brother.' In relation to the Civic Federation of the City of New York, I want to say that I watched it and was one of the first to join it, and I am proud to say I am a member of it, because knowing as I do the valuable work it has done, and the many strikes it has averted by bringing the parties together, I am sure it will do good in the future. . . . One of the biggest parts of the building trades troubles was settled to-day, and that settlement was brought about by a member of the Civic Federation, Mr. Hayden. Otherwise, good friends in the Federation are watching our movements and helping to keep us in the right path." [Applause.]

Mr. Nixon deemed it fitting that Mr. Otto Eidlitz should next be heard from. Mr. Eidlitz began his remarks by saying: "Mr. Chairman and Brothers"—laying stress on the word "brothers"—which brought out applause from all present. Mr. Eidlitz's short address was mainly directed toward clearing up points at issue in the New York building trades contests.

"There is one point," he said, "upon which Archbishop Ireland talked, that I desire to emphasize. He stated that the unions are here and are a factor to be dealt with. I feel that I can say to him frankly, after having studied the situation for about eighteen years, that the unions are here and should be here. Not only that it is right that they should be here, but it is a positive necessity for the right-minded employer that they should be here, and the only difficulty with the union is if it should not be properly run."

Col. McCook spoke as follows: "I have been a learner from the beginning, but I do wish to say that from what I have seen thus far of the operations of

John B. McDonald, contractor Rapid Transit Subway Construction, New York.
Frederick D. Underwood, President Erie Railroad, New York.
S. R. Callaway, President American Locomotive Works, New York City.
Charles A. Moore, President The Shaw Electric Crane Company, New York City.
Edward P. Ripley, President Atchison, Topeka & Santa Fe Railway System, Chicago.
J. Kruttschnitt, Vice-President Southern Pacific Company, San Francisco.
H. H. Vreeland, President National Street Railway Association, New York City.
Lewis Nixon, President United States Shipbuilding Company, New York City.
Samuel Mather, Placards, Mather & Co., Cleveland, O.
Charles H. Taylor, Jr., President American Publishers' Association, Boston.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
James A. Chambers, President American Window Glass Company, Pittsburgh.
William H. Frahier, former President National Founders' Association, Philadelphia.

ON THE PART OF WAGE EARNERS.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President United Mine Workers of America, Indianapolis.
Edgar E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
Theodore J. Shaffer, President Amalgamated Association of Iron, Steel and Tin Workers, Pittsburgh.
James Duncan, General Secretary Granite Cutters' National Union, Washington.
Daniel J. Keefe, President International Longshoremen's Association, Detroit.
P. H. Morrissey, Grand Master Brotherhood Railroad Trainmen.
James O'Connell, President International Association of Machinists, Washington.
Martin Fox, President Iron Molders' Union of North America, Cincinnati.
James M. Lynch, President International Typographical Union, Indianapolis.
J. J. Hannahan, Grand Master Brotherhood of Locomotive Firemen, Peoria, Ill.
Henry White, General Secretary United Garment Workers of America, New York.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit.
Denis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.
John Tobin, General President Boot and Shoe Workers' Union, Boston.

THE FEVER FOR ORGANIZING.

Periods of industrial prosperity offer inducements to organizers both of new corporations and of new labor unions. During the first two years of the present "boom" the country was aroused, and even alarmed, by the rush of promoters to organize and reorganize industrial undertakings. A financial journal recently estimated the capitalization of these enterprises at \$6,000,000,000. Now that several large speculations have collapsed and the public has learned the limits of others a lull has come and it is difficult to interest underwriters and investors in new ventures.

It was not until a year or two after the fever for capitalist organization had affected the financiers that the same kind of fever spread among labor organizations. Old unions expanded enormously, new unions sprang up everywhere. Unionism is now apparently nearing the top of this wave. Several notable successes, especially of the bituminous mine workers and the longshoremen, in 1897 and 1898, stimulated the less skilled and the unorganized labor over the country, and recruiting in this class of unions has since been remarkable. Older unions, especially in the building trades, have received unprecedented advances in wages.

Up to the present time the difficulty with capital has been mainly owing to the misgivings aroused by the losses of investors in several speculative securities floated a few years ago. But this distrust will have a new soil for growth in the anxiety as to labor demands. Employers in general are organizing, and while it was comparatively easy for the unions to get increases when speculation was active and promoters and underwriters wished to avoid unsettling confidence in their "undigested securities," it may be expected that future demands, if excessive, will be resisted, as the prospects for transferring the increase to the consumer and investor are diminished.

As the solid corporation built on substantial values may be expected to come out of the boom with well-equipped plants and good reserve funds, so those labor unions characterized by good discipline and fidelity to agreements will come out with recognition of their merits from the public and employers.

Fortunately, the danger of a panic from over-capitalized corporations seems to have passed, and the only present apprehensions in the business world are from "over-capitalized labor unions" of recent growth. The older and conservative unions have an obligation to the public and the new unions to guide and restrain the latter during their formation period. There are signs that the solid unions appreciate this responsibility. This is seen in the action of the Chicago Federation of Labor, which, though it rejected by a small majority the proposition to withhold from a union less than one year old any indorsement of a strike, yet unanimously decided to refuse support to any union on a strike if the Executive Committee of the Federation had not first been appealed to for its conciliatory offices. This action is strongly indorsed by labor representatives, and Mr. John Mitchell speaks of it as "an epoch in the advancement of labor." Apart from the greater sense of security on the part of the public, restraints of this kind should be encouraged on behalf of organized labor itself. Such restraints lessen the dangers ahead of new organizations, and strengthen the older ones in the confidence of employers and the public. They tend, above all, to remove the anxieties which in the past two months have materially checked industrial enterprise.

THE MOSELY COMMISSION.

To see ourselves as others see us has usually been prescribed as a cure for pride, but the reports of the Mosely Industrial Commission are calculated to exalt rather than to lower the pride of Americans in our industrial conditions. True, one who reads the reports can see proofs of the danger in generalizing for the whole country upon what the delegates happened to see in their three-weeks' trip. They visited the largest cities and the best establishments, but we must also believe that they corrected their impressions by conferring with their fellow craftsmen in this country. Each of the twenty-three members was not only an

expert in his own line but a leading officer in his trade union, his business having been for many years to study labor and market conditions for the intensely practical purpose of improving the wages and shortening the hours of his fellow unionists. The opinions of such men in comparing conditions at home with those in America are worth far more than elaborate statistical tables.

They agree, as will be seen in our summary of their reports, that wages in America are 15 to 100 per cent. higher than in England, hours of labor about the same, and workshop sanitary conditions superior. Most interesting of all, and most authentic because contrary to their own preconceptions, they find that the American workman is not pressed and rushed while at work beyond the speed of English workmen. This certainly is also contrary to the general view in America. Undoubtedly each delegate felt that he had been brought to this country by Mr. Mosely for the purpose of taking back to the English unionists a warning against their alleged opposition to machinery and unrestricted production. They find, indeed, a greater output in America, but it is owing, they say, to the greater natural resources and the amazing eagerness of manufacturers for new ideas and the best machinery. Apparently, from their conclusions, it is the English manufacturers, rather than the English workmen, whom Mr. Mosely should have introduced to the superiorities of American industry.

Their observations in one respect are distinctly depreciative of American practices, namely the quality of the product. They state that not only is the quality inferior in beauty and finish but also in substantial and enduring character. This is one reason why in their view America's output is greater.

Above all is it a matter of satisfaction to hear, on almost unanimous testimony, that American workmen are much less given to gambling, horse-racing and drunkenness than British workmen.

The indorsement given by the delegates to the work of the National Civic Federation, and their desire to see a similar organization established in England, is all the more significant since English unions have advanced much further than American unions on the line of conciliation and trade agreements. The delegates strongly emphasize the non-arbitrative character of the Federation and base their indorsement on its promotion of conciliation and friendly discussion.

INEXCUSABLE MISSTATEMENTS.

The problems of employer and employee are by no means easy of solution, and their solution is not helped by inaccuracy in stating facts. Two or three recent announcements by prominent critics of the Civic Federation, whatever may be said of their line of argument, are open to serious objection on the score of carelessness in this elementary matter. From a recent address by the President of the National Manufacturers' Association we quote the following:

"There was one article in that Chicago newspaper to which I have referred that I have reserved to speak of last. This article is the one relating to the formation of a Civic Federation in Chicago. I do not desire to get into any controversy with any noted Senator or politician, but I could not do even partial justice to that newspaper without saying something about what this particular article contained. In this article a noted Senator is quoted as saying several things. In the first place he is made to say that he was glad to learn that the Chicago Federation of Labor had given birth to a central senate or strike committee. Immediately following the noted Senator on the platform came Mr. John Mitchell, whose union a few months ago voted solidly in favor of a general confiscation of wealth. Mr. Mitchell also spoke about this new strike institution. He said, to quote his words: 'It marked an epoch in the country for the best interests of organized labor.' There you have it, gentlemen: The editor, the politician and the strike leader, all standing together congratulating the city of Chicago on the acquisition of an institution which appears to have it in its power to say who shall have the right to labor and what wage scales employers must pay.

"Now, I do not know what this so-called labor senate will do for Chicago. Let us hope it will do nothing. But I can and you can well imagine what it is possible for it to do. As the editor hinted, it could tie up the industries of Chicago tighter than a drum. A central committee composed of men elected by labor unions is a dangerous depository of the

power to rule or ruin the industries of a great city. What can the noted Senator of whom I spoke be thinking of when he makes haste to be among the first to doff his hat to this latest product of triumphant unionism?"

The action of the Chicago Federation of Labor which called forth this ridicule and denunciation was the adoption of this resolution:

"We, your Executive Board, recommend that the Chicago Federation of Labor take some action on the hasty calling of strikes at this time. We suggest that when there is any grievance existing the Executive Board should be notified before any strike is called, to try and settle the matter without a strike. We believe that many of the troubles arising at this time can be adjusted without strikes."

In advocating its passage, Barney Cohen, a member of the Executive Board of that body, said:

"I believe that many of the strikes now disturbing the city could be avoided if good judgment were used in the first place. By acting conservatively we can have the support of those who are now opposed to organized labor, and who think our main object is to stir up strife. On the contrary, the object of this Federation is to secure the best possible conditions for the workers, and to do so with as few strikes as possible."

When Senator Hanna and John Mitchell applauded the act as "epoch making in labor history," we believe they expressed no more than the sentiment of every intelligent observer of industrial progress in this country. It may well be hoped that every central labor body shall take similar action.

The statement as to "John Mitchell, whose union a few months ago voted solidly in favor of a general confiscation of wealth," is absurd. It doubtless has reference either to the vote of the miners' delegates at the New Orleans convention of the American Federation of Labor last November, or to the vote of the mine workers' convention at Indianapolis in February. There is not a scintilla of fact in the action of either body to justify the statement, as the official published records plainly show. At the annual meeting of the American Federation of Labor at New Orleans the following resolution was introduced by a Socialist:

"Resolved, That this twenty-second annual convention of the American Federation of Labor advises the working people to organize their economic and political power to secure for labor the full equivalent of its toil and the overthrow of the wage system and the establishment of an industrial co-operative democracy."

After a discussion extending throughout one day the resolution was amended, on motion of the National Secretary of the Mine Workers, so as to strike out everything after the word "toil," leaving not a vestige of Socialism or "confiscation of wealth" in the resolution. But even in this amended form it was rejected by the convention, largely on the ground that it had been originally "introduced by a Socialist," and, as stated by one delegate, "might be construed by malicious enemies" against them.

The Indianapolis incident is as follows: At the Mine Workers' annual convention held February 19 last, certain Iowa delegates introduced the following:

"Resolved by the annual convention of the United Mine Workers of America that they go on record as favoring and indorsing international Socialism."

The Committee on Resolutions non-concurred in this resolution, and the convention sustained the committee by an overwhelming vote.

An officer of another association of employers, in his anxiety to discredit the National Civic Federation, quotes an Associated Press dispatch which placed a member of the Civic Federation in the attitude of having defied an injunction, and adds that "with this defiance on his lips he went to attend a session of the National Civic Federation." This alleged defiance occurred, according to the dispatch referred to, in May, 1900, just twelve months before the organization of the National Civic Federation.

COMMISSIONER DU BRUL'S OPEN LETTER.

Mr. Du Brul's declarations in another column as to the objects and spirit of the National Association of Manufacturers and the Dayton Employers' Association are quite positive; but it may be suggested that those organizations have energetic officials of their own, who can speak, if need be, with higher authority on their purposes.

In reference to the position of the National Metal Trades Association, of which Mr. Du Brul is the First Vice-President and Commissioner, the statement in the April REVIEW which has called forth the vigorous letter from Mr. Du Brul is as follows:

"The National Metal Trades Association is composed of several hundred employers. It formerly had a national agreement with the International Association of Machinists, but this was broken, and was followed by what is known as the machinists' strike of 1901. The association deals with 'the machinists' organization in many localities, but, as a national organization, is more or less hostile to organized labor. The breaking of the contract in 1901 was deplored by the conservative element on both sides, and it is hoped by many that it will eventually be renewed, but the National Metal Trades Association cannot now fairly be classed with either the National Founders' Association or the National Association of Manufacturers."

Of the five statements in the above paragraph four Mr. Du Brul undoubtedly will not question. This reduces his objection to a part of one of the statements, viz.: "but as a national organization is more or less hostile to organized labor."

The only other reference to the National Metal Trades Association in the article complained of is where the "Bulletin" of that association is referred to in connection with other periodicals, as being "ably edited and largely devoted to attacks on organized labor."

Whatever evidence might be adduced to justify our statements, we accept at their full face value the official avowals as to the purpose and scope of the National Metal Trades Association. The REVIEW is only too glad to publish the assertion from Vice-President Du Brul that his organization is hostile only to the "illegal and unjust acts" of trade unions—a statement which it is safe to say would be indorsed by every right-minded citizen of this country.

THE LABOR OUTLOOK.

There has been a remarkable clearing of the industrial skies the past few weeks, whether viewed from a national or local viewpoint. A month ago there was great danger in what may be termed national industries, and local strikes were innumerable. In fact, compared with thirty days ago, it is safe to assert that there is an improvement of 75 per cent. There is not at this time any national strike on, nor is there one in view, and within the last week nearly all the important local troubles have been either settled or have progressed so far toward a settlement that they are no longer considered important factors in the industrial situation.

A month ago there was danger of a break coming between the Amalgamated Iron and Tin Workers and the United States Steel Corporation over the tinplate wage scale. The scale was signed up, however, last week, thus guaranteeing peace for another year in this basic industry. A satisfactory agreement was also reached between this same labor organization and the Republic Iron and Steel Company.

At the beginning of the month there were grave apprehensions in some quarters that another strike might occur in the anthracite coal region through the inability of the Anthracite Conciliation Board to organize, and although there are alarming headlines in the papers to-day an understanding will undoubtedly be reached.

The American Bridge Company's strike, affecting seven large cities, threatened at one time to involve the United States Steel Corporation in another conflict with organized labor. That has been satisfactorily settled within the month.

In the railroad world a month ago there was a serious strike in progress on the Union Pacific Railroad, and there were threatened strikes on the Southern Pacific Railroad, Northern Pacific and the Mobile and Ohio railroads, all of which have been settled or averted, and the ominous unrest of the brotherhood members on several of the large Western lines entering Chicago three weeks ago is no longer visible.

In what would be termed local difficulties, probably the most serious situation was the prospective tie-up of the entire building industry of New York and vicinity. The past week has seen advance made

towards a satisfactory settlement. The New York Metal Trades Association and Marine Trades Council settled their strikes and lockouts on the first of the month. The threatened elevated railroad strike was averted and a contract signed for a year; while the subway strike has about "petered" out. The threatened strike of the clothing cutters, involving 30,000 employees, which for five weeks seemed inevitable, was finally averted by a joint trade agreement ratified June 1.

The Chicago situation, which presented so many ugly aspects the first of the month, practically cleared up the past few days. The International Harvester Company's plants, the great packing houses, the breweries, the laundries, the hotels and restaurants, the barbers, the metal trades and the railroads so far as their freight handlers are concerned, and a dozen other industries, were all involved in strikes during the month of May, and all were settled either through conciliation or arbitration.

In St. Louis, what gave promise of being a very bitter contest between the Metal Trades Association and the machinists and blacksmiths was settled last week by an annual agreement; and what threatened to prove a serious strike of the teamsters and freight handlers has been settled the past forty-eight hours.

In Denver the situation, which portended all kinds of things at one time, has happily cleared up; and the troubles at Omaha are practically at an end.

The general tie-up of the street railways of San Francisco was averted by both sides referring the matter to their respective Presidents for arbitration.

The strike and lockout in the glove industry at Gloversville, N. Y., affecting 10,000 operatives, has just been settled by an agreement to arbitrate.

The Lowell cotton textile strike, while not settled, is expected by the mill agents to be soon brought to a close by the operatives returning to work.

Practically the only strike of any magnitude now on is that of the woolen textile industry at Philadelphia, and it is not believed it will be of long duration.

But there are other signs which are indicative of a better and more conservative tone in the industrial world. The action a few weeks ago of the Chicago Federation of Labor in regard to the indorsement of hasty and ill-considered strikes, wherein it declared that it would not indorse a strike unless the grievance had first been submitted to its Executive Committee and it given a chance to bring about a settlement, had the effect of making the Chicago Federation of Labor a conciliation committee, and it has proven one of the most potential factors in securing peace in Chicago.

The San Francisco Building Trades Council this week passed resolutions to the effect that no further demands for the increase of wages should be made without the entire body sanctioning it; that the indiscriminate demanding of the increase of wages would have the effect of scaring capital out of the building industry, and that a halt must be called.

At the meeting of the Brotherhood of Railway Trainmen in Denver this week Grand Master Morrissey declared that the time would soon come in the world of organized labor when the "contract breaker" would be as detestable as the "scab."

In the settlement of the wage scale with the American Tin Plate Company the Amalgamated Iron and Tin Plate Workers gave up a number of "time honored" restrictions that will increase the output 15 per cent.

In the settlement between the Wholesale Clothing Manufacturers' Association and the clothing cutters of New York City a shorter workday was granted in consideration of the union surrendering all arbitrary restrictions, the language of the contract being that "the men should do their best with due regard to their health, and be paid accordingly."

While these are among the incidents showing the growing conservatism and broadening of views of the wage workers, many incidents could also be given showing broadening in view of employers. Several organizations of employers, originally started for the purpose of "smashing the unions" have changed to the more rational policy of dealing and making joint trade agreements with them.

Conciliation and arbitration are surely rapidly gaining on the old-fashioned strike and lockout.

Trade Agreement in the New York Clothing Trade.

The Clothing Trade Association and the Clothing Cutters' Union of New York City on June 1st perfected the first written agreement between the two associations. Several conferences had been held during a period of six weeks, and until the last week it seemed impossible to avoid a costly strike or lockout, which would have thrown 30,000 people out of work. Finally, concessions were made on both sides. The union consented to forego payment for the eight legal holidays during the year, for which the members had hitherto been paid, and also to abolish restrictions on output. The manufacturers conceded a reduction of hours from 52 to 48 per week. A permanent joint committee was provided for to pass upon all complaints. Two members of the National Civic Federation held important positions in the negotiations, Mr. Marcus M. Marks being President of the Manufacturers' Association and Mr. Henry White Secretary of the United Garment Workers of America. It is stated that the tailors of New York will now endeavor to avert the usual annual strikes by the same method.

Glovemakers' Strike Ends.

Gloversville, N. Y., June 2.—The block cutters' strike, which was inaugurated March 18 and was followed May 8 by the manufacturers locking out the table cutters, thus affecting the 10,000 glove workers in Fulton County, was settled late this afternoon as a result of the intervention of Messrs. M. M. Marks and Samuel B. Donnelly, of New York, members of the Executive Committee of the National Civic Federation.

A conference this morning between these representatives and those of the Glove Manufacturing Association and the several unions interested resulted in the Table Cutters' Union rescinding resolutions previously passed and the Manufacturers' Association withdrawing the lockout resolution ordered by that body May 13.

It is further agreed that the difference between the block cutters and manufacturers, which has hung fire for a long time, will be arbitrated.

The settlement is thus made on mutual concessions and neither side claims a victory. The glove factories will resume operations full handed either to-morrow or Thursday.

Indorsement by Street Railway Employees.

The Amalgamated Association of Street Railway Employees of America passed the following resolutions at their convention at Pittsburg, May 4-9:

Whereas, The officers and members of the National Civic Federation during the past year have aided our international officers in securing conferences which have led to settlements that have been highly beneficial to our organization; therefore, be it

Resolved, That this Eighth Biennial Convention of the Amalgamated Association of Street Railway Employees of America, in session assembled, do hereby return a vote of thanks to the National Civic Federation for their advice and assistance; and further be it

Resolved, That we assure the members of our organization and our fellow workers in the different crafts throughout the country that we have confidence in the work of the Civic Federation and feel that they are doing a grand and noble work along the line of mediation and conciliation, not only for capital and labor, but for the welfare of our country as well.

An Open Letter.

To the Editor of the Review:

Dear Sir: In your issue, Volume 1, No. 1, of date April, 1903, you make several statements which are not correct, and which I trust you will correct by publishing this letter in your next issue.

In the first place, you state, regarding the National Association of Manufacturers, that the association indorsed statements made by its President at New Orleans. If you can find any indorsement of anybody's statements in the minutes of that convention, you will do more than the official reporter can do himself, and all of the acts of that convention are on record in the minutes.

Whatever may be Mr. Parry's personal opinions, and in whatever manner he may express them, the National Association of Manufacturers is on record with a declaration of principles and some resolutions, none of which is directed against the organization of labor as such. They are directed, and strongly so, against the vicious and lawless element in such organizations.

The National Association of Manufacturers is not an organization of employers as such, and, of itself, does not touch the labor question, excepting as it is affected by legislation. On the other hand, the association, by its acts, insists that the vicious and lawless element should not be considered the true representatives of the great body of organized labor, and in denouncing the vicious and lawless element it cannot be considered as an attack on the organization of labor. If you, sir, had investigated the matter more closely, you would surely not have made this mistake. Cer-

E. F. DU BRUL.

tainly you cannot believe that the vicious and lawless are an essential part of the organization of labor. Why, therefore, put yourself in the position of seeming to believe it by taking as gospel truth the garbled press reports of a convention representing two thousand patriotic manufacturers, who specifically went on record in these particulars?

Regarding the Employers' Association of Dayton and kindred organizations—here, again, whatever may be the personal opinions of the President of that organization, you are wrong in assuming that it was organized for the specific purpose of smashing unions. If you will take the slight trouble to read the constitution of that organization, you will see just why it was brought into being.

Now, regarding the National Metal Trades Association, of which I have the honor to be Commissioner, I beg to deny your statement that this organization is more or less hostile to the organization of labor. This organization is absolutely hostile to illegal acts, whether performed by workmen or by employers, organized or unorganized. Because we do not choose to make agreements with certain unions you seem to consider us hostile to their existence.

We had an experience that has made us chary of the present management of the Machinists' union. Perhaps we are wrong in our opinion in this regard, but in a number of cases of recent date, in attempting to deal with the Machinists' union, in various localities, we have found that it was impossible to do business with them. At this writing, in Rochester, New York, there is a strike on in a member's shop; a strike that seems to have been voted against the wishes of the employes of that shop, by the employes of other shops. The strike is an effort to compel the company to abolish the premium system, and so reduce the output and earnings of their men. The premium system has been in operation for two years, to the great satisfaction of not only the company, but also of its employes. In that case the official representatives of the Machinists' union of Rochester absolutely refused to

submit the matters in dispute to a disinterested board of conciliation.

In Quincy, Ill., there is another case of the Machinists' union refusing to submit a demand to a board of conciliation. This demand was for the reinstatement of a man who personally has never asked to go back to work in the shop in which he formerly worked and which he left under circumstances that made it impossible for the employer to calculate as to how long the man would be absent.

In Elmira, N. Y., the machinists have demanded the abolition of the premium system in the Payne Engine Company's shop, and their representative, not reasoning at all, not arguing the question, not claiming any injustice, simply flatly stood on the proposition that the premium system would not be tolerated by that union.

In Milwaukee, Wis., there is a strike to compel the reinstatement of a foreman who was discharged for unsatisfactory service.

On the other hand, conferences are now going on in Pittsburg, St. Louis and Chicago, without strikes, which, it is hoped and believed, will result in amicable and equitable settlements.

All of the above strikes have been indorsed by the Grand Lodge of the Machinists' union, under misapprehension of the facts perhaps, but nevertheless they are indorsed.

These things, my dear Mr. Easley, are not theories, but they are facts, and the natural feeling among the members of the National Metal Trades Association is that, until we have evidence that the management of the Machinists' union shows itself, by its acts, to be such as the members of this association can place confidence in we had better not have another national agreement. On the other hand, this association is definitely on record as permitting agreements between its members and their employes, collectively, whenever the members feel that the collective management of their employes' affairs is businesslike and reasonable.

Now, referring to our periodical. It has been my aim and intention, in publishing our monthly "Bulletin" not to devote it to attacks on organized labor, but to devote it to denunciations of the evils that are now so prevalent with organized labor and which I firmly believe can be removed only by an awakening of public sentiment. If you had read our "Bulletin" as carefully as I shall read your publication, you would see, in every number, articles dealing with the problems of conciliation and arbitration. In the very first number, July, 1902, there was an exposition of the satisfactory settlement of machinist matters in St. Louis last year.

In the August number was reprinted an address delivered before the National Civic Federation at Chicago, in December, 1900, by Mr. Frederick P. Bagley, on the subject of the organization of employers as a prerequisite to conciliation and arbitration, and also a copy of a proposed agreement between the Stove Founders' Association and the Polishers' union; also a copy of the Pittsburg Machinists' agreement, and an account of arbitration in the Moran Shipyards, Seattle, Washington.

In the September number was a paper by one of our members, a discussion of arbitration with an odd arbitrator.

In the October number was a reprint of an article by Professor George Gunton on the foolishness of attempts at the suppression of trade unions, and a reprint of your own description of the National Civic Federation and its works. Also an account of the New York blacksmiths' strike of last August, in which the Civic Federation was of great assistance in bringing about a peaceable settlement by arbitration.

In the November number was a reprint of Mr. Herman Justi's address before the National Civic Federation at Chicago on Dec. 17, 1900, on the organization of employers as a prerequisite to conciliation and arbitration.

In the December number was a reprint of Mr. Justi's lecture on the organization of capital, delivered in Boston on Nov. 20, 1902, and a discussion of the acceptance of the premium plan in England by the Amalgamated Society of Engineers.

In the January number of this year appears Dr. Hillis' sermon, "Labor's War on Labor," an article

from the "Union Chronicle" of Cincinnati, and an article from the "Nineteenth Century Review" on industrial troubles of America; also an article arguing for a better kind of organization of labor than some of the unions have at the present time.

In the February number we reprinted an address delivered by Mr. William H. Sayward, urging conciliation in the building trades, and also some commendatory editorials on "Organization of Employers," as suggested by Mr. Justi's Boston speech.

In the March number we reprinted more editorials along the above lines, and Mr. W. H. Pfahler's address before the American Association of Political and Social Science, on the "Co-operation of Labor and Capital."

In the April number we reprinted Mr. Pfahler's address before the American Economic Association on "Free Shops for Free Workmen," and also a letter of Mr. Goldwin Smith, one of the men to whom unions owe much in England for the repeal of the old combination laws.

Now, if the printing of articles of that sort, together with other articles which condemned the vicious practices of some unionists, are attacks on organized labor, I suppose that we are guilty.

I believe, with you, sir, that "there is a common ground where employer and employe can meet with satisfaction and honor to each," and wherever, in my work as Commissioner of this association, I find that a union involved with us is willing to deal fairly, I recommend as strongly as lies within my power that the employes be met more than halfway. In Cincinnati, prominent members of the National Metal Trades Association, imbued with the idea of fair dealing and conciliation, after having fought through a bitter strike two years ago, a strike which would never have occurred had the machinists' officials in this city and elsewhere not brought it about, have voluntarily and unasked consummated a reduction in the working time of the shops of the members here to fifty-five hours per week, with no reduction in pay.

In Cincinnati and in other places, the local secretaries act very largely in the capacity of joint "social secretaries" for members, listening to complaints of the workmen, hearing their grievances and seeing to it that abuses unsuspected by the employers are corrected.

I want to assure you, sir, that the membership of the National Metal Trades Association aims to deal fairly and justly by all of their employes, whether organized or unorganized. In this we may differ from others, but we take it that the Coal Strike Commission is, so far, the highest authority in these matters and we accept their good American dictum that "no discrimination shall be made against any employe because of his membership, or non-membership, in a labor organization," and we stand ready to enforce in our shops their further dictum that "no employe shall be discriminated against by the members of a labor organization because of his non-membership in such organization." If this is hostility to the organization of labor, then the Anthracite Coal Strike Commission is as hostile as we are. If the vigorous condemnation of lawless and vicious acts is hostility to organized labor, then this association is not as hostile to organized labor as that commission, for we can never use language as strong as that commission's report.

Even during the heat of the general machinists' strike of two years ago, when we adopted our present declaration of principles (every one of which has since been practically sustained in the coal strike report), this organization there went on record as favoring conciliation between employers and employes in the following words: "In cases of disagreement concerning matters not covered by the foregoing declaration, we advise our members to meet their employes either individually or collectively, and endeavor to adjust the difficulties on a fair and equitable basis. In case of inability to reach a satisfactory adjustment, we advise that they submit the question to arbitration by a board composed of six persons, three to be chosen by the employer and three to be chosen by the employe or employes. In order to receive the benefits of the arbitration, the employe, or employes, must continue in service and under the orders of the employer pending a decision. In case any member refuses to com-

ply with this recommendation, he shall be denied the support of this association until it shall approve the action of said member." I wish to say further that in no case has a member received support in which he did not endeavor to adjust his difficulties as above.

In this connection, I beg to call your attention to the fact that Mr. W. H. Pfahler, one of the most earnest friends of organized labor and a member of your national board, is a valued and active honorary member of our Administrative Council; that Mr. Charles A. Moore, of New York City, a member of this association, is on your national committee and also on your New York committee; that Mr. Walter L. Pierce, a member of the New York Civic Federation, is a former President of this association and one of his associates in business, Mr. H. N. Covell, of the Lidgerwood Manufacturing Company, is now our First Vice-President. Furthermore, I beg you to remember that the New York Metal Trades Association, an offshoot of this body, by and with the consent, knowledge, approval and suggestion of this association, was eminently successful, in co-operation with you in several cases affecting our members in New York, in bringing about peaceable and equitable adjustments. In this particular see the item quoted on the last page of your very first "Review," headed: "Ship Yards Strike Ends."

Now, Mr. Easley, do you think it is fair to confound our hostility to illegal and unjust acts with hostility to the principle of organization, a principle which we ourselves are daily preaching to the employers?

I trust that this letter has not infringed too largely on your space, but I feel that the matter is of sufficient importance to demand full explanation, in order to put the National Metal Trades Association correctly before your readers.

We hardly dare hope to be understood by radical unionists, but we did not expect to have you misrepresent our aims in such an offhand, self-confident way, a way liable to stir up hard feelings rather than allay them.

I remain, sir, yours respectfully,

E. F. DU BRUL,

Commissioner National Metal Trades Association.
Cincinnati, O., May 1, 1903.

Hon. S. E. Morss an Early Advocate of Trade Agreements.

In reply to your inquiry I think the "Sentinel" was one of the first newspapers in the country, if not the very first, to enter into a time contract with the local Typographical Union. When I purchased an interest in this paper on Feb. 1, 1888, a strike of printers in the morning newspaper offices had recently taken place, and all the daily papers in the city were set up by non-union printers. One of the first things I did was to have a conference with the officers of the local typographical union. The "Sentinel" Company made a contract with the union which was, I believe, to run a certain length of time—three years, I think.

A few months later the other daily papers of the city made similar contracts with the union, and subsequently the newspapers of the city formed a Publishers' Association for the purpose of dealing with the labor unions, and contracts are now made from time to time between the Publishers' Association and the local Typographical Union. The results have been entirely satisfactory. While the unions have demanded and obtained very liberal concessions and I feel that the employes in the mechanical departments secure a disproportionate share of the product of the business, I will say that every contract made has been scrupulously fulfilled by the union and that there has been no friction of any kind after the contract has been executed. Similar arrangements have been in force in other cities for several years, and finally a contract was made last spring between the American Newspaper Publishers' Association on the one hand and the International Typographical Union and the International Printing Pressmen's Union on the other. This contract was ratified by a substantially unanimous vote of the Newspaper Publishers' Association. I think the general feeling is that these arrangements afford the best method available, under existing conditions, of regulations between newspaper publishers and the employes in their mechanical

departments. Under these arrangements the liberty of action by proprietors is very largely restricted. They surrender a good many of the rights which the owners of the Pennsylvania coal mines claim to be inherent in proprietors. But on the other hand, they secure a high standard of service and efficiency and a large degree of stability, and when a three years' contract is made they know exactly what they can depend upon for that period.

While the unions are quite exacting and advance their claims at the termination of every contract, I personally believe in the right and duty of workingmen to organize and to use their organizations to secure such benefits as they can in the way of increased wages, shorter hours of labor, and improved conditions. If other large employers of labor would deal with their employes in the same spirit as the American newspaper publishers do there would not be many serious labor troubles. I must confess, however, that the publishers would have found it very difficult at any time for many years to ignore the Typographical and Pressmen's unions. These organizations are strong and are conducted with much intelligence and ability. Many publishers probably would prefer to deal with individual employes, but the newspaper proprietors are entitled to the credit, at least, of recognizing the cast-iron facts of the situation and conforming to them. They have met these organizations in a broad spirit, and the result is that for some years there have been very few strikes among the employes in the mechanical departments of newspapers.

S. E. MORSS,

President and Manager Indianapolis "Sentinel."

REMARKS BY CHAIRMAN FERD C. SCHWEDTMANN.

Made at the Organization of the St. Louis Branch of the National Civic Federation, May 1, 1903.

As an employer of labor, I have always taken the keenest interest in organizations formed for the purpose of better understanding between employers and wage earners. Many of the interests of the two are alike and neither can progress without the aid of the other.

FERD. C. SCHWEDTMANN.

An organization of employers to be successful in dealing with the labor problem must necessarily be built on two fundamental principles.

The first is meeting with workmen or their representatives for the purpose of determining conditions mutually satisfactory, under which workmen shall be employed.

The second is determination to have strikes and lock-outs the very last recourse in all labor troubles and resort to them only after all other means, mediation, conciliation and voluntary arbitration, have failed. The St. Louis Metal Trades Association and the St. Louis Founders' Association, two organizations of employers of metal workers, are formed on these two basic principles. Of both these organizations I have the honor to be President.

Since the existence of these two organizations, St.

Louis has been comparatively free from labor troubles in our lines.

Ever since the inauguration of the National Civic Federation we have followed with interest the proceedings of this organization. The introduction of the third party, the public, in the prevention and settlement of labor difficulties appeals to the thinking mind as logic and a step much in advance of former methods.

The National Civic Federation decided a short time ago to establish local branches and soon afterward inaugurated the New York Civic Federation.

We felt that St. Louis must be the next place to have an organization to promote closer relations between employer and employe. After lengthy correspondence with the National Civic Federation the national officers have come to St. Louis to assist us in forming the St. Louis Civic Federation.

There is surely no city in the United States that will furnish a better field for co-operation of labor, employer and public than St. Louis. And of all the days of the year none is better fitted for which we celebrate the one hundredth anniversary of the Louisiana Purchase.

Combined efforts of the wage earner, the merchant, the learned man and the capitalist have changed the territory purchased one hundred years ago from a wilderness to a country equal in resources and culture to the oldest empire of the world. Without this co-operation between the classes it would again become the wilderness it was one hundred years ago.

To-day we have the opportunity to lay the corner stone of consideration and harmony between the classes. On this foundation we will build in commemoration of the St. Louis Exposition a monument a thousand times greater than the Eiffel Tower of the Paris Exposition and greater than the Field Museum of the Chicago Exposition. We will build the monument of Industrial Peace.

REMARKS BY JUDGE MURRAY F. TULEY.

Made at the Organization of the Chicago Branch of the National Civic Federation, May 4, 1903.

I desire to say that I have kept close watch upon the proceedings of the National Civic Federation. I was invited to participate in its movements at its beginning. I did not do so, for the reason that I was somewhat suspicious that the movement was in the interest of capital and against labor. My reasons for entertaining such suspicion are unnecessary to state, but I am glad to be able to say that I am now satisfied that those suspicions were unfounded and that it is now and has been a genuinely disinterested movement in favor of conciliation and arbitration of labor difficulties.

As I understand it, it is not the intention in organizing this branch of the National Civic Federation to interfere in any manner with the local arbitration boards, but rather to tender assistance to such boards and to capital and labor in any difficulty arising between them.

The assistance of a branch of the national board might well be invoked in many labor difficulties, as many strikes and lockouts are national in their effects, particularly where they interfere with the due operation of interstate commerce.

I am also pleased to know that the chief effort of this national board, with its branches throughout the different States, has been and will be to educate the general public, the capitalists and the laboring men upon the great economic questions underlying their relations to each other.

Something has been said here about elevating the laboring man. He has secured by his own efforts a great elevation within the last twenty-five years, but he, as well as the capitalist, should be educated to a due recognition of the fact that a third party—the public—is interested to a larger extent than they themselves are, in the maintenance of peace and harmony in the carrying on of their joint operations.

The main difficulties arise between these two classes upon the question as to what proportion of the profits resulting from the joint operation of labor and capital shall be given to labor. A capitalist must recognize that the business carried on is not solely his business, and the employe must recognize that the work performed by him is not solely a matter of his own con-

sideration, and both parties must deal with each other upon the idea that the business carried on is the joint business of employer and employe, and recognize the rights of each to an equitable share of the profits produced by such joint operation, and the question is, how peace and harmony between employer and employe can be best maintained to their joint advantage, and to the advantage of the general public.

So serious have become the troubles between capital and labor that we find ourselves tending toward one of two results, either that their difficulties—their strikes and lockouts—shall be prevented or settled by conciliation and arbitration or that they shall be settled by compulsory arbitration through the medium of the courts. If conciliation and arbitration shall prove to be a failure, the only other remedy would appear to be compulsory arbitration by law.

I have investigated the history of compulsory arbitration in the Australian colonies, France and other countries, and have come to the conclusion that compulsory arbitration is neither desirable nor advisable. The difficulty with it is that it destroys the individuality of both employer and employe, it degrades both of them; it deprives both of them of their constitutional rights and freedom of contract.

In England, in early times, justices of the peace were given power to fix rates of wages and hours of work, and history tells us that the justices of the peace became judicial despots within their jurisdiction.

Arbitration by the courts is not judicial work. The fixing of prices on articles, the fixing of wages and hours of labor, these things are business questions, not judicial questions, and the tendency of compulsory arbitration laws must inevitably be to create a judicial tyranny wherever they are carried into operation—a judicial tyranny resulting in the slavery both of employer and employe to the will of the judiciary.

I firmly believe that the remedy for our labor difficulties is voluntary conciliation and arbitration. Conciliation and arbitration do not mean the same thing. The first is a preventive of strikes, the latter is only resorted to from necessity.

My long experience on the chancery bench may be what has led me to the conviction that where both parties to a controversy are honest and desire nothing more than what is right, and are desirous of settling their controversy, such controversy can always be settled by ascertaining the right, the equity, underlying the controversy, and applying it to the matter in dispute.

Mr. Schilling has made reference to the fact that I was an umpire in the first great strike in the city of Chicago—what is called the bricklayers' strike, or the lockout of the bricklayers (as they contended) in 1887. That strike had continued nine or ten weeks; it was estimated there were 40,000 persons out of employment, as the strike of the bricklayers had tied up the work of all allied trades and building operations. A committee of five was chosen on each side, that is, five by the bricklayers and five by the Builders' Association, and to my surprise I was requested to act as umpire, as they said they could agree upon no other person, and I consented.

We met on Monday, the 4th day of July, 1887; the feeling was bitter and both sides were suspicious of the law as represented by myself, but we succeeded, by working twelve hours a day until Friday night of the same week, when we arrived at a settlement of the strike. It was settled then on a basis in nearly all respects similar to that which was followed in the settlement of the great coal strike.

The settlement provided for a board of arbitration, the members to be chosen from each side annually in the month of January. This board was to meet and fix a minimum rate of wages, pay for Sunday and overtime, and all other questions about which trouble could be anticipated. In case the arbitration committee could not settle any difficulty arising, the umpire was to be called upon. I was elected umpire for seven successive years, and never was once called upon to settle a difficulty between the parties.

I became so much in love with the theory of the settlement of controversies by conciliation and arbitration that I set to work to devise a law by which a controversy in a court of justice might be settled by conciliation and a judicial arbitration without expense

and without delay, and without appeal or writ of error. That law was passed in 1889, and in substance it provided that any two persons having a controversy could appear in court with or without attorneys and ask the judge of a court of record to settle the controversy existing between them, and upon signing a certain stipulation provided by the law the court is required to hear the controversy without formal pleadings, without a jury, and to decide the same forthwith, or within a certain specific number of days fixed by the stipulation of the parties, and no record to be kept of the proceedings beyond the written stipulation of the parties and the judgment or decree of the court, which judgment or decree should recite what the controversy was that was submitted and should be conclusive.

This law worked well, parties have frequently availed themselves of the means provided, among others the well known case of Farwell vs. Sturgis, in which there was litigation enough to last for two or three generations, but which was promptly decided after a six weeks' hearing, and the validity of the finding in that case was afterward affirmed by the Supreme Court.

I am firmly convinced that the efforts to adjust labor difficulties by voluntary conciliation and arbitration will prove a complete success. There may be some evils to be suffered in arriving at it, but it is far better that they should be borne and the independence of the individual in his constitutional rights maintained than that he should be subject to compulsory arbitration by the courts.

JUDGE MURRAY F. TULEY.

By getting the employer and employe together, getting them to understand their relative rights in carrying on their joint operations, and that it is the duty of both parties to submit to what is right and equitable, in any difficulty that arises, a solution—not a solution, but a preventive—of labor difficulties will be obtained to a very large degree.

I am glad to be able to participate in this movement and I pledge you my hearty co-operation in any way that I can serve the cause.

THE DANGER IN GROUNDLESS STRIKES.

The strike is labor's last resource. Its use is a serious matter—so serious that the experienced labor organization will go out of its way to get a fair settlement by other means. So long as this weapon is held in reserve or used only when all other weapons fail its moral effect is great. When a union which has made itself known to the public as opposed to needless strikes finds itself so unjustly treated that a strike is unavoidable it has strong claims to public sympathy. The feeling will be widespread that such a body resorts to extreme measures only because all other methods of getting justice have failed. It is equally plain that the effect of frequent and groundless strikes must be to destroy public confidence in labor unions. Experienced labor leaders recognize this and are using their influence to prevent unnecessary and therefore unjustifiable strikes.—[Chicago News.

FOR INDUSTRIAL PEACE.

(Concluded from page 9.)

the National Civic Federation and the New York organization, I believe that no man, whether his connection be with the church, with great industrial affairs or with the leadership of some great trade union, can devote his time to a higher or better cause than the Civic Federation. I favor it on many grounds, but chiefly from the standpoint of the unions, because they make better men, better mechanics, better citizens, better Americans. I feel that on the side of capital the unions increase the responsibility of men who have often acquired their means and experience, beginning like the rest of us plain Americans, with hard effort. It has been my privilege of representing the public in this matter, not to do a great deal, but what little I have done has been with the greatest possible pleasure. I do feel that the New York Civic Federation will be an instrument, an auxiliary to the National Civic Federation, that will render unlimited service to all interests. I feel that as we are organized now, with our Conciliation Committee under Mr. McMillin subject to a telephone call and responding to any request coming within its province, with Mr. Marks, Mr. Easley, Mr. Farley and Mr. Nixon always ready, no matter what time of the day or night they are called upon (they make it a privilege as well as a duty to respond to that call, and we have seen in some instances where the call could not come too soon) it will be a very useful force. One instance of its good work came under my own observation recently, when I did not know that Mr. Mahon was in the city, when it was necessary for an interview to take place. A new organization had made demands which could not be acceded to by the directors, who were new to the situation, and who answered 'no.' There was a deadlock. The traffic of this great city was in imminent danger of being paralyzed at any moment. A telephone message from Mr. Easley's office announced that Mr. Mahon was here. That resulted in a talk with important officials of this corporation; that resulted in further conferences and better understanding, and in a very few hours the serious difficulty of the situation was removed. The service is going on uninterrupted and, so far as the public is concerned, nothing is known of the Federation's labors in its behalf. A service of that kind to a city like New York, with all its commercial interests, could not be measured. If that organization had not existed and Mr. Mahon had not been here, we cannot tell what would have happened. It is only one of I suppose thirty similar cases in which the members of the local Federation have had the opportunity of rendering service. We cannot give too much attention to this Federation. We cannot be too prompt in its service. It supports a great cause. It is a just cause and personally I shall do anything and everything within my power to advance the interests of the Federation and to bring men who apparently see things from different standpoints to see them right. Any man that does right himself and helps other men to do right is doing a great public service. This, gentlemen, I believe, is what we are all here to do. Our organization is a useful one, our cause great, and it will be blessed, not only during our time, but in the future." [Applause.]

Mr. Underwood, being called on by the Chairman, replied: "I don't think I can say anything more that will throw light on this great work. I merely desire to say I am willing to learn and shall always feel it a privilege and duty to contribute as much of my time as possible toward bringing about the peaceable and honorable adjustments we are all seeking." [Applause.]

Mr. Nixon, in calling on the next speaker, Mr. Marks, said: "I want to pay a tribute to one always ready, no matter if it overtaxes his energies, one ready and willing to make sacrifices, both for his own side and the other whenever we have a difficulty, and that one is Mr. Marcus M. Marks." Mr. Marks was greeted heartily. He said: "Archbishop Ireland said we are here to learn. True, and we are also to be teachers. We come here to learn and go outside to teach. Unless the labor leaders go out and teach their people, unless the leaders of industries go out and impress the manufacturers, we fail in our purpose. Let us go outside and

say to the manufacturers: 'Open your eyes; it is a condition, not a theory, that confronts us; be just! be patient!' and say to labor men: 'Don't be prejudiced because your employer is a so-called capitalist; be reasonable! respect the rights of others.' Gentlemen, I can say to-night it is the greatest blessing to us that the machinery of this Civic Federation has been given to us for the purpose of accomplishing good. It is a tremendous engine. It has the confidence of the community. Yes; let us spread the good influences of our conferences. We can thus make the Civic Federation a great power tending toward industrial peace." [Applause.]

Mr. Nixon, referring to Mr. McMillin, said he would like to hear from him, as another member of the New York branch engaged in active and effective work. Mr. McMillin declined to make a speech, saying: "I have really but one suggestion to make to-night and that is in the interest of the Committee on Conciliation. When the labor organizations send out their organizers to make new regiments they might instruct them to drill their men for ninety days in their own rules and laws before permitting them to rule themselves. We are having a great deal of trouble in the subway through a new organization becoming a little previous. If the organizers could drill such men up to self-government before letting them walk alone, it would relieve the Committee on Conciliation a great deal." [Laughter and applause.]

As the diners dispersed the comment was general that every one present might well say he had been present at an event certain to become historic. It had been plainly discernible to all that a new element was rapidly developing which would be destined to have a strong influence on the course of events in American industrial progress. The cause had already brought to the front eloquent and influential champions, all agreeing on the means to be pursued in pushing forward to the common end—peace and prosperity for all. As the evening had passed without a single untoward incident, it might be well hoped that the future course of the Federation would be helpful not only to New York but to the entire country.

THE EXCLUSION OF THE NON-UNION MAN.

BY MARCUS M. MARKS.

Questions of wages and of hours can usually be arranged if wage earners and their employers confer in the proper spirit and have sufficient patience and judgment.

The question of restriction of output—one of the most serious in connection with the labor problem—although generally understood by our national labor leaders, has not been brought home clearly to the rank and file of organized workmen. Unless union men realize the grave dangers underlying arbitrary restriction of output, the solution of the problem may ultimately force itself upon them when the advancement of the non-union man, who is free from restriction and thus able to push his way to the front, teaches in a striking way that the strength given to each individual should be developed and expressed in his work up to the extent permitted by security to health. The subject is one that needs considerable light, and it is only by frequent friendly conferences between employers and wage earners that we may hope to clear away the haze which in many cases still envelops the whole theory of restriction. The employer should never forget that he must insure full payment for extra service before the wage earner can be enthused into bringing out his best powers.

But there is one problem in connection with the labor movement regarding which there seems to be less hope for early understanding and agreement, and that is the status of the non-union man. Shall wage earners refuse to work with a man who cannot be persuaded by them to join their union? Shall the employer be urged to coerce this man into joining the union or else discharge him? These questions usually arouse considerable feeling on both sides, and employers as a rule refuse to confer on the matter, which they consider a question of principle and therefore not subject to arbitration. This disinclination to confer makes the question very serious, because, as already suggested, it is only by kindly discussion that misun-

derstanding between employers and wage earners can be removed.

In England, where the labor union movement is old established and twice as strong as in this country, union workmen do not object to non-union men being employed in the same shops. In this country a great many of the national labor leaders understand that the hope of the labor movement lies in evolution and not in revolution, and that workmen can best be brought into a union by convincing them that good is being accomplished by association. Our leading labor leaders realize that a man coerced into joining the union makes a poor union man and is apt to drop out when his affiliation is most needed; but many of the local leaders throughout the country do not yet fully appreciate this.

Only recently a conference between employes and employers was in danger of being seriously disturbed

MARCUS M. MARKS.

when the remark was made by one of the local representatives of the union that "he would rather work next to a man with the smallpox than next to a non-union man." Manufacturers present who happened to employ many non-union men of good character and ability were incensed at this statement, and it took coolness and patience to smooth over the situation. It was pointed out to this union man that as only ten to twenty per cent. of the workmen belong to unions, his remark was a gross insult to the vast majority of workmen in this country. Of course his statement was exaggerated and fortunately does not represent the feelings of union workmen as a class.

Most men now agree that great good can be accomplished, and is being accomplished, by unions of workmen as well as by associations of employers. But it must always be borne in mind that the best results are brought about by moving along the lines of least resistance. Persuasion and argument may be persistently used, but the line should be drawn at coercion. If a workman is convinced that it is not to his best interests to affiliate with the union, it is both unwise and wrong for his comrades to coerce him to join. If unionism is for the good of the wage earner, he is bound to find it out. Let the demonstration of the value of association be made clear and the union movement will win out in the end.

Many cases have presented themselves where serious strikes and lockouts were brought about because the unions insisted that the employer discharge non-union men, while, on the other hand, in some cases where this demand was not insisted upon, the men subsequently joined the union of their own volition.

The national labor leaders in the Civic Federation can do much to throw light on this dark place in the workings of local labor unions throughout the country, and it is to be hoped that these leaders will raise their voices fearlessly and frequently against coercive methods, which are against the spirit of the age and opposed to the best interests of true trade unionism.

Outside of its province to provide neutral ground

where contending parties may meet without loss of dignity or prestige to adjust matters of difference between capital and labor, the work of the Civic Federation is mainly educational. Leading men in many walks of life, coming together at its great conferences, exchange experiences resulting from broad, busy lives, and invariably leave one another the richer. However, were the good effect to end with the education of this Executive Committee the accomplishment would not be sufficient. Each man should become a center, radiating the good influences of the Civic Federation. The employers on this committee should pass on to their fellow employers the valuable ideas that have been absorbed at the meetings, and should counsel recognition of practical conditions as they exist in the labor world. They should advise and help to bring about frequent conferences between employer and employed, and impress on the employer the duty of great patience which his position in the community imposes upon him.

The labor leader has a corresponding duty. The atmosphere of the Civic Federation should be communicated as far as possible to his membership; his task in the future will be made easier and simpler if the rank and file of the organizations are impressed from time to time with the broad spirit of ideal unionism. If this policy of transmission is carried out thoroughly, the potent influence of the Civic Federation for good will be immeasurable. Then indeed will the members of the Federation, who are blest with the opportunity of using its powerful machinery, have ample cause to feel content with the results of their efforts.

THE WARFARE AGAINST UNIONISM. HOW SHALL IT BE MET?

BY HENRY WHITE.

General Secretary United Garment Workers of America.

The hostile declarations of a certain class of manufacturers against the unions, followed by the formation of business men's associations for the avowed purpose of fighting unionism, are evidence of the belief entertained by many employers that the vast power acquired by the unions is being used despotically and that the tendency is to become more so as their prestige increases.

HENRY WHITE.

So pronounced has this opposition become as to give rise to serious concern on the part of those most active in the labor movement. The welfare of the cause will not be served by making light of the accusations or belittling the antagonism engendered. Neither will it avail to reply in kind or to make extravagant claims for the unions. The better course is to consider the criticism calmly and to ascertain to what extent it is well founded, in order to remedy deficiencies.

The working class has all to gain by fair play. Until recent years helpless and disunited, it was long kept close to the life-line. The pressure of society bore heavily down upon it, and it could offer no counter-resistance. Through concerted action it has now gained a firm footing and has secured a measure of independence, a larger share in the product, and more recognition from society. There is nothing to interrupt its steady rise if its higher purposes are kept in view and it strives for the attainable. Should it depart from that course its steps will have to be retraced at a great cost. A few persons may levy tribute upon society or exact exorbitant pay for their services, but if the multitude attempts the same proceeding the harmony or balance of the social forces is upset, society being unable or unprepared to meet it. Any attempt also to apply to existing affairs the standards of justice based upon ideal conditions must meet with a like fate.

The necessity for labor organization is so apparent that the authorities in economic science are all agreed

as to the indispensable services that the unions render. They are based upon principles that make them invulnerable when acting within the bounds of reason. That is why the unions need not fear to acknowledge their shortcomings. Just as consciousness of our faults is necessary to their correction, so will a frank admission of the defects of the union lead to their correction. Hence, if fear of the movement is largely inspired by the inability or unwillingness of its leaders to recognize its faults and limitations, an acknowledgment of them would do more to inspire confidence than the most vehement denial of the accusations. It cannot be held that a union, like a king, can do no wrong. No one can expect the labor movement to be the only perfect human institution; as the membership comprises the average persons, it is not to be supposed that on becoming members they will be transformed into saints. When actuated by a common grievance they appeal to the highest sentiment, but when they feel secure in their power they are likely, unless controlled by rare wisdom, to apply it as ruthlessly as the other side, and the latter, hard pressed in turn, are moved to make the same appeal to justice. That is human nature, and we might as well be candid about it. The unionist is liable to seize his opportunity, just as the employer has done, to exact all he can without regard to ultimate consequences, and when he feels safe becomes deaf to all entreaties. And when a union officer, who, because of his knowledge and experience, is enabled to look further ahead, counsels moderation, he is apt to be thrust aside, and the membership only brought to its senses after a contest in which it has lost the fruits of years of struggle.

Nearly all union officers and labor leaders of my acquaintance have often taken great risks in boldly standing out against excessive demands and unworthy methods of their membership. Although in their representative capacity they are placed in the position of supporting their unions against hostile attacks, yet they know, what they are loth to say to the members, that an occasional resistance by employers is necessary to keep the restless element within bounds. It is a question as to whether the checking process is to be done by the membership or by the employers after a wasteful fight.

An amazing change has come over the laborer. A generation ago he was submissive, stolid, and contented. He could be depended upon to support existing conditions, and he seemed devoid of any feeling of solidarity with his fellows. To-day he has pooled his interests with them, has bettered his condition substantially, and he even contends for some say in the conduct of business. The vital question now arises: "Will the unions show a consciousness of the responsibility that goes with power, develop the ability to restrain themselves, and keep on in the path of least resistance, or will they plunge ahead, driven on by the clamor of the unreflecting among the membership?" "Whither are they tending?" is the question sometimes anxiously asked by the most sincere friends of the working-class movement. Will the unions find their functions in society by serving as an agency for effecting a more equitable distribution of wealth, or will they clash with other social forces and precipitate a hurtful internal conflict?

There is little that is strange in the hostility of employers toward unions. Industrial improvement is not possible without some forcing. If the workmen had to wait until employers voluntarily offered to increase wages and shorten hours they would remain where they were. It is by asserting themselves that concessions are granted and recognition given. In time, as the employer realizes the futility of trying to destroy a union, he becomes reconciled to it as a factor to be dealt with in the conduct of his business, and his active opposition ceases, especially when he finds that he does not suffer as a competitor when wage conditions are made uniform. When, however, he becomes subject to harassing demands, his latent opposition is again aroused.

The present organized movement against unionism means something more than this normal opposition. It is due rather to the fear that industry is being menaced by an irresponsible and insatiable power. The unions can allay that fear only by the force of example—by demonstrating that it has no real basis.

ORGANIZATION AND CONCILIATION.

Hon. Oscar S. Straus, as President of the American Social Science Association, in an address on "Industrial Peace," at its session May 14, brought out these points:

OSCAR S. STRAUS.

The results accomplished by the National Civic Federation have not only justified its existence, but have also clearly shown that along the lines of its endeavors the best results toward adjusting labor disputes and securing industrial peace are attainable.

The "Conciliation Committee" has been applied to for its good offices within the past fifteen months in many important and large labor controversies. These applications have come sometimes from the one side, sometimes from the other side, and not infrequently from both sides. The committee has succeeded beyond its most sanguine expectations in bringing about or materially contributing toward an adjustment in nearly every instance, with the exception of the anthracite coal strike.

The plan of organization of the industrial department of the Civic Federation has been unfavorably criticised for not giving unorganized labor a representation, and as a consequence, unduly leaning toward, if not actively supporting, organized as against unorganized labor. This point of view did not escape the careful attention of the Executive Committee of the Federation, and for that reason its "statement of purpose" contains the following: "That at all times representatives of employers and workers, organized and unorganized, should confer for the adjustment of differences or disputes," etc.

Besides, these considerations presented themselves, that the third group, "on the part of the public," could certainly be relied upon to represent all the laboring elements irrespectively, just as they represented the welfare of the entire community. In what other way could it select representatives, for had the Civic Federation summoned unorganized labor to have a conference and select delegates or representatives for its committee, then it could have been charged that by that very act it had promoted the organization of unorganized labor.

As a member of the Conciliation Committee, I have had frequent conferences with many of the leading labor leaders in the country, and I am free to state my point of view has undergone a complete change in respect to the evolution of the labor question. I have grown more and more hopeful that, as this country was the first to organize religious and political equality, it will lead the way to a peaceful co-ordination of the economic forces by equalizing the opportunities for advancement, which is the nearest practical approach to economic equality. The maintenance of the open door of opportunity is a fundamental American doctrine as old as the Declaration of Independence.

Without organization, however, and with unrestrained competition, the well disposed employer is often prevented from granting his workmen more liberal terms which he regards as reasonable, so long as his less well disposed competitor holds out against making like reasonable concessions, and as a result strikes on the part of organized labor are brought about to correct evils growing out of a lack of harmony among unorganized employers.

Besides, strong organization among employers will have a far-reaching moral and disciplinary effect upon labor, and make it easier for the leaders to labor to control their followers and restrain them from making unreasonable demands. Just as among nations one sword keeps the other in its scabbard and makes for peace, so will equality of might conduce to equality of right, and strengthen the forces of wisdom and conservatism on both sides.

How much more intelligent and economical and useful a branch of the National Civic Federation in every city of importance in the Union than a national organization formed for the express purpose of pitting capital against labor, of fostering hatred and breeding strife!—[Chicago Post.

A CHECK ON RAW STRIKERS.

Hasty and ill-advised strikes were condemned by vote at a meeting of the Chicago Federation of Labor on May 4, and the Federation immediately proceeded to put its resolution into practice. A strike of the 6,000 employes at the Deering harvester plant and an attempt at calling out 7,000 at the McCormick plant were denounced on the floor of the Federation by Barney Cohen, a member of the Executive Board. The two plants are now a part of the International Harvester Company's property. Mr. Cohen said that from an investigation at the McCormick plant he

W. G. SCHARDT.

thought there was no trouble there that could not be settled in half an hour by using good judgment. No demand had been made on the management by the employes. A number of these said that their only demand was the right to organize. "Superintendent Wood of the twine mills," said Committeeman Cohen, "told us that it would be the last thing he would think of to interfere with the personal liberty of his employes. The question of joining a union was one for themselves to decide. Superintendent Flather of the reaper works told us the same thing. No one had ever been discriminated against for being a member of the union. All of the blacksmiths and two-thirds of the machinists are union men. They have made no complaints of discrimination."

"I believe," continued Committeeman Cohen, "that many of the strikes now disturbing the city could be avoided if good judgment were used in the first place. By acting conservatively we can have the support of those who are now opposed to organized labor, and who think our main object is to stir up strife. On the contrary, the object of this federation is to secure the best possible conditions for the workers, and to do so with as few strikes as possible."

The recommendation of the Executive Board, as adopted by the Federation, was: "That the Federation take some action on the hasty calling of strikes at this time. We suggest that when there is any grievance existing the Executive Board should be notified before any strike is called to try and settle the matter without a strike. We believe that many of the troubles arising at this time can be adjusted without strikes."

The McCormick affair was quickly settled. The company invited an investigation of its works by representatives of the Chicago Federation of Labor. They found that the employes in general had no fault to find with their treatment by the company. President W. G. Schardt, of the Federation, on seeing the situation at the McCormick works, caused the union pickets to be withdrawn and interference with the company to be brought to an end. He and the Federation Executive Committee conducted negotiations for ten days with the officials of the International Harvester Company, at the end of which time the Deering strikers voted to return to work. Both sides made concessions and decided to submit their differences to arbitration by a joint committee representing the company and the Chicago Federation of Labor.

Complaints against the company in minor matters, especially by the girls and women, who were forced to work in unsatisfactory surroundings, were investigated by the company. As a result it will systematically set about improving the conditions.

The Secretary of the Chicago Federation estimates the union membership represented on its floor as 300,000, including thousands of youths under age and women. Many others are unskilled laborers, not naturalized citizens.

The Chicago Federation for two years has been actively engaged in the work of arbitration, of which its most active members are usually strong advocates. It is making a reputation in this regard as an agency for public order.

Mr. Schardt, the president, was a union carpenter in Spokane in 1896, the union's business agent in Seattle in 1891, and in a similar position in Chicago in 1894. From 1895 to 1902 he was financial secretary of Local No. 1 in Chicago. He is a skilled worker at his trade, and has established a reputation as an aggressive but moderate leader.

A DISTRICT AGREEMENT.

New York Metal Trades Association and the Brotherhood of Boilermakers and Iron Shipbuilders.

In the April number of the REVIEW an account was given of the conference between the New York Metal Trades Association and the Marine Trades Council which was brought about through the efforts of members of the New York Civic Federation. This conference agreed to call off the sympathetic strikes of the boilermakers in the shipbuilding yards of the members of the Metal Trades Association, and also the sympathetic strike of all the crafts in the Townsend-Downey Shipbuilding and Repair Company. After that agreement was made the boilermakers presented demands to all the employers in the New York district asking for an increase in wages, shorter hours, and exclusive employment of union members, to take effect May 1. Neither organization was at first willing again to enter into conference, both having determined that the only solution of their difficulties was to be found in a trial of strength. At this juncture, through the offices of Mr. Marcus M. Marks of the Civic Federation, the Metal Trades Association consented to hold a conference with the boilermakers, whose District Council also assented. Each side appointed five committeemen, who arranged a meeting for 11 o'clock on the last day of April. If the strike, which was to go into effect the next day, was to be avoided it was necessary that a prompt agreement be reached. The committees were in session continuously nineteen hours, from 11 o'clock on Thursday morning until 5 o'clock on the morning of May 1. They finally reached an agreement in which concessions were made on both sides.

While the union had demanded a nine-hour day on all shop work and a half-holiday during the summer months, it was agreed that the custom as to hours prevailing in the several plants should be continued. The agreement also provided:

"There shall be no restriction or discrimination on the part of workmen as to the handling of any materials entering into the construction of the work upon which they are employed.

"There shall be no limitation placed upon the work to be performed by any workman during working hours.

"There shall be no restriction as to use of machinery, or tools, or as to the number of men employed in the operation of the same.

"There shall be no restriction whatever as to the employment of foremen.

"There shall be no sympathetic strikes called on account of trades' disputes.

"No person other than authorized by the employer shall interfere with the workmen during working hours.

"The employer may employ or discharge, through his representative, any workmen, as he may see fit; but no workman is to be discriminated against on account of his connection with a labor organization.

"In cases where misunderstandings or disputes arise between the employer and workmen, the matter in question shall be submitted to arbitration without strikes, lockouts or stoppage of work pending the decision of the arbitration.

"Each member of the New York Metal Trades Association affected by this agreement shall be held individually responsible only for the performance of the same, and his, or its, violation of this agreement shall subject such member to expulsion from the association."

In return for the concessions of the boilermakers in the matter of discipline and management of the shops the employers conceded an advance of wages to \$3 per day for boilermakers, riveters, chippers and caulkers, and an increase of 5 per cent. for others.

MR. GOMPERS GIVES SOUND ADVICE.

He Favors Employers' Unions and Rebukes a Reckless Organizer.

Two letters which President Gompers of the American Federation of Labor has recently written have been widely quoted by the press with approval.

Of the organization of employers he wrote:

SAMUEL GOMPERS.

"Employers will find it to their advantage to be organized, and not only this but to deal with organized labor. The movement to form unions among the business men will tend rather to prevent conflict than to promote trouble. The better the organization on both sides the better it will be for business. Organized employers will be better able to understand the demands of organized labor and to meet these demands without friction.

"There has been much hot talk about the increasing demands of labor. My experience has taught me not to be an alarmist, and I am not alarmed over this particular situation in general. So long as human nature is as it is there will be manifestations of discontent, both from laborers and from employers. But I believe that every day is making for better conditions. We hear more of labor troubles now than we did years ago, but we must not judge too hastily from this that laborers are any more widely discontented or that they are unreasonable. When an industrial dispute occurs in our time it involves so much that it must attract more attention. But every dispute is an influence toward a better condition of things in the future."

To an organizer of the Federation operating in San Antonio Mr. Gompers wrote:

"Through the courtesy of some fellow unionists, I am in receipt of copies of newspapers containing references to remarks alleged to have been made by you at a conference where the subject of unionizing the men employed in the Fire Department was under consideration, and that during this conference you made a statement substantially as follows: 'That being asked what the firemen, if organized into a union, would do in the event of a strike, you said you would be in favor of not letting an engine be touched, and that you would be willing to let the whole city burn.'

"I do not want to take it for granted that you did make the remarks referred to, and yet all the circumstances indicate it; but when I first saw the utterance it shocked me beyond expression. The American Federation of Labor is a standing protest against wanton destruction, injustice, brutality or inhumanity, and I would be recreant to that organization as well as to my entire make-up did I allow such a remark to go unrebuked, particularly when made by one holding a commission as organizer for the American Federation of Labor.

"You will please advise me promptly whether the remarks above stated have been made by you, or any remarks which are similar in substance. If you can give but an affirmative answer to this statement, you will please return the commission you hold as General Organizer for the American Federation of Labor."

NATIONAL ASSOCIATION OF MANUFACTURERS.

The Declaration of Principles Adopted at New Orleans, April 15, 1903.

1. Fair dealing is the fundamental and basic principle on which relations between employes and employers should rest.

2. The National Association of Manufacturers is not opposed to organizations of labor as such, but is unalterably opposed to boycotts, blacklists and other illegal acts of interference with the personal liberty of employer or employe.

3. No person should be refused employment or in any way discriminated against on account of membership or non-membership in any labor organization, and there should be no discriminating against or interference with any employe who is not a member of a labor organization by members of such organizations.

4. With due regard to contracts, it is the right of the employe to leave his employment whenever he sees fit, and it is the right of the employer to discharge any employe when he sees fit.

5. Employers must be free to employ their work people at wages mutually satisfactory, without interference or dictation on the part of individuals or organizations not directly parties to such contracts.

6. Employers must be unmolested and unhampered in the management of their business, in determining the amount and quality of their product, and in the use of any methods or systems of pay which are just and equitable.

7. In the interest of employes and employers of the country, no limitation should be placed upon the opportunities of any person to learn any trade to which he or she may be adapted.

8. The National Association of Manufacturers disapproves absolutely of strikes and lockouts, and favors an equitable adjustment of all differences between employers and employes by any amicable method that will preserve the rights of both parties.

9. The National Association of Manufacturers pledges itself to oppose any and all legislation not in accord with the foregoing declaration.

THE CIVIC FEDERATION INDORSED.

At the annual convention of the Amalgamated Association of Iron, Steel and Tin Workers, held at Columbus, O., in April, the following indorsement of the National Civic Federation by President T. J. Shaffer was unanimously approved by vote of the delegates, and it was resolved that the association adhere to its connection with the Civic Federation:

T. J. SHAFFER.

"The investor of capital has certain rights which we must grant, but at the same time he must recognize and grant to us conditions which belong to us, because without our co-operation he cannot succeed, and as a coadjutor we shall be without employment, if he be not with us.

"The time has come, and I believe it is propitious, when capital and labor in organized capacities, must unite to oppose and defeat the purposes of their common enemies. This union has been started, but has not attained the strength it must have to protect the interests of the employer and the employed. The union to which I refer is the Civic Federation, composed of statesmen, clergymen, philanthropists, educators, business men, and leaders of organized labor. They aim to procure industrial peace, equitable divisions of earnings, proper conditions, better citizenship and corrected government.

"When labor presents intelligently its claims to capital, educated by labor's reasoning, then shall capital and labor be partners and share equitably in common production and mutual investment. This desirable condition is sought by the Civic Federation, within whose ranks are men of thought, reason, soundness of judgment and pure tendency of heart and disposition."

Mr. Eidlitz on the Building Trades Unions.

Otto M. Eidlitz, Chairman of the Emergency Committee of the Building Trades Employers' Association, has made public this statement regarding the present employers' movement:

"It must be understood first, last and all the time that this is a movement that is making for industrial peace, that is our one and only aim. At the outset it may appear to some people that this is not the case. But in the end we will demonstrate that out one and only purpose has been to bring about peace and amity between employer and employe.

"There is an immense amount of work that we shall have to do before we can get down to a specific working plan. In the first place, we will have to find out the exact status of the relations between each of our associations and the labor unions with which it does business. In some instances men are out on strike and in others they are locked out, and in others they are prevented from working because of the rival claims of contending unions or because of the non-delivery of materials.

"In a matter of such great importance as this we must move very slowly. We cannot afford to make mistakes. The eyes of employers throughout the whole country are upon us. We are determined that this movement shall have a successful issue, and that the results we shall achieve will be beneficial to all of the interests involved.

"With great care we are working out our plan and scope, and until that has been completed it will be impossible for anybody to say just what action we shall take in dealing with the different problems before us. In mapping out our plans we keep before us all the time the knowledge that unions of labor, instead of being a menace, are a help to us. We do not want to exterminate the labor unions or hamper them in any way. We want the unions. They bring about competition, and competition is of the greatest value in every trade. We do not regard the unions as a necessary evil that we have got to meet. We welcome them.

"But we do think that there are some phases of unionism that are unfair. The foremost of these, in my opinion, is the discrimination of individual unions against individual employers. This, we believe, should be stopped."

High Commendation from Mr. Wallace Downey.

I desire to express my appreciation of the splendid services rendered by the New York Civic Federation in connection with the several difficulties that have existed during the past five months between the New York Metal Trades Association and the employes of the members of that association, particularly in the matter of the sympathetic strike called against the members of the New York Metal Trades Association last March. In this case after several conferences the interested parties had come to a deadlock, and there seemed no recourse except a continuation of the strike condition, until either one side or the other gave way. Then by an especially clever stroke the Civic Federation demonstrated its full value by creating an opportunity for the contending parties to meet under conditions which made for peace. Then as a result of most faithful and unbiased effort the merit of the matter was brought to the fore and an adjustment of the difficulty made, which was based absolutely on merit without concession to sentiment or prejudice. I take special pleasure in mentioning this matter since I am convinced that the Civic Federation will be a great power for good by standing firmly for the recognition of merit on either side of the many controversies that are bound to grow out of the present strained condition between capital and labor.

WALLACE DOWNEY.

Townsend-Downey Shipbuilding Company, 12 Broadway, New York, May 26, 1903.

TRADE AGREEMENT.

H. Coulby Praises the Longshoremen's Union.

I am asked, first, whether any improvement has taken place in the character of the longshoremen's organization and its observance of agreements; second, the effect upon the industry from the employers' standpoint which has followed the increase in wages during the past few years and the exclusive employment of union workmen coupled with the system of joint trade agreements.

In answer to your first question I will state that the dock managers of the great lakes are now entering upon their fourth year of dealing with the Longshoremen's Union by the contract system, and after giving it a fair trial I have no hesitation in saying it has been, on the whole, satisfactory to both the managers and the men. In fact the results have been such that the Lake Carriers' Association of the great lakes has this year, for the first time, made contracts with the Firemen, Water Tenders and Oilers' Union, the Seamen's Union and the Cooks' Union. The Great Lakes Towing Company has also just entered into contract with the Licensed Tugmen's Protective Association and Tug Firemen and Linemen's Organization for manning their tugs during the ensuing year. All of these contracts contain the usual arbitration clause and provide that the men shall continue to work pending such arbitration. In addition, it is provided that all men working under the contracts must be satisfactory to and under the direction and control of the management, which I regard as the most essential features of the contract, because it clearly defines the relation between employer and employe. The officers of the International Longshoremen, Marine and Transport Workers' Association were the pioneers in establishing the contract system on the lakes, and to them is largely due the success that has attended its adoption. They have always insisted that a contract once entered into must be lived up to conscientiously and faithfully. During the life of our first contract there naturally arose some misunderstandings and wrong constructions of its terms. At the following annual conference with the men these were largely cleared up and since that time I know of no serious instance where the contract has been violated.

In answer to your second question: I believe the increase of wages during the last few years is largely due to the inevitable law of supply and demand. We are enjoying an era of prosperity which has created a great demand for labor, and it is only natural to expect that it would result in a higher wage scale.

The laborer is worthy of his hire and is entitled to his share of the results of the good times. I believe the supply of labor on the great lakes is nearly all included in the several unions. Just so long as labor leaders keep up their supply of labor to fill the trade agreements they enter into, insist upon the elimination of sympathetic strikes, and that all matters in dispute be submitted to arbitration, the men in the meantime continuing to work, and that they shall not encroach upon or interfere with the executive part of the work, I believe satisfactory results will be obtained for both sides through trade agreements. It is certainly a vast improvement over the old method which often resulted in strikes and interruptions two or three times a month.

The sociological problem of the ultimate outcome of the exclusive employment of union workmen, coupled with the system of trade agreements, must, in my judgment, remain for the present a tentative one. A student of the history of trade unions in England for the last century finds its pages filled with things that dwarf commercial development. To successfully apply this method of dealing between employer and employe entails responsibilities on both sides. The employer must recognize that while all men are not endowed with the same ability we are all human and entitled to fair treatment, and that the best results are always obtained from men who feel they are well treated. At the same time, he must jealously guard his right to run his own business in his own way, as there is a tendency in unions to encroach upon the executive part of the work. On the other hand the trade unions must recognize the right of every man living under our form of government to sell his labor in the best market he can find, to rely upon the power of moral suasion and example to recruit their ranks and eliminate from their creed the weapons of boycott, tyranny and oppression that seems in the past to have been part of their stock in trade.

H. COULBY.

Pickands, Mather & Co., Cleveland, O., May 4, 1903.

President Newman Warmly Commends the Longshoremen.

Prior to the year 1903 our company had no direct dealings with labor organizations; that is, while we employed mostly union men there were no formal contracts entered into. In consequence more or less trouble ensued, especially during the year 1902, when a general strike of our employes occurred lasting some five or six months. Our past trouble, in my opinion, was largely caused by a failure to meet the various organizations and arrive at proper bargains. The failure to do this I attribute to the organizations themselves, our company being desirous of such a meeting. But be that as it may, we have since that time met with the chief executive officers of the labor organizations, and after careful negotiations have completed bargains and written contracts for the employment of all men for the ensuing year, which agreements we have every reason to believe will be faithfully observed.

Our having met with the labor organizations and arrived at agreements indicates to me that the labor organizations are constantly improving in their general character and the personnel of their officers. And while the wage scale has in most every instance been increased over former years I can see advantages to the employer which should compensate for the increase in the wage scale. My opinion is that every employer of labor would do well to carefully negotiate with the officers of the various trade unions whose men they desire to employ, and undertake to arrive at satisfactory agreements before they decide that such agreements cannot be made or would not be carried out. Labor organizations as a rule, I believe, are desirous of observing the contracts they make, and with the good work the employer can accomplish at the time the bargains are made the importance of this to the trade unions will become more and more apparent and strikes and lockouts less frequent.

T. F. NEWMAN, President.

General Office The Great Lakes Towing Company, Cleveland, O.

(Chicago Inter Ocean, May 5.)

CAPITAL AND LABOR WELDED BY LEADERS.**Senator Hanna and John Mitchell Felicitate Chicago at Organization of Branch of National Civic Federation.****Distinguished Ohio Senator Refutes Anarchy Charges and Praises the Way Strikes Are Handled Here, but Is Mute on the Subject of Politics.**

FRANKLIN MACVEAGH.

Capital and labor, figuratively speaking, put their feet under the same table at a love feast at the Auditorium Annex yesterday afternoon. The meeting marked the organization of a local branch of the National Civic Federation, with representatives from the money and working classes and from the general public to form an Executive Committee. In attendance and warmly championing the proposed movement were Senator M. A. Hanna, John Mitchell, William R. Harper, Bishop Fallows, the Rev. Emil G. Hirsch, George A. Schilling, Franklin MacVeagh, Lambert Tree, Judge Murray F. Tuley, John C. Driscoll, Albert Young, Daniel Keefe, Colonel John J. McCook of New York, and a large number of others. Senator Hanna and Mr. Mitchell assisted in the forming of a similar branch at St. Louis last Friday.

R. M. Easley, secretary of the National Civic Federation, called the gathering to order a few minutes after 4 o'clock. Franklin MacVeagh was made chairman and John C. Harding secretary. In a few words of explanation the chairman stated the purposes of the session, and pointed out that the organization was not to be confounded with the local Civic Federation, although it had grown out of that body.

"The national movement was started in Chicago in 1900," said Mr. MacVeagh, "and, like many another good thing born here, moved to New York. It may be said that Chicago again assumes the leadership, for it is the only city in the country that has a Board of Arbitration, and the only city that has a Federation of Labor that is avowedly going about the work of conciliation.

REMEDIES AND PROBLEMS.

"It has been said that Chicago breeds the problems. It also breeds the remedies. The National Civic Federation, therefore, meets different conditions here from those existing in New York and St. Louis."

Mr. MacVeagh then introduced Senator Hanna. "It is indeed a gratifying time to me," said Senator Hanna. "It is more than gratifying to see this representative assemblage of Chicago citizens from the world of capital, of labor, and of thought. I believe in organized labor, and have had to deal with it for thirty-five years. When I had an opportunity I became a member of this organization, because it represents principles in which I believe. When men with differences have met on a common ground, in a spirit of fairness, a peaceful settlement has been the result.

"The National Civic Federation is engaged in a work of education and the bringing of the differing forces together upon a middle ground where they can reach an agreement. There never was a time in the history of this country when the questions which we are organized to deal with have assumed such economic importance as at present.

PRAISES ORGANIZED LABOR.

"I am glad to learn since I came here of your splendid organization for arbitration. I am more than glad to learn that organized labor has taken the lead in such an important thing. We are not arbitrators. We have never been called upon to act in that capacity, but in our sphere and in our way we have brought the opposing forces together and settled disputes involving millions of dollars. In this work which you have undertaken to further, I say, gentlemen, God speed you."

John Mitchell, President of the United Mine Workers of America, said that he was glad to add his voice in the furthering of the work in hand.

"More strikes and more trouble," he said, "have resulted through the failure of representatives of labor and capital to get together than from any other cause. I desire to compliment the Chicago Federation of labor on its action of yesterday. It marks an epoch in the advancement of labor. The best thing, in my judgment, that trade unions can do is to adjust their difficulties without strikes.

NEED POWERFUL AUXILIARY.

"It will be a good thing for you all to form this branch of the National Civic Federation. You have a

good Board of Arbitration, a good Federation of Labor, and you need this powerful auxiliary to aid both. In the language of Senator Hanna, I say, 'God speed you.'"

Judge Tuley, the Rev. Mr. Hirsch, Albert Young, President of the Teamsters' National Union of America; Daniel Keefe, President of the International Longshoremen's Association; Professor Laughlin, of the Chair of Political Economy in the University of Chicago, and Colonel John J. McCook, of New York, addressed the meeting in furtherance of the work and approbation of sentiments that had been expressed.

On motion of B. J. Rosenthal the chairman was instructed to form an executive committee of twenty-three members, seven representing capital, seven labor, and seven the public, and to include the chairman and secretary.

Mr. MacVeagh appointed the following:

Representing the public—Judge Tuley, W. J. Onahan, B. J. Rosenthal, Bishop Fallows, Prof. H. P. Judson, W. W. Tracey and George A. Schilling.

Representing employers—Charles R. Crane, T. K. Webster, John M. Clark, Charles H. Hulburd, G. Watson French, George C. Prussing and W. T. Brownridge.

Representing employees—William G. Schardt, Carpenters; J. Keppler, President district No. 8, International Machinists' union; Harry Horder, Locomotive Engineers; F. C. Bender, Teamsters; William Miller, Wood Workers; Charles A. McCauley, president L. T. P. Association of the Great Lakes, and J. J. Corcoran, Bricklayers and Stonemasons.

The committee of twenty-three at a meeting, May 8, placed sixty-six names on the rolls of the general committee. Of these twenty-two represented the employers, twenty-two the wage earners and a like number the public. Other members will be added from time to time.

George A. Schilling, John C. Harding and B. J. Rosenthal were appointed a committee on constitution and to perfect the organization.

The general committee are:

J. Keppler	A. C. Barlett	Judge Tuley
A. L. Young	H. G. Selfridge	W. J. Onahan
F. Buchanan	J. A. Poor	B. J. Rosenthal
J. Fitzpatrick	J. O. Armour	Samuel Fallows
Chas. Peterson	F. P. Bagley	H. P. Judson
G. Thompson	A. A. McCormick	H. W. Tracy
J. J. Corcoran	H. W. Hoyt	G. A. Schilling
Herman Lillien	H. F. Vories	F. MacVeagh
W. G. Schardt	J. H. Seiz	J. H. Eckels
Charles Hanks	H. F. McCormick	E. J. James
J. C. Harding	R. A. Keyes	C. S. Darrow
Wm. Belloway	J. M. Roach	Lambert Tree
L. P. Stranlee	R. T. Lincoln	Adolf Kraus
W. Miller	J. C. Driscoll	T. C. MacMillan
A. W. Simpson	N. L. Brown	John S. Miller
F. A. Pouchot	E. P. Ripley	E. G. Hirsch
J. W. Morton	C. R. Crane	T. A. Moran
F. C. Bender	T. E. Webster	L. A. Seeburger
Matthew Carr	J. M. Clark	Rev. E. K. Kelley
H. W. Horder	C. H. Hulburd	Graham Taylor

C. A. McCauley	G. C. Prussing	M. A. Ryerson
E. J. Conway	W. T. Brownridge	Judge Kavanagh

TRADE AGREEMENT OF MARBLE DEALERS AND MARBLE WORKERS.

The joint agreement adopted at Buffalo, N. Y., on March 18, 1903, by the executive committees of the National Association of Marble Dealers and the International Association of Marble Workers, the latest new trade agreement in the labor market, has several points of interest. It is an innovation in the agreement system of the building trades in that it is entered upon by national associations rather than by local associations. The agreement provides for conciliation committees, for a nine-hour work day, the abolition of piece work, the abolition of sympathetic strikes and sympathetic lockouts. It gives preference of employment to members of the Marble Workers' union, in so far as the union can supply a sufficient number of competent workmen, and stipulates that members of the union shall not work for firms or corporations which pay lower wages than those paid by members of the Employers' Association; nor shall they work upon material not finished by members of the organization on the basis of hours and wages stipulated in the agreement. All grievances or requests from the workmen are to be presented through the shop steward only.

The full text of the agreement is as follows:

Whereas, there has heretofore existed a sentiment that the members of the National Association of Marble Dealers and the members of the International Association of Marble Workers were necessarily enemies, and in consequence a mutual dislike and distrust of each other and of their respective organizations has arisen, provoking and stimulating strife and ill-will, resulting in severe pecuniary loss to both parties,

now this conference is held for the purpose of cultivating a more intimate knowledge of each other and of their methods, aims and objects, believing that thereby friendly regard and respect may be engendered and such agreements reached as will dispel all inimical sentiments, prevent further strife and promote the material and moral interests of all parties concerned.

Resolved, That this meeting adopt the principle of conciliation in the settlement of any dispute between the members of the I. A. M. W. and the members of the N. A. M. D.

Resolved, That a Conciliation Committee be formed consisting of six members, three of whom shall be marble workers appointed by the International Association of Marble Workers and three persons appointed by the National Association of Marble Dealers. If a member of the Conciliation Committee is a party to the dispute, or a member of a local union whose member or members are involved, he cannot serve on the Conciliation Committee in the settlement of the case involved. The President of his National Organization shall appoint a member to take his place in the settlement of that particular dispute.

Resolved, Whenever there is a dispute between a member of the N. A. M. D. and the Marble Workers in his employ (when the latter are members of the I. A. M. W.) and it cannot be settled amicably between them, it shall be referred to the Presidents of the two associations before named, who shall themselves or by delegates give it due consideration. If they cannot decide it satisfactorily to themselves, they may, by mutual agreement, summon the Conciliation Committee, to whom the dispute shall be referred, and whose decision by a majority vote shall be final and binding upon each party for the term of twelve months; pending adjudication by the Presidents and the Conciliation Committee neither party to the dispute shall discontinue operations, but shall proceed with business in the ordinary manner. In case of a vacancy in the Committee of Conciliation, it shall be filled by the association originally nominating. No vote shall be taken except by a full committee, or by an even number of each party.

Resolved, That on or before the first of June, 1903, the N. A. M. D. will run the finishing departments of their factories nine hours per day. The men to receive for the nine hours the same amount of pay as they now receive for ten hours. Any change in wages that cannot be agreed upon between a member of the N. A. M. D. and his employees shall be settled in the manner provided for the settlement of other disputes.

Resolved, That on or before the first of June, 1903, the members of the N. A. M. D. will abolish piece work in their finishing departments, except for the polishing of plumbers' slabs, backs and aprons.

Resolved, That there shall be no sympathetic strikes or sympathetic lockouts in the shops.

Resolved, That the National Association of Marble Dealers recognize the International Association of Marble Workers on and after the first of June, 1903, and agrees to give preference of employment to members of the International Association of Marble Workers in so far as the I. A. M. W. can supply a sufficient number of competent workmen.

Resolved, That no member or members of the I. A. M. W. shall work for any person, firm or corporation (not a member of the N. A. M. D.) on the basis of over nine hours per day or for less wages than those being paid by members of the N. A. M. D. for similar services.

Resolved, That no member or members of the I. A. M. W. shall handle or set any marble that is not finished by members of the I. A. M. W. working on the basis of not more than a nine-hour day and receiving the same wages as are paid by members of the N. A. M. D. for similar services and under the same conditions.

Resolved, That any request emanating from and affecting the workmen in the shops (when they are members of the I. A. M. W.) in the employ of a member of the N. A. M. D. shall be presented through and handled by the shop steward only.

Resolved, That except where otherwise specified, these resolutions shall go into effect this eighteenth day of March, 1903.

"CIVIC FEDERATION IS SOLUTION OF LABOR AND CAPITAL PROBLEM."*Former President Grover Cleveland*

United States Senator Hanna, John Mitchell, President of the United Mine Workers' Union, David R. Francis, President of the Louisiana Purchase Exposition, and Bishop D. S. Tuttle Address the National Civic Federation in the Interest of Peaceful Relations Between Employer and Employee.

MITCHELL URGES ORGANIZATIONS TO SUPPORT MOVEMENT.**Suggestions on Settlement of Labor and Capital Differences.**

"It is necessary that neither capital nor labor should regard itself as infallible. In contentions which arise it is utterly impossible that both sides should be right. Both sides should concede that they may possibly be wrong."—Grover Cleveland.

"A proper understanding between labor and capital will be of great help to St. Louis, especially during the next year, when the responsibilities of St. Louis are so great. A delay of thirty days would mean that the Louisiana Purchase Exposition would not be completed when its gates are thrown open to the world."—David R. Francis.

"I have been before the public as one in favor of industrial war instead of industrial peace, but I want to tell you that never in my life did I urge a strike until all other means had been exhausted."—John Mitchell.

"If the employer and the employee will meet face to face, tell each other the truth and be honest with each other, strikes will be reduced to a minimum."—John Mitchell.

"I believe that strikes and lockouts have grown out of a failure of the employer and the employee to understand each other."—John Mitchell.

"The workmen of St. Louis should give this movement their support."—John Mitchell.

"A united effort should be made to get these great factors, capital and labor, together. They must meet, and it seems to me the time to meet, to get together, is now."—Senator Hanna.

"In labor difficulties the public is the final arbiter."—Senator Hanna.

"In a labor controversy mutual confidence on both sides is the foundation that leads to good results."—Senator Hanna.

"Patience and common sense as against an appeal to force."—Bishop Tuttle.

A St. Louis branch of the National Civic Federation was established yesterday at a meeting held in the Administration Building at the World's Fair.

The purpose of the National Civic Federation is to promote a better feeling between capital and labor, to urge arbitration in difficulties which arise between the two great forces of capital and labor and to create means to avert strikes and lockouts and other troubles, serious alike to employer and employee.

The gathering in the Administration Building was a notable one. Among the speakers were former President Grover Cleveland, United States Senator Mark Hanna, John Mitchell, President of the United Mine Workers' Union and a labor leader of national reputation; Lewis Nixon, President of the New York Civic Federation, and best known as the designer of the battleship Oregon and as ex-leader of Tammany; Oscar Straus, member of The Hague Arbitration Court; David R. Francis, President of the Louisiana Purchase Exposition; Reverend Father D. S. Phelan, who was delegated to address the meeting by Archbishop Kain; the Right Reverend Daniel S. Tuttle; Bishop of the Episcopal Church; Festus J. Wade, President of the Mercantile Trust Company, and Albert Young, President of the National Teamsters' Union.

The chapel in the Administration Building was crowded and the utterances of every speaker were cheered. Former President Cleveland and Senator Hanna occupied seats near the chairman. They sat side by side and faced the audience. Directly in front of them sat John Mitchell, the resolute labor leader. The countenance of Mitchell bore a serious expression all during the proceedings. Senator Hanna smiled frequently, while Mr. Cleveland was quiet and attentive.

CLEVELAND AND HANNA APPLAUDED MITCHELL.

When John Mitchell arose to address the meeting Senator Hanna and Mr. Cleveland applauded vigorously, and Mr. Mitchell just as warmly applauded the words of Mr. Cleveland and Senator Hanna.

Festus J. Wade was made temporary chairman of the local federation, and J. A. Jackson of the Typographical Union was chosen secretary.

Former President Cleveland was the first speaker called upon. When Mr. Cleveland arose there was an outburst of applause that lasted several minutes. Mr. Cleveland is a member of the National Federation and he was one of the promoters of the organization.

"I came here this afternoon," said Mr. Cleveland, "not to speak, but to see in what spirit the Civic Federation of this city would be formed. I came here to gather new inspiration and hope from a movement in which I am deeply interested and one which has my hearty sympathy."

"I have always believed that those who labor with their hands and those who labor in other ways should be nearer together. There should be a balancing power, with the end that when differences arise peaceable adjustments could be made. It seems to me that when these differences arise, the first and best thing to do would be to see if the parties in antagonism cannot be reconciled."

POSSIBLE FOR EITHER SIDE TO BE WRONG.

"It is necessary that neither capital nor labor should regard itself as infallible. In contentions which arise it is utterly impossible that both sides should be right. Both sides should concede that they possibly may be wrong."

"If capital and labor can be brought to a realization of these things it is natural then to call in some one for the purpose of arbitration, and if the feeling of arbitration is stimulated and cultivated the day will come when we will have a tribunal that can settle these difficulties."

"A local organization of this character is absolutely necessary in the maintaining of peace between employer and employee. Most of the great labor troubles are the result of local differences. It is apparent, then, that expediency in the handling of these difficulties is necessary, and a local organization such as the Civic Federation is the solution of the grave problem of labor and capital."

"Upon the success of this movement here will depend the success of similar movements in other cities. This meeting is one of vast importance and St. Louis has the opportunity of setting a grand example for every city in the United States."

PRESIDENT FRANCIS LAUDS MOVEMENT.

President Francis, who followed Mr. Cleveland, said that he was in hearty accord with the movement.

"I trust," he said, "that this great celebration of the dedication of the Louisiana Purchase Exposition will be remembered as being the occasion of the birth of an organization destined to create a better understanding between the employers and the employees. A proper understanding between capital and labor will be of great help to St. Louis, especially during the next year, when the responsibilities of St. Louis are so great."

"The Civic Federation will be of great good to this community, and to all other communities, and I heartily approve of the objects of this meeting. As President of the Louisiana Purchase Exposition, and as a private citizen, I promise to lend a helping hand to this organization."

"On the World's Fair work there are now more than 5,000 men engaged, and differences between employers and employees during the present year in St. Louis would be most deplorable. A delay of thirty days would mean that the Louisiana Purchase Exposition would be incomplete when its gates are thrown open to the world."

John Mitchell, President of the United Mine Workers' Union, spoke briefly: "I am in favor of the organization of Civic Federations," said Mr. Mitchell, "and my advice to those under me is to support these movements. I favor local branches of the Civic Federation in all large cities and think they can work great good, both to employer and employee."

MITCHELL DECLARES IN FAVOR OF PEACE.

"I have been before the public as one in favor of industrial war instead of industrial peace, but I want to tell you that never in my life did I urge a strike until all other means had been exhausted."

"I believe that strikes and lockouts have grown out of the failure of the employer and the employee to understand each other. If they will meet face to face, tell each other the truth, and be honest with each other, strikes will be reduced to the minimum."

"A Civic Federation, I think, should make all possible effort to compel the rival forces—labor and capital—to meet together."

"I want to say to the workmen of St. Louis that, in my judgment, labor organizations should give this movement their support. The Louisiana Purchase Exposition is a great project, and the workmen of St. Louis should take a hearty interest in its building. It is necessary at this time that labor and the men who employ labor should have a thorough understanding, and the Civic Federation is the agency to perfect that understanding."

Senator Hanna is the President of the National Civic Federation, and much of his speech was along the line of work that had already been accomplished.

HANNA SAYS TIME TO GET TOGETHER IS NOW.

"It is fitting," said Senator Hanna, "that this meeting should be held following the great event of yesterday. There should be a united effort to bring these great industrial factors, labor and capital, together. They must meet, and it seems to me that the time to meet, to get together, is now."

Senator Hanna said that the work of the National Federation had met with universal success. He urged the business men to appreciate the importance of the local organization, and pointed out the work of the national organization as inspiration for renewed efforts on their part. He said that the public should take an interest in these great questions of labor and capital, for, after all, the public is the final arbiter, and mutual confidence on both sides of the controversy is the foundation that leads to good results.

Other speeches were made by Lewis Nixon, Albert Young, Reverend Father Phelan, Oscar Straus and Bishop Tuttle.

Father Phelan said that differences between labor and capital could no more be eliminated than wars between nations, but he expressed the opinion that many strikes are unnecessary and that they could be minimized as to extent and number.

Father Phelan made an argument in favor of a just wage for labor.

"It would be a crime," he said, "to raise the price of bread in time of famine," and at all times it is a crime to lower the price of labor."

BISHOP TUTTLE SAYS PATIENCE MUST BE EXERCISED.

Bishop Tuttle said the contending forces should exercise patience and good

GROVER CLEVELAND,
Member Executive Committee, National
Civic Federation.

common sense as against an appeal to force. He said that patience would always win.

Oscar Straus was the last speaker called upon, and in introducing him Chairman Wade said: "We always save the best for the last."

Mr. Straus was one of the founders of the Civic Federation in New York, and he outlined the plan of work that had been adopted in that city.

The gentlemen who will perfect the permanent organization of the St. Louis Civic Federation are:

Representing the public—Gov. D. R. Francis, President Louisiana Purchase Exposition; Festus J. Wade, President Mercantile Trust Company; Chas. H. Huttig, President Third National Bank; Thos. S. McPheeters, President McPheeters Warehouse Company; Frederick N. Judson, lawyer; Dwight F. Davis, Security Building; Frederick M. Crunden, Public Librarian.

Representing employers—W. F. Niedringhouse, National Enameling and Stamping Company; Wm. S. McCheaney, General Manager St. Louis Terminal Association; C. Gillick, President St. Louis Building Contractors' Council; Frank N. Johnson, Simmons' Hardware Press Brick Company; Geo. F. Steedman, President Curtis & Co. Mfg. Company; F. C. Schwedtmann, President St. Louis Metal Trades Association.

Representing wage earners—J. A. Jackson, President Typographical Union No. 8; Harry A. Walters, Chairman Grievance Committee Locomotive Engineers of Terminal Railroad Association; L. W. Quick, National Secretary Order of Railway Telegraphers; Victor Kleiber, Business Agent Iron Molders' Union of North America; J. G. Hoppenjon, President Central Trade and Labor Union of St. Louis and Vicinity; R. DeBarry, Secretary Building Material Trade Council of St. Louis and Vicinity; W. W. Morrison, President Building Trades Council of St. Louis.

Festus J. Wade was elected chairman of the federation; W. F. Niedringhouse, first vice chairman; Richard DeBarry, second vice chairman; Charles H. Huttig, treasurer and Ferdinand C. Schwedtmann, secretary.

The Executive Committee is composed of the following: Representing the public—Frederick M. Crunden, Elias Michael, W. S. Chaplin, Thos. S. McPheeters, F. N. Judson. Employers—W. A. Kenward, J. F. Wade, Thomas Kinsella, George C. Newman, H. A. Waiters. Employers—George W. Brown, F. N. Johnson, George F. Steedman, H. C. Gillick, Corwin H. Spencer.

The following were selected on the Conciliation Committee: Representing the public—Benjamin Schnurmacher, James W. Bell, John F. Lee, Jas. L. Blair, Dwight F. Davis. Employers—J. J. Morris, W. W. Morrison, A. W. Morrison, M. J. Dwyer, R. B. Parker. Employers—F. A. Drew, Paul Brown, O. L. Garrison, J. J. Collins, J. H. Conrade, Jr.

COMBINATIONS OF CAPITAL AND LABOR

DESTRUCTIVE COMPETITION THE EVIL TO BE MET—THE VARIOUS FORMS OF ORGANIZATION

That excessive competition is an evil is recognized by everyone when it occurs in his own business. It is recognized by capitalists, by farmers, by the professional classes and by wage-earners. The epithets used to describe it testify to the dislike of it. Excessive competition is "destructive," "unfair," and "cut-throat." The "price-cutter," "underseller" and "rebate giver" are as unprincipled in the eyes of the merchant and railroad manager as the "non-unionist" and "scab" in the eyes of the trade unionist. When excessive competition occurs in the field of capital it shows its havoc by depression of trade, long and risky credits, bankruptcy, and "demoralization." When it occurs in the field of labor its consequences are the sweating system, long hours, low wages, the "exploitation" of labor, unsanitary and dangerous work places, miserable homes and other phases of poverty. And the two series of results are usually found together, for the ruin of the employer's business means the destruction of employment, and the exploitation of labor means the survival of the unscrupulous employer.

Volumes might be filled with accounts of the efforts and methods both of capitalists and laborers to do away with destructive competition. And interesting enough is the fact that the methods of the two classes are similar. They all agree in the one policy of combining as many as possible of those who are competitors in an agreement not to compete with their fellows beyond a certain point and to deal effectively with those who will not enter into the agreement. The capitalists call themselves an "association," an "exchange," a "pool," a "trust," or even a "corporation," and the workmen commonly call themselves a "union." The capitalist organizations, of course, differ widely in details, but so do the unions. A pool is more compact than an association, and a corporation or a trust than a pool, but so is a highly skilled union, like the glass blowers, better disciplined than a miscellaneous union, like the cloak-makers. All originate in what they consider the absolute necessity of doing something to keep competitors from ruining one another, and all are open to the temptation of overdoing a good thing and carrying their methods, which originate in self-protection, over into monopoly and public menace. They have all been legislated against in varying degrees of penalty. They have been haled before the courts, and the courts have handed down hopelessly contradictory decisions. They have been sustained in one State and overthrown in another, and the same courts have reversed themselves, leaving the ultimate policy of the country toward combinations unsettled. Whether they are criminal is not our present concern. We are exercised only with the economic fact that they have sprung into being to meet the real evil of mutual destruction through over-competition.

In the following columns we have collected brief ac-

counts of various associations and unions, showing how similar are their methods in admitting and rejecting members, boycotting, posting spies and pickets, regulating output, setting up minimum wages and prices, and even entering offensive and defensive alliances.

BOYCOTT.

Boycotting in some of its forms is a natural and first-suggested means employed by both classes of associations in going beyond persuasion and putting pressure upon non-members to join in a common cause. Unions have developed large and systematic methods of boycotting, but their methods are much the same as those of the Publishers and Booksellers, the Wholesale Druggists, railroad associations which divert shipping from one line to another, and other capitalist associations.

The blacklist is a form of boycott, and similar in object to the boycott and blacklist, but the reverse in method, are the whitelist and the label, either of the Consumers' League or the union. The union label, in some trades like cigar making, clothing manufacturing, and breweries, has become a powerful instrument for directing consumers away from "unfair" establishments toward those which accept the union conditions of hours, wages, and employment. The Consumers' League, composed in part of wealthy society women, grants its label only to those manufacturers of women's wear who pass the standards of its inspectors, and their names are published in its "whitelist."

These are organized methods for making effective a force recognized whenever men associate together for a common object. Even the Christian church, with its avowed love for all men, sometimes discriminates in favor of believers, for the Methodists in their "General Rules" expect church members "to evidence their desire of salvation by doing good, especially to them that are of the household of faith or groaning so to be; employing them preferably to others; buying one of another; helping each other in business; and so much the more because the world will love its own and them *only*."

MEMBERSHIP.

While combinations both of capital and labor strive to bring all competitors into their fold, they also agree in trying to limit the numbers of competitors. The unions have initiation fees, examination of candidates, and limits to the number of apprentices. The associations have initiation fees and sometimes limitations to membership. When union or association passes from mutual protection to mutual aggrandizement, the change is likely to appear in higher initiation fees or stricter limits on admission, as when the New York Stone Cutters or the New York Stock Exchange resolves to admit no more members.

MINIMUM WAGES AND PRICES.

Both classes of these combinations establish minimum rates, the one of prices and the other of wages, and these rates are based on the necessities of the weakest competitor, as may be seen in the case of passenger fares on railroads. Professional associations, such as those of physicians, have a minimum scale of fees, sometimes unofficially promulgated as a part of code of ethics and sometimes drawn up and posted in the physician's office.

RESTRICTION OF OUTPUT.

When production is too great to support the minimum price, combinations sometimes place limits on the output, as when the whiskey pool limited production to twenty-eight per cent of each plant's capacity and the whiskey trust closed sixty-eight of its eighty distilleries, or as when a plumbers' union places a maximum on the amount of work a member shall perform and an assemblers' union on the amount of wages a member shall earn.

BUSINESS AGENTS.

Many organizations of both kinds have officers with duties designed to meet violations of the combination agreement. The walking delegate or business agent of the union who looks out for "scabs" and scale violators is similar to the inspectors of the Railway Classification Committee who examine shipments to discover whether shippers are cutting the freight rate scale by underbilling, and whether individual roads belonging to the association are conniving at the practice. Where, as in the hardware and iron and steel pools, there is a "commissioner," this officer is given the remarkable authority of apportioning the output to the several members, just as a walking delegate or a shop steward sometimes "calls down" a man who is working too fast.

PICKETS AND SPIES.

The Book Publishers' Association and the Wholesale Druggists have their spies and "pickets" for the purpose of watching a boycotted firm, to prevent it from obtaining a supply of books or proprietary drugs. These associations also, as well as many others, furnish their members and customers with lists of "fair" and "unfair" firms, carrying the "threat" open or implied, that those who deal with the unfair firms will themselves be cut off from supplies or customers.

JURISDICTION DISPUTES.

Many other points of resemblance, more or less refined, might be noted. Rival combinations and jurisdictional fights are as troublesome when occurring between railroads invading each other's territory, or between jobbers' associations and manufacturers' associations, as when occurring between the Carpenters'

union and the Woodworkers' union, and both kinds of fights compel some sort of a working agreement to be brought about. Where both the union of labor and the union of capital are strong enough in the same industry they come to a "joint agreement," and these agreements are of all degrees, from unstable verbal agreements to those monopolistic, exclusive alliances by which non-members of both associations are shut out from business and work.

There are differences as well as resemblances. The nature of the trade, the number of competitors, the strength of the organization, and other circumstances produce infinite varieties in detail, and there are constantly occurring many fluctuations in strength, many amendments and revisions in by-laws and practices, but rules, methods and functionaries are all directed toward the main object of regulating or eliminating

competition. When the capitalist association takes the form of a trust it brings into play a method of organization much superior to any possible for a mere association or a trade union, since it is based on common ownership. This object is aimed at in a lesser degree in the "community of interest" so recently popularized in railroad alliances, after other forms of union had been tried unsuccessfully.

An examination of the brief accounts herewith given of combinations of capital and unions of labor will give an idea of how universal are these efforts to lessen the hardships of free competition. The list we give is by no means complete. There are 125 national and international trade unions, with about 2,400 Federal unions, and the Interstate Commerce Commission requires a volume of 295 pages in order to publish its list of commercial and agricultural and pro-

fessional associations, a large number of which have as one of their objects the regulation of competition. Hence, if in the following article one association or union is mentioned rather than another, it cannot be regarded as in any way invidious. The conclusion is almost inevitable that, no matter how the courts and the legislatures treat these combinations, they are the product of necessity, and as such must be recognized. In some cases, such as railroads, they are recognized as necessary not only for protection to the members, but also for protection to the public, since rate-cutting is a discrimination between shippers which demoralizes the business of every industry that depends on transportation.

The problem regarding all of these combinations is not how to suppress them but how to preserve their benefits and prevent their excesses.

ASSOCIATED LABOR

The rules and methods of labor unions are the outgrowth of experience in dealing with the evils of competition. They might have been different if they had been drafted by philosophers. They differ widely among the unions in ways that can be accounted for only by the various competitive circumstances under which the unions are placed. Sometimes a natural strategic advantage, or a long experience, or a compact organization, leads one union to drop a practice which another considers essential. Yet all union rules and methods, whether governing membership, apprenticeship, working with non-unionists, minimum wage, piece work, machinery or output—all of which are described below—have come into vogue to protect the members at whatever points they feel competition to be destructive.

MEMBERSHIP.

From the standpoint of maintaining the position of the union the conditions of admission and the barriers raised against admission are first in importance. Nearly all unions in one form or another establish a term of probation or apprenticeship. In a few, such as the Amalgamated Iron and Steel Workers, where exceedingly high skill is necessary, there are no formal rules or conditions regarding apprentices. Notwithstanding that modern conditions of production have destroyed the old apprentice system in many trades, and that through the specialization of work and the splitting up of trades a workman can often learn his particular work in a few months, yet the majority of organizations require an apprenticeship of three or four years. A number, among them the pattern makers and watch-case engravers, require five years. The number of apprentices is also usually fixed at a definite ratio to the number of journeymen, the machinist ratio being one apprentice to five or ten journeymen. The iron moulders allow one apprentice to each shop and one to eight journeymen; the glass bottle blowers by agreement each year with the manufacturers limit the number of apprentices according to the state of the trade, the ratio of 1899 being one to fifteen, and in 1901 one to ten; but in some years they close their apprentice books entirely. The steam fitters' helpers in New York open their books twice a year and admit only a few applicants, according to the state of the trade, though the number of applicants is always large. The lithographers allow one apprentice to the first five journeymen or less, one additional apprentice for the next ten, another for the next fifteen and another for the next twenty-five. The stone-cutters forbid employing more than one in a shop which employs less than fifteen journeymen, more than two where there are less than one hundred journeymen, or more than four in any case whatever.

Local organizations of the various trades do not always adhere to the national rules, and the ratio may be larger or smaller than that provided in the national constitution, according to circumstances.

While the requirement of a period of apprenticeship is maintained as a means of providing an all-round training in the trade yet it is also certain that one of the motives is the desire to diminish the competition within the trade.

The initiation fee, imposed at admission either on a journeyman or an apprentice on completing his term,

is usually placed at \$3 to \$5, but there are individual unions which have increased this fee to as high as \$50 or \$100. The fee of the architectural iron workers, the mosaic helpers, the electrical workers and others in New York is \$100; of the longshoremen, \$25; of the bituminous mine workers of Illinois, \$50. The stone-cutters of New York at one time went so far as to close their books, not only against all outsiders, but against members of their own craft from other localities. The outcry against this exclusive policy was so great that it was revoked. In some cases the international organization has prohibited local unions from imposing high initiation fees, the United Garment Workers, for example, fixing the maximum at \$5.

UNION AND NON-UNION WORKERS.

The exclusive employment of members of the union is maintained by the majority of unions wherever possible. They reason that in order to enforce the scale of wages and hours it is necessary that every workman be subject to discipline if he works below the scale, and that they cannot know whether he is actually working below the scale unless he is a member. If they can require his dismissal from employment for violating union rules they have the best possible means of holding him to fidelity to the union.

In this respect the railroad brotherhoods differ from other organizations, since they do not stipulate in any of their agreements that non-unionists shall not be employed. The longshoremen in their agreements with the dock managers, have a clause as follows:

Sec. 3. "All employees employed by the dock managers for the purpose of performing the work set forth in the schedules hereto attached shall be members of the local organization whenever such men can be had who can perform the work as is called for in the contract. When such men cannot be had the dock managers have the right to secure any other men who can perform the work in a satisfactory manner until such time as members of the International Longshoremen's Association can be procured."

In other unions, especially in the building trades, there is no provision for the employment of non-members, even when the number of members is not adequate for the work on hand. It is universally the case in those organizations that have the "union label" that establishments to which the label is granted shall agree to employ only members of the organization. In this case the label is a specific consideration given the employer in return for his promise to employ only union help. A reciprocal arrangement is also true of the arbitration agreement between the International Typographical Union and the American Publishers' Association, the international taking upon itself the obligation to furnish competent help in case the local union violates the agreement by a strike, and protecting the publisher against boycotts or "any other form of concerted interference with the peaceful operation of the department or departments of labor so contracted for by any union or unions with which he has contractual relations."

The object in the policy of exclusive employment is that which distinguishes the unions in general, namely, the prevention of destructive competition. By limiting employment to their own members they prevent the introduction of workmen willing to work

below the established scale of wages, and especially they protect such members as may officially represent the organization.

RECIPROCAL EXCLUSIVE ARRANGEMENTS.

An extension of the principle of exclusive employment is occasionally found in a reciprocal arrangement to the effect that members of the union shall not work for employers not members of the employers' association.

Arrangements of this kind, where both associations are strong, are apt to lead to excessive monopolies in that the employers use the unions to intrench themselves against competitors. It is alleged that in the building trades of Chicago at the present time there are serious abuses in combines between employers and employees. Recently a former member of the Sheet Metal Contractors' Association of that city brought suit against the association and the Sheet Metal Workers' Union, alleging that they had formed a pool by which he was prevented from getting workmen on jobs obtained by bidding against the members of the contractors' association.

The Chicago Tribune, August 13, 1903, contains the following:

"The Chicago Employing Plasterers' Association has limited competition by a close agreement with the members of the plasterers' union. This is held to be the most perfect combination of its kind in the city, and through its ironclad rules has forced even the contractors doing subcontract work to pay tribute to the association.

"The agreement has rules covering the way work shall be done," said Attorney Charles D. Francis, "and these were not put into it to benefit the union, but to make the plans of the contractors possible."

These rules prohibit the completion of work by a firm that does not have the original contract. They prohibit the members of the union from working for firms that attempt to take work started by another firm. They do not even allow a plasterer to patch up the holes made by plumbers, steamfitters, or carpenters unless extra pay is obtained for the work.

The employing plasterers force the observance of this law in the following manner:

"Any person or persons who shall estimate or take contracts for any building or job in violation of this rule shall be fined 5 per cent of the contract price for the first offense, 10 per cent for the second offense, and for the third default he shall be subject to such penalty as the joint arbitration board shall see fit."

It is alleged that the plasterers have a pool on large buildings similar to that in the other trades. It is asserted that this has increased prices between 10 and 40 per cent and has given practically all the work in the city into the hands of a few firms.

Other employers' associations in the building line in Chicago alleged to have similar agreements or understandings with the unions are the Electrical Trades Association, the Master Steam Fitters' Association, the Master Roofers' Association, the Plumbers' Supplies Association, the steam heating and boiler and fireproofing companies, and the sewer contractors.

The agreement of the coal team owners and coal team drivers of Chicago, adopted May 1, 1902, reads as follows:

"Party of the first part (the Coal Team Owners' Association) agrees to employ none but members of the Coal Teamsters' Union, Local No. 4, in good stand

ing and carrying the regular working card of the organization.

"We (the Coal Teamsters' Union) further agree that we will not work for any firm that does not belong to the Coal Team Owners' Association."

In the agreements in the marble industry of New York it is provided:

"That the members of the Marble Industry Employers' Association agree to employ no cutters in New York City or vicinity (vicinity to be a radius of twenty-five miles from City Hall) excepting those being members of the Journeymen Marble Cutters' Association, or such others as will be recognized by them through application."

And also:

"The members of the Journeymen Marble Cutters' Association agree that they will not work for any person or persons doing business in New York City or vicinity not members of the Marble Industry Employers' Association in New York City and vicinity (vicinity to be a radius of twenty-five miles from City Hall)."

The arrangement in the stone cutting industry in New York, between the union and the employers' association is said to go so far as to provide for payment to the union treasury of a percentage on contracts in consideration of limiting their work to the members of the employers' association, and the employers thereby are enabled to do away with competition on contracts.

The agreement of July 1, 1902, between the Association of Master Plumbers and the Journeymen Plumbers and Gasfitters of New York contains the following section:

"Art. II. No master plumber shall employ any non-union man or men after receiving due notice from the Delegate or Chairman of the Joint Conference Board not to do so. A member violating this rule shall be fined twenty-five dollars and five dollars per day for each and every day he retains such man or men in his employ thereafter. Any journeyman plumber or gasfitter working for a non-union employer when notified not to do so by the Delegate or Chairman of the Joint Conference Board shall be fined four dollars and twenty-five cents for each and every day he continues so to do."

At a joint conference, held recently at Detroit, the Window Glass Workers of America and the American Window Glass Co. reached an agreement to withhold all the wage scales until the present available stock of glass in the country is depleted, and to keep all factories idle until a general resumption is ordered. An increase in wages was agreed upon and all current price-lists for glass were to be withdrawn in order that an advance of probably twenty per cent. to the public might be made. Owing to a split in the union this agreement has been hindered somewhat, and certain independent companies have begun work with the dissatisfied mechanics.

An interesting episode in this chapter of alliances between unions of employers and unions of workmen is found in the horseshoers' trade. The Master Horseshoers' Association is in most particulars similar in its objects and methods to the Journeymen Horseshoers' Union. The masters do not differ much from the journeymen in wealth or social standing. Owing to the very small amount of capital required to set up a blacksmith shop, journeymen often become employers and vice versa.

The organizations of the two sides in New York and several other American cities are at present engaged in a struggle over the question of label. The Masters' Association insists on putting exclusively its own label on horseshoes leaving the shops, while the journeymen demand that the label of their union also be included. As the patrons of the horseshoers are largely workmen, such as teamsters, coachmen and cab drivers, naturally in sympathy with the union journeymen, the employers regard the union label as too strong a weapon in the hands of the union in the case of a trade dispute. The constitution of the Masters' Association of New York provides penalties for members using the union label. On the other hand, in several cities the two labels are used side by side, with the effect of keeping down competition from newcomers.

The following provisions of the agreement between the Master Horseshoers' Association and Journeymen Horseshoers' Union of Pittsburg illustrate the trade situation in most of the large cities:

1. Members of Master Horseshoers shall not em-

ploy any journeyman unless he is a member of the Journeymen's Union, nor shall any journeyman work for any employer not a member of the Masters' Association.

2. Prior to a member of the Journeymen's Union starting a shop, he shall resign his membership in that body before joining the Masters' Association, and any Master quitting business shall resign from the Masters' Association before he can be admitted to membership in the Journeymen's Association.

3. No member of the Journeymen's Union shall work for so-called corporation shops that may hereafter be opened up, or for any corporation shop black-listed by the Masters' Association.

6. The Journeyman shall observe that his employer lives strictly up to the rules of the Master Horseshoers' Protective Association.

The foregoing classes of agreements between employers and unions are well calculated to carry the principle of self-protection over into the policy of monopoly. There is another class of agreements, not open to the charge of monopoly, which simply provide that all employers in the same line shall be treated alike. For example, the agreement entered into March 18, 1903, between the National Association of Marble Dealers and the International Association of Marble Workers does not provide for exclusive employment on either side, but provides for preference of employment to members of the union and forbids the union to work for non-members of the employers' association for less wages than for members. Misunderstandings have arisen in the execution of this agreement, and a lockout has followed, but it illustrates the principle. Sections touching on this matter are as follows:

That the National Association of Marble Dealers recognize the International Association of Marble Workers on and after the first of June, 1903, and agrees to give preference of employment to members of the International Association of Marble Workers in so far as the I. A. M. W. can supply a sufficient number of competent workmen.

That no member or members of the I. A. M. W. shall work for any person, firm or corporation (not a member of the N. A. M. D.) on the basis of over nine hours per day or for less wages than those being paid by members of the N. A. M. D. for similar services.

That no member or members of the I. A. M. W. shall handle or set any marble that is not finished by members of the I. A. M. W. working on the basis of not more than a nine hour day and receiving the same wages as are paid members of the N. A. M. D. for similar services, and under the same conditions.

The following, similar in its aims, is the agreement between the Electrical Contractors' Association and Local No. 3 of the Brotherhood of Electrical Workers of New York City:

(3) That the members of the association shall employ only members of the union, as journeymen and helpers, to do electrical work in any building, bridge, ship, or pole work, and that in consideration of such exclusive employment the union agrees that it will not work for any electrical contractor not a member of the association who does not sign and conform to an agreement similar to this, the original of such agreement to be shown to the Secretary of the Association if requested.

WAGES AND HOURS.

Almost universally the union endeavors to establish the principle of a standard wage or a minimum wage, whether paid by the hour, day, or week, and a maximum number of hours per day or week. Employers argue that this wage is placed so high that they cannot afford to pay members more than the minimum, and the unions, with very few exceptions, refuse to grade workmen in classes with a different wage for each class. They hold that if the union assigns members to several classes there will be occasion for jealousy and favoritism, and if the employer assigns them to particular classes he will place as many as possible in the lowest class, which would be equivalent to cutting the scale of wages.

Unions do not generally prohibit members from receiving more than the minimum wage, but they establish the minimum on the basis of what they consider a fair wage for the bulk of their members. On this account those who in the opinion of the employer are not able to earn the minimum are discharged when business slackens and are the last to be employed when business expands. The unions enforce the minimum wage rule by fines and expulsion in case of its violation.

Occasionally unions modify the minimum wage rule by grading the workmen. The stonecutters of New York have three grades, the scale being \$5 for the first grade, \$4.50 for the second, and \$4 for the third. Many unions issue special permits to old or sick or incapacitated men to work below the scale. This is usually done through a committee created for the purpose.

PIECE WORK.

Piece-work wages are opposed by a number of unions while by others they are favored.

The unions which object to piece work do so on the ground that it places them at a disadvantage in preventing the destructive competition which brings about the reduction in piece-work rates. Especially among the machinists, where there are great differences between job and job, piece-work rates practically do away with the union scale and reduce the remuneration of labor to a matter of individual bargain. The glass bottle blowers have elaborate printed price-lists containing more than 1,000 specifications. Where a union is not strongly organized the objection to piece-work is found in the fact that the employer frequently bases his pay on the output of the speedier men and cuts the prices so that the less capable are placed at a disadvantage and cannot earn the amount of wages which the union considers fair.

The following lists were prepared by the Industrial Commission:

Unions whose members work by the piece, at least in some department, without active opposition on the part of the organization:

Boot and Shoe Workers.	Piano and Organ Workers.
Hatters.	Coopers.
Garment Workers.	Amalgamated Association of Iron, Steel and Tin Workers.
Tailors.	
Custom Clothing Makers.	Stove Mounters.
Ladies' Garment Workers.	Sheet Metal Workers.
Lace Curtain Operatives.	Wire Weavers.
Mule Spinners.	Longshoremen.
Typographical Union.	Cigarmakers.
Steel and Copper Plate Printers.	Leather Workers on Horse Goods.
Glass Bottle Blowers.	Stogie Makers.
Flint Glass Blowers.	Upholsterers.
Potters.	
United Mine Workers.	
Northern Mine Workers.	

Unions which either forbid piece-work or actively discourage it:

Bookbinders.	Mechanists.
Bricklayers.	Amalgamated Society of Engineers.
Carpenters, Brotherhood.	Iron Moulders.
Painters (Paper-Hanging excepted).	Pattern Makers.
Plasterers.	Blacksmiths.
Plumbers.	Bakers.
Stonecutters.	Brickmakers.
Tile Layers.	Watch-Case Engravers.
Amalgamated Glass Workers.	Jewelry Workers.
Woodworkers.	Oil and Gas Well Workers.
Wood Carvers.	
Carriage Workers.	

OUTPUT.

In some instances where piece-work prevails the union has a rule prohibiting its members from earning more than a designated amount of wages and enforces this by fines and expulsion. Wherever this rule is imposed it is not done by the international, but by the local organizations, and therefore under the same international union a limit may be placed in one locality or one shop and not be found in other localities or other shops.

Even where unions are paid by the day or week, and not by the piece, they sometimes place limits on the amount of work, as when the clothing cutters limit the number of suits to fourteen a day. Similar limits are sometimes found among machinists, molders, polishers, tile layers, marble setters, plasterers, and others. One of the reasons given for limitation is the "unfair" competition of unusually swift workmen—"leaders," "pace-makers," "rushers," "rooters." This is seen in the following by-law of the Brotherhood of Carpenters of New York:

"Any member who does an unreasonable amount of work, or who acts as a leader for his employer for the purpose of getting all the work possible out of the men working in the same shop or job with him, shall be fined for the first offense ten dollars; for the second offense he shall be suspended or expelled."

The Amalgamated Iron and Steel Workers have for many years placed a limit on the output of the hot rolls in the sheet and tin plate mills. By agreement with their employers this limit has recently been modified in the case of tin plate, but it continues to be enforced in the sheet mills. In the window glass factories the union usually has secured a rest for the two hot months of July and August, and during the recent depression of trade this was increased to four or five

months by agreement with the employers to prevent overproduction. The plumbers of Chicago in 1899 had the following rules regarding a day's work:

Rule 1. When working on lead work, eight wiped joints shall be considered a day's work.

Rule 2. When working on iron pipe, the measuring, cutting, threading, and placing in position of 15 threads of one inch, or under, shall be considered a day's work.

Rule 3. Ten threads on one and a quarter, one and a half, and two inch pipe shall be considered a day's work.

Rule 4. When running soil pipe in a vertical manner, the following shall be considered eight hours' work: 6 inch, 6 caulked joints; 5 inch, 6 caulked joints; 4 inch, 9 caulked joints; 3 inch, 10 caulked joints; 2 inch, 12 caulked joints.

Rule 5. When running soil pipe in a horizontal manner, the following shall be considered eight hours' work: 6 inch, 4 caulked joints; 5 inch, 4 caulked joints; 4 inch, 6 caulked joints; 3 inch, 6 caulked joints; 2 inch, 8 caulked joints.

Rule 6. When finishing on flats or apartments, hotel or office building, one fixture shall be considered an average day's work, except laundry tub, then each apartment shall constitute one fixture.

Rule 7. When working on Durham system, the running of 2½, 3, and 4 inch pipe, when working on stacks, three stories shall be considered a day's work. When working on 5, 6, and 8 inch pipe on stack, two stories shall be considered a day's work.

Rule 8. Pump pipe down spouts, and other straight stacks of pipe: 2½ and 3 inch, 50 feet shall be considered a day's work; 4 and 5 inch, 40 feet a day's work; 6 and 8 inch, 30 feet a day's work.

Rule 9. In cases where work is of a complicated nature, or workmen are delayed through no fault of theirs, the absolute performance of amounts as laid down in schedule shall not be considered as compulsory by this association.

Rule 11. Any member violating any of these rules shall be dealt with according to section 16 of working rules, which reads: 'A fine of one day's pay for first offense, and two days' pay for second offense, and if he persists in his violation, the association shall deal with him as it sees fit.'

The plasterers in New York have the following scale of work incorporated in their agreement with the employers' association, designed partly to prevent rush work on inferior and speculative buildings:

Section 1. In tenement houses where there are ten rooms and a lobby or hallway to each floor or flat, the time for scratch coating rooms and hallway on said flat or floor shall be two days, or one day each for two men.

Section 2. The time for browning in said tenement houses for ten rooms and hallway shall be six days, or three days each for two men.

Section 3. In browning where there are extra rooms or extra closets, there shall be extra proportionate time allowed.

Section 4. The time for hard finishing ten rooms and hallway in tenement houses shall be six days, or three days each for two men.

Section 5. For corning and finishing tops of rooms in tenement houses, the time for each room, with four angle and two break mitres, done with a common mould, about seven inches projection, shall be one day, or one-half day each for two men. When there is a square panel the time shall be one and one-half days, or three-quarters of a day each for two men.

Section 6. If the moulds are extra large, or extra members or quarter circles in panels, or extra panels on the ceiling, there must be extra proportionate time allowed.

Section 7. In the larger tenement houses, called apartment houses, where there are large front and back room of about 13x16, and the common cornice mould is about ten inches in projection, the time for corning such a room, with four angle and two break mitres in it, shall be three-quarters of a day each for two men, and when there is a square panel in each room the time shall be one day each for two men.

Section 8. In small rooms, where there are only four mitres where a common mould of six or seven inches is used, two men shall cornice three and finish ceilings and tops of walls of said rooms in one day. Coving in above class of buildings to come under the heading of corning.

Section 9. In private houses, known as speculation and such like, all corning and panelling shall be governed by the rules of large and small rooms in apartment houses, and if the parlors in said private houses are larger than the ordinary 13x16 feet parlors or apartment houses, or the moulds larger or more difficult to work, or more panelling on the ceiling, there must be extra proportionate time allowed.

The window glass cutters stipulate in their agreement with their employers that—

"No cutter shall be allowed to cut more than 3 pots or 360 boxes of double strength. The boss cutter shall be directed to see that cutters short in their quantity shall have spare cutting in preference to cutters who have their full quota."

While trade unions, generally recognizing that this is a mechanical age, are endeavoring to maintain wages while not opposing machinery, yet individual unions have placed obstacles in the way of machinery or its economical use. The pressmen's union, to protect its members, stipulates that on a double press one pressman and three press hands shall be employed, whereas in certain offices employers have contended that two press hands would be adequate; similarly on a quadruple press, the union requires four press hands, on a sextuple six, and on an octuple eight, being in each case two to three press hands more than some employers believe can be economically employed.

The International Association of Machinists has this rule:

ASSOCIATED CAPITAL

manufacturer, who may fix his own price and adopt such plan for the sale as he in his judgment may determine. At one time the sale of these goods was largely made through travelling agents, who worked upon commission and supplied the goods to the customer or retailer. At the present time they are sold almost entirely to wholesalers and jobbers who are members or who abide by the rules of the Wholesale Druggists' Association.

Prior to the origin of this association the manufacturers sold goods to some of the wholesalers on more favorable terms than to others, thus permitting large dealers to make a profit while a great number of the smaller firms found the handling of proprietary goods unprofitable. The Druggists' Association devised a plan for the conduct of the business which was accepted by the Proprietary Association. It provided that the latter should establish a uniform jobbing price for fixed quantities, as well as a price to be charged by the wholesale druggists, which both were to agree to maintain, the wholesale druggists being allowed the difference between the jobbing and their selling prices as their profit.

In December, 1893, the so-called Detroit plan was adopted instructing a committee of the wholesalers' association to

Request the proprietors selling their preparations under the contract system to refuse supplies of their preparations to any party whom they may find on a full investigation to be wilfully, deliberately and systematically, even though secretly and indirectly, violating the contracts of any one party, un-

"Any member running more than one machine in any shop where such is not now the practice, unless such introduction is upon the decision and advice of the local lodge and approved by the grand lodge, shall be expelled."

A statement by an officer of the union was issued in 1902 showing the gains made by the members of the International Association of Machinists during the previous two years as follows:

"We prevented the introduction of the two-machine system in 137 shops, employing 9,500 men. It is safe to say that if this system had been introduced the force of men would be reduced one-eighth; hence, in this we have saved the position of 1,188 men, whose daily wages would amount to \$2,613.60 per day, or \$818,056.80 per year.

"Thirty-seven lodges reported having prevented the introduction of the piece-work system in shops employing 4,500 men. This system, when in practical operation, reduces the force on a fair estimate one-fourth. Thus the positions of 1,125 men have been saved, which amounts to \$2,475 per day, or \$774,675 per year.

"From the above figures you will see that we have declared a dividend which has gone into the pockets of the machinists, through the efforts of the organization, amounting to a sum total of \$2,181,278.22."

The Cigar-Makers' Union prohibits the use of the union label for cigars made in whole or in part by machinery, but does not forbid its members working on the cigar-making machine.

In the Report of the Industrial Commission the following statements are found:

"The stogie makers will refuse to admit machine workers to their organization, and both the coopers and the iron moulders maintained the same attitude up to 1899. It is only half a dozen years since the coopers appealed to the Federation of Labor to declare against ale and beer packages made by machinery. The Federation, however, did not approve the proposition. The stone cutters prevent the use of stone-planing machines wherever they can. When a new machine was invented two or three years ago for blowing lamp chimneys, the flint-glass workers proposed to the manufacturers that the machine be bought up and eliminated, and that the selling price of chimneys be advanced to pay the cost. The rules of the plumbers contain a long list of plumbing goods which were formerly made by hand as they were used, but which are now appearing in the market as products of machinery. The plumbers declare that this change is taking away the work of their trade, and that the use of these goods should be stopped. The plate-printers have always opposed the introduction of steam presses, and have succeeded in keeping them out of the largest plate printing office in America, that of the United States Bureau of Engraving and Printing. The reason given is that the work done on a hand-roller press is far better."

til the subcommittee have become satisfied that such practice will be discontinued.

That our committee on Proprietary Goods be authorized to omit from future official lists of rebate articles the preparations of such proprietors as may continue supplying to parties found guilty of violating any contract under the foregoing resolution, and announce to our members that this committee will no longer regard such articles as really restricted.

This resolution is directed against such proprietary firms as refuse to enter into the agreement, and it was considered by the counsel for the plaintiff as equivalent to placing such manufacturers on a boycotted list. A further provision of the plan was:

That when complaints of violation are properly lodged with the committee in writing against any dealer the chairman, with the consent and advice of his associates, shall proceed to have thorough investigation of such charges made, and shall have full power to engage for this purpose any assistance he may deem proper to corroborate such charges.

Under this the committee employed spies, who tracked shipments to the Park Sons Company, and reported the names of the intermediaries through whom purchases had been made. These intermediaries were thereupon placed on the excluded list.

Another resolution establishes a whitelist and a blacklist:

That the committee on proprietary goods furnish rebate proprietors with a list of parties who advertise proprietary articles at cut rates at retail, also of parties who are purchasers for division, in violation of the letter and spirit of their contracts, and that we

PROPRIETARY DRUGS.

The Wholesale Druggists' Association, organized in 1882, represents 90 per cent of the wholesale jobbing trade of the United States. Of this trade 45 or 50 per cent is in the form of proprietary drugs, sold under trade-marks, copyrights or patents, which secure exclusive right of sale to the manufacturers. The manufacturers themselves, organized as the Proprietary Association of America, have an arrangement with the Wholesale Druggists' Association to control wholesale and retail prices. A number of retail associations have also been formed in the several States, with a National Association of Retail Druggists, which co-operates with the jobbers and the manufacturers' associations.

From its organization to the present time the Wholesale Druggists' Association has conducted a vigorous attack upon wholesale houses declining to become members of the association or to abide by its conditions with respect to sales. This contest has all the more significance for our present purpose because of the decision of the highest court of the State of New York sustaining the legality of the arrangements thus effected to regulate competition. This decision was rendered by the Court of Appeals April 28, 1903, in the case of John D. Park & Sons Company vs. The National Wholesale Druggists' Association. The facts, as agreed upon by both parties to the suit, were as follows:

The medicines are known as proprietary goods and their manufacture and sale are under the control of the

request that orders for such parties be not hereafter filled, except at long prices.

That in justice to those proprietors who have in the past and will now agree to act up to this measure of protection to retailers, the committee of proprietary goods note, in the official rebate list, the names of all manufacturers who will act in accordance with the spirit of that resolution.

That all proprietors selling goods on the contract plan are hereby requested to forward names of new firms or associations wishing to purchase goods to the sub-committee on rebate contract; said committee shall at once inquire as to the business methods and organizations of said firms or association, and report to the proprietors, in accordance with resolution No. 5, passed at the Indianapolis meeting of the N. W. D. A., if in their opinion said firm or association are entitled to purchase rebate goods. And all proprietors are requested to abide by said decision. On the adoption of this resolution by the association, a copy shall be forwarded to all parties selling goods on contract plan.

In conformity with these resolutions, joint committees of the Proprietary Association and the Druggists' Association were created, which proceeded to compile lists of the firms throughout the United States entitled to direct quantity sales at the rebate discount, and also to furnish to the proprietors lists of all firms refusing to abide by these rules or furnishing goods as intermediaries to other firms that so refused. The committees, through a system of spies, received daily reports of shipments to or from the firms on their blacklist and furnished these lists to all manufacturers of proprietary goods.

The Committee on Proprietary Goods at the session of the Wholesalers in 1902 affirmed that "the continuous advocacy of the rebate plan has involved no hardship upon any branch of the trade nor has it dulled the edge of competition. It has simply restrained it from taking an unreasonable and destructive form. The opportunities for those members which have ample capital and capable management are as great as ever and their operations have not been restrained with the practical working of the rebate plan."

The Committee of the Proprietary Association, at their session in 1902, reported:

"It is a pleasure to be able to say that all are coming to realize, as they have not heretofore, the immeasurable superiority of co-operation over the kind of competition that for forty years has tended to render the retail drug business more and more a life of profitless drudgery, while the profits of proprietors and jobbers have also seriously diminished.

"The great majority of the jobbers are living up to the terms established by the proprietors for the sale of their goods, but there are undoubtedly a number on the uniform list that need discipline of the kind they will certainly remember.

"The retail trade, or at least the members of the National Association, are with few exceptions carrying out conscientiously the stipulation made that, in exchange for an honest effort by proprietors and jobbers to secure them, the retailers, a reasonable profit on proprietaries, the various preparations of the proprietors shall be sold by them, when called for, *without argument*."

The importance of the New York decision in the Park & Sons Company case make it worth while to give extracts showing the grounds of the decision. The court held that the wholesalers' contract system did not create a monopoly, since its terms were open to non-members as well as members of the association. Judge Haight, in the majority opinion, said:

"Under the plan adopted every dealer has the right to purchase goods from the manufacturers upon the same terms as the members of the association with the right to the same rebates or commissions upon complying with the requirements of the manufacturers with reference to following their price list in making sales of goods. . . . It is true it does away with the competition among the dealers as to prices, but it creates no restriction upon them as to the quantities they may be able to sell or the territory within which they may confine their transactions. . . . An active competition and rivalry in business is undoubtedly conducive to the public welfare, but we must not shut our eyes to the fact that competition may be carried to such an extent as to accomplish the financial ruin of those engaged therein and thus result in a derangement of business and inconvenience to consumers and in public harm. . . . It is true, many of the proprietors refuse to sell to the plaintiff proprietary goods except at long prices, which I understand to be the selling price. They have refused to allow plaintiff commissions or a rebate upon the goods purchased, but this refusal is based upon the ground that the plaintiff refused to sell at the price fixed by the

proprietor. The plaintiff can at any time avail itself of the right to purchase upon the contract plan by complying with the requirements of the proprietors. The plaintiff could command large capital, and by reason of this they could purchase proprietary goods in larger quantities and more cheaply than the other wholesale and jobbing druggists, and that by reason of the contract plan the plaintiff was unable so to do. Under the contract plan the prices of these goods were made uniform for fixed quantities, and dealers possessing large capital and thereby enabled to purchase in large quantities could not purchase for a less sum than the ordinary wholesale and jobbing druggist, and not being able to purchase for a less sum could not handle the goods more cheaply. The situation is not new. It is one to which the attention of the public has been frequently drawn in recent years. The great merchants possessed of large capital will persuade manufacturers to sell to them more cheaply in consequence of their taking large quantities, and thus they are enabled to undersell and drive out of business the small merchants in their vicinity. I am not here to question the right of the big fish to eat up the little fish, the big storekeeper to undersell and drive out of business the little storekeeper, but I do believe that the little fellows have the right to protect their lives and their business, and if they can by force of argument and persuasion induce manufacturers to establish a uniform price for fixed quantities so that they can purchase as cheaply as the great merchants and thus compete with them in the retail trade, they have the right to do so, and that no court of equity ought to interfere and restrain them from the exercise of this privilege."

Since the decision of the New York court the arrangement is still maintained, works satisfactorily, and is earnestly defended by the association and those interested in its maintenance. A manufacturer signs a contract with the officers of the association agreeing that prices shall be maintained and that orders shall be refused from all dealers whose names appear upon a blacklist furnished the association from time to time. These conditions are being enforced, and since the Park suit the contract seems supreme. The jobber is permitted to cut the price on certain specified quantities, as, for instance, for orders for three dozen of Ayer's goods he may make a discount of 5 per cent at his discretion, and the same discount on orders amounting to \$36 of Pierce's goods, etc., each proprietor electing the size of the quantity ordered that permits the discount. Retail druggists and wholesale druggists find it very difficult and always more expensive to buy these goods if they violate provisions of the contract.

There is in the drug line another scheme, known as the "Miles plan," inaugurated by the Miles Medicine Company. This company, which markets its goods through jobbers, prohibits a jobber from filling orders from any firm or person whose name is not found on the list furnished him by the Miles Company. To get on this list a retailer must contract to sell the Miles goods at full price. The retailer forwards his contract, if he is not already on the list, to his jobber. The jobber in turn forwards it to the proprietor, who, if accepting him as in good standing, adds the retailer's name to his general list. On receiving from a regular customer not on Miles's list an order containing an item calling for any of Miles' goods, the jobber fills the order less the Miles goods even if his customer is a valuable one to him. This causes much irritation to the retailer and considerable explanation from the wholesale druggist. The wholesalers, however, seem pleased with the plan, and are standing by it to a man.

BOOK PUBLISHERS AND BOOKSELLERS.

In the latter part of 1900, the American Publishers' Association was organized, with, it is supposed, about 95 per cent, both in number and extent of business, of the publishers of all kinds of books, magazines, and similar commodities throughout the United States. The association included such publishing houses as: McClure, Phillips & Co., D. Appleton & Co., Dodd, Mead & Co., Doubleday, Page & Co., The Funk & Wagnalls Company, Harper & Bros., Henry Holt & Co., Houghton, Mifflin & Co., The Macmillan Company, G. P. Putnam's Sons, The Baker & Taylor Company, Fleming H. Revell & Co., and others. Shortly thereafter the American Booksellers' Association was organized, composed of a large number of bookdealers at wholesale and retail, with about 90 per cent of all

such dealers both in number and extent of business throughout the country.

The Publishers' Association adopted an agreement providing that all copyrighted books published by any of them after May 1, 1901, should be published and sold at retail net prices, that is, the published price, and not be subject to any discounts. It also provided that these books should be sold only to those booksellers who would maintain the retail net prices of such books for one year, and to those booksellers and jobbers only who would sell books at wholesale to no one known to them to cut or sell at a lower figure than such net retail prices, or whose name would be given to them by the association as one who had cut such net prices. An office was established for the purpose of carrying out this plan.

Soon afterward the American Booksellers' Association issued a statement announcing that the plan of the Publishers' Association would take effect May 1 and giving as reasons for this measure the demoralization of the book trade, both as regards publishers and retail dealers, in the cutting of prices by department stores, home library associations, and other mail order agencies which advertised books at "wholesale prices."

The Booksellers' Association stipulated that its members should co-operate with the American Publishers' Association in supporting the latter's agreement as to prices and conditions of sale. The Publishers' Association on its part refused to sell to the person violating his agreement any book published by any member of the Publishers' Association, whether copyrighted or not, until the association should be satisfied that such persons would co-operate with it and its members in maintaining the uniform net price system.

In carrying out the arrangement the American Booksellers' Association sent a circular letter to publishers who had not joined the Publishers' Association, containing the following statements:

"By special arrangement entered into with the Organization committee of the American Publishers' Association, the members of our association are bound not to buy, not to put in stock, nor to offer for sale the books of any publisher who shall finally decline to cooperate with us in the maintenance of the net price system by joining the American Publishers' Association and issuing books under the net price system. Inasmuch as the publishers have carried out their part of the agreement upon which our conduct was conditioned, it now becomes necessary for us to preserve our part of the agreement. We had sincerely hoped that you would be pleased to join the American Publishers' Association and co-operate with us through it in the maintenance of the net price system; and if you will take the matter into consideration at the present time, we are confident that you will now join the Publishers' Association and not compel us to take final action in this matter. We inclose a copy of the last issue of the Booksellers' Bulletin. By referring to page 6 of the Bulletin you will see that one publisher has already been cut off by the members of our association. We sincerely hope it will not be necessary to extend the list. Very truly yours,

"American Booksellers' Association."

The resolution on which the above notice was based is as follows, adopted by the American Booksellers' Association June 17, 1902.

Whereas, all publishers of trade books still remaining outside of the Publishers' Association have been repeatedly invited by us to join the organization and through it co-operate with us in the maintenance of the net price system, and,

Whereas, such publishers of general trade books as still remain outside of the Publishers' Association are continuing to sell their publications to the few persistent price-cutters, and thus encouraging them to continue their opposition to the net price system, therefore,

Be it Resolved that we, the American Booksellers' Association in convention assembled, do hereby instruct our secretary to give final notice to such publishers that it is our intention to apply Reform Resolution No. 1 unless they immediately join the American Publishers' Association and co-operation through it with us in the maintenance of the net price system, and therefore,

Be it Resolved that should any such publisher on receiving such notice decline to co-operate with us by failing to make application to the American Publishers' Association after receiving final notice, the secretary shall promptly issue notice to all members that Reform Resolution No. 1 is thereafter to be applied to such publisher, and all members shall discontinue handling the books of such publisher as provided by Reform Resolution No. 1 until further notice.

As a further illustration of the methods adopted and the success with which they were carried out the following extracts are given from a circular letter sent out by one of the publishers:

"Several things have already been demonstrated of interest to the entire trade in connection with the 'No Cut rate' movement.

"1. The substantial loyalty to the association of all dealers. In only one case (up to date of this letter) has there been any cutting of price,—one large department store in New York City.

"2. The vigor and promptness of the association to punish those who violate its regulations. The association immediately took steps to assure itself that the cut in price was deliberate and intentional. The entire wholesale publishing trade was at once notified not to sell a book of any kind published by the members of the American Publishers' Association to the offending concern. There is every indication that this order will be loyally carried out by all publishers and wholesalers."

A number of department stores accepted the conditions imposed by the Publishers' Association, but the firm of R. H. Macy & Co., of New York, brought suit in December, 1902, in the New York Supreme Court for an injunction and for \$100,000 damages against both the Publishers' Association and the Booksellers' Association. The petition cited that the two associations had entered into a combination to maintain prices and to prevent competition, and that they refused to sell any books to R. H. Macy & Co. It was also alleged by the plaintiff that the Publishers' Association had sent their spies into the store of Macy & Co. and had bribed their employees and followed them to their homes and elsewhere in order to discover the parties who were selling books to them in violation of their contract with the Publishers' Association not to do so; and that, in some cases, when these parties were discovered their supply of books was immediately cut off by all the publishers.

In reply, the President of the Publishers' Association contended that the object of the association was not to create a monopoly, since it admitted all reputable publishers that might wish to become members. Neither did the association attempt to fix the price of any one of the books. This was done by each publisher, and the effect of the rules was therefore not to stifle competition but rather to increase competition by providing settled methods of doing business. It was intended in no way to limit the sale of books, but to furnish them to all jobbers and dealers who would agree to prevent sales at less than the fixed retail price, and it was intended that such jobbers and dealers should be treated with justice and equality and without special concessions, rebates or discounts. It was held that the publishers' profits had not been increased by the association.

This suit was decided in a lower court in favor of the publishers and booksellers; in an intermediate court in favor of Macy & Co., and is now pending on appeal taken by the publishers to the Court of Appeals.

THE PLUMBING BUSINESS.

The National Association of Master Plumbers of the United States was organized in New York in 1883. In 1884 at Baltimore the organization adopted certain resolutions which have constituted a bone of contention ever since between the master plumbers and the manufacturers and jobbers of plumbers' materials, whose organization is the Confederated Supply Associations.

While the supply men seem to have been willing to confine their sales to people legitimately engaged in the plumbing trade, as originally called for in the Baltimore resolutions of the Master Plumbers' Association, they refused to go a step further and accede to the association's demand that they should sell only to its members. At a meeting at which the Central Supply Associations' organization was effected the following declaration of policy was adopted:

Whereas, Many members of this association have been requested by State and local master plumbers' associations to refrain from selling licensed master plumbers, regularly engaged in business, who are not members of said association; and

Whereas, We deem such discrimination inexpedient and unwise from a business point of view and contrary to the laws of the United States and the principles on which our government is formed; therefore, be it

Resolved, That we reserve the right to sell plumbing

goods to any licensed master plumber, regularly engaged in business, in accordance with the definition of the Baltimore resolutions as made by the National Association of Master Plumbers, at its annual meeting in Washington in 1892.

The master plumbers adopted a policy of patronizing only those supply men who agreed to their demands, thus boycotting others. The struggle between the two associations went on with varying success, the supply men expressing their willingness to abide by the Baltimore resolutions of the plumbers and urging arbitration for grievances and disagreements between members of the two bodies. Finally a conference in New York of the executive committees of the two associations adopted an agreement embodied in seventeen resolutions, the more important of which read as follows:

Whereas, we believe it would be to the best interests of the manufacturers, jobbers and plumbers of the United States that the sale of plumbing goods be confined to master plumbers as herewith defined:

1. A master plumber is one who has an established place of business and represents the industry of plumbing, and who has qualified under State or local enactments regulating plumbing and plumbers where such exist; or, where no license is required, an individual or firm with an established place of business and representing the industry of plumbing;

2. Resolved, That we recommend the establishment of a Joint Standing Committee on Conciliation to which shall be referred all cases of dispute between the plumber and the dealer. This committee shall be constituted by the appointment of six members, three of whom shall be named by the President of the National Association of Master Plumbers, and three by the Chairman of the National Committee of the Confederated Supply Associations. In case they cannot agree they shall submit the question to three arbitrators, chosen in the usual way.

3. That plumbing goods shall not be sold to dealers who do not confine their sales to master plumbers.

8. Supply houses, doing a plumbing supply business and contracting for plumbing work, directly or indirectly, are considered unjust competitors.

9. Net prices or any discounts from list prices furnished to others than those allowed to buy under these resolutions are violations thereof.

11. The members of the National Association of Master Plumbers shall not sell plumbing material to consumers when they do not furnish the labor for putting the material in.

14. The penalty for violation of these resolutions shall be left to the discretion of the arbitrators and be commensurate with the violations and circumstances.

By these resolutions the master plumbers gave up their claim that plumbers' supplies were to be sold to members of their association only, while they succeeded in establishing a more strict definition of the master plumbers to whom the privileges of the trade were to be confined. The resolutions were adopted unanimously by both organizations.

But in spite of its acceptance by the convention of the master plumbers the agreement was repudiated by their National Executive Committee at a meeting held in Cleveland, October 8, 1901, where resolutions were unanimously passed which revived the old demand. As these "Cleveland resolutions" were "enthusiastically and resolutely approved" at the succeeding annual convention of the master plumbers held at Atlantic City, June 18, 1902, and as the master plumbers are still trying to enforce them, their most important provisions are quoted verbatim:

1. The members of the National Association of Master Plumbers are requested to confine their purchases of plumbing goods to manufacturers and jobbers who are willing to assist in improving the condition of the plumbing business, and who sell plumbing goods in localities where there are members of the National Association of Master Plumbers only to recognized master plumbers whose names appear in the national Directory of Master Plumbers, published under the supervision of the National Association of Master Plumbers. No plumbing goods shall be furnished to consumers under any condition.

2. It shall be the duty of the secretary of each State or local association affiliated with the National Association, to furnish a list of recognized master plumbers in his locality to the President of the National Association of Master Plumbers. All this must be submitted to the officers of the various State associations and approved by them before being sent to the National Association.

4. The names of manufacturers and jobbers who are considered in accord with these resolutions shall be printed in pamphlet form, under the supervision of the National Association of Master Plumbers, and distributed to those who are members of the N. A. of M. P., with the request that they bestow their patron-

age upon those whose names are upon the said list of manufacturers and jobbers. Supplements to this list shall be issued monthly, or more frequently if necessary.

5. Manufacturers and jobbers who sell or exchange plumbing goods with other manufacturers and jobbers who furnish plumbing goods to those not on said list of recognized master plumbers shall not be considered in accord with these resolutions.

6. In order to aid in honest dealing and the payment of just debts, manufacturers and jobbers are requested not to furnish plumbing goods to any one for a building, or addition to a building, where a manufacturer or a jobber in accord or a member of the N. A. of M. P. has not been paid in full what is justly due him for goods furnished for such building or for work performed upon such building. Manufacturers and jobbers furnishing plumbing goods contrary to this section shall not be considered in accord with these resolutions.

7. Master plumbers shall not finish work, or furnish plumbing goods for any building, or addition to any building, where a manufacturer or jobber in accord, or a member of the N. A. of M. P., has not been paid in full what is justly due him for goods furnished for such building, or for work performed upon such building. Master plumbers finishing work or furnishing goods for such buildings contrary to this section shall not be recognized as master plumbers.

10. It is a recognized rule in all lines of business that manufacturers and jobbers confine themselves to manufacturing and wholesaling. Manufacturers or jobbers who conduct a plumbing business directly or indirectly or who establish and maintain others in the plumbing business shall not be considered in accord with these resolutions.

11. Master plumbers selling plumbing goods that they do not install, or who install plumbing goods that they do not furnish, in localities where there are members of the N. A. of M. P., shall not be recognized as master plumbers.

12. Manufacturers, jobbers or their representatives in plumbing goods who give net prices or any discounts from list prices to those who are not recognized as master plumbers by the National Association shall not be considered in accord with these resolutions.

The Supply Associations refused to comply with the Cleveland resolutions, and at a meeting at Chicago, Nov. 12, 1902, the National Committee of the Confederated Supply Associations adopted what are known as the "Chicago trade resolutions," in which, reaffirming their belief in "the spirit of conciliation and arbitration," they laid down the following definition of a legitimate master plumber "to whom sales of supplies are to be confined:"

"A party who represents the industry of plumbing, who has an established place of business, doing a general merchant and contracting plumbing business with the public generally; who has qualified under the State and local enactments regulating plumbing and plumbers where such exist, or, where no license is required, who fulfils the other requirements, and represents the industry of plumbing in the locality."

Besides the legitimate master plumbers, section three provides that—

"The following are entitled to buy plumbing goods: Federal Government, State and county institutions. Also water works, railroads, steamship companies, ship building companies, car building companies, packing and stock yard companies, educational and charitable institutions, municipalities, manufacturing companies, for use only in the requirements of their business, providing they are regularly employing journeymen plumbers the year round to install same.

"No plumbing shall be sold to any of the aforementioned parties for use of any officers or private individuals connected with said excepted parties.

"No plumbing shall be sold to any of the aforementioned, mail order or catalogue houses, buildings, office buildings, or hotels, or retailers not doing a legitimate plumbing business."

The Chicago and Cleveland resolutions are at present still the subject of dispute. In the words of a prominent manufacturer of plumbers' supplies, as matters stand at present—

"The Cleveland resolutions are not strictly enforced. There is more or less elasticity about their enforcement, according to locality and custom. It is implied in them that legitimate plumbers, to whom the supply houses are required to limit their sales, are all in their directory. This is admittedly impossible. In many places only their association members are reported. We all sell to any legitimate plumber, regardless of his association membership, when he is otherwise in good repute."

The master plumbers, however, insist upon their demand that goods be sold to members of their association only, and resort to threats of boycott, as the following letter, recently sent by the secretary of a

local association of the plumbers to a manufacturer of plumbers' supplies, shows:

Dear Sirs: On March 2, Mr. —, Secretary of the — Local, wrote you that you had shipped tubs to — people who were not members of the Northwestern Association, State or National. Yours of March 3 read as follows: That you had not done so, as far as you knew. You also say that Mr. —'s letter to you of March 2 was indefinite. He, again, on March 7, wrote you in answer to yours that the tubs were shipped to — direct from your factory. Yours of March 11 says: "The tubs were shipped on the order of a jobber." In connection with that I would say that we hold you accessory to this matter as much as if you had shipped them direct. If a horse is stolen, and you had helped to secrete him, the law says you are accessory to the crime, and the Northwestern will hold you to that point that you are a party to this wrong, and we will give you to March 23 to adjust this matter with the — people to their satisfaction, and when it is settled they will report to me, and that will end the difficulty, but at the end of that time, if Mr. — reports to me that this matter has not been settled satisfactorily, then the Northwestern will take this up against you in their usual custom. As this is the first offense against you, we hope you will be prompt in straightening this matter out, but you cannot be excused for selling to non-member on a jobber's order. Yours respectfully,

(Signed)

The "usual custom" referred to is the placing of the manufacturer's name on the list of those "not in accord," which is equivalent to a boycott of his goods by the members of the association.

That these threats are being carried out in different parts of the country the following cases of recent date go to show:

The Spokane (Wash.) Chronicle of July 9, 1903, contained the following item of local news:

"In the case of Maxwell & Hollinberry vs. The Master Plumbers' Association, brought in the Superior Court for an injunction to stop the boycott which has been enforced against the plaintiffs, the final hearing of which was held July 2, Judge Kennan this morning granted a decree, perpetually restraining the defendants from intimidating Holly, Mason, Marks & Co., the Griffith Heating and Plumbing Supply Company, and all other dealers in plumbers' supplies and materials in the city of Spokane, either by use of threats, coercion, fine or otherwise, and from further interfering with the business of the plaintiffs or in any way injuring the trade of the plaintiffs by intimidation, threats or fine, either by agreement among said defendants, either express or implied, open or in secret."

The "Plumbers' Trade Journal" of August 1, 1903, contains the following:

"Suit was begun in the early part of last month at Birmingham, Ala., by J. E. Barnes against the Milner & Kettig Company and the Birmingham Pipe and Casting Company. The suit is brought under what is known as the Sherman anti-trust law, which forbids combinations.

"Barnes, who is a master plumber, claims that he cannot purchase plumbing material from either of these firms. The reason, he states, is owing to the fact that he is not a member of the National Association of Master Plumbers, and that both firms in question have conspired with said association and refuse to sell to them. The case will be watched with a good deal of interest."

In St. Louis the local association of master plumbers succeeded by threats and intimidation in compelling the manufacturers and jobbers to confine their sales to members of the plumbers' association only. A plumber by the name of Walsh found himself cut off effectually from all supplies, and applied to the court for relief. The "Plumbers' Trade Journal" of May 15, 1903 (page 479), contained the following account of the case:

"In the case of Walsh vs. Association of Master Plumbers of St. Louis et al., the St. Louis Court of Appeals held: 'Capitalists have the right to combine their capital in productive enterprises and by lawful competition drive the individual producer and the smaller one out of business. . . . We think it is competent for the court to declare the agreement complained of as illegal and void, and to restrain the parties to the agreement from keeping its terms or demanding that they be kept, and thus have the respondent corporations and each of them free to deal or not to deal with the appellant (Walsh) as they may choose.'"

Barclay, J., concurring with the decision said:

"While any or all dealers in plumbing materials may *sponte sua* (of one's own accord) refuse to sell to appellant, they cannot combine and conspire to that end as the statute law now is."

An attempt was made in the early part of this year to bring the two warring organizations together. At a conference between the National Executive Committees of the two organizations held in February, 1903, the President of the Plumbers' Association proposed, as a basis for compromise, that in every locality where the plumbers' organization included two-thirds of the plumbers engaged in business and represented 75 per cent of the purchasing power, the dealers should confine their sales to members of the association. This was rejected by the supply people, and the conference was terminated. In the meantime, the over-aggressive policy of some of the local organizations resulting in adverse decisions from the courts, the National Association of Master Plumbers asked its local organizations not to take action in their controversies with the supply people except through the National Committee. Several of the local associations were displeased by this step, the dissatisfaction being especially great among the members of the Northwest Association of Pennsylvania, who seceded from the larger body.

HARDWARE.

Observers in close touch with the hardware trade differ as to the extent to which the hardware industry in the country is regulated by means of pools or "gentlemen's agreements." Varying estimates place the figures at from 60 to 95 per cent. of the output of the entire industry. Some of the most important lines, such as screws, shovels, axes, etc., are organized in pools. The general tendency is toward combination, since it is so often found that unrestrained competition is ruinous. Although many pools fail, yet almost invariably a new pool springs up to replace the old one, to profit by its mistakes and prove more stable. Moreover, after the prejudices and mutual suspicions of the members have been overcome, a pool that has attained success tends in the course of a few years to develop into a complete merging of the individual concerns into one company.

The avowed object of a pool is to maintain prices at a profitable level. The common means to that end is the apportionment of the market among the members in proportion to plant capacity. Ascertaining the capacity is confided to a special commissioner, who alone is thus made familiar with the facts regarding each plant, the members remaining in ignorance of the particulars of one another's business. The apportionment made, each member is told what his output is to be, and it becomes henceforth the commissioner's duty to audit the books of the constituent concerns at regular intervals, to see that all live up to the agreement. Members selling less than their share are compensated from the common fund, while those exceeding their allotment are required to pay into it the excess. Members detected in selling below the prices agreed on are subject to forfeiture of part or all of the money paid in by them as a guarantee of good faith. To insure more perfect control a central selling agency is sometimes established, often managed by the commissioner. In other cases the manufacturers composing the pool are left each to market his own product, the earnings being adjusted at stated intervals by the commissioner.

Not all the lines of hardware industry are organized in pools. Some are mere gentlemen's agreements, as in the case of the manufacturers of bolts and nuts. These agreements are sometimes in the nature of an informal understanding as to prices. More frequently they take the shape of a formal contract, signed by all the parties thereto, and providing for penalties in case of violation. All of these forms of agreement, however, have one feature distinguishing them from pools, which is that there is no attempt to regulate output or to allot it among the several manufacturers. The latter are free to compete for sales, so long as they do not attempt to undersell one another. Such agreements are known to exist among the manufacturers of hammers, tool-handles, cabinet backs and door-hangers, and other lines of builders' hardware.

The prices agreed upon by the manufacturers are those charged to jobbers. Between these two elements there is constant friction on account of direct sales by manufacturers to retailers, department stores and mail-order concerns. The jobbers have sought without success to become the agency for all the manufactur-

ers' product, but the manufacturers will not even agree to sell to retailers at prices bearing a fixed percentage to the prices to the jobbers, and they vary the prices to the retailers with the size of orders, terms of payment, etc. In some cases, as in wood-screws and horseshoes, described more fully below, there are different scales of prices, according to the importance of the jobber.

In the skate and lawn-rake combinations each manufacturer has been assigned a number of jobbers, through whom he does business exclusively. The jobbers were not consulted in this assignment, but the experience of each manufacturer as to what particular jobbers he did most business with was taken into account. The agreement, which is called "iron clad" in the trade, as it provides for severe penalties in case of violation, has been in force for several years and has worked very successfully. Jobbers are sometimes dissatisfied when unable to get the particular goods made by a manufacturer to whom they do not happen to be assigned, but they carry out the agreement faithfully, as they are bound in their turn to their respective manufacturers by contracts providing for a rebate on their prices at the end of the year, with loss of the rebates on any violation of the agreement. The pools and the agreements as a rule take in all the manufacturers in a given line. Competition sets in, if at all, at a later stage, when the high prices maintained by the combination make the field attractive to newcomers.

The mutual relations between the manufacturers and jobbers in the hardware trade are summed up in the following extract from a speech by E. B. Pike, of the Pike Manufacturing Company, New Hampshire, delivered before the annual convention of the Southern Hardware Jobbers' Association, in July, 1903:

"I believe it is the policy of the average manufacturer to depend upon the jobber to distribute his goods. Of course, some mistakes have occurred, some manufacturers have been foolish enough to sell their goods to retailers, some even to consumers, and some have been so absolutely bad that they have sold to catalogue houses. But I think most of them have sooner or later come to realize and repent of their sins.

"Of course every line of goods cannot be handled in the same way. Manufacturers of machinery must necessarily sell a large portion of their product direct to the user, while manufacturers of such articles as tacks and screws would be very foolish to do so."

At the same meeting, C. M. Fouche, of the Crucible Steel Company of America, Chattanooga, Tenn., made an address which contained the following statement:

"When it is thought that the manufacturer is making too much profit our jobbing friends will urge embryo manufacturers, with more money than brains, to go into the business, and we soon have over-production and the resultant seeking after markets by the manufacturer who cannot dispose of his goods through the regular channels."

The following are among the more important combinations in the hardware trade:

WOOD SCREWS POOL.—Has been in existence for about six months. It is organized as a regular pool on the lines above described. It has a commissioner who has charge of the pool funds and the matter of compensation and of charges for excess made to each manufacturer, according to his output. There is no common selling agency, but members are subject to forfeiture for selling below prices. There are three scales of prices: One for very large jobbers, another for the medium jobber, and a third for small jobbers or retailers. The effect of this pool has been to raise prices 40 per cent, but it is claimed that before the combination prices were unprofitable.

SHOVELS.—The association controls about two-thirds of the total output of the country. The manufacturers allow jobbers a rebate provided they refrain from purchasing from outside manufacturers.

AXES.—The pool controls practically the entire output of the industry. It has recently been formed and no changes in prices have yet been made, but an advance is expected. Among the concerns in the pool is the American Axe and Tool Company, a consolidation of about a dozen independent concerns, which control about one-half the entire output of axes in the country.

HORSESHOES.—Controlled by a pool organized on the lines described above. There is only one im-

portant concern, the Burden Iron Works, of Troy, N. Y., outside the pool. A new independent concern, the Standard Horseshoe Company, of South Waltham, Mass., has also come into the field recently, but it is not operating on a large scale at present. The prices of the pool are graded according to the importance of the jobber. A jobber ordering not less than one thousand kegs in six months is allowed a rebate of $7\frac{1}{2}$ cents per keg, equivalent to $2\frac{1}{2}$ per cent; those buying not less than two thousand kegs in the same period get a rebate of 15 cents per keg. The buyer in large quantities is thus deemed to be entitled to greater consideration and protection.

AGRICULTURAL HAND IMPLEMENTS.—Are controlled by a trust with only one serious competitor.

AMMUNITION.—Metallic ammunition, powder and shot. The association, controlling over 90 per cent of the total output, consists of three concerns: The Union Metallic Company, the Winchester Arms Company, and the United States Cartridge Company. The only outside concerns are the Robin Hood Powder Company, and the Peters Cartridge Company, of Cincinnati, O. This is said to be the most successful of all the pools and has been in existence for several years.

ICE CREAM FREEZERS.—There is a "gentlemen's agreement" as to prices on the part of the four concerns engaged in the manufacture of this article. It effectually keeps out competition.

IRON AND STEEL.

The following associations, pools or "gentlemen's agreements" are known to exist in the iron and steel industry:

The *Steel Rail Pool* includes all the leading concerns with two exceptions. The output of the pool, which is fully 90 per cent of the total output, is by agreement apportioned among the constituent concerns in proportion roughly corresponding to the capacity of their respective plants. The apportionment is a matter of bargaining, carried on every year at the renewal of the pool. There is no central selling agency, each company filling its own orders, but all the inquiries received by each company are compared daily at the office of the commissioner in New York to insure uniformity of prices and terms. The pool has been in existence several years.

The two outside concerns are the Colorado Fuel and Iron Company, which co-operates with the pool, and the Tennessee Coal, Iron and Railroad Company, which is a competitor.

STEEL BILLET ASSOCIATION.

The recent revival of this pool has been made possible through the decrease in the number of independent concerns as a result of consolidations. The pool includes now the United States Steel Corporation, the Jones & Laughlin Steel Company, the Wheeling Steel and Iron Company, the Cambria Steel Company, the Pennsylvania Steel Company, the Lackawanna Steel Company, and the Maryland Steel Company. Meetings are held in New York every day, at which inquiries and sales are regularly reported. The agreement refers exclusively to prices, which have been established for the principal points of consumption. Though popularly called a pool, the combination is merely a "gentlemen's agreement" and each firm is free to sell all it can.

The *Beam Association* is a regular pool organized in the form described under hardware. Owing to adverse court decisions the feature of compensation when falling short and payment for excess of allotments has been dropped. The output is still apportioned among the various concerns, and no one is permitted to exceed his share, the matter being regulated through a commissioner. A concern receiving orders in excess of its allotted share will turn them away, thus indirectly compelling the customer to apply to another member. The pool controls about 90 per cent of the total output.

The *Plate Association* includes all the principal manufacturers of plate, with the exception of the Lukens Iron and Steel Company, which, however, co-operates with the pool. Organized in the same manner as the Beam Association, this pool controls more than 90 per cent of the output.

The *Pig Iron Association* of the Mahoning and

Shenango valleys maintains a common selling agency. It is a combination of outside furnaces which sell their output to the United States Steel Corporation. It has recently decided to shut down all of the furnaces for 30 days at some time prior to January, 1904, to prevent an accumulation of stock.

The *Association of Steel Bar Manufacturers*, west of the Alleghany Mountains, has been in existence for about two years. It is in the nature of a "gentlemen's agreement" to maintain prices.

There is an association of manufacturers of shaftings, which is not strong.

A meeting of representatives of blast furnaces located in eastern Pennsylvania and New Jersey was held Sept. 21 in New York, at which it was practically agreed to curtail production. One of the conferees is reported as giving out the following statement:

"No formal action was suggested or taken at the meeting. The question, however, came up as to whether it was advisable to undertake any restriction of output. It was decided that, first, no price agreement was worth talking about, and, second, that no formal restriction of output could be carried through. Informally, however, it was the sense of all present that we should limit production to consumption."

RAILROADS.

Probably in no other field of capital does destructive competition cause such waste as it does in the railroad business. It is no longer competition, it is "war." "No competition," says the Interstate Commerce Commission, "is so destructive as that between railways." If these wars are less frequent in recent years than they were in earlier stages of the business, it is because means have been found by combination or otherwise to prevent them. The fight is often as bitter to prevent a new road coming into the field as it is between existing roads, and the vigorous efforts of the Pennsylvania railroad interests to prevent the Gould lines from getting Atlantic Coast terminals are well known matters of recent history. Sometimes the contests between existing roads are carried to such extremes that they become actually ridiculous, as in the case of the passenger-rate war one year ago on lines between Chicago and Texas, as described in the following telegraphic item:

"Houston, Tex., Aug. 17.—Five hundred tickets were sold to Chicago yesterday at startling prices as the result of a war of ticket brokers, the outgrowth of the fight of the Missouri, Kansas & Texas, the International & Great Northern, the Cotton Belt and the Santa Fe for Northern passenger business.

"The lowest rate before yesterday was \$18 for the round trip. One broker cut it to \$8. Another broker at once cut it to \$4. Yet another announced Houston to Chicago, 30 cents; Houston to St. Louis, 20 cents; Houston to Kansas City, 10 cents.

"Another met the cut and offered a \$5 box of cigars with each ticket."

Railroad combinations differ from others in that railroads are public utilities, and railroad wars and discriminations inflict a public injury. On this account the Interstate Commerce Commission, representing the people, has recommended that poolings be legalized. For, says the Commission:

"If public transportation can be bought and sold like a commodity the largest purchaser will, some of the time if not all of the time, get the best terms. It is idle to expect that railroads will actually and all the while compete with each other as to every item of service or facility and at the same time expect that all their patrons, large and small, will be treated exactly alike. The policy now pursued cannot and will not prevent an outcome of vicious discrimination. And, what is most unfortunate of all, these discriminations favor the few and place the many at a disadvantage."

To place competition on a stable basis the railroads find it necessary to resort to two kinds of agreements, viz., uniform classification and uniform rate-fixing. For the purpose of classifying freight uniformly the different trunk lines of the country are associated through their representatives in what are known as Classification Committees. The entire United States is divided among three such committees, the Official, the Western, and the Southern.

The roads represented in the Official Classification Committee cover the territory lying north of the Ohio and Potomac Rivers and east of the Mississippi and the city of Chicago; those in the Western Committee

the territory west of Chicago and the Mississippi River; and those in the Southern Committee the territory south of the Ohio and Potomac Rivers and east of the Mississippi.

The Classification Committees, composed as a rule of General Freight Agents or Traffic Managers, are voluntary associations of the railroads. Their object, as stated in the Articles of Association of the Southern Classification Committee, is to establish "uniform freight classification and the publicity of the same."

The membership of these committees ranges from fifteen in the Official Committee to forty-two in the Southern. In addition to the representatives of the roads each committee has a chairman, a paid officer, not representing any road. The Classification Committee, without attempting to fix the actual freight rates, confines itself to classifying commodities. Nevertheless, it is evident that by changing an article from one class to another, the classification committees are able in so far to fix rates. By making a sweeping change of this kind these committees in January, 1900, advanced freight rates 20 to 100 per cent.

The Official Classification Committee works hand in hand with the Trunk Lines Association, which includes the roads connecting the Atlantic Coast cities with Chicago. This association fixes the actual rates by classes and also the so-called "commodity rates," i. e., special rates on commodities not included in any of the regular classifications. There is no provision for penalties of any kind for violating the rates or the classifications, yet it is believed that the roads abide by both.

The way in which this observance of rates and classifications is brought about is one of the most interesting facts in the history of all the ingenious devices for escaping destructive competition. By the anti-trust laws as interpreted in the Trans-Missouri cases, the roads are prohibited from organizing pools or associations to agree on rates, and this decision has intensified their efforts toward the now famous method of "community of interest." A person or a corporation in the interest of a competing line secures enough of the stock of its competitor to influence the election of the board of directors. A Federal Court, in the Northern Securities decision, has interdicted this practice when managed by a holding company organized for the purpose, yet that other form of community of interest, where individuals hold stock in competing roads, is not checked and is an increasing influence as a means of preventing rate-cutting.

Each of the associations which co-operate with the classification committees maintains a staff of men who inspect shipments to prevent the practice, said to be common among shippers, of underbidding weights and misdescribing goods to get lower than the published and legal tariff rate. The practice, when successful amounts practically to a discrimination in freight rates, the unscrupulous and successful underbiller getting virtually a rebate on his freight bill. The inspectors are responsible directly to the associations, and not to the individual railroads, being constantly shifted about from one road to another. Though they are supposed to watch the shippers and not the railroads, the latter themselves are sometimes the instigators of underbidding as a means of secret discrimination, and it has been stated by a prominent representative in the Trunk Line Association that the practice is on the increase in the Official Territory.

The experience of the trunk lines in arranging differentials on the limited passenger fares between New York and Chicago is an interesting example of the principle of agreeing on a minimum compensation. When a passenger pays \$8 more to ride between New York and Chicago on the Twentieth Century train than on the ordinary train this principle is recognized. The regular rate is based on the slowest line, which has \$20 for a twenty-eight-hour run. To overcome in a measure the advantage of the quicker lines, the latter agree to charge the \$8 excess. Were this not done all of the travel would be by the quicker lines, and the slower one might be forced into bankruptcy, to the ultimate disadvantage of all the lines.

The express companies and telegraph companies, like the railroads, have uniform rates for similar services.

LUMBER TRADE.

The National Wholesale Lumber Dealers' Association has for its object "the protection of its members against unbusinesslike methods of wholesale and retail lumber dealers and others. It shall give such security in the way of debarring 'scalpers,' the regulation of inspections and credits, the arbitration of disputed matters, as may be within the lawful power of such an association." (By-laws, Article I., Section 2).

Article XIX, referring to "relations with retail associations," provides that "whenever it shall be determined by the Board of Trustees . . . that any firm, person or corporation is not a legitimate customer for the wholesale trade according to the principles recognized by this association, as best conserving the interests of the lumber business, the members shall not thereafter sell to such person, firm or corporation."

Any member violating this provision "shall be notified to explain to the Committee on Arbitration, and should he fail to satisfactorily explain his conduct to said committee he shall be suspended or expelled by the Board of Directors as said Board may deem proper." (Article XV., Section 2.)

The local associations have their own rules for carrying out the spirit of these provisions. Thus the New York Lumber Trade Association has the following provisions regulating prices of lumber to members and to non-members of the association:

"First, the retail dealers hereby agree to purchase their stocks of spruce timber entirely from the wholesale commission houses who are members of the New York Lumber Trade Association in good and regular standing; second, the wholesale commission firms who are members of the New York Lumber Trade Association hereby agree to sell spruce timber in New York only to such persons, firms and corporations as shall be members of the New York Lumber Trade Association in good and regular standing.

"No member shall sell or deliver any lumber not mentioned in the above agreement in connection with or in consideration of the sale of lumber and timber mentioned in this agreement, at a less price than the wholesale price of such lumber in this market at the time of sale; members shall not sell to other members who are not in good standing with this association, except at the regular retail price."

Owing to the publicity recently given to these rules, the New York association has appointed a committee to revise them, and it is not yet announced whether changes have been made in the sections just quoted.

GROCERIES.

In the grocery business the increase in the number of "chain stores" and department stores is giving considerable concern to wholesalers and retailers, forcing them to organize more compactly for defensive purposes. Already one concern is operating 230 retail stores; another 114; and many from 5 to 50. The Retail Grocers' Association of Milwaukee has passed resolutions not to handle the products of manufacturers who place their goods in department stores, and the president of the association predicts that their action will be followed in every one of the States in which the National Retail Grocers' Association has branches. The National Association has recently passed resolutions asking manufacturers to maintain retail prices.

Wholesalers' and retailers' associations are working together in certain localities, as may be gathered from the following statement of the President of the Southern Wholesale Grocers' Association:

"About three years ago the retail grocers of Birmingham were in a bad way. There were dead beats coming into the town all the time, cutting and slashing prices and causing trouble to the retailers. What hurt the retailers hurt the wholesalers, and the wholesalers determined that the solution of the trouble was to organize the retailers so that they could protect themselves against irresponsible competitors. After the organization of the Birmingham retailers, the Minnesota wholesalers followed the lead, organizing the retailers of that State."

The "factor" or "equality" plan, which the wholesale grocers induced the sugar refiners to adopt in 1895, was designed to overcome the extreme competition which had wiped out the profits of the jobber. The plan provides for the payment of a rebate to the wholesalers by the refiners upon condition that they maintain the price fixed by the refiner. The refiners were to aid in the maintenance of the plan and to con-

fine their business strictly to the jobbing interests, and on the other hand refiners not a party to it were not permitted to reach the market through the wholesale grocers, and no additions were to be made to the list of approved refiners. Thus importers and outside refiners were compelled to reach the retail trade direct or through outside jobbers. This arrangement was gradually broken into by the rise of new refiners and was definitely abandoned about a year ago. In its place has been substituted the "limited price" agreement between jobbers and refiners without the exclusive features. During the present year this also has been broken and prices have been cut, and for this the jobbers are blaming the refiners and the refiners the jobbers.

Similar price-fixing arrangements exist in many other lines of goods sold by the grocers.

Wholesale grocers' association in certain states and sections are beginning to show a tendency to take another step in eliminating competition, by organizing under the corporate form. Leading firms in Ohio have recently consolidated under a New Jersey charter, and are expecting to take in firms in other states.

THE CONFECTIONERY TRADE.

The collective regulation of the confectionery trade is divided between the organization of the jobbers and that of the manufacturers.

Among the objects of the National Jobbing Confectioners' Association, which are enumerated in Article II. of its Constitution, are "to establish a uniform price, to harmonize all conflicting interests, if possible, and protect all persons engaged in the business that are affiliated with this body."

In a resolution adopted in 1902, at the eighth annual convention of the jobbers' association in Philadelphia, the following passage occurs: "That we support those manufacturers who sell jobbers at jobbing prices and retailers at association prices." The National Association leaves its local organizations free to adopt any measures they think best calculated to attain their ends.

The Association of Confectionery Jobbers of New York City has recently assumed an aggressive policy in an attempt to regulate prices to the retail trade. It states, first, that owing to the small capital required to engage in the confectionery jobbing business there has been such an influx of dealers as to reduce prices to an unremunerative level, and, secondly, that unscrupulous members of the trade cut prices practically below cost to build up a trade quickly and secure a large credit, and then by failing in business recoup their losses. The association maintains that no jobber who intends to remain in business could adopt such methods, and therefore they are subjected to dishonest competition.

With a view to putting an end to this practice, injurious to the interests of manufacturer and jobber alike, the New York Confectionery Jobbers' Protective Association has adopted a system of fines terminating in expulsion directed against price cutters.

Section 8 of the association's by-laws reads:

"When a member is found guilty of selling below the price list of the association he shall be fined \$10 and not above \$50 for the first offense, \$50 for the second offense, and may be expelled for any subsequent violation."

To make the punishment of expulsion effective the manufacturers were requested not to sell to jobbers who were not members of the association. It was also understood among the members of the jobbers' association that manufacturers refusing to comply with their demands were to be deprived of the jobbers' patronage.

The manufacturers on their part have taken a position which in many but not all respects is sympathetic with that of the jobbers. At the annual meeting of the manufacturers of the Eastern Confectioners' Association held at New York in April, 1902, the following were among the declarations adopted:

"Having this end in view, the manufacturers recognize that it is essential to the existence and well being of such associations that their membership should include, so far as may be practicable and possible, all jobbing confectionery houses doing business within the limits of the territory covered by the jobbers' associations, and the manufacturers are therefore in duty

bound to lend their assistance in increasing and strengthening the membership of such jobbers' associations, so long as they are conducted on right and equitable principles. On the other hand, this association believes that no jobber should be constrained to become a member of any association in opposition to his own judgment and choice, much less should he be forced into membership by the use of threats or any form of intimidation.

"This association believes that manufacturers should refuse to sell their goods to any jobber of confectionery who bears the established reputation of being what is known as a 'cutter,' or who will deliberately and persistently undersell the schedule of prices adopted for his territory by a jobbers' association.

"This association, however, does not believe that jobbers' associations have any right to expect or demand that manufacturers shall refuse to furnish goods to a responsible and reputable jobber who will maintain association prices, whether said jobber belongs to said association or does not.

"The association further declares that it should be the unquestioned right of every manufacturer to sell to any jobber who maintains association prices without any discrimination on the part of the jobbers' association or any member thereof, against such manufacturer."

The latest expression of the attitude of the manufacturers is found in the following resolution adopted at a special meeting of the Eastern Confectioners' Association held at Gettysburg, July 8-9, 1903:

"The Eastern Confectioners' Association can not and will not blacklist any person or persons or take any action intended to injure any one's business or to drive him out of trade."

As stated by a prominent manufacturer against whom a boycott had been instituted by the jobbers' association, it has been his invariable practice to "cut off" every jobber, if after fair warning he did not cease cutting prices. But while he could do so of his own accord upon information received from the jobbers, without making himself liable to prosecution before the law, he could not discriminate against a non-member of the association at its request without exposing himself and the association to the danger of prosecution for conspiracy.

There is another noteworthy feature in the present disagreement between the manufacturers and the jobbers. The New York jobbers, believing that their field is overrun by unnecessary competitors, are exacting an initiation fee of \$250. This keeps out of the association the candy jobber, who is practically a peddler and confines his sales to the small candy stores. The manufacturers, however, are disposed to welcome additions to the number of distributors so long as they sell at a reasonably profitable price. Hence one objection to the demand of the jobbers that the manufacturers confine sales to members of the jobbers' association.

The difference in attitude of the manufacturers and the jobbers is shown also in another point. The manufacturers contend that when a jobber is detected in cutting prices it should be the business only of the particular manufacturer who supplied the goods to discipline the jobber, and "cut him off" if necessary. The jobbers, on the contrary, insist that the jobber caught cutting prices of even one manufacturer should be "cut off" by all other manufacturers when notified to that effect by the jobbers' association.

THE JEWELRY TRADE.

Owing to the great variety of products no uniformity of trade methods prevails in this industry, conditions differing widely in the various lines of manufacture. Several lines have no regulations as to prices or methods of selling. The following trade organizations are believed to exist:

The watch case manufacturers have an understanding as to the distributors with whom they will deal. Each manufacturer has a list of jobbers whom he recognizes as his distributors, and will sell direct to no other individual or firm in the trade, whether jobber or retailer. The manufacturers deny the fact of this agreement, but the retailers find by a singular coincidence that the lists of distributors of the several manufacturers are identical. Prices to retailers have advanced, in some cases more than 50 per cent, since this method of selling came into vogue. It is employed by all the leading manufacturers, such as the Elgin, the Waltham, the Crescent, the Keystone, the

latter controlling several minor concerns, among them the Philadelphia, the Boss, etc.

The American Association of Wholesale Opticians has among its objects the doing away with excessive competition. Their members, however, aver that there is nothing beyond a gentlemen's agreement, remembering the anti-trust laws.

The cut glass manufacturers are similarly organized. The relations with jobbers are left to the discretion of the individual members, each being free to sell both to jobbers and retailers. The manufacturers fix the prices at which the jobbers are to sell to the retail trade, and keep them to strict account. A prominent manufacturer of cut glass states that they "cut off" one of the leading jobbing houses in the country as a punishment for selling to retailers at lower prices than the manufacturer himself. There is said also to be an informal understanding among the manufacturers as to prices.

The New England Manufacturing Jewelers' and Silversmiths' Association has a "gentlemen's agreement" as to prices.

ANTHRACITE COAL.

The production of anthracite coal is divided among the six "anthracite railroad lines" on the one hand and a number of private operators called "independents" on the other. The private coal operators ship their coal through one or other of the anthracite railroad companies or its subsidiary coal company. The railroad companies themselves have an understanding both as to rates and the apportionment of coal tonnage to each road. The tonnage is fixed in these proportions:

	Percentage of Total:
Lehigh Valley	22.88
Central of New Jersey	17.12
Delaware, Lackawanna and Western	19.52
Erie	5.64
New York, Susquehanna and Western	4.68
Philadelphia and Reading	29.96

The contract for buying the coal of the independent operators is made between each coal operator and the railroad company to which he sells his coal. But all the agreements, being the result of a joint deliberation by the representatives of the different roads and the independent operators, are identical.

The essential points in these agreements, as they exist at present, are that the operator agrees to deliver all of the anthracite coal mined or to be mined by him to the railroad coal company in question, to be marketed by the latter, the operator receiving 65 per cent of the tidewater price. The railway, however, does not undertake to buy all the coal that the operator produces. It only promises "to use its best efforts to find a market for the seller's coal, so as to enable the seller's collieries to be working as many days as practicable with due regard to the general market conditions." It also "agrees that it will not discriminate in favor of its own mines, or any persons, firms, or companies with which it has contracts to buy coal, but that the quantity to be ordered monthly shall be a just proportion of the entire quantity of coal agreed to be purchased by the buyer, measured by the colliery capacity of the respective sellers."

The colliery capacity is "determined as of the first of January, by the parties thereto, and on their failure to agree the President for the time being of the Guaranty Trust Company shall select a suitable expert for this purpose."

This anthracite railway pool has been successfully maintained since 1896, and when at one time it was threatened by the independent operators with a proposed railroad the roads affected took the heroic step of buying out the collieries of the largest independent coal company and thus breaking up the scheme. The deal was carried out on the joint account of the six anthracite companies. They took stock in a concern called the Temple Iron Company, in the proportion of their allotment of tonnage, and the Temple Iron Company was made the owner of the purchased collieries, with the Guaranty Trust Company of New York as trustee. The latter is intrusted with all the stock of the Temple Iron Company, together with the absolute right of voting it, and in turn it issues to the railroad companies their allotted certificates of beneficial interest in the stock.

INSURANCE.

Of the several classes of insurance companies, those in fire insurance have advanced furthest in regulating competition. The National Board of Fire Underwriters is a representative body of the largest companies, subordinate representative bodies being the State and rating associations and local boards of fire underwriters. The local boards, under direction from the head of each company, establish uniform rates for the different localities. They prescribe in the minutest detail the form of contract, the base rates, the additional rates for every specific kind of risk, such as the presence of gasoline, electric connections, etc., and the deductions to be allowed for safety devices diminishing fire risks. The boards, National, State and local, and the inspection bureaus, are conducted at an annual expense of \$1,500,000, which is assessed on the several companies on the basis of their premium receipts.

The "giant" life insurance companies, viz., the Equitable, Mutual, and New York Life, in April, 1903, entered into a tripartite agreement to refrain from the use of "competitive literature" referring in any way directly or indirectly to any other American life company, and issued a list of the standard publications which agents are permitted to use as not coming under the head of that class of printed matter. They agreed to destroy within thirty days all printed matter of the character prescribed, the order to this effect being celebrated by their agents throughout the country by "competitive literature cremations." The life companies have no agreements as to benefits or premiums, and the life underwriters' associations throughout the country represent, not the companies, but individual agents.

The leading "industrial" companies have for some time had an agreement like that just effected between the life companies, by which "no agent is permitted to misrepresent the policy of his own or another company, must not abuse or malign a competitor, must not twist policy holders, while agents cannot be taken from one company to another, and should they leave voluntarily are not employed in the same city by another company until two years have elapsed. No company issues any literature attacking another company."

In liability insurance the companies establish "conference rates," though there are outside companies that refuse to be bound by them. The International Association of Accident Underwriters has not gone so far as to prescribe uniformity in benefits and premiums.

At least one State recognizes that insurance, like railroads, is a public business, and Illinois has enacted a law prohibiting agents from cutting premiums.

NEW YORK BANKS.

The objects of the New York Clearing House Association are the "effecting at one place of the daily exchanges between the several associated banks and the payment at the same place of the balances resulting from such exchanges" (Sec. 2). But in addition to this labor-saving mechanism the Clearing House Association has during the past three years provided a scale of commissions to be charged by the New York banks on out-of-town collections, with heavy penalties for violation. All banks, members or non-members, clearing through the association are required to charge a commission for collections on out-of-town checks at a rate varying from one-tenth of one per cent to one-quarter of one per cent of the amount collected, according to the distance from New York of the banks on which the checks are drawn. "No collecting bank shall, directly or indirectly, allow any abatement, rebate, or return for or on account of such charges or make in any form, whether of interest on balances or otherwise, any compensation therefor." A collecting bank found guilty of violating this rule must pay to the association the sum of \$5,000, and in case of a second violation "any collecting bank may also in the discretion of the association be excluded from using its privileges directly or indirectly, and, if it is a member, expelled from the association." Expulsion from the association, by depriving it of the privileges of the Clearing House, is practically equivalent to driving a

bank out of business. An estimate has been made that the foregoing rule of the Clearing House Association has saved the New York banks \$3,000,000 yearly.

NEW YORK STOCK EXCHANGE.

Although the transactions by and through the Stock Exchange are of vital importance to the business world, yet, unlike financial exchanges in foreign countries, it is subject to no special laws or regulations of the State, and it is not incorporated, but is governed solely through rules laid down by its own membership.

The primary object of this voluntary organization is to protect the common interests of its members by maintaining a code of conduct and a standard of remuneration for the services which they render to their customers.

The number of members, limited at present to eleven hundred, cannot be increased "except by action of the Governing Committee," who prescribe "the number of increase and the terms of admission" subject to the approval of the members. "Members admitted by transfer shall pay to the exchange an initiation fee of \$2,000," in addition to the amount they may have to pay to their predecessors who sell them their seats. Owing to the limited membership, there is a high money value on each seat, a recent sale being reported at more than \$80,000.

Clearly defined rules stipulate the commissions to be charged by members. Every member is obliged to charge a commission "under all circumstances upon all purchases or sales of securities dealt in upon the exchange;" this commission must be "absolutely net and free from all or any rebatement, return, discount or allowance in any shape, or manner whatsoever, or by any method or arrangement, direct or indirect." Brokers are not allowed to divide commissions with brokers on rival exchanges. The minimum fees are fixed by the exchange at not less than one-eighth of one per cent on business for non-members, and not less than one-thirty-second of one per cent on business for members.

To insure due observance of this scale the exchange subjects the business of members to strict surveillance, requiring registry of partnerships, a limit to the number of partnerships, regulation of branch offices, salaries and not commissions for clerks and employees, submission of books and papers to investigating committees, and prohibiting partnership with suspended or expelled members or with members of a competing exchange, prohibiting transactions with non-members on the floor of the exchange, and prohibiting dealings upon any other exchange or in public outside the exchange. A member is also prohibited from establishing telephonic or telegraphic connection with non-members without the approval of the Committee of Arrangements. This provision is directed against furnishing stock quotations to non-members, especially to that class known as "bucket shops."

Penalties for violating these rules are suspension for the first offense, and expulsion for the second, on a majority vote of the Governing Committee.

ASSOCIATED PRESS.

Telegraphic news is essential to the business of a daily newspaper, and the Associated Press is a mutual association of such newspapers for the collection and distribution of news. It is conducted not for profit but for the mutual service of its members, and the expenses are shared according to a scale agreed upon. It is natural enough that, having perfected their organization for exchanging news and having made valuable connections with other agencies for collecting and distributing news, the members should not be inclined to admit competitors to the enjoyment of their facilities. In each locality the members of the Associated Press therefore have the right to admit or reject applications for membership and to set the fee for admission. The veto of one local member is enough to exclude an applicant.

The Associated Press makes a contract with each of its members setting forth the conditions under which news shall be furnished, and it was brought out in the suit for injunction on behalf of the Chicago Inter-Ocean Publishing Company against the Association that the members were forbidden to furnish any news report to any newspaper published in the territory described in the contract or to any other news agency;

and also to receive news from any other person or association "which shall have been declared by the Board of Directors or the stockholders to be antagonistic to the association." When the Inter-Ocean procured and published news received from another association, its fellow members in Chicago made complaint, and, according to the by-laws, gave notice to the Inter-Ocean that it would be suspended from membership. This was not carried out, however, because of the injunction obtained by the Inter-Ocean Company and sustained by the Supreme Court of Illinois on appeal. The court held that the Associated Press discharges a public duty, and that a public interest attaches thereto, and that it could not restrict competition by preventing its members from purchasing news from any other source than from itself. The restrictive clause of the contract was declared null and void.

On account of this hostile decision in Illinois the Associated Press gave up its Illinois charter and re-incorporated in the State of New York. The Illinois decision does not require the Associated Press to admit an applicant to membership, and a case of that kind has never come up. Consequently, although the Associated Press is held to be a business affected with a public interest, yet the members in a locality continue to exclude outsiders and to protect themselves to that extent from excessive competition. For this reason the Associated Press franchise is undoubtedly the most valuable asset of a daily newspaper, since it is almost the sole protection which the business has against destructive competition.

FARMERS.

Efforts to prevent excessive competition among farmers are handicapped not only by the enormous number of the competitors in one country and in every country, all subject to the world's market prices, but by the isolation of the competitors, a large proportion of whom usually need ready cash. Where a crop is localized and the farmers can come together, it is not rare to find them resorting to the methods of other capitalists and the workingmen. The following news item is taken from a recent issue of the "American Agriculturist":

Trying to Form a Hop Pool.

"A letter from Secretary Winstanley of the Oregon Hop Growers' Association to A. Menke, a Sacramento hop grower, says:

"There are so many missing hills in the Oregon hop yards this year that it will be impossible for us to raise more than 50 to 75 per cent of last year's crop. We believe that this condition justifies us in asking you to co-operate with us in demanding better prices for our 1902 crop. Dealers are to-day offering to shade 20 cents, but there are no sellers, and we feel sure that hops will go to 30 cents if we unite in holding."

"There follows a form of agreement which is being signed to pool the remaining portion of the 1902 crop and hold it until the selling price reaches 25 cents or more. The pool is not to be effective until 6,000 bales are secured under the agreement. If any grower signing is compelled to sell by emergency before the end is achieved he agrees to give five days' notice, and the managers of the pool are to have the option of purchase at the ruling prices."

Associations to some extent similar have existed, or been attempted, among fruit growers and dairymen. To control world-wide crops there have been popular movements like the Farmers' Alliance, which inaugurated a "hold-your-cotton" and "hold-your-wheat" agitation. The Cotton Growers' Protective Association, organized in 1899, makes an effort each year towards this end. It is reported that recently the Russian Minister of the Interior received an invitation from 30,000 American farmers to join in a movement to hold the present world's wheat crop for better prices.

Recently fifty representatives of agricultural associations in a dozen or more states met in Chicago and organized a national body for the purpose of fixing prices of all farm products, regulating the marketing of crops and constructing grain elevators and cold storage warehouses for the use of farmers.

One of the organizers said, in the course of an address:

"The farmer holds the destiny of the industrial world

in his hand and he should take advantage of his position. We must form a national organization, fix a minimum price for our product and hold back our crops until we get our price. It is just as easy to get \$1 for corn as it is to get 80 cents."

A despatch from Oklahoma Aug. 18 is along the same lines:

"The Farmers' Co-operative Union of America has organized under the laws of Oklahoma to secure and maintain better prices for farm products and specifically 'to force the price of this year's wheat to \$1 a bushel on the Chicago market,' by storing and holding the supply in elevators owned by the union. The union is declared to be non-political."

Farmers often organize to do their own marketing, and thus protect the members from middle men, as illustrated in the milk trade of New York and vicinity.

The New York Milk Exchange is an association of city milk dealers which meets once a month, or more frequently if necessary, to fix the price to be paid for milk. This price rules throughout the entire territory tributary to the New York milk market. No dealer pays a higher price than that fixed by the exchange, but some dealers managed to pay a lower price to farmers who compete with one another. The farmers have long been dissatisfied with this arrangement, and the Five States Milk Producers' Exchange, at a meeting held at Binghamton, July 8, entered into an agreement to sell to the Pure Milk Company, a new corporation of dealers, "all of the milk produced from the cows owned or controlled by them severally, except milk used in their homes, for a term of five years, beginning October 1, 1903," at certain prices stipulated in the contract for each month of the year.

TRUSTS.

The foregoing examples of the many associations to regulate competition by agreement have the one great weakness that the parties to the arrangement cannot always be held to it strictly. Each competitor retains his business identity and the legal right to quit. This is because the courts are usually inimical to "combinations" and refuse to enforce their contracts at law, to say nothing of actually enjoining and dissolving them. In France and Germany, where the courts sustain such agreements, they have been found satisfactory in controlling competition, and in those countries the so-called "syndicates" or associations like some of those just described, are the highest form of the movement away from competition and are found in nearly all industries under the sanction of law. But in the United States the hostility of legislatures and courts has had exactly the opposite effect from that intended. Instead of compelling the parties to revert to the former state of suicidal competition, it has forced them to take on the highest and most compact forms of anti-competitive organization to be found in any country, namely, the trust and the corporation. Under these the individual competitors actually give up their identity and the management of their business in order to make sure of escaping the ravages of competition. In the case of the trust in its original legal form, the several competitors handed over the shares of stock representing their properties to a board of trustees and received in return certificates of an interest in the profits. The trustees then elected the boards of directors of the formerly competitive companies. When the courts followed up their attack by dissolving the trusts, they simply changed their legal form from a "trust" to a "corporation" and continued the same as before so far as the matter of competition is concerned. This is the reason why the name "trust" sticks to them, and in this article we use the term in its popular sense. The identity of competitors, which is lost in the trust, is even more deeply buried in the corporation. The change is legal not economic. A corporation charter is taken out. Corporation shares are exchanged for the trust certificates. The trustees become directors. The officials of the trust are the officials of the corporation.

Thus the trust is the highest form and the culmination of the movement on the side of capital to do away with destructive competition. But it goes further than a mere corrective of evils, for it usually strives to eliminate competition itself, by consolidating all, or nearly

all competitors under the joint ownership of a single stock company. It has not always been successful in destroying competition but there is no doubt that this has generally been the object. Says the National Biscuit Company to its stockholders:

"In the past the managers of large industrial corporations have thought it necessary to success to control or eliminate competition. So, when this company started, it was believed that we must control competition, and that to do this we must either fight competition or buy it. The first meant a ruinous war of prices; the second, constantly increasing competition. Experience soon proved to us that, instead of bringing success, either of these courses, if persevered in, must bring disaster. . . . It became the settled policy of this company to buy out no competitor."

But the Biscuit Company still continues to do all it can to escape from the pressure of destructive competition—it turns its energies, like hundreds of other companies in all lines of business, to specialties, trade marks and patents.

"On the package business we have practically no competition—not because the field is not open to all—not because we have had any special privileges, except such as were granted by the United States. These privileges lie in the patents we control and in our trade marks."

In a similar vein the president of the so-called whisky trust speaks of the monopolistic intentions of those who promoted the trusts. He says, in an official circular:

"Most of the recent consolidations of industrial enterprises have been based upon the theory of a practical monopoly for the purpose of regulating and maintaining prices. . . . The constituent companies of the Distillers' Securities Corporation have gone all through this phase of the industrial problem, and since 1899 have conducted their business in open competition and free from all artificial combinations to control prices or markets."

It is now four years since trusts became epidemic. During these years, as estimated by the "Journal of Commerce," the capitalization of industrial consolidations amounted to \$7,536,000,000, the largest flotations being in 1899 and 1901. The same journal mentions nearly 250 separate combinations in many lines of business, and it is no unusual thing to learn of a combination controlling 70, 80 or 90 per cent of the output in its particular line. The National Biscuit Company has 128 different plants in various cities. The Consolidated Tobacco Company makes 95 per cent of the cigarettes consumed in America, controls a majority of the plug and snuff concerns, has entered the cigar business, and has extended its business to England. To enumerate all of the trusts and to describe the extent to which they have gone in buying up competitors would be only to repeat familiar history. All sorts of competitive circumstances have played a part. In some cases, where the larger companies unite and only a few small and scattered companies are out, competition is controlled, and the little companies follow the prices set by the combine. In other cases, the smaller competitors combine, seeking to protect themselves from a large one, which thenceforth is perhaps induced to follow a less destructive policy towards the smaller ones. If not, the smaller ones must go a step further and buy off the big one.

The trusts furnish an impressive lesson to all organizations, both of capital and labor, of the limits beyond which organization cannot go in passing over from protection against excessive competition to attempted monopoly. Many of them have collapsed and the securities of nearly all have depreciated. A writer, recently speaking of the whole situation, states that "the actual market value of this prodigious product of the printing press to date is probably about 25 cents on the dollar."

It has also been found that new competitors could not be kept out, and the "Journal of Commerce" shows that, mainly in the past two years, new corporations, rivals to the consolidations, have come into the field with a capitalization of nearly \$500,000,000.

This failure of so many trusts arouses the painful suspicion that the recognized arguments as to the "wastes of competition," "cost of advertising," "traveling salesmen," "savings in freight charges," "economy of administration," "control of the market,"

arguments sound enough in connection with conservative combinations, were seized upon and taken advantage of by mere promoters to unload over-capitalized projects.

It does not follow that because many of the trusts have overdone the matter and invited competition they will be followed permanently by a condition of destructive competition. In the very nature of the

case such competition cannot continue. In fact, not all the trusts have failed. A goodly number have adopted a careful and far-sighted policy and have established their industries on an apparently stable basis.

SUMMARY

The foregoing recital shows that the efforts to escape destructive competition are almost universal. There is scarcely an industry that is free from combinations of capital or combination of labor in some form. The differences are found only in the extent to which the combination is successfully carried. There is an infinite variety in the methods of the various combinations, yet there is a general similarity in their efforts to regulate competition and to bring pressure to bear on persistent competitors, price-cutters, and non-unionists. What is true of the boycott, as stated by Carroll D. Wright, in his address before the National Association of Manufacturers, is in general true of other methods of the two classes of combines. Mr. Wright said:

"Everybody boycotts somebody, and to a certain degree it is a legitimate weapon for the defense or protection of proper methods. Carried to the extreme it is a crime against the individual and prevents that development of private character which is essential to public virtue. It never does, therefore, for either the employer or the employe to accuse the other of resorting to methods common to both."

It may well be asked, in view of these universal efforts to regulate or eliminate competition, What is to be the outcome? and, What should be the policy of the general public toward combinations? We may ask, Shall all combinations be suppressed and all industries be compelled to submit to the unregulated competition of anarchism? Or, shall these combinations continue to grow and competition be entirely eliminated in the ideal state of socialism. If neither of these extremes should be followed, what shall be the middle ground where competition may continue without being destructive and where the public shall not be exploited by monopoly of capital or monopoly of labor?

This number of the "Review" will be sent to employers, workingmen, lawyers, economists, and in the next number will be published a symposium of the views of all classes of people upon the phase of the industrial situation above portrayed. This symposium ought to throw light on such practical questions as follows:

Shall these combinations be left to work out their

purposes, or shall the courts and the legislatures be called upon to deal with them? Shall combinations of capital be treated exactly the same as combinations of labor, or shall the one be suppressed and the other encouraged? Shall legislation regulate the terms of membership and compel the employers' association and the trades union to admit members on the qualifications and fees determined by law? If not by regulating membership, how can the rights of independent manufacturers, and dealers and workingmen be protected? How far shall publicity be carried, and how much can be accomplished by publicity?

These are a few of the many questions suggested by the array of evidence which we have collected. The industrial problem is generally admitted to be the urgent problem of the day. It cannot be met by crimination or recrimination, for all classes are more or less involved in similar practices. It can be met only by candid and serious discussion based on knowledge of the facts, and to call forth such discussion is the object to be gained in the foregoing review of combinations of capital and labor.

TEN CENTS

THREATENED PARALYSIS OF THREE GREAT INDUSTRIES AVERTED.

TRADE AGREEMENTS, THROUGH FRANK CONFERENCES, PRODUCE PEACE IN THE BITUMINOUS COAL, THE TIN PLATE AND SHEET IRON AND THE LONGSHOREMEN'S INDUSTRIES.

FRANCIS L. ROBBINS,
President Pittsburg Coal Company.

INTERSTATE BITUMINOUS CONFERENCE.

A Trade Agreement That Prevented a Strike That Would Have Paralyzed Industries.

The last month has witnessed the most important agreement between labor and capital that has been reached in this country for many a year. This is the adjustment of the wage-scale for bituminous mining in the four States, Pennsylvania, Ohio, Indiana and Illinois, entering into the interstate joint agreement between miners and operators. The events culminating in this adjustment centered in the conference at Indianapolis between the representatives of the operators and the delegates of the United Mine Workers of America. This conference failed to reach a final agreement; for the miners' delegates, being restricted by instructions from local unions were not able, even had they wished, to follow the counsel of President John Mitchell of the United Mine Workers and of the officers of State organizations, to accept the compromise proposition advanced by President Francis M. Robbins of the Pittsburg Coal Company on behalf of the operators.

This proposition from the operators was rejected by the Indianapolis conference. But it was unanimously rejected, only after an understanding had been reached whereby the compromise offered should be referred to a vote of the miners' organizations in the four States. This was a practical method of overcoming the difficulty offered by the instructed delegates to the Indianapolis conference, who did not consider themselves at liberty to vote in that body to accept directly the offer of the operators. As was anticipated, in view of the openly

expressed approval of President Mitchell and other leading representatives of the miners' organizations, this resort to referendum resulted in the acceptance of the new scale by the miners themselves, on March 15, of the compromise proposition.

A RED LETTER DAY.

Thus does that date, March 15, 1904, deserve recognition as a red-letter day in the calendar of the current history of the relations between labor and capital in the United States. Its decision meant the prevention of a strike whose possible consequences no man could foretell, and which have now happily been dismissed to the realm of hypothesis. It is plain enough, however, that the business interests of the country have escaped a disturbance potentially even more gravely disastrous than that which was actually caused by the anthracite coal strike of 1902. A bituminous strike in the four States might literally have stopped the commerce and paralyzed the industries of the country. More than this, and of a consequence more permanent, is the prevention of a disruption of the relations between organized labor and the employing coal operators in the four States concerned.

DANIEL J. KEEFE,
Longshoremen, Marine and Transport Workers' Asso.

The continuance of those relations is a conclusion of the greatest importance, not alone to the coal industry, but to producers and consumers affected by conditions in many other industries, especially in transportation and manufacture.

The most general and far-reaching significance is attached to the fact that organized labor has proved, in this instance, its willingness to adhere to a joint agreement as to wages, when that agreement involves a reduction in wages, based upon lower prices for the product

JOHN MITCHELL,
President United Mine Workers of America.

and other adverse conditions of trade. It has been alleged that the joint agreement, when put to the test, would prove to be an arrangement that would work only in one way—in the direction of a share always for the employe in larger profits of an industry, but, never in the acceptance by the employe of his share of the privation caused by smaller profits. The interstate bituminous agreement involved precisely this proposition of the acceptance by the miners of a reduction in the scale of wages, in response to a reduction in the profits of the capital invested in the mining and marketing of coal. The action of the miners proves that organized labor can have the fairness to adhere to a joint agreement, when that agreement causes lower wages as well as when it causes higher. Their action furnishes a specific answer to the assertion of some employers that joint trade agreements are untrustworthy and ineffective.

A NOTEWORTHY BODY.

All these reasons lend vivid interest to the narrative of the proceedings of the Indianapolis conference and to the terms finally submitted to the referendum. The conference itself was an unusual body. Upon the side of the operators were men . . . while standing firmly for what they maintained were the rights and the necessities of capital, asserted freely their hope that the interstate agreement might not be terminated, and avowed candidly their sympathy with organized labor. Upon the side of the miners were delegates whose appearance and manner bespoke the constant uplift of education, and whose words were sustained arguments, of course in support of their contention, but in large degree animated by a response to the friendly expressions of employers, and

inspired by an apparent desire for co-operation. There were several critical passages in the debates. There were moments of dramatic earnestness, when none might tell how a passionate utterance, a misplaced word or a verbal collision might have widened the breach that it was the effort of the conservative leaders on both sides to bridge.

These debates reflected credit upon both the ingenuity and the prevailing sense of fairness of many of the speakers. The conference opened with the presentation by President Mitchell of the three demands of the miners. For these President Robbins offered as a substitute the first proposition of the operators. Upon that substitute the debate turned, with Messrs. Mitchell and Robbins as the leading champions of the two sides. But there were other doughty figures in the lists as well.

The three demands of the miners, as presented by Mr. Mitchell, were for payment upon a single, run-of-mine standard; for 7 cents a ton less for machine-mining; and for a uniform rate of wages for outside labor. The substitute offered by Mr. Robbins declared that "the conditions of the times and the reductions in the price of coal and the necessity of meeting competitive conditions, in districts where this interstate movement does not apply, demand and require a reduction of 15 per cent. from the present scale of wages."

PRESIDENT MITCHELL'S ARGUMENT.

Mr. Mitchell first stated his general argument. He uttered the broad proposition that the operators do not profit by paying low wages, and he enforced their position with this language:

"I am free to confess that it is to me a strange philosophy that a reduction of wages will relieve an industrial depression. I cannot understand how less wages will relieve over-production. To my mind the only way to relieve over-production is by making it possible for people to consume; and the workingman cannot purchase unless he has wages. A reduction in the price of mining means a reduction all around. If you reduce one industry it goes on and on, and finally the wages of all workers are reduced, for the purchasing power is cut off; and then you come back and start over and over again; it is an endless repetition. It means that when wages go down the consuming power of the purchasers is curtailed, and all the citizens of our country are compelled to suffer, whether they be workers or capitalists.

"I am, therefore, of the opinion that a reduction in wages will benefit no one; that it will not benefit the employer, who either secures it by agreement or is able to enforce it in the field of industrial conflict. Speaking specifically of our industry, my experience and my observation have been that whenever there was a reduction in the price of mining, that reduction has not benefited the operators. Instead of being benefited they were compelled to give, not only all of that reduction, but more, to the railroad companies who consumed a large portion of their product."

After discussing details of the industrial situation, Mr. Mitchell pointed out that lower wages and lower prices of coal would not bring about an increase in its consumption. Not one ton more of coal would be mined if coal were to sell for 10 cents a ton less. He then made this plea for harmony upon the then existing basis:

"The cost of living during the past six or seven years has increased in proportion to the increase in our wages, and, inasmuch as it is not within your power, even if you had the inclination, to offer us a reduction in the cost of our living, we cannot see our way clear to accept the proposition which you make. We are not living too well now. We are better than we have ever been before, but we are not going to return to the conditions that prevailed some years ago. The time will never come again, without consent at least, when the coal miners of this country will have to ask for charity when they are able to work, when they are willing to work, and when they are at work. We want these relations continued; we want you to be prosperous; we want to enjoy a reasonable degree of prosperity ourselves. We are free to say, we are glad to admit, that the conditions of our lives and of our labor were never better; but we also propose to say, and to insist, that they are not too good yet. We ask you, gentlemen, not to insist upon a reduction in wages where it can do you no good, and can do us in-

calculable injury. We ask you not to insist upon a part of our earnings in order to turn it over to the railroad companies. Let us go on as we are, making such modifications in our internal arrangements as seem necessary. Let us try and restore the good times, if we can."

Mr. Mitchell denied that the country had entered a period of industrial depression, that the demand for coal had in consequence decreased, and that the price of coal would necessarily fall. Mr. Mitchell supported these statements by a number of newspaper clippings, showing that mills that had been closed had resumed operation, in response to demand for their products that would continue during at least a year. He quoted from the last report of the Pittsburg Coal Company, and declared:

"I submit that, as a matter of fairness, it is not right for the operators to come into this convention and ask for a reduction in wages. If one company can increase

T. L. LEWIS.
Vice-President United Mine Workers.

its business and increase its receipts eighty-six per cent. in one year, I say they can well afford to stand a slight loss, a slight depression, without asking the miners to share it all for them. If I believed that the conditions of the coal trade were such as to warrant a reduction in wages, if I believed that industrial conditions generally warranted a decrease in wages, I would stand up here and advocate it. And I will say now that I wouldn't care if I were the only miner present that spoke for a reduction, I would do it if I believed it was warranted, and if I believed the future of this joint movement depended upon it. But I do not believe it."

Mr. Mitchell concluded his address with this plea for peace:

"I do earnestly hope that the operators present will see their way clear to withdraw their demand for a reduction in wages, and let this movement go on. They have enjoyed their full measure of prosperity during those last five or six years. We, too, have done very well. Our conditions of life and our conditions of labor are better than they ever were before; but, let me say to you, that in return for these better conditions of life and labor we have given you better service every year. The reports of our product show that for every day our people go down in the mines they give you a greater return. It shows you that we perform our labor better than we did during the old times when we were at war continuously. If it were possible for me to say anything that would perpetuate this movement, more than I have said, I should certainly not take my seat now. I hope that we will go on, and that we will continue to be, as we have been in the past six years, the leaders in the cause of industrial peace."

PRESIDENT ROBBINS' POSITION.

To this vigorous and eloquent appeal Mr. Robbins made cogent reply on behalf of the operators. He went at once to the basis of Mr. Mitchell's argument, the fact that iron and steel furnaces in the vicinity of Pittsburg had started up. Mr. Robbins admitted the fact, but he asked: "How have they started up? By a reduction for every man that works for them. Not a man but has

stood a reduction in order to start them up. We have reduced our coal to start them up, also. That is why they are started. And it is why you will start, and why you will get more work if you will make a corresponding reduction in your wages."

Mr. Robbins then analyzed the report of the Pittsburg Coal Company, which Mr. Mitchell had cited as an evidence of the returns upon capital invested in the mining and selling of bituminous coal. Mr. Robbins pointed out that this statement covered the calendar year, from January 1, 1903, to January 1, 1904. It thus included three months, January, February and March, of the last scale year, when prices were abnormally high because of the anthracite strike and the scarcity of bituminous coal. In order to make its earning, the company had found it necessary to expend, in addition to the \$32,000,000 original cash, \$40,000,000 more. The earning had been six and three-quarter millions of dollars, upon an investment of \$70,000,000, or less than 10 per cent. "That is a great thing to talk about, isn't it?" asked Mr. Robbins. "This company has gone into this investment of \$70,000,000 in order to give you gentlemen employment, and it makes 10 per cent. on its investment."

In reply to a question by Mr. Mitchell, as to whether in addition to the \$6,000,000 and more of profits the company had not been able to put \$14,000,000 of its earnings into the purchase of property, Mr. Robbins admitted that this was approximately true, but that the investment covered a period of four years, not one year. Moreover, it had been made possible only by paying 7 per cent., reserving the rest of its profits for investment. An issue of \$25,000,000 of bonds was about to be made for further investment. Then Mr. Robbins made this striking statement of the meaning to labor of this financing:

"Did you ever realize what an investment of a large operating company means? Do you realize that, to start with, it takes the coal in the ground, that is not worth five cents a ton, and everything from that on until it reaches the consumer is labor—labor for you, labor for the day men, labor for the railroad men, labor for the men where it goes into the vessel from the dock, labor for the vessel men that transport it over the lakes, labor for the men that take it from the vessel and put it on the dock, labor for the men that put it on the railroad, and for the railroad men that transport it, and for the laboring man that takes it out of the cars and delivers it to the consumer? Did you ever realize that it is all labor, and that the people who have received this less than 10 per cent. are furnishing labor for the people of the country?"

PROFITS AND INVESTMENT.

Mr. Robbins asked the miners' delegates to divert their minds from the idea of the large earnings of the Pittsburg Coal Company. He reminded them that they should consider the aggregate of the capital invested. They would not think an earning of \$20,000 or of \$10,000 in a year so very much. Yet that would be only 10 per cent. on an investment of but \$200,000, or of \$100,000. He attributed to the fear by capital of trade-unionism the fact that the stock of the Pittsburg Company, which had sold at par, was quoted at 49 cents on the dollar, despite its earnings last year of 10 per cent.

From the report that Mr. Mitchell had quoted Mr. Robbins made this further quotation, as showing the disposition of the company toward its employees:

"In the last annual report attention was called to the operations of the Pittsburg Coal Company's Employees' Association, under which employees are enabled to purchase preferred stock of the company, to secure for themselves and their families benefits in cases of accident or death, and are assured pensions under prescribed conditions. The number of employees who are taking advantage of this opportunity to purchase stock has grown from 1,040 to 1,571 during the year just closed, and the number of shares of stock thus being acquired has increased from 7,723 to 11,315. There has been distributed in accident and death benefits during the year upward of \$60,000, and the pension fund has grown to \$23,601.07. Your officers' expectations of great mutual benefits through the working of the employees' association are being fully realized."

Mr. Mitchell announced that he gladly made acknowledgement of what the company was doing for its em-

ployes, but that he did not consider that pertinent to the questions under debate. Thereupon, Mr. Robbins turned his attention to the conditions in competitive fields. There, he asserted, reductions had been made which the miners in the joint agreement States had been unwilling to meet. Operators in other fields had the advantages of more hours of labor, lower wages, lower deadwork. These conditions had to be met. Mr. Robbins dramatically exclaimed:

"I shall never sign a scale except upon these conditions. It has come to the parting of the ways, so far as I am concerned, and so far as my companies are concerned. It has come to the point where, in justice to the people who have put their money in the company, whose report you have heard, that we shall stand for fairness and justice. It has come to the point that, when conditions of the country require a reduction, you should be men enough to meet the situation."

Mr. Robbins closed with the following expressions as to the pending crisis:

"I tell you, gentlemen, it is a most critical time for organized labor in this country. You will never in this world stand upon any such unfair proposition. If it means only one way, if it means that it is all an advance, and that you are never going to be like your fellow-workmen in other fields, that you will never accept a reduction, and accept it in order to supply them with coal at reduced prices as well as to supply railroads and steam producers of all kinds and descriptions, we should know it now. If you are to be a favored class that stands no reduction, but always onward for an advance, I am not with you."

"I have talked to you now as frankly and fairly as one man can talk to another. I have talked to you as honestly as any man ever spoke to another, with just as great a feeling in this heart of mine for you as you have for your fellow-men. I have been all through it. I started as a boy, and have done everything but dig coal, and I have done that on occasions. I have been through the whole thing, and I know it all, and it is perhaps because of that I have this feeling for you. It is, perhaps, because of that I interceded for you with the anthracite presidents before the strike occurred, and tried to get them to recognize you, and it is because of that I labored along with others in the Civic Federation. It is because of a feeling I have had that one man feels for another, but the base of it always was that when the time came when it would be necessary for you to do what was fair to meet fair conditions you would do it. If that feeling is not in your hearts, gentlemen, I am not with you."

Mr. Robbins announced his willingness for "an arbitration of what reduction you shall stand, based upon the reduced price of coal." Mr. Mitchell proposed instead to arbitrate what should be paid for machine mining as against pick mining. That proposition Mr. Robbins pronounced an absurdity, pointing out that only because of the introduction of machinery had the operators been able to advance wages in the past.

Mr. Tennant of Indiana reminded the conference that it was only a part of the American people. The people expected to pay less for coal. That was a concrete fact that could not be ignored.

Mr. Bogle, president of the Indiana operators, dwelt upon the fact that his was a State of individual operators. He protested, therefore, against basing the debate upon the operations of a large company.

VICE-PRESIDENT LEWIS SPEAKS.

Mr. T. L. Lewis, vice-president of the United Mine Workers, discussed the alleged reduction of wages in other industries and the shrinkage or values in this country. He said in part:

"We will not admit the statement that there is any shrinkage in values; and when we deny that statement some one will point out that all that is necessary to do is to pick up our daily papers and show where the stock of the United States Steel Trust has gone down from 90 to 50; that the common stock has gone down as low as 10 cents on the dollar; that the Pennsylvania Railroad Company has depreciated in value, and, in fact, that every other industrial and railroad stock in the country has been affected. Why? Is there any business man in this convention who will attempt to prove that the great

railroad system owned by the Pennsylvania Railroad Company is of any less value now than it was one or two years ago? Is there any man in this convention who will attempt to prove that the mills, the railroads, the shipping interests, the docks, and, in fact, all the property of the United States Steel Company, so far as the real value of it is concerned, is any less in value now than it was one or two years ago? If there is, I want to hear that argument, and I want to have the argument borne out by facts. We know, and every one who has made a study of this question understands, that when the Steel Trust was organized the stock placed upon the market was fictitious in value, and not real. The men who promoted that great combination, and the men who promoted many other combinations, inflated the value for a purpose, and it is unnecessary for me to say why.

"It may be true that you are not receiving as much for your coal at this time as you were this time a year ago, but, according to your arguments at that time, you

T. J. SHAFFER,

President Amalg. Asso. of Iron, Steel and Tin Workers.

were receiving much higher rates per ton in the market than you expected to receive the year following the signing of that joint agreement.

"If this is true, why then should we be confronted with a proposition at this time for a reduction of our wages? One of the gentlemen on the other side stated this morning that the enemies of this movement said it was all right as long as wages were going up; that this movement was all right as long as we were making concessions and advancing the mining rate; but when the time came when it was necessary to stop, we might come to the parting of the ways.

"This year we have not asked for advance in the pick mining rate, but we have asked for a readjustment of the differential between pick and machine mining. Why do we ask that? Mr. Bogle said this morning that we have come into this convention time after time and demanded that we should have a fair share of the wealth we produced. That is the keynote of the whole thing. We are entitled to it. We do not deny to the operators that they shall have a legitimate profit on their investments in mining machinery; we do not deny to the operators that they shall get profits to offset certain risks they take in the industry; but we certainly do deny that the placing of the machines in the mines shall reap all the difference between pick mining at 90 cents and machine mining at 60 cents per ton in the Hocking district, and the same relative difference in other places."

In response to Mr. Lewis, Mr. Robbins went into a detailed explanation of contract prices, which may be summarized in his words:

"As far as the Pittsburgh district is concerned, I want to reiterate that there is no trade, domestic, steam, railroad or any other trade in that district that has not met a very serious and a very large reduction, based upon meeting competition from outside fields that you are not in control of."

Discussion of prices was continued by Mr. Guthrie, Mr. Mullins and Mr. Chapman, Ohio operators, and by

Mr. Patrick Dolan, president of the Western Pennsylvania miners.

The conference rejected the substitute offered by Mr. Robbins. The issues were then referred to the scale committee, which reported back to the conference, with the result already recorded.

This action was preceded by brief arguments. In support of his proposition, rejected by the conference but afterward approved by the referendum, Mr. Robbins said:

"This reduction is wholly inadequate to meet present conditions. We offer it only because of a desire to, if possible, reach a settlement and not to terminate this movement, and because of the two-year contract where we are willing to contribute our portion, yea, more than our portion, to the benefit that will arise from it to the labor of this country and the business interests of this country.

"We want to assure capital, which is timid in this country at this time, that this movement, which stands for so much, upon which is focused the eyes of the thinking people of this country, is a successful one. In arriving at this proposition we have been governed very largely by this feeling."

Mr. Mitchell addressed a circular letter to the miners, summarizing his reasons for advising their acceptance of the compromise proposition. His counsel and the influence of other influential leaders of organized labor had much weight in bringing about the approving vote.

SHEET AND TIN PLATE.

An Agreement Involving a Wage Reduction of 10 Per Cent for the Scale Year.

The April conference in Pittsburg between the sheet and tin plate manufacturers and a committee representing the Amalgamated Association resulted in an agreement for lower wages for the scale year. The workers felt themselves obliged to yield to the demand of the manufacturers for a reduction in wages. The manufacturers acquiesced in a reduction of 18 per cent. instead of their original demand of 20.

President Shaffer of the Amalgamated Association was chairman of the delegates' meeting, in which forty-three lodges were represented. Mr. James Campbell, of Youngstown, Ohio, was chairman of the manufacturers. The discussion was opened by President Shaffer, who was followed by W. T. Graham, president of the American Sheet and Tinplate Company. Thus the interests of the United States Steel Corporation and of the Amalgamated Association were brought, through their representatives, face to face. In order to get at the facts a committee was appointed, composed of an equal number of manufacturers and delegates, to go over the figures and ascertain what the result would be after the proposed reduction of 20 per cent. In this joint committee the following represented the delegates: Sheet Mill—R. R. Williams, Charles Hughes, Charles H. Brown and Moses Chivers. Tin Mill—William L. Hull, William G. Young, John Eynon and D. R. Rees.

Chairman Campbell appointed the following to represent the manufacturers: Sheet Mill—Messrs. Davis, Robinson, Beatty and Warner. Tin Mill—Messrs. Goldsmith, Phillips, Davey and Bennett.

After this committee had reported there was a general discussion, followed by an executive session. There it was decided to appoint a special committee of nine sheet and nine tin delegates, to confer further with the manufacturers. The sheet delegates chose as representatives: Charles Hughes, William Hilton, W. J. Pearce, Roland Layer, Otto Sellers, R. T. Lynch, Charles H. Brown, Thomas O'Hare and Andrew R. Black. The tin delegates chose Walter Larkin, Adolphus Edwards, John Kiddell, David J. Jenkins, William G. Young, John Eynon, David J. Davis, Harry Irvine and Frank Piggott. Walter Larkin was made chairman.

This committee labored assiduously with the manufacturers to secure better terms. Their conference lasted four days, so that, with the preceding conferences, eight days were consumed in reaching the settlement.

The *Amalgamated Journal*, the official organ of the

Amalgamated Association of Iron, Steel and Tinworkers, thinks that the reduction will be accepted with poor grace by a majority of the rank and file, but it asks for fair judgment for their representatives upon the conference committee, who bear the onus of accepting the reduction. The *Journal* declares that "it was only a realization that conditions were entirely against the workers that spurred them to shoulder the weight of such a burden." The *Journal* has this advice to offer to the workers' organization:

"Everything was done with an eye single to the future welfare of the sheet and tin trades and the general interests of the Amalgamated Association. The future alone will reveal the wisdom of the delegates in accepting the onerous conditions which they had to face, and much depends upon the way in which the membership will act in face of such adverse conditions. If the rank and file will heed the scores of admonitions that appeal to them from the past they will awake and realize that the time has come when they must organize more thoroughly. To sulk because reverses have come through circumstances over which the Association had no control, and which the delegates will fully explain to their sub-lodges, would be the height of foolishness. Let us profit by the mistakes of the past, improve the machinery of our organization, so that it will be able to cope with the modern conditions, which are entirely different from those that its founders had to deal with. Let us go forward, in spite of the obstacles that loom up in the way."

The *Labor World*, of Pittsburg, says of the agreement:

"Before any harsh criticism of the agreement has been entered into the condition that forced it must be fairly considered. If this is done it will readily be discovered that the agreement is absolutely one of expediency. It was effected solely to escape what were believed to be worse results. This, and this alone, was the reason for the delegates of the workmen conceding the reduction. After, to their own satisfaction, having fully grasped the situation in all of its ramifications, they were fully convinced that two evils confronted them. One of them was to refuse to grant any reduction, which meant a strike or lockout, and the other was to agree to work for reduced wages. These delegates arrived at the conclusion that the latter was the lesser of the two evils, and acted accordingly."

THE LONGSHOREMEN'S AGREEMENT.

Wages, Hours and Working Conditions at Lake Erie Ports for the Coming Year.

The agreement between the International Longshoremen, Marine and Transport Workers' Association and the dock managers at Lake Erie ports for the ensuing year was reached in April. This agreement is one of the most noteworthy of its class, as it has been found to operate effectively as a preventive of strikes or lockouts. The Longshoremen's Association, of which Mr. Daniel J. Keefe is president, covers more territory than any other labor organization in the world. Its agreement is uniform, but covers thirty-nine divisions of trade. It is reached at an annual conference between representatives of the union and of the organized employers. The union delegates to this conference are vested with full power, without instructions, so that the agreement is not subject to ratification by a referendum. In the formation of the agreement, its subjects are referred to committees, and union men themselves present to these committees the employer's side of the case. By this method of procedure, the union conferees, when they meet the representatives of the employers, are able to discuss every article of the proposed contract, both from their own and the employers' point of view.

As a result, the annual conference is conducted with both dignity and harmony. Every demand made by the workers has been thoroughly threshed out in advance. The labor delegates are not likely to present a demand to the employers whose justice they have not been able to prove before a committee of their own fellow craftsmen. The conference this year was of the usual character. The Longshoremen's Union was organized by Mr. Keefe in 1882. The wage scale has been advanced an average of 60 per cent. since 1895. When the agreement is reached, its acceptance is made by unanimous vote, based upon the previous ascertainment of the will of a majority. The rule of the majority is thus made binding upon all. Any matter not covered by

the agreement is subject to arbitration, as is any dispute as to the construction of the contract. The contract is printed, and a copy is furnished to every worker, so that he may at any moment refer to its exact language.

The joint conference adopted the following resolutions:

"That any and all contracts made between the local manager and the men directly involved shall be held in-

H. COULBY,
President of Dock Managers.

violate for all work not specifically covered in exhibits attached to and made part of this contract, and that any one trying to break such agreement, or in any way interfering with its performance, shall be barred as a representative, and shall not be permitted to work under this contract, and in all cases work shall not be interrupted on any account.

"That all grievances or suggested changes of form of contract shall be submitted in writing to the chairman of the dock managers and president of the I. L. M. and T. A. prior to the convening of the next convention, and that no statement of grievances shall be entertained unless so submitted.

"That in future conferences any new addition to be added to the present agreement must receive the two-thirds vote of the delegates of the conference."

The agreement is for the navigation season of 1904, and also covers winter work from December 1, 1904, un-

H. N. TAYLOR,
Illinois Coal Operators.

til May 1, 1905. Schedules of wages are attached as part of the agreement, marked "A," "B," "C" and "D." All employees are to be members of the local organizations, whenever such men can be had who can perform this work, as called for in the contract. When such

men cannot be had, the dock managers have the right to secure any other men who can perform the work in a satisfactory manner, until members of the union can be secured. No man shall be discharged without just cause, and any man discharged shall be notified of the cause. The men may inspect bills of lading, to verify the tonnage. When unusual work arises in isolated cases not covered by this agreement, the men shall perform such labor. The compensation shall be adjusted between the representatives of the local organizations and the dock managers or owners. Any disagreement is to be arbitrated.

If any controversies and grievances cannot be settled by the local representatives of the union and employers, they shall be arbitrated by choosing a third disinterested man, the decision of any two to be final. "If the representative of the local organization and the representative of the employers cannot agree upon a third man, then each side shall choose a disinterested man—the two disinterested men thus chosen to choose a third disinterested man, and said three men shall constitute a board of arbitration, and the decision of a majority of said three shall be final, and all parties shall abide thereby." This board is to meet within ten days after the difference arises.

No beer, whiskey or other intoxicating liquors shall be brought upon the property of the dock managers. No man in an intoxicated condition or under the influence of liquor shall be permitted upon the premises of the dock managers. Employees are not permitted to leave the dock during working hours without permission. Pure and fresh drinking water, with oatmeal and ice, shall be provided on the dock.

CIVIC FEDERATION OF BOSTON.

The initial organization of the Civic Federation of Boston and vicinity was effected at a meeting at the Exchange Club, when addresses were made by Major Henry L. Higginson, who presided; Rt. Rev. William Lawrence, P. Daniel Driscoll, Lucius Tuttle, Henry Abrahams, Charles H. Taylor, Jr., and Ralph M. Easley. There was a large attendance of men prominent in business, labor, public life and the professions. The following committee of eighteen upon permanent organization and membership was appointed:

For the Employers: Arthur T. Lyman, Amory A. Lawrence, Lucius Tuttle, Frederick P. Fish and W. C. Winslow.

For the Unions: Dennis D. Driscoll, President of the Boston Central Labor Union; Jeremiah J. Donovan, President of the Boston Building Trades Council; R. H. Bradford, President of the Structural Building Trades' Alliance; Henry Abrahams, Secretary of the Central Labor and Cigarmakers' Unions, and Frank K. Foster, of the Typographical Union.

For the Public: Right Rev. William Lawrence, Charles Francis Adams, Charles S. Hamlin, John Mason Little and Louis D. Brandeis.

Major Henry L. Higginson, Charles H. Taylor, Jr., and James R. Crozier, President of the State Branch American Federation of Labor, were added as ex-officio members representing the public, employers and unions, respectively.

Unionism should mean competency and honesty of purpose. Earn your salary and earn something for the man who is paying it. There is nothing that adds as much to the cause of unionism as an honest, fair workman, and no one thing detracts so much as a loafer. Therefore make an effort to be a credit to your union and yourself as well.—Baltimore Labor Herald.

Those flamboyant and cock-sure men who were so certain that the Civic Federation would cease its work upon the death of Senator Hanna are now explaining. The federation met last week and a record of its proceedings shows that it is full of life and vigor and will go forward in its noble work with increased ardor.—United Mine Workers' Journal.

The trade agreement, therefore, is the result of the matching of forces, and follows after both sides have demonstrated their ability to inflict damage upon the other. Under such conditions the best results are obtainable, and conciliation and arbitration become effective.—Weekly Bulletin of Clothing Trades.

A wage agreement affords every possible opportunity for employers and employed to settle their own disputes in their own practical way.—Labor World, Pittsburg.

NEW OFFICERS OF THE NATIONAL CIVIC FEDERATION.

THE SUCCESSOR TO PRESIDENT HANNA TO BE CHOSEN BY A COMMITTEE—REPORT OF THE CHAIRMAN OF THE EXECUTIVE COUNCIL.

The Executive Committee of the National Civic Federation held its semi-annual meeting in the Fifth Avenue Hotel, New York City, on May 6. Wide interest was manifested in this gathering, both because of the general expectation that it would elect a successor to the late president of the Federation, Marcus A. Hanna, and because of the growing appreciation by the public of the purposes of the organization. The proceedings of the Executive Committee included, besides its regular business, a general interchange of views among its members, which disclosed a mutual determination to continue and extend the work of the Federation, and a spirit of confidence that its successful progress is assured. This feeling was strengthened by the reports presented, showing a record of notable accomplishment. All of the officers of the Federation were elected, except a new president, whose selection was referred to a Nominating Committee. A feature of the meeting was memorial addresses by members of the Executive Committee who had been closely associated with the late Mr. Hanna in his work.

The meeting was called to order by Samuel Gompers, first vice-president of the National Civic Federation and president of the American Federation of Labor. Those present were: Cornelius N. Bliss (ex-Secretary of the Interior), New York City; Oscar S. Straus (member of the Court of Arbitration at The Hague), New York City; Isaac N. Seligman (of J. & W. Seligman & Co.), New York City; Archbishop John Ireland (of the Roman Catholic Church), St. Paul, Minn.; Bishop Henry C. Potter (of the Protestant Episcopal Church), New York City; James Speyer (of Speyer & Co.), New York; V. Everit Macy (capitalist), New York City; Ralph M. Easley (chairman Executive Council), New York City; Henry Phipps (director United States Steel Corporation), New York City; August Belmont (president Interborough Rapid Transit Co.), New York City; Frederick P. Fish (president American Bell Telephone Co.), Boston; Francis L. Robbins (president Pittsburg Coal Company), Pittsburg; Samuel Mather (of Pickands, Mather & Co.), Cleveland; Dan R. Hanna (of M. A. Hanna & Co.), Cleveland; Charles A. Moore (Manning, Maxwell & Moore), New York City; Franklin MacVeagh (of Franklin MacVeagh & Co.), Chicago; H. H. Vreeland (president New York City Railway Company), New York City; Otto M. Fidlitz (chairman Board of Governors; Building Trades Employers' Association), New York City; Marcus M. Marks (president National Association of Clothing Manufacturers), New York City; Charles H. Taylor, Jr. (president American Newspaper Publishers' Association), Boston; Samuel Gompers (president American Federation of Labor),

Washington; John Mitchell (president United Mine Workers of America), Indianapolis; Rezin Orr (treasurer Amalgamated Association Street Railway Employees of America), Detroit, proxy for E. E. Clark (grand chief conductor, Order of Railway Conductors), Cedar Rapids, Iowa; Frank Buchanan (president International Association Bridge and Structural Iron Workers), Chicago, proxy for James Duncan (general secretary Granite Cutters' National Union), Washington; Daniel J. Keefe (president International Longshoremen, Marine and Transportworkers' Association), Detroit, Mich.; P. H. Morrissey (grand master Brotherhood Railroad Trainmen), Cleveland; William H. Farley (secretary Mosaic and Encaustic Tile Workers' Association of New York City), proxy for James O'Connell (president International Association of Machinists), Washington; John Tobin (general president Boot and Shoe Workers' Union), Boston; Thomas B. Lavey (Iron Molders' Conference Board of New York City), proxy for Joseph F. Valentine (president Iron Molders' Union of North America), Cincinnati; James M. Lynch (president International Typographical Union), Indianapolis; J. J. Hannahan (grand master Brotherhood of Locomotive Firemen), Peoria, Ill.; Henry White (general secretary United Garment Workers of America), New York City; William Launer (general secretary Glass Bottle Blowers' Association, United States and Canada), Philadelphia, proxy for Denis A. Hayes (president of the same association); J. P. Archibald (secretary Brotherhood of Painters, Decorators and Paper Hangers of New York City), proxy for William Huber (president United Brotherhood of Carpenters and Joiners of America), Indianapolis.

VICE-PRESIDENT GOMPERS' ADDRESS.

In calling the body to order Mr. Gompers said: "This is the first time since my connection with the National Civic Federation, and with its industrial branch—and my connection has been of quite a long duration—that I have had the honor of calling the meeting to order. I cannot say that it is a pleasure, except in a qualified sense, for I should have much preferred that we all would have had the pleasure and the honor of being called to order by the former president of the National Civic Federation, the gentleman who is no longer with us, and who a very few weeks ago passed from the midst of us and of those who knew and loved him to the Great Beyond. One of the things in which I am deficient is in readiness to pronounce an eulogium upon the dead. Notwithstanding my great admiration for the man, and his great qualities of heart and mind, I yet find myself in a position to express inadequately thoughts that press upon

my mind. I might say that it was my pleasure to have known our dear dead friend, Marcus A. Hanna, for a number of years. Even during those dark days when calumnies were heaped upon his head, his stout heart and his great mind were able to withstand them, and he lived at least to the time when calumny had receded, and nearly every one, if not every one, had begun to realize the higher qualities of which he was possessed in so eminent a form. He was a friend to organized labor, because he was convinced that through its agencies it would be the means of accomplishing better conditions and be helpful in bringing about more rightful relations between employer and employee; because he believed and was convinced that, notwithstanding all the calumny that is heaped upon organized labor, he, having gone through that crucial test, knew to a very large extent what one would suffer, and what men always suffer, by being misrepresented and misunderstood; and he realized that in the labor movement there were men in whom he could have unbounded faith and confidence to do for their fellows the best that was to be done. He was not a friend and advocate of organized labor because of a fad or a mere sentiment or a whim. It had grown upon him as a deep-seated conviction. He had, perhaps, as good relations established between himself as an employer and his workmen as employees as obtained in any industry in our country. He was of those who were pioneers among the employers not only to recognize, but to come to agreements with labor in its organized capacity. He has done much for his fellow-men. He has done much, especially in the line of work that he had chosen for himself. He did much to help give tone and character and standing, and to contribute in a large measure, to all the successes of the National Civic Federation. I know I but express the views of all those who knew him, and certainly of those who are associated with us here to-day, when I say that it is a matter of deep regret, and it is with a sense of deep loss, that we regard the death of our honored chairman, Marcus A. Hanna.

"In calling this meeting to order, may I ask whether it would meet the approval of the gentlemen present if we devote a little time to some expressions from some of the men who are here with us, and who I know would like to express their sense of regret at the loss we have sustained; and I therefore suggest that we devote a little while to what may be termed a 'memorial service' in honor of the memory of the late Marcus A. Hanna, our chairman.

"If there be no objection, I think we can proceed on that line."

Mr. Oscar S. Straus then arose to offer resolutions

H. H. VREELAND,
Chairman Welfare Department.

FRANCIS L. ROBBINS,
Chairman Trade Agreement Com.

JOHN MITCHELL,
Chairman Trade Agreement Com.

RALPH M. EASLEY,
Chairman Executive Council.

SAMUEL B. DONNELLY,
Secretary.

which he had prepared. Mr. Straus spoke as follows:

ADDRESS AND RESOLUTIONS BY MR. STRAUS.

"This occasion fills me with sadness, as it does all of you here who have been colleagues of our chairman in this work. Two and a half years ago, when we assembled in this city for the purpose of organizing the National Civic Federation, Senator Hanna was deeply engrossed in the work of national legislation; but he regarded this work which we were about to undertake of such transcendent importance, and his heart was so deeply interested, that he gave an expression of his views, briefly, to the press. I desire to recall to the memory and recollection of you, his colleagues in this work, the sentiments he expressed on that occasion:

"I would rather have the credit of making successful the movement to bring labor and capital into closer relations of confidence and reliance than be President of the United States. If by resigning my seat in the United States Senate I could bring to fruition the plans that we are now fostering to make strikes, lockouts and great labor disputes impossible, I would gladly do so. I think it is the grandest thing that could be accomplished in this country. I would want no greater monument than to have the world remember that I did something to end wars between American labor and American capital."

"It was my privilege on that occasion to introduce him, with these sentiments from his own lips, and I will extend my statement by reading from the opening of his speech on that occasion:

"Gentlemen, these are my sentiments. They came from the heart, and they came after a long experience in the industrial world and almost daily contact with labor since I have been a man of business. . . . To say that I am interested is to put it very mildly, and although I did not intend that that sentiment should have the publicity that your president has given it—and, perhaps, it may have seemed a little egotistical to have mentioned it in that connection—I reaffirm the sentiment by the statement that I stand ready and willing and anxious to give the best that is in me while life remains to accomplish this purpose."

"Mr. Chairman, I have the honor to introduce resolutions which but inadequately express the sentiments of my heart and the great loss that we have sustained:

"An all-wise Providence has called from the activities of this world Marcus A. Hanna, who was president of the National Civic Federation since December, 1901. His lamented death was a personal bereavement to us, his colleagues in this body, and the removal of a strong and earnest leader in its work; therefore, he it

"Resolved, That the National Civic Federation mourns the departure of a member who, as its official head, through his untiring energy, conspicuous ability and conscientious devotion, conveyed to the public mind the message of mutual confidence and respect, of equity and co-operation, in the relations between labor and capital; who had chosen the promotion of that purpose as the crowning work of his life, ranking it above all

other ambitions, and with steadily increasing conviction regarding a share in its accomplishment as the most patriotic service he could render his country, and the most philanthropic legacy he could bequeath to humanity; whose training in business and whose knowledge of public affairs had endowed him with peculiar fitness to carry forward the work of this organization, through his intimate relations with both employer and employed; whose quality of sincerity conveyed the irresistible conviction of the profound and lofty motive that inspired his zealous devotion to the high purpose of the Federation;

"Resolved, That his associates and fellow workers here record their sincere appreciation of the far-seeing and kindly sagacity, the rare and discerning judgment and the brilliant and earnest leadership displayed by Mr. Hanna as the president of the National Civic Federation;

"Resolved, That we, in the knowledge of the consecration of head and heart by our late president to a work that implied incessant appeals to both reason and sympathy, hereby pledge our continued and loyal devotion to the great cause which his intelligent perception and humane personality were forceful in forwarding;

"Resolved, That these resolutions be spread upon the record of the Federation, and that an engrossed copy, signed by its officers, be sent to the family of Mr. Hanna."

REMARKS BY BISHOP POTTER.

The Rt. Rev. Henry C. Potter, of the diocese of New York, in seconding the resolutions, suggested a slight verbal change, which Mr. Straus accepted, so that the resolutions, as adopted, read as they appear above. Bishop Potter expanded his suggestion in these words:

"I wish to bring out the interesting development in his own mind, of a sense of the enormous importance and significance of the effort in which we are all concerned. I hope I shall not touch any of our political friends here; but there are two classes of gentlemen—one we call politicians, the other statesmen. Politicians are particularly interested in results. A statesman is a man who has the quality of vision; and that is the quality which we recognized in Mr. Gladstone, a distinct perception of great movements, great tendencies, and what they have meant, what they stood for. I cannot pretend that I was very enthusiastic when Mr. Hanna was elected chairman of this Federation. I had chiefly associated him with political processes, the friendships and intimacies which represented the former of the two classes I have just referred to. But what did impress me in his service as presiding officer of this body was not only his large equity, his sense of fairness, which was a very fine note of his nature, but there seemed to grow in his mind day by day a larger sense of the enormous value and gravity of the questions in which we are here concerned. They are questions which touch the whole foundations of human society, and the equities of which involve the relations of every man with every other

man. And Mr. Hanna seemed to me to realize increasingly the great responsibility of his office and the enormous possibility of service and sacrifice that his calling as chairman of this Federation placed upon him. But he rose, step by step, to the possession of those finer qualities which so greatly endeared him to all of us. I learned to have a profound respect for his views and his rare sense of that which the movement really meant."

MR. MITCHELL SPEAKS FOR LABOR.

Mr. John Mitchell spoke as follows:

"I am sure I can but inadequately express the general sentiment of the laboring people of this country in saying that the loss of Senator Hanna brought to the working people a real sense of regret. My own personal relations with Senator Hanna were such that I knew him well. I knew his feelings well. I knew that he was sincere in this movement. I think no greater tribute could be paid to a man than the action of the coal miners in this country—400,000 of them—when on the day of his burial they stopped work and stayed away from the mines—laid aside their picks and shovels to do honor to the memory of him whom they believed to be their friend. I feel that his death is a distinct loss to this movement, a well nigh irreparable loss. He thought more of this movement than any other one thing in which he was engaged. I know that to be true. He has not only made the public statement to that effect, but he has told me on more than one occasion that he would rather be helpful in establishing rightful and proper relationships between capital and labor than be President of the United States. I don't know, Mr. Chairman, if there is anything further I can say. I feel that Senator Hanna has done his full share, not only in this movement, but in all his own relations with employees, to establish an ideal relationship between them."

CHARLES A. MOORE'S CHARACTERIZATION.

Charles A. Moore delivered the following tribute:

"I think the remarks made by Bishop Potter very clearly and nicely express the feeling that might be termed the general feeling throughout the country when our distinguished president and friend, Senator Hanna, was selected to preside over this important organization. Perhaps it is human nature to find fault; I don't call it criticism; but you found them saying that this selection was for political purposes. I know of no man who could have been selected for this very responsible and important position, who had to contend, personally and in the public mind, with greater obstacles to establish himself, as was necessary, in the confidence of all, than our recent president and departed friend. He was an aggressive man, a man of affairs, a man of great courage, who believed when he wanted to accomplish a purpose in the business of politics that he should go right to it, directly. He was essentially a direct man. I think that was one trait of character that he possessed to a degree that was remarkable and made him most successful. His diplomacy was what you might term a

'Hanna diplomacy.' It was not roundabout or subterranean—it was direct. He won the confidence of men. His manner was that of a man; and all the essential qualities we look for in the full grown, upright, forceful man he had to a wonderful degree. He had the wonderful gift of dealing with men in different walks of life from his own, with different ideas, and yet he could express his individual ideas frankly and directly and not offend those men. He had that quality to a marvellous degree. I think that, taking him as we see him now, under the present light of our organization, the results accomplished, it is doubtful if any man could have filled that place with all the qualities of mind and heart necessary to fill it to a successful termination as he did.

"Men believed in Marcus A. Hanna, and that was one great quality. He could make his fellow man believe he was honest; and unless he was honest he could not make him believe it. I do not know a man who ever made greater personal sacrifices. As he grew in this work I may plainly say that Senator Hanna grew to his job; and he did it because he consecrated himself to his work. I think that one of the most beautiful traits a man can develop is when, undertaking a work like this, he grows to fill it better than his best wishers expected him to do. Certainly, Senator Hanna filled this place even better than his most intimate friends thought him capable of doing. He has contributed much to the strength of this organization. He has helped to strip it of those ideas that are antagonistic to our work. He had to school himself, and he had to grow to his job; and he did it in a highly magnificent manner, that all are ready to recognize. Even those who differed with Mr. Hanna most positively learned to respect him for the evidences of his honesty and the sincerity of his work. I feel that we were all greatly favored in having known him—those who knew him in connection with this work and those who knew him in his lifework. He believed in good citizenship, integrity and honesty of purpose, and I never knew him in all his political work to suggest the doing of anything in an underhand, undignified manner. He went direct to the point. Confidence is a plant of slow growth, yet he had it almost entirely with the national leaders of labor. He had it with capital, and in a high degree with the public. As Bishop Potter has well expressed it, there were some who had their little doubts that there was some ulterior purpose in his taking the chairmanship of this organization, but he was able to dispel that, and get the confidence of the three groups; and without that his work would have been wasted. And he had that confidence to a marvellous degree. I am proud to have been a friend of and to have known Senator Hanna."

TRIBUTE OF CORNELIUS N. BLISS.

Cornelius N. Bliss, with evidence of emotion, uttered this personal appreciation:

"My relations with Senator Hanna have existed for many years. It was not here that I first met him. Perhaps it was owing to his influence, and because of his approval and desire, that I first became connected with this association, in which I am proud to have had this experience. My first acquaintance with Senator Hanna was many years ago, perhaps fifteen or more, and our relations have been exceedingly intimate. They were relations literally quite as intimate as any family relations. I not only admired him, but I had respect and affection for him, not only in his business relations, but in his relations here, and especially in his hospitable home and family relations. It is a matter of much regret to have been parted from him at this time, in the midst of his usefulness, and while he was rendering great service to the country. His services were appreciated by the great mass of the people throughout the country, as they were evident to us, his friends. Those who stood by his remains at the time of his funeral in Washington, and those who followed on to Cleveland, know the outpouring of sympathy and love that was expressed for him by those who surrounded him. I am grateful to him for having brought me into this work. Perhaps I have not done the work I might have done, but his example, influence and desire have led me to devote myself to it, so far as it is in my power to assist.

I refer largely in my remarks to the personal, intimate, close relations to our departed friend."

D. J. KEEFE'S REMINISCENCE.

Mr. D. J. Keefe spoke as follows:

"Senator Hanna was what might be termed a 'big brother' to the longshoremen. Whenever there was a difference or misunderstanding between the employers and our association and we could not adjust it ourselves, we always called on him, and he never failed to bring about an amicable understanding. I can say without fear of contradiction that his attitude toward organized labor was friendly, for whenever it was possible for him to assist in any way he cheerfully did so.

"His death will be a great loss to humanity in general, and the loss to America cannot be calculated. He was a man whose efforts were untiring to make a better world, and in this he was a success, for he certainly accomplished much, as the future will demonstrate. Others will take up the work where he left off. His strength of character was ably demonstrated in his charity of speech and sentiment when speaking of the authors of the many vile cartoons in the past two Presidential campaigns.

"Lincoln emancipated the colored men, and had Senator Hanna lived he would have done relatively more for all the toilers—he would have accomplished the solution of the problem of capital and labor, and would have taught the employer and employe alike to do unto others as they would be done by. He certainly made the world better by his having lived in it, and his name will go down to posterity as an apostle of the common people.

"Organized labor has suffered a great loss, and from thousands of the wage workers' homes a fervent prayer will go up to God to have mercy upon their true friend and benefactor. He, like Lincoln, needs no marble pile to perpetuate his name—it will always be revered by the masses for his great deeds and untiring efforts."

The resolutions offered by Mr. Straus were adopted unanimously by a rising vote.

The minutes of the last meeting of the executive committee were approved. Mr. Easley read his report as chairman of the executive council, which, on motion of Mr. Macy, was approved and ordered published.

Mr. Easley's report follows:

THE FEDERATION AND ITS WORK.

"When the National Civic Federation was organized the scoffers at its undertaking were not altogether alone. Even some well-wishers of the movement had misgivings as to its practical value. They felt that as soon as the novelty should wear off it would be impossible to hold the interest of its members and of the public; and that the general proposition to try to bring about a better relation between capital and labor was a beautiful sentiment, but not practical. When, in answer to that, it was pointed out that the imposing array of names on the executive committee included those of large practical employers, public-spirited men and hard-headed labor leaders, it was said: 'Yes, but wait until you have tried your beautiful machine; wait until the labor leaders find out that they cannot win in every controversy that you have to deal with, and they will turn against you; wait until the employers find that they have to grant higher wages in settlement of disturbances that you have to deal with, and they will quit you.' Well, we have waited and gone through all that. We have had three and a half years of it. We have gone through the sentimental period, when everything was coming our way, so to speak; we have gone through the trying period of defeat, when everything was going the other way—the anthracite coal strike, for instance. We have, too, lost our great leader, the one who marshalled us night and day, under all circumstances, in time of defeat as well as victory, and yet we are to-day stronger as a movement than ever before. The early suspicions of organized labor have been allayed. The larger and more representative interests of capital have found that we are not a set of meddlers, but are seeking through conservative and educational methods to bring about more rightful relations between employers and employes; and that our movement is a practical effort to work out the great so-called 'labor problem' through evolutionary, rather than revolutionary, methods.

"These elements of difficulty or discouragement have

been dissipated. They never were organized. But there have sprung up during the past year several employers' associations whose war cry is: 'Smash the unions,' 'Down with arbitration,' 'Beware of the National Civic Federation.'

"For example, we receive the following tribute from an officer of the Citizens' Industrial Association of America:

A moment's consideration of the inestimable benefits resulting from organization in Chicago should convince the most skeptical. The Employers' Association of that labor plague spot of the world is fast redeeming the city and delivering its people from the bondage of organized labor; not by continuing the policy of organized labor's colleague, the National Civic Federation, which is the greatest menace to industrial peace now in existence, but by demanding a recognition of the constitutional rights of the citizen and then appealing to public sentiment through and by organization.

"Again, we have the deliberately chosen words of the president of the same association in plain opposition to both conciliation and arbitration:

To my mind, this is not the proper time to talk conciliation. . . . Conciliation implies a yielding attitude and a recognition of the validity of destructive demands made by the opposing side. Since the principles and demands of organized labor are absolutely untenable to those believing in the individualistic social order, an attitude of conciliation would mean an attitude of compromise with regard to fundamental convictions. . . . Neither is it the time to talk arbitration or 'joint agreements.' To arbitrate questions of wages and hours is to introduce artificial methods of determining what they shall be, and an equitable arrangement as to either cannot be effected artificially.

"The first of these quotations is an overt effort to misrepresent the attitude of the Civic Federation by distorting its avowed friendship for organized labor as sympathy with the violence or disorder which, whenever and wherever they appear, are the most dangerous foes of the true interests of wage earners. The second quotation is a defiant and dogmatic rejection of methods of improving the relations between employer and employe that have been vindicated by their successful operation in practice.

"Socialism is another organized opponent to the work of peace and co-operation of the Civic Federation. It is to be noted that generally violence, in word or deed, when manifested in any labor union, is a symptom of the insidious invasion of the bacilli of socialism. To gain control and direction of organized labor the agents of socialism are putting forth every exertion. Socialists are opposed to the orderly and law-abiding elements that now direct, as a rule, the policy and control the action of labor organizations. Socialism recognizes in the National Civic Federation an ally of the self-respecting, self-restrained workingman. Therefore socialism foams at the mouth at the mention of the Federation. Thus, on May day in Chicago, Eugene V. Debs, its acknowledged national leader, flaunts this verbal red flag:

Socialists in unions were rare exceptions a few years ago; to-day they have been multiplied by thousands. The time is not far when the socialists will be in the majority in the trades unions, and they will rescue the union movement from the withering hand of the leaders who dominate it, and from the blighting control of the Civic Federation, which has entered into an unholy alliance—the slaughterers of the laborer and those leaders in joint conspiracy against the union man.

"The methods of socialism are frequently masked. Sometimes the mask is torn off. This happened in the correspondence, made public in a report of the British Columbia Labor Commission, which includes written instructions from the president of the United Brotherhood of Railway Employees to his organizer, whose mission was to promote a strike by the employes of the Canadian Pacific Railway. One of these letters contains the following passage:

In all your writings, carefully word your articles so as to develop a public sentiment for the U. B. R. E., the A. L. U. [the American Labor Union, a socialist labor organization, formed principally to fight the American Federation of Labor], and against the reactionary and capitalist party now temporarily in control of the A. F. of L., but not against the masses of members comprising the A. F. of L. Continually separate the administration of the A. F. of L. from the A. F. of L. itself, and give all possible praise to the masses of the A. F. of L. but

Ralph M. Easley, Chairman Executive Council, New York City.

ON THE PART OF EMPLOYERS.

Henry Phipps, director United States Steel Corporation, New York City.
August Belmont, President Interborough Rapid Transit Company, New York City.
Lucius Tuttle, President Boston & Maine Railroad, Boston.
Frederick P. Fish, President American Bell Telephone Company, Boston.
Francis L. Robbins, President Pittsburgh Coal Company, Pittsburgh.
H. H. Vreeland, President New York City Railway Company, New York City.
Samuel Mather, of Pickands, Mather & Co., Cleveland.
Charles A. Moore, Manning, Maxwell & Moore, New York City.
Franklin MacVeagh, of Franklin MacVeagh & Co., Chicago.
Charles H. Taylor, Jr., President American Newspaper Publishers' Association, Boston.
Dan R. Hanna, of M. A. Hanna & Co., Cleveland.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
Otto M. Elditz, Chairman Board of Governors, Building Trades Employers' Association, New York City.
Edward P. Ripley, President Atchison, Topeka & Santa Fe Railway System, Chicago.
William H. Pfahler, former President National Founders' Association, Philadelphia.

ON THE PART OF WAGE EARNERS.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President U. M. W. of America, Indianapolis.
E. E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
James Duncan, General Secretary Granite Cutters' National Union, Washington.
Daniel J. Keefe, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.
P. H. Morrissey, Grand Master, Brotherhood Railroad Trainmen, Cleveland.
Theodore J. Shaffer, President Amalgamated Association of Iron, Steel and Tin Workers, Pittsburgh.
J. J. Hannahan, Grand Master Brotherhood of Locomotive Firemen, Peoria, Ill.
James O'Connell, President International Association of Machinists, Washington.
John Tobin, General President Boot and Shoe Workers' Union, Boston.
Joseph F. Valentine, President Iron Molders' Union of North America, Cincinnati.
James M. Lynch, President International Typographical Union, Indianapolis.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit, Mich.
Henry White, General Secretary United Garment Workers of America, New York City.
Denis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.

VICTORIES FOR TRADE AGREEMENTS.

A large part of this number of THE REVIEW is devoted to a presentation of recent impressive events in the actual operation of trade agreements. The space allotted to this subject is warranted by the magnitude and significance of these events. The three agreements that stand out most prominently in recent industrial history are those between the bituminous operators and the organized miners in four States; between the Amalgamated Association of Tin and Iron Workers and the employers, and between the Longshoremen's Union and the Dock Managers' Association of the Great Lakes. The conspicuous facts about these three agreements are that they have been continued after open and candid discussion in mutual conference, and that at least two of them have withstood the test of acceptance of reductions of wages by the workers' organizations. Especially gratifying and important to the business interests of the entire country has been the prevention of a bituminous coal strike, through the reaching of a thorough understanding of trade conditions, attained at the conference at Indianapolis between representatives of the miners and of the operators, some of whose most remarkable utterances we commend to the thoughtful appreciation of our readers.

This interstate bituminous conference with its outcome is the most momentous industrial event of the year. There was a period when a strike seemed inevitable. A general bituminous coal strike would mean literal paralysis of the manufacturing industries and carrying machinery of the continent. The country had suffered much from the anthracite strike. A bituminous strike would have been an immensely greater disaster. It was the lamented Marcus A. Hanna, then president of the National Civic Federation, who declared, realizing the enormous gravity of the situation, "Every possible effort must be put forth to prevent a strike." Every effort was made. All of them were concentrated in the Indianapolis conference, where Francis A. Robbins and John Mitchell were the leading champions of the two sides, although they were aided by strong and resourceful lieutenants. The discussion carried conviction to the leaders of the miners' cause that a reduction of wages was justly required by the market prices of coal. Simultaneously, it convinced the representatives of the operators of the fairness of certain propositions, including the cost of living, upon the side of the workers, which led them to recede from their original demand. Then was presented the remarkable spectacle of labor delegates to this conference, who had been bound by instructions to vote at Indianapolis against the compromise, appealing successfully to their constituents for its ratification.

These events gave active interest to the proceedings of a conference upon trade agreements, held in New York City on May 7, under the auspices of the National Civic Federation. The discussion at that conference was highly animated and instructive, and a verbatim report will appear in the next number of THE REVIEW.

Experience has proved the efficacy of the trade agreement as a way to avoid industrial strife. Discussion bids fair to promote its better understanding and its wider use.

The benefit of full and frank conference receives signal illustration in the renewal of the trade agreement for another year between the Molders' Union and the stove manufacturers. Their association demanded a reduction of 15 per cent in wages, upon the ground that market prices for their products had fallen, and would go lower. There was also a question at issue as to the ratio of apprentices. Both of these questions were discussed with the utmost freedom and candor in a conference at Chicago that lasted five days. The decision was to maintain the present rate of wages. This result was reached largely because the representatives of the molders were able to

prove their contention that the cost of living had increased. As one of the manufacturers, Mr. Kahn, put it, "We are very much in the position of a married couple, and it is our business to get along in peace, for weal or woe." It is an interesting fact that several of the speakers at this conference attributed the higher prices of commodities for the household to the Russo-Japanese war. An amicable agreement as to apprentices, pronounced fair to both foundrymen and molders, was also reached. The *Iron Molders' Journal* attributes this outcome to the observance on both sides of "fair dealing as a cardinal principle," without "wrangling over petty technicalities," and predicts a continuance of the harmony that has prevailed in this trade during fourteen years.

AN EXHORTATION TO EMPLOYERS.

The day and the hour are here when the employer can display, to his own advantage and to the country's good, a spirit of reasonable liberality in his attitude toward the payment of the employed. The record of lower market prices, decreasing consumption of products, lighter transportation, reduced wages and economies in the number of workmen employed in improvements, enlargements or in new construction, testifies that the industries of the country, broadly speaking, have slackened in activity, and that commercial conditions are upon a lower level than they occupied during a time of some inflation, though not without the real substance of genuine prosperity. It is legitimate to hope that this condition will prove to be only a passing relaxation of the tense strain that commanded, in the stress of profitable production, the total sum of the combined energies of capital and labor. But the actual situation cannot be bettered by glossing the truth. It is both braver and more sensible to face the facts of the present as they are.

This industrial condition opens to employers an opportunity that should be seized for conservatism in their treatment of wages. It is a time when they may wisely refrain from taking undue advantage of a situation that may temporarily place it within their power to act selfishly and graspingly. When two jobs await every man able and willing to work, the condition invites demands for higher wages. When two men await every job, the reaction favors the enforcement of lower wages. The former case offers the opportunity for labor, whether organized or not, to refrain from excessive demands, with a sane eye to its future. The second case presents to employers, whether organized or individual, the opportunity to exercise discreet liberality and to call into play consideration and foresight that may avoid present resentment and forestall future reprisal. A prominent railway president recently uttered this economic truth: "The cost of maintaining an artificial market is greater than the profit." So, too, the profit of artificially depressing wages is less than the ultimate cost.

The time is peculiarly favorable for the exercise of self-restraint by employers in compelling wage reductions. Conservative leaders of the unions have shown upon their part a growing spirit of reasonableness and a wholesome inclination to fair dealing. The movement for conciliation, for harmonious relations, for industrial peace, has gained breadth and strength, because of this prevalent spirit of its leaders, throughout the ranks of organized labor. There is no doubt that the manifestation of this spirit has had its moderating effect upon the general attitude of public opinion toward the unions. These are influences that work for the common weal. They are impalpable, but nevertheless real assets in the total public welfare. They are elements that, properly encouraged and nourished, will become factors powerful among all the others that count for a return of the flood tide of industrial activity and commercial prosperity.

The employer who realizes this situation and

tempers his treatment of the employed with a measure of discretion in enforcing economies, and perhaps with an explanation of their necessity when they are imperative, will not only strengthen his individual position, but will contribute to the benefit, in the long run, of his entire industry and to the harmony that is essential to national health. It is a time to keep in mind the truth that the natural law of supply and demand should be modified in its operation between human beings by a due regard for the burdens that are made heavier by every decrease in the earnings of toil. This higher motive is re-enforced by the fact that reasonable altruism has one of its roots in selfishness. That is, broadly speaking, generosity, like honesty, is the best policy.

THE OPEN SHOP DEBATE.

There is an apparent tendency in the minds of some writers to regard the question of the "open" versus the "closed" shop as one of irreconcilable conflict. The issue has been depicted recently as one that will precipitate a series of battles that must culminate in a social revolution, whose outcome must be either anarchy or the extreme of paternalism, through governmental regulation of all trade agreements. Some alarmists depict the situation as beyond amelioration and as approaching rapidly a hostile alignment of forces whose clash must disturb and distress the national life, or even threaten its very existence.

The extremists upon either side, it is our judgment, are making too much clamor about imaginary perils that underlie the agitation of this question. No possible harm can be done by the freest and fullest debate of the open and closed shop. On the contrary, much good may be done by awakening public interest to an intelligent perception of the opposing arguments. But much harm may be done if alarmists, whether merely the victims of their own imaginary fears, or unduly impressed by a false estimate of the strength and arbitrary purpose of recently formed employers' associations, or moved by the socialistic and mischievous desire to stir up strife, are allowed to present unchallenged and uncorrected their distorted view of the case.

Those who profess to be able to see only fierce and relentless war in the growth of unions on the one side and of associated employers on the other, ignore the power of organized forces to establish stable conditions of peace based upon mutual responsibility, joined with mutual good faith in fulfilling obligations. The agitators dwell exclusively upon the "rights" of one side and of the other. They make a din of proclaiming "the legal and moral right" of the employer to discharge and to hire men without regard to the unions. They shout aloud that the non-unionist has "the legal and moral right" to sell his labor for whatever he can get, regardless of the union scale. They reach the crescendo of defiance in declaring that employers will never, never yield the "right to run their own business," and conversely they raise the battle-cry that the unions must resist to the death the open shop as an insidious menace to their existence.

It were well if there were less sound and fury about the "rights" of employer and employed, and more consideration of their equal capacity to realize their duty to each other and to the entire social fabric. Opposition of their interests, however highly organized upon both sides, does not necessarily mean combat without quarter. There is no occasion to fear the lining up of the two forces for a frank comparison of their positions. In such case the agitators will be left to do the fighting with words, while the calm common sense of both sides will discern the way to peace with both honor and profit. Actual experience has proved this to be true. "De-

fense" is a militant word. It implies hostility. It means forcible resistance to forcible aggression. Yet the Defense Association of Stove Manufacturers, formed for war, has in practice been converted into an association for the working out of pacific relations with the molders' unions and of stable trade conditions. That is only one example of how a warlike title has been compelled by the force of mutual interest to acquire a significance of actual friendliness. In this case, also, the open shop has proved not to mean, where it exists, the destruction of the union. Nor has the unionization of foundries made it impossible for the employers to continue to exercise their "right to run their own business."

There is a great deal of human nature in this particular question of open or closed shop. The personal equation is a highly important factor in the problem. The pessimists and those eager for fray would make it an intensely inflamed factor as well. When an employer demands an open shop as one of his "rights" and announces at the same time that with the open shop he will smash the union, it can hardly be expected that the union will tamely submit. When the closed shop means the control of a business by the union, leaving the employer only to pay the bills Saturday night, no one can blame the employer for determining to smash the union. Put either side in a position where it must fight for its life, and it will fight. But that extreme position is unnecessary. Exclusive contracts are practicable. Suppose a union agent to say: "Mr. Employer, we want a contract with you to do your work. You want your work well done. We don't object to working with non-union men, but an exclusive contract with us would make us able to discipline and control our men so that we can carry out our agreement and we can guarantee you better work." Is not that a proposal on a business basis? This is done every day without an outcry about abridged liberty in the building trades. Smith lets a contract for a house. The contractor hires all the men. Smith neither knows nor cares about their creed or their affiliations or lack of affiliations.

The truth is that no sensible person desires to destroy any of the "rights" of which we hear so much talk. Nor should any person desire to exercise individual rights without regard to the rights of others. The rights of individuals and the rights of communities have been rubbing against each other throughout all the evolution of civilized society. Neither class of rights has been destroyed in that friction. Similarly, there may be an adjustment, through patience, tact and forbearance, of the right of the employer to make an exclusive contract with the union, and of the right of the non-union man to determine for himself whether he shall belong to a union or not, and to work without molestation wherever employed. Rights may be inalienable and yet reconcilable. The forces for their adjustment are mightier by far than are the forces that would create conflict and compel the inconceivable enthrallment of either labor or capital.

JOHN MITCHELL ON STRIKES AND LOCKOUTS.

Newspaper reports of an address delivered by Mr. John Mitchell at the conference upon trade agreements, held in New York City on May 6, under the auspices of the National Civic Federation, have misrepresented, unintentionally, of course, an attitude of the President of the United Mine Workers. The published reports made him appear as preferring strikes and lockouts to arbitration. In order to set right both Mr. Mitchell and newspaper comment, it is well to quote here an extract from a stenographic report of Mr. Mitchell's remarks:

"I say that neither side should surrender its

right to strike or lock out. Failing in every other method to settle their differences, they [the workers] should always maintain the right to strike, or the employers the right to lock out their men. If they were to surrender absolutely those rights, then the chances are that the conditions of employment would be satisfactory neither to the men nor to the employers.

"My own judgment is that in preference to a strike we should resort to arbitration. There are questions I would not arbitrate at all. I would not arbitrate, under any conditions, my right to belong to a union. . . . You can't arbitrate fundamental principles. . . . As I said before, I favor settlement of it by agreement, and only arbitration in the event of failure to agree, and then in preference to strike."

This correct quotation places Mr. Mitchell in a position altogether different from favoring the strike and the lockout. He would rank them as last resorts. He would preserve the ultimate right to fight, because he regards that right as essential to the power to make treaties of peace. An alliance between two disarmed forces would be shorn of significance.

LABOR UNIONS AND GOVERNMENT.

A recent editorial in the New York Times contains several mis-statements of fact and wrong inferences, both in extracts from a speech delivered by Mr. Kirby, of the National Industrial Alliance, upon industrial conditions in Australia and New Zealand, and in comments upon his remarks. Mr. Kirby dwells at length upon the disastrous results of trade union legislation and compulsory arbitration in those colonies. Even from the standpoint of an organization that advocates the policy of "smashing" the unions, Mr. Kirby's inferences are erroneous; for the trade union control in Australia and New Zealand has been brought about, not through the union methods obtaining in the United States, but through partisan organization of the unions, which the American Federation of Labor earnestly opposes.

The unions in Australia and New Zealand were disastrously defeated in a general strike in 1891. To bring about that defeat the powers of the government were employed. As a consequence, the colonial unions abandoned the non-partisan tactics of trade unionism, which are maintained in this country, and directed their attention to organizing a political labor party. That party eventually gained control of the government in both these colonies. Whatever evil results may have followed have, therefore, come about, not through voluntary negotiation with employers, but through control of the legislatures and administrations by the labor vote. The policy of the "smashing" associations of employers, for whom Mr. Kirby speaks, if successful, would invite a similar change of policy on the part of the unions in the United States. Is that what the "smashing" employers' organizations desire? The unions in the United States have not organized a labor party to capture the State and Federal governments, but have operated along the lines of negotiation, conciliation and trade agreements, meeting the employers upon equal terms. Only when thoroughly convinced that employers will refuse to continue in these lines would the unions turn to partisan action here, in the manner forced upon the unions in Australia and New Zealand.

That the unions in Great Britain, because of the engineering strike and lockout in 1897, have met with overwhelming defeat, looking to the disintegration of the whole labor movement, is a most surprising mis-statement of the actual situation. The unions in the British shipbuilding industry, to which reference is particularly made, are to-day much stronger than ever before, and the principal union in that industry, the Boilermakers', took no part in the strike of

1897. The Amalgamated Society of Engineers, which was defeated in 1897, has entirely recovered its ground, and through a general arbitration and joint conference board is taking up subjects of dispute and reaching agreements with the federation of employers, through methods of conciliation.

The statement that "it has been declared illegal to strike against the employment of non-union men, or to demand the discharge of a man because he does not belong to a labor organization," is exactly the opposite to the fact in the English situation. The highest court in England, in the case of *Allen vs. Flood*, has held that a labor union not only has the right to strike, but the right to threaten to strike, against the employment of a non-union man. This decision in effect upholds the legality of the closed shop.

A REVIVED FALLACY QUASHED.

When a union demand for the closed shop in some industry is advanced, there is likely to reappear the familiar assertion that only 15 per cent. of the wage earners of the country are organized in trade unions. This statement is the premise of an argument that it would be monstrous tyranny for so small a proportion of workers to exclude from employment 85 per cent. of those who earn their livelihood by toil. Assuming, for the sake of discussion, that these figures are approximately correct, the argument is shattered in its application. It is only where a union has established a real ascendancy in a given trade that it can raise, with any hope of success, the issue of the closed shop. The alleged 85 per cent. of wage earners outside the unions are mainly in occupations in which there are no unions at all, or in which the unions are too weak to think of challenging a contest over the employment of workers outside their organizations.

The *Chicago Tribune*, in a recent editorial, states the case thus pithily:

"Suppose that the Plumbers' Union, controlling almost the entire plumbing trade, demands the exclusive employment of union plumbers. What species of argument is it to reply that the agricultural laborers are still wandering beyond the limits of the trade union fold? Suppose that the glass blowers, finding that here and there a non-union glass blower continues to escape the payment of union dues, refuse to allow the 'traitor' to work beside them. Will they be deterred by an enumeration of the washerwomen over whom trade unionism has not yet spread its shield?"

It seems to be necessary again and again to expose the fallacy of the much-quoted 85 per cent. of unorganized labor as a proof of union tyranny in the crafts where the movement for the closed shop is strongly supported. This is a singular example of the persistent fascination of a battered illusion.

The importance of maintaining a high standard of personnel in union representation and membership is emphasized by President Frank Buchanan, of the International Association of Bridge and Structural Iron Workers. We quote President Buchanan's official counsel, addressed to the local unions of New York: "Select men on their merits to represent you and see that the unions dictate to them instead of letting them dictate to the unions. Our associations should keep agreements inviolate. A fair agreement means a fair day's pay for a fair day's work. The men who are trying to use the unions to hold their jobs when they are unwilling to do a fair day's work in a workmanlike manner are enemies to the principles that trade unionism is founded upon, and an organization that will permit its strength to be used

for such purposes will come to grief in the end."

There is a sermon in this message worth the attention of every union in the land.

There has been a noteworthy instance of the voluntary discipline in Chicago of a member of a union for "slugging" a non-union worker. The discipline, in the form of a fine of \$20, was inflicted upon David Bergquist, a member of the Carriage and Wagonmakers' Union, for beating Harry T. Stevens, a fellow employe, for not joining the union, although that union has an open shop agreement with the Carriage and Wagon Makers' Association. Besides inflicting the fine, four members of the union testified before a magistrate against Bergquist, who was placed under \$500 bonds to keep the peace. This is hailed as an indication of wholesome assertiveness by the conservative element in the local unions.

A STREET RAILWAY ARBITRATION.

The Finding of Oscar S. Straus as to the Differences Between the United Railroads of San Francisco and Their Employes.

The recent settlement of difficulties between the United Railroads of San Francisco and their employes lends renewed interest to the decision of the arbiter in the differences between that company and Division No. 205, Amalgamated Association of Street Railway Em-

OSCAR S. STRAUS.

ployes. All these differences, except the subject of employment and discharge, were referred on April 6, 1903, to W. D. Mahon, president of the Amalgamated Association, and Patrick Calhoun, representing the railroad company. They were authorized to appoint a third person to consider with them points upon which they were unable to agree, a majority vote to be decisive. Messrs. Calhoun and Mahon on June 15, 1903, telegraphed as follows to Mr. Oscar S. Straus, in New York:

"We have agreed upon you as third arbiter, to act with us in the settlement of certain differences between the United Railroad Companies of this city and the street car men's union. The evidence will be taken by a commissioner, and submitted to you in writing. This controversy is an important one, and we strongly urge you to accept."

To this Mr. Straus replied, on the same day: "In the line of the duty I have set before me to promote industrial peace, I accept, but regret this additional work coming upon me."

Subsequently the testimony was taken before a commissioner, covering nine closely typewritten volumes, besides many volumes of exhibits.

The first meeting of the commission was held on September 15, 1903, in the rooms of the New York Board of Trade and Transportation, 203 Broadway. Mr. Calhoun suggested that the commission should pass upon

the question upon which the company had refused to give testimony, as to their ability to pay the wage demanded. It was unanimously decided by the commission that no testimony as to the ability or inability of the company to pay the wages that will be fixed by this commission would be received, as no question had arisen as to the company's lack of ability to pay its wage, or any wage this commission should decide. Further hearing of the commission was adjourned until October 12, 1903. Mr. A. A. Moore appeared as counsel for the railroads, and Hon. Edward J. Livernash appeared as counsel for the union.

The arguments on the part of counsel were heard on that day, and on the 20th, 21st and 22d of October following. Written briefs were subsequently handed in by the respective counsel.

The following decision, rendered by Mr. Straus, is here published for the first time:

It is the judgment of the undersigned there remain, of all the matter presented by the voluminous pleadings and correspondence framing the issues, but two questions for determination by this board, namely:

First—The question as to what is a fair wage rate.

Second—The question of hours of labor.

A FAIR WAGE RATE.

Of all questions that arise in industrial disputes none is more difficult to define and determine than what is a fair wage rate? Wishing to make my conclusions as brief and concise as possible, I will not enter into the economic speculations that this question gives rise to, as it can serve no purpose here. If arbitrations of this kind concerned the interpretation of a contract, or of laws or regulations, they would be free from many of the uncertainties, indefiniteness and difficulties that surround a decision. We are met at the outset with the absence of precedents to guide us. There are no terms of a contract to interpret, because the very fact that such an arbitration is agreed upon is because the parties have been unable to make a contract, and therefore appeal to the high sense of equity on the part of the persons selected as arbitrators to accord a fair wage for the services that are demanded. The earlier economists generally held to the ruling that wages, like any other commodity, are regulated by the demand and the supply. In our day, with the more humane consideration of this question, there has come about a decided departure from this rigid and often inhuman method of regulating wages. No doubt the organization of wage-earners on the one side and employers on the other, coupled with the more enlightened and humane views that characterize our age and civilization, have been responsible for the change. On the other hand, we must be mindful that nothing is so destructive of an industry as to yield to demands on the part of labor that may be uneconomic.

STANDARD OF WAGES.

By the testimony, it appears that the United Railroads of San Francisco are now paying a high rate of wage, and that there are only four street railway companies out of 345 of which statistics are given that pay a higher rate, and that these are located in Montana; and that these four pay an average rate ranging from 27.5 cents per hour to 29 cents, and that there are of this number only four companies that pay as high a rate as the company is now paying, namely, 25 cents. That these companies are located in Oakland, Cal., in San Francisco, and in Spokane, Wash., and also one in Chicago.

The standard of wages on the Pacific Coast, and especially in San Francisco, since 1849 has always been high, resulting from many causes. The migration from the East began in that year, impelled by the discoveries of gold, and by reason of the fact that the journey was a long and expensive one wages were much higher than in the middle or eastern part of the United States; and so, also, was the cost of living. As time has run on, and with the building of transcontinental lines, the disproportion has become less and less; but it still remains as a fact that, generally speaking, the rate of wages is somewhat higher in the city of San Francisco than in other cities of equal size throughout the United States. Doubtless it was for that reason, among others, that the United Railroads of San Francisco, after the strike in

April, 1902, settled by granting the men 25 cents per hour, with 30 cents for overtime, which, according to their own showing, was 10 to 15 per cent higher than paid by similar railroads in other cities, with the exception of those mentioned above.

COST OF LIVING.

The evidence shows, in comparing the cost of living in 1902 with that of 1903, that there has been an advance. It is claimed on behalf of the street railway employees, by a large mass of testimony they accumulated, that that advance has been from 20 to 30 per cent. On the other hand, it is claimed by the United Railroads, based upon Prof. Plehn's reports, that while there has been an advance, that advance does not exceed more than 3 per cent. The basis of the large mass of testimony offered by the street railway employees, derived from their own members, is lacking in definiteness, and in part in reliability. On the other hand, the basis of the exhaustive calculations made by Prof. Plehn are not entirely satisfactory or convincing. The testimony on both sides establishes, however, the fact that there has been for the periods mentioned a rise in the cost of living; that, on the average, the rent of rooms or apartments such as the employees live in has advanced about 10 per cent.

Referring to the increased cost of living, the Anthracite Coal Strike Commission (See Bulletin of the Department of Labor No. 146, May, 1903, page 472), say:

"This increase for the past few years, as ascertained for a forthcoming report, and taking into consideration the leading articles of consumption for food, amounts to 9.8 per cent. From this it is seen that, taking the average quantity of articles consumed per family, and assuming the price for 1901 to be 100, in 1898 they were 96.5; in 1899, 94.5; in 1900, 96.7; in 1902, 106.2."

Whether the increase of the cost of living in San Francisco for the first five months in 1903, as compared with the first five months in 1902, was abnormal or not, as compared with the rest of the United States, does not appear. It was claimed that part of the increase is due to the fact that labor is more generally organized in the different branches of industry in San Francisco than elsewhere, and that that has been one of the causes for a rise in the cost of living.

In view, therefore, of all the circumstances, I adjudge and award:

First—That the United Railroads of San Francisco pay to such of the members of Division No. 205, Amalgamated Association of Street Railway Employees of America, who are now and have been in their employ for a period under two years, prior to April 1, 1903, an increase of 5 per cent above 25 cents an hour, and to such of said employees who are now and have been prior to April 1, 1903, in their employ two years and over, an increase of 10 per cent above 25 cents an hour, and that for overtime the like percentages of increase above the present rate be paid.

Second—I adjudge and award that the United Railroads of San Francisco pay to such of its employees who are members of Division 205, Amalgamated Association of Street Railway Employees of America, who work by the day, and who are now and have been in their employ for a period of under two years prior to April 1, 1903, an increase of 5 per cent above the daily rate of wage they are now receiving, and to such of said employees who are now and have been prior to April 1, 1903, in their employ two years and over, an increase of 10 per cent above the rate of wage they are now receiving.

SCHEDULE OF HOURS.

It appears by the evidence that the average hours of actual labor by the body of regular men under the present schedule are 10 hours and 3 minutes, or thereabouts; that at the time when the strike was settled in April, 1902, the schedule which was agreed to by the company was 10 hours per day, to be completed within 14 hours, and that this schedule, upon the request of the union, was amended by extending the hours of labor to 11, to be completed within 15 hours. In comparing the hours of service on these railroads it does not appear that they are longer or more arduous than generally prevail in this line of service; nor does it appear that they are too long, considering the health and wel-

fare of the men in this line of service, and in view of the fact that the climate of the Pacific Coast is exceptionally mild and free from that severity that obtains in the middle and eastern part of the United States.

Third—I adjudge and award that the same hours and schedules that now obtain be continued. It is always within the province of the railroad on the one side and the employees on the other to amend their schedules by mutual agreement. I therefore decline to disturb the present schedules.

Fourth—In accordance with the agreement under which this arbitration was entered upon the wage rate adjudged and awarded shall be deemed to go into effect as of the First of May, 1903, and continue until the First of May, 1904.

CONCLUSION.

In conclusion, I desire to add that in coming to the above decision I have endeavored to be just and equitable to both sides, and have been largely influenced by the desire and purpose to establish a permanent peace between the company and its employees, to encourage a spirit of mutual confidence, and to secure to the public what it has a right to demand, the best possible street railway service without friction, so as to avoid for many years to come conflict and disagreement between the corporation on the one side and the union on the other, although by this agreement the award, as aforesaid, is to be only binding for a period of one year.

I trust, and it is my expectation, that it will continue for a much longer period. The extensive preparation of this case, with its vast amount of testimony and the large cost and labor it has entailed upon both sides, has been so great that it is hoped that this will be an added reason for continuing the award for years to come beyond the period specified.

For the purpose of avoiding any dispute or disagreement regarding the meaning and interpretation of these awards, or regarding the persons to whom they shall apply, I suggest, in such event, the question be referred to arbitration, the arbitrators to be selected, one by the United Railroads, the other by the employees' union, and in case they disagree, a third arbitrator to be selected by these two, whose decision shall be final and conclusive.

OSCAR S. STRAUS.
W. D. MAHON.

Mr. Calhoun filed a dissenting opinion. Mr. Mahon also placed on record, in writing, his reasons for concurring in the decision of the third arbiter, Mr. Straus.

TRADE AGREEMENT CONFERENCE.

An Instructive Discussion Followed by the Appointment of a Standing Committee.

A meeting of the committee on trade agreements of the National Civic Federation was held at the Fifth Avenue Hotel on Saturday, May 7, 1904. Mr. Francis L. Robbins, president of the Pittsburg Coal Company, presided at the session until business called him away, when Mr. John Mitchell, president of the United Mine Workers of America, took the chair. A large number of representatives of both employer and employed were present. The time of the session was entirely consumed in an animated interchange of views concerning trade agreements and their operation. A noteworthy feature of the discussion was that not a single expression was heard against the trade agreement as a practical method of encouraging co-operation between employer and employed. A report of the discussion will appear in the next issue of *THE REVIEW*. The announcement was made that a standing joint committee on trade agreements would be appointed. This committee is composed of the following:

Francis L. Robbins, President Pittsburg Coal Company, Pittsburg, Pa.; Harry Coulby, Chairman Dock Managers' Association, Cleveland, Ohio; Isaac W. Frank, President National Founders' Association, Pittsburg, Pa.; Chauncey H. Castle, President Stove Manufacturers' National Defense Association, Quincy, Ill.; Otto M. Eldlitz, Chairman Board of Governors, New York Building Trades Association, New York City; Marcus M. Marks, President National Clothiers' Association, New York City; Charles

H. Taylor, Jr., President American Newspaper Publishers' Association, Boston, Mass.; John Cooper, President Iron League, New York City; Louis B. Schram, Chairman Labor Committee, United States Brewers' Association, Brooklyn, N. Y.; John D. Hibbard, President Chicago Metal Trades Association, Chicago, Ill.; John Ralston, Chairman Glass Bottle and Vial Manufacturers' Association, Pittsburg, Pa.; W. C. Brown, Vice-President Lake Shore Railroad Company, Chicago, Ill.; Lucius Tuttle, President Boston and Maine Railroad Company, Boston, Mass.; Charles A. Moore, Member New York Metal Trades Association, New York City; Emerson McMillin, President American Light and Traction Company, New York City; William H. Pfahler, former President National Founders' Association, Philadelphia, Pa.; Walter L. Pierce, former President National Metal Trades Association, New York City; W. W. Miller, former Vice-President New Orleans City Railway Company, New York City; Grange Sard, of Rathbourn, Sard & Co., Albany, N. Y.; John Mitchell, President United Mine Workers of America, Indianapolis, Ind.; Daniel J. Keefe, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.; James M. Lynch, President International Typographical Union, Indianapolis, Ind.; Theodore J. Shaffer, President Amalgamated Association Iron, Steel and Tin Workers, Pittsburg, Pa.; James O'Connell, President International Association of Machinists, Washington, D. C.; James Duncan, General Secretary Granite Cutters' National Union, Washington, D. C.; Frank Buchanan, President International Association Bridge and Structural Iron Workers, Chicago, Ill.; Henry White, General Secretary United Garment Workers of America, New York City; John Tobin, General President Boot and Shoe Workers' Union, Boston, Mass.; Denis A. Hayes, President Glass Bottle Blowers' Association, United States and Canada, Philadelphia, Pa.; John A. Moffatt, President National Hatters' Union, Orange, N. J.; M. Donnelly, President Meat Cutters and Butcher Workmen of North America, Chicago, Ill.; William H. Farley, Mosale and Encaustic Tile Layers, New York City; John McNell, President Boltermakers and Iron Shipbuilders of North America, Kansas City, Kan.; James Wilson, President Pattern Makers' League of North America, New York City; Edward J. Lynch, President International Association Metal Polishers, Buffers and Brass Workers of North America, New York City; W. D. Mahon, President Amalgamated Association Street Railway Employees of America, Detroit, Mich.; James P. Archibald, Brotherhood Painters and Decorators, New York City; Edgar E. Clark, Grand Chief Conductor, Order Railway Conductors, Cedar Rapids, Iowa; P. H. Morrissey, Grand Master Brotherhood Railroad Trainmen, Cleveland, Ohio; J. J. Hannahan, Grand Master Brotherhood Locomotive Firemen, Peoria, Ill.; Robert E. Neldig, Housesmiths, New York City; Edward A. Moffett, M. M. Garland, former President Iron, Steel and Tin Workers, Pittsburg, Pa.

CIVIC FEDERATION OF CLEVELAND.

The Civic Federation of Cleveland and vicinity completed its organization in March with the adoption of its by-laws. Its first formal action was the adoption of resolutions upon the death of Marcus A. Hanna, who was a personal friend as well as fellow-townsmen of all

SAMUEL MATHER.

the members. He was a central figure at the initial meeting of the Cleveland Federation, to which he had declared his purpose of giving a great deal of attention.

The officers of the Cleveland Federation are: Chairman, Samuel Mather; secretary, James Reynolds; vice-

without being personal or vindictive condemn the temporary capitalistic administration of the A. F. of L. in the strongest terms you can possibly employ.

In this way you will constantly stimulate and augment a great public sentiment for the U. B. R. E.—for Industrial Unions, for the A. L. U. and for socialism (but don't use the word) and against capitalism and the Gompers faction, which is working in harmony with Marcus A. Hanna and the infamous Civic Federation to keep down

"Thus the Federation faces simultaneously the hatred of socialism and the opposition of the recently formed employers' associations. But these organizations, it is significant to observe, include none of the great employers of labor representing the basic industries, such as coal, iron and steel, building trades and railroads. They have enlisted chiefly small concerns, in country towns generally, whose combined capital and number of employees would not approach those interested in the single organization of the bituminous coal operators which has just so successfully worked out with the Mine Workers' Union the two years' joint trade agreement. While neither large nor influential to-day, they do constitute a warning to the more radical and arbitrary unions that there must be a modification of a policy that invites and encourages organized opposition of employers. Without such provocation a fighting organization, with nothing but a destructive programme, will never make much headway in this country.

RESULTS OF TRADE AGREEMENTS.

"Of far greater moment and of more wholesome interest are the trio of victories recently achieved for the policy of forming trade agreements, as advocated by the National Civic Federation. These were the settlement which resulted from the bituminous coal conference three weeks ago at Indianapolis; the more recent termination of the controversy between the organized longshoremen and the shipping interests of the Great Lakes, and the agreement upon a wage scale between the Amalgamated Iron, Steel and Tin Workers and the United States Steel Corporation and independent manufacturers at Pittsburg. These results were achieved by sane and rational methods, involving free and candid discussion of facts and conditions, as to prices of products, profits of capital and cost of living, between representatives of the parties interested, brought face to face. This method was the very one attacked by the president of an employers' association above quoted. In each of these three instances the leaders of the contending forces were members of the executive committee of the National Civic Federation. In the bituminous coal conference the country little realized how near it was to facing probably the greatest strike the world has ever seen. The anthracite coal strike last year would have paled into utter insignificance in comparison. Yet it was prevented by the vote of 150,000 miners to accept a reduction in wages, which is what the scoffers at the National Civic Federation said would never be done, predicting that when that strain came the theory of the trade agreement would not endure the test of practice.

"The three adjustments here recounted, together with the experience of our conciliation committees, have strongly emphasized the importance of the plan, determined at the meeting of the executive committee last December, to organize a special committee to promote the joint trade agreement idea throughout all industries that deal with organized labor. This committee, which is composed of the heads of the principal organizations now operating under such agreements, will hold its first meeting in this room to-morrow morning, the purpose being to compare experiences and discuss the merits and demerits of the various plans now in vogue. That there is great usefulness for such a committee was clearly shown in the settlement of the lithographers' troubles, which largely grew out of a confusion of ideas on both sides as to what subjects should properly be included in an agreement. At several stages of that controversy the associated employers and the men's organizations were found advocating propositions that, with older organizations, would have been exactly reversed. At this meeting to-morrow, in addition to the older organizations, there will be representatives of both sides of controversies in three different occupations where to-day no

agreement exists; but we hope to be influential in promoting such agreements in these instances. Additional interest will attach to their presence because in one of these industries there exists an actual strike, while hostilities in the two others are threatened.

SECTIONS.

"Another proposition approved at the December meeting was the organization of various sections to deal with the especial problems that belong to a given industry. A great deal of study and effort has been devoted to this part of our work, with results that are quite gratifying. It has been necessary to make a special investigation of each field to ascertain just how far such sections would be practical and beneficial. As was pointed out at the December meeting, while there are some problems that are common to nearly all industries, there are so many especial problems that to treat them at all intelligently requires a special committee or section; for instance, the problems in the building trade are totally dissimilar from those in the metal trade, the textile industry, the street railway service, the railroad, mining and iron industries, and so on. This work cannot be rushed. It requires careful and patient effort. A detailed report of just what can be accomplished in each section would be rather more technical than interesting to a general committee such as this."

Mr. Easley's report at this point included an account of the organization of the Welfare Department. This portion of his report is incorporated in an article upon that department which appears upon another page of this issue of THE REVIEW. The report continued:

PUBLICATION DEPARTMENT.

"The Publication Department has been reorganized. Beginning with the 15th of May, THE REVIEW will be issued every month. Heretofore it has been published at irregular intervals. At present THE REVIEW is sent to 5,000 selected labor leaders, 5,000 large employers and 5,000 men who are professionally in touch with public opinion, such as preachers, editors and lawyers. But it is not the intention to limit the circulation of THE REVIEW to 15,000. That is only the basis of a vastly larger mailing list to be developed in the early future. It is expected that this periodical will be made self-supporting. With unrivalled facilities for obtaining facts and data as to the causes, the course and the treatment of industrial disturbances; with contributions to be secured from economic scholars, industrial experts and hard-headed men of practical affairs; with the sources at its command of all important industrial news, including judicial decisions and many events directly bearing upon the work of the Civic Federation, and with information freshly gathered as to industrial conditions in other countries, THE REVIEW may be made an educational force of great value.

"The evil that men or organizations do needs no vivifying stimulus. It is the good they do that can with advantage be brought into the light of publicity. That will be one purpose of our periodical. For example, when funerals were picketed in Chicago, the greswome fact was heralded throughout the land. But when a little later in the same city a local union fined one of its members for assaulting a non-union workman and furnished the witnesses to secure his conviction in a criminal court, the incident received only passing local attention and elsewhere was ignored. Again, when a union at Schenectady that had fallen under socialistic influence expelled a member last year because he belonged to the militia, the widely published statement evoked severe and sweeping criticism of an attitude that was ascribed to unionism in general. But when, soon afterward, the annual convention of garment workers by a large majority declared its support of the militia, or when Mr. Gompers in a trenchant article defended the militia, daily journalism took no notice of the facts. The accusation that all labor organizations are opposed to the militia persists even until to-day in the editorial rooms of many journals. Upon the other hand, there are labor papers that convey to their readers the notion that there exist no fair employers, but that all are cruel taskmasters, exacting from downtrodden slaves the last ounce of agonized energy. Whenever a labor organization declares its firm and earnest disapproval of a wrong or opposition to an abuse it will be instructive and elevating for all other unions and for all employers to be

informed of such action. Equally wholesome will it be for all employers and all unions to be informed of any action by individual or associations of employers tending to better conditions in any given industry.

"There is no publication to-day, except the National Civic Federation REVIEW, that attempts to set forth the brighter, the humane and the uplifting aspects of affairs industrial. Nor will it fail to state the truth and to speak condemnation about actions or events that deserve such treatment.

"Moreover, no one can fail to recognize that there is a great and growing public interest in questions involved in the conduct of the great industries of the country, in problems of production and transportation. Trade terms so technical as once to be Greek to the general readers have become familiar and suggest topics about which there is an eager thirst for additional and accurate information. The public has become attentive to the questions suggested by such words and phrases as 'fair wages,' 'shorter hours,' 'industrial organization,' 'the open shop,' 'piece work,' 'blacklists,' 'boycotts,' 'restriction of output,' 'joint trade agreements,' 'minimum wage,' 'the sympathetic strike,' 'integrity of contracts,' 'conciliation and arbitration,' 'recognition of the union.' These are but a few of the topics that will be discussed as occasion arises. Thus it is hoped it will merit the attention and support of a large and growing constituency among the general public as well as among those whose investments or whose occupations create more direct concern in these subjects.

"The Publication Department, in addition to THE REVIEW, is planning to issue a weekly letter, to be furnished free of charge, to a large number of journals that desire to keep their readers informed about the very subjects with which the National Civic Federation is dealing."

Mr. Easley also presented the report of the sub-committee on conciliation on behalf of its chairman, Charles A. Moore. The report was approved.

Upon motion the chairman appointed the following committee to make nominations for officers of the organization for the ensuing year:

Employers—Franklin MacVeagh, Francis L. Robbins and Charles H. Taylor, Jr.

Labor—John Mitchell, Daniel J. Keefe and P. H. Morrissey.

Public—Right Rev. Henry C. Potter, Isaac N. Seligman and V. Everit Macy.

The meeting adjourned for luncheon at the Hoffman House, where its proceedings were continued. Informal and earnest addresses were delivered by Messrs. Fish, Belmont, MacVeagh, Phipps, Mitchell, Tobin and Morrissey. Mr. Moore acted as chairman, in his capacity as president of the New York Civic Federation, which tendered the luncheon. During these proceedings the nominating committee reported the following list of officers, who were unanimously elected for the ensuing year:

First Vice-President—Samuel Gompers.

Second Vice-President—Oscar S. Straus.

Treasurer—Cornelius N. Bliss.

Chairman Executive Committee—Henry Phipps.

Chairman Finance Committee—August Belmont.

Chairman Welfare Committee—H. H. Vreeland.

Chairman Conciliation Committee—Charles A. Moore.

Chairman Executive Council—Ralph M. Easley.

Secretary—S. B. Donnelly.

The committee on nominations was continued, with power to act upon the selection of a President.

The following is the text of a provision relating to wages upon government aided railway construction, contained in an act passed at the last session of the Dominion Parliament: "In every case in which the Parliament of Canada votes financial aid by way of subsidy or guarantee toward the cost of railway construction, all mechanics, laborers or other persons who perform labor in such construction shall be paid such wages as are generally accepted as current for competent workmen in the district in which the work is being performed, and if there is no current rate in the district, then a fair and reasonable rate, and in the event of a dispute arising as to what is the current or fair and reasonable rate, it shall be determined by the minister, whose decision shall be final."

HOW THE WELFARE DEPARTMENT WAS ORGANIZED.

STRIKING PICTURES PRESENTED AT ITS FIRST CONFERENCE OF THE ACTUAL OPERATION OF WELFARE WORK IN SEVERAL TYPICAL INDUSTRIES.

The Welfare Department of the National Civic Federation is in successful operation. The following account of its inauguration and its work is an extract from the report of the Chairman of the Executive Council, presented at the meeting of the Executive Committee on May 6:

"In accordance with the decision of the National Executive Committee that its efforts to better the relations between employers and employees would be materially aided by the promotion of what is called 'Welfare Work,' President Hanna appointed, January 6, a committee of prominent employers to organize the Welfare Department.

"The first meeting of the committee was held January 29 at the Waldorf, New York City, and was largely attended by these representative employers from the various sections of the country. Honorable Oscar S. Straus, on behalf of President Hanna, and Bishop Potter, on behalf of the Executive Committee, welcomed the members and congratulated the Civic Federation on having such a representative and influential committee to handle this important part of the work. Mr. H. H. Vreeland was requested to act as chairman. The last act of President Hanna in connection with the work of the National Civic Federation was the sending of the following telegram to us at this meeting:

Washington, D. C., January 29, 1904.

R. M. Easley, 281 Fourth Ave., New York City.

I should like to attend the Employees' Welfare Committee meeting this morning, but that, of course, is impossible. I appreciate the opportunity for good in that organization, and hope for beneficial results. Please express my best wishes to the members.

M. A. HANNA.

"It developed that it was the first time that employers who are especially interested in thus bettering the conditions of their employees had been brought together, and, instead of organizing or attempting to transact any business, the entire day, from 10:30 a. m. to 5 p. m., was spent in a general discussion of methods of installing and maintaining welfare work, and in a frank exchange of experiences. An adjournment was taken until February 24, a special committee being authorized to present a plan of work for consideration at that time.

"At the adjourned meeting a plan of work was adopted, which provides for:

1. Educating the public as to the real meaning and value of welfare work.
2. Interesting employers not giving such consideration to the welfare of their employees; and
3. The maintaining of a central bureau to provide inquiring employers with information as to especial successes and failures in welfare work and their causes.

"The plan also provides for a membership of both employers who are, and who are not, promoting welfare work, the idea being that the latter may become interested in undertaking such efforts, in this way. We have, therefore, extended an invitation to a number of employers to accept membership in this department, and have more than one hundred acceptances at the present time.

"Three different kinds of conferences have been provided for:

1. Conferences of employers for the discussion of the following and kindred subjects:
 - General policy to be pursued in installing and maintaining welfare work.
 - Housing of Labor (City and Country Mills).
 - Recreation.
 - Educational Efforts.
 - Sanitary Work Rooms.
 - Hospital Service.
 - Wash Rooms and Baths.
 - The Luncheon Room.
2. Public Conferences.
3. Conferences of Welfare Managers.

"The members of the Executive Committee determined that it would be important to hold a conference of welfare managers at an early time. Employers were requested to send to such a conference, which was held at the Waldorf, March 16, their representatives (who in

a few instances have been called "Social Secretaries") engaged in any effort to better the conditions of their employees. As many employers personally accepted this invitation, it was not practicable to confine the meeting to the welfare managers. At this conference descriptive talks on the work in different industries, i. e., manufacturing, the retail store, and mining, were made at the morning session. The afternoon was devoted to short talks and a general discussion which was interesting and developed much valuable information. The proceedings will be issued shortly."

A clear idea of some of the specific things that have been done to better the condition of wage-earners may be gained from the following summarized extracts from addresses delivered at this conference. These extracts are descriptive of welfare work in a mill town, in a

H. H. VREELAND,

retail store, in a mining community, in the operation of a street railway, and in a small factory. The names of the speakers and of their establishments are not essential to an understanding of the condensed quotations:

IN A MILL TOWN.

It was our desire to improve the conditions of the employees, to teach them to help themselves, to direct them through a library to a higher education and to show them how to appreciate the higher ideals of life.

Naturally, the first place that we looked after was the mill where the employees spend most of their active hours. Ample light was provided so as to prevent dark corners and the depression of gloom. The best sanitary appliances were put in, all toilet rooms were finished with asphalt floors, the walls were lined with white enameled brick, all plumbing being exposed. One of the best things we ever did for our men was to provide baths. The only trouble is, we have not enough of them.

A modern system of ventilation was installed, insuring warm air in winter, cool air in summer, and fresh air at all times, and dissipating the dust and fumes incident to the industry. Special attention was given to the purity of the water supply. Seats were provided for women operatives which they could use when a little tired, or when the nature of the work permitted. Proper dressing rooms and lockers for the clothing were provided. The environment of the mill was made attractive; muddy roads were macadamized; lawns, shrubbery and vines were planted until all the surroundings became attractive to the eye. These improvements were immediately reflected in the homes of

the employees, who were moved by the impulse of imitation to adorn their grounds.

The company adopted the plan of building houses to be leased to the men at a rental within their means. These houses are set back from the road so that in front there is room for lawns, flower beds and shrubbery. In the rear of the houses there are gardens and hen yards. Aside from such common service as the removal of ashes and garbage the company believes in simply helping the tenants to carry out their individual wishes so that each house and its surroundings express the character of its dwellers.

Upon a hill overlooking the mill and the houses is a reading room. That the library is appreciated and is a benefit is shown by the records of its circulation. It is in charge of a trained librarian and assistant. The success of the library is largely due to the fact that the men are provided with catalogues to take to their homes, where they may make selections at their leisure, and that they are also supplied with literature in their native tongues.

In an equally attractive situation is a building used for a dining hall and for social gatherings. The use of the dining room grew from merely furnishing hot coffee and tea, to providing substantial dinners costing from ten to twelve cents, with some simple luxuries obtainable for a few cents more. The patrons must wait upon themselves. There is a separate dining room for the women. This hall is used by the Women's Social Club, and for concerts, dances, lectures and other entertainments.

Near the mill is an industrial school building, in which there is a kindergarten, a room for manual training, a cooking school, and a place for teaching mechanical drawing.

A band was organized, the company furnishing rooms to practice in, and loaning money to buy instruments. This band plays at baseball games and at our Labor Day show, and gives concerts in the winter. There is an athletic field where our ball club has a game every Saturday afternoon with a visiting nine.

The location of our mill has made it possible for us to substitute a seashore bathing beach for the swimming pool provided by other manufacturers as an annex to their gymnasiums.

We make of Labor Day a fair of competitive exhibits and of athletic sports. The fair requires a large tent to shelter the exhibits of vegetables, fruit, fancy work, flowers, school work, cooking and poultry. The company offers prizes for these and also for the vegetable and flower gardens that are the best kept in summer.

We have a hospital for the care of those injured in the mill, or by outside accident. Trained nurses are in charge. Much of their time is given to visits to employees and in reporting to the company desirable sanitary improvements in the houses. These nurses are provided with a house for their own use. Their work has proved most important in improving health and arresting the spread of contagious diseases in epidemics, as well as bringing to the attention of the company any particular cases of need.

There are several voluntary benefit associations among the employees.

We have taken up welfare work by degrees, so that it has been a gradual development. Its success has been due largely to the fact that one person has given his entire time to the supervision of the work—a study of the needs of the especial type of employees, the solving of the problems and carrying out of the plans determined upon. A vital point frequently overlooked is that the officials in large concerns are too much engaged to give the time necessary to successfully manage welfare work without the assistance of such an agent. It is well in developing the problem to bring the peo-

ple, through committees, as much as possible into the work; of course, how much depends entirely upon local conditions. As this can be done, it will gain their confidence and allay question of motives.

The problem that we have to deal with is that of the mill town. Naturally, when welfare work is introduced by the manufacturer in a city mill somewhat different lines must be pursued.

IN A DEPARTMENT STORE.

It was my first duty as welfare manager to acquire a thoroughly comprehensive idea of the store organization. In doing this I became acquainted with many employes and gained their confidence. After this I became the intermediary in complaints and grievances, and in questions of both promotion and discipline. The two purposes for which I was engaged were to insure just treatment and to improve the efficiency of employes.

Complaints have varied from unhygienic conditions to such fundamental things as wages and hours. My function is judicial. For its exercise it is essential that I have the privilege of entering into any question that may arise in the house. I work with the superintendent, who is the one in power; but he has learned to hear facts presented to him from every proper source. Thus it has come to pass that his authority is not despotic, but intelligently informed in its exercise.

We have an association whose purposes are the improvement of unsatisfactory conditions in the store; the insurance against illness and death, and the arbitration of disagreements that have been appealed from initial decision. Members of the firm are members of the association, having the same voting power as any employe. The association may vote upon the store rules that affect the efficiency of the employes. A committee has power to award prizes for suggestions. There is an arbitration committee to which employes have the privilege of appeal from dismissal and for the adjustment of disputes. Members of this committee are elected by secret ballot from the employes on different floors. The firm has left this committee entirely alone and has accepted its judgments. A small majority of the decisions have been in favor of employes. The committee has proved able to adjust disputes as to discipline with less friction than has been developed by any other method that the firm has tried.

The clubhouse adjoining the store contains a luncheon room, social room, a library, and an emergency sick-room. Welfare work in a retail store also includes provision for visiting the sick, a savings bank, and classes for instruction in sales work and in preliminary branches for cash boys.

A STREET RAILWAY SYSTEM.

Labor organizations and secret beneficial associations reach only the individual. They do not get beyond into the home and family. Herein lies the peculiar opportunity for welfare work among street railway employes in a large city. Those under my direction number some fifteen thousand. Our first point is to make every man understand that no one can discharge him but himself. His continued employment is assured so long as he is progressive and faithful. Then we have a voluntary organization to provide insurance against sickness and death. This makes it certain that in case of death a man's family will be tided over its period of trouble. It is characteristic of the wife of the average laboring man that she will always land on her feet if given time.

Success in welfare work depends almost entirely upon the active interest taken in it by the men in control of the business. For instance, the president of a Western railroad told me that his attempts at welfare work had failed. I learned that he had never attended a meeting of the organization of his men since the first. I find it necessary to attend every meeting. I am always on the platform to speak to the men. All the officers of the company are interested in the work. In our clubroom you will find on one bench motormen, conductors and a vice-president; upon another bench engineers, machinists and a superintendent of transportation, or the head of the electrical department. In short, every one of our managers is in touch with the men.

We make the men understand that there is no charity connected with our organization. The company is pledged to supply rooms, light, heat and furniture; to pay the secretary and to assume generally all expense of operation, so that all money paid by employes will be returned to them in sick benefits, and death benefits, or will remain in the reserve fund. Every additional feature of the association's work has been provided by the men themselves. It elects its own officers, who control all of its affairs, the president of the company being ex-officio president of the association.

A large portion of the thousands of men live in boarding houses. They would have no place to go in the evening for warmth and companionship except the saloons or the pool rooms were it not for our club house. Our club rooms are filled every night in the week. They contain a library, pool tables and other games. The library is successful because of its use by the families of the men. The management caused it to be understood that catalogues should go into the house of every employe who had a family. We wished the wives and daughters and sons of our employes to use these books. As a result, the library is a family affair. It was turned over at least twenty-five times in its first winter. It is understood that if any man has a son or a daughter working for an education and special text books or books of reference are needed, it is only necessary for the employe to apply to the librarian and the books are bought and put in the library.

The company finds value in this welfare work, because it enlists in the company's business the personal interest of the individual employe and of his family as well.

Through the association any case of trouble or want in the families of the employes is promptly brought to my knowledge. It is the duty of every foreman to report every case of illness among the men under his charge or in their families. The company's physician reports periodically to me as to the condition of the families. If in any house there is insufficient food or fuel, the doctor has authority to relieve the difficulty. Through this association I know more of the men by name than the average railroad man who has only a thousand. I have never allowed an outsider to address our meetings, except upon a technical subject, unless I knew in advance every word he was going to say. The reason for this is that some one who didn't understand just what we were trying to accomplish might inadvertently work mischief. We have a school for the instruction of our new employes.

IN A MINING COMMUNITY.

Our welfare work is elementary. It is in the mining district of Lake Superior. Our miners are of all nationalities. The Cornishman will not mix with the Swede, nor the Frenchman with the Finlander; hence we have not attempted a clubhouse or social work. What we have done has been in the way of housing. Our employes are encouraged to buy their own houses. We do not lend them money, but we sell them land, allowing long time payments. We rent as few houses as we possibly can.

We offer prizes for well kept premises. The results are extremely satisfactory. The improvement of the town has been marked. Men will not only have vegetable gardens and plant vines and flowers, but the love of improvement thus stimulated leads them to paint their houses and fix their places up generally.

Our benefit fund is taken arbitrarily by the company from the wages of the men. The company, of course, contributes to this fund. It is used to maintain a hospital and corps of physicians. This arbitrary method is peculiar to us, and is warranted only by the reason that the employes are foreigners and accustomed to having things of this nature done for them by those in authority.

The work of our miners is dirty, and it is therefore impossible for them to wear their mining clothes on the street. Until recently very little attention had been given to comfort and cleanliness in the buildings provided for the miners to change their clothes. Our new "changing-house," as it is called, is a fireproof structure containing, among other things, shower baths, an ade-

quate supply of wash troughs containing individual enameled iron wash basins, with hot and cold water; drying racks for the mining clothes, lockers, an office for the shift bosses, an emergency hospital room, with all appliances, and a room in which the men may eat their luncheons.

A SMALL MANUFACTURER.

We have heard about welfare work in large establishments and communities. I would say a word about its operation in a smaller concern. We started on a small scale, and our welfare work grew with the business. In the beginning the main feature and, indeed, the successful foundation of our work lay in the meeting of the foremen with the men who actively manage the business. In this way we not only learned to work together harmoniously, which has been of vital importance to us, but the needs of the employes were brought to our attention; and these meetings led to the establishment of a luncheon room, better washrooms, a men's club, which is of great educational value; a library, a rest room for the women employes, an emergency sick-room, and other features.

The following are the officers of the Welfare Department:

Chairman, H. H. Vreeland; first vice-chairman, Cyrus H. McCormick; second vice-chairman, John H. Patterson; third vice-chairman, Edward A. Filene; treasurer, Cornelius N. Bliss.

Executive Committee.—George W. Brown (Treasurer United Shoe Machinery Company), Boston, Mass.; G. E. Emmons (Manager Schenectady Works General Electric Co.), Schenectady, N. Y.; Edward A. Filene (Treasurer Wm. Filene's Sons Co.), Boston, Mass.; W. C. Fish (Manager Lynn Works General Electric Co.), West Lynn, Mass.; G. Watson French (President Bettendorf Metal Wheel Co.), Davenport, Iowa; Orrin S. Goan (Manager National Biscuit Co.), New York City; Wm. C. Greene (Treasurer Peace Dale Manufacturing Company), Peace Dale, R. I.; J. B. Greenhut (President Siegel-Cooper Co.), New York City; F. R. Hazard (President The Solvay Process Co.), Syracuse, N. Y.; H. J. Heinz (President H. J. Heinz Co.), Pittsburgh, Pa.; Edwin M. Herr (Vice-President Westinghouse Air Brake Co.), Wilmerding, Pa.; Charles W. Hubbard (Treasurer Ludlow Manufacturing Associates), Boston, Mass.; Charles H. Hulburd (President Elgin National Watch Co.), Chicago, Ill.; John S. Huyler (President, Huyler's), New York City; M. E. Ingalls (President C. C. & St. L. Ry. Co.), Cincinnati, Ohio; John F. P. Lawton (Assistant Treasurer and Secretary Gorham Mfg. Co. of Rhode Island), Providence, R. I.; Warner M. Leeds (Vice-President American Sheet and Tin Plate Co.), Pittsburgh, Pa.; Arthur T. Lyman (Treasurer The Boston Manufacturing Co.), Boston, Mass.; W. G. Mather (President Cleveland Cliffs Iron Co.), Cleveland, Ohio; Cyrus H. McCormick (President International Harvester Co.), Chicago, Ill.; L. A. Osborne (Vice-President Westinghouse Electric and Manufacturing Co.), East Pittsburgh, Pa.; John H. Patterson (President National Cash Register Co.), Dayton, Ohio; H. D. Perky (President Natural Food Co.), Niagara Falls, N. Y.; A. J. Pitkin (Vice-President American Locomotive Co.), Schenectady, N. Y.; Ellison A. Smyth (President Pelzer Manufacturing Company), Pelzer, S. C.; Nathan Straus (R. H. Macy & Co.), New York City; H. H. Vreeland (President New York City Railway Co.), New York City; Ralph M. Easley (Chairman Executive Council, National Civic Federation), New York City.

On April 7 Chicago Stereotypers' Union No. 4 entered into agreements with the *Chicago Daily News*, *Record-Herald*, *Journal* and *Post*. A contract was signed in January with the *Tribune*. No. 4 now has agreements with all the Chicago daily newspapers published in English. Thus end the differences which have existed since 1898. Ex-President Colbert, of No. 16, acted as the representative of the International Typographical Union, and his work is highly commended. President Freel and Vice-President Straube represented the International Stereotypers' and Electrotypers' Union in the negotiations. The famous Chicago situation is now a thing of the past. Its conclusion demonstrates the wisdom of the policy of the International Typographical Union, and assures the stereotypers of an era of peace and prosperity in that locality.—*Typographical Journal*.

The Chicago Packing Trades Council, of which the Amalgamated Meat Cutters and Butcher Workmen is a part, has adopted these resolutions:

Whereas, Organized labor has been publicly criticised because some unions in times of difficulty with employers have been reported as resorting to violence; and

Whereas, The American labor movement can best protect and advance the interest of the workers by advocating and insisting upon a strict observance of the law by all its members; therefore, be it

Resolved, That the Packing Trades Council of Chicago and vicinity deprecates any methods of violence by any member or members of organized labor.

A NOTABLE CASE OF CONCILIATION THROUGH CONFERENCE.

INCIDENTS DRAMATIC, ENTERTAINING AND INSTRUCTIVE IN NEGOTIATIONS BETWEEN EMPLOYING LITHOGRAPHERS AND ALLIED UNIONS, UNDER THE AUSPICES OF THE CIVIC FEDERATION.

The history of the negotiations between the organizations of the employes and the employers in the Lithographers' Association affords an illustrative example of the methods of conciliation as employed by the Civic Federation.

JAMES W. PARKER.

The organized unions and the employers' association contain 95 per cent of all the labor and capital employed and invested in this industry in the United States. The labor organizations involved in the dispute in this trade extended throughout the country. The employers are formed into a National Lithographers' Association, with divisions of the East, West and Pacific. The negotiations between these two forces covered, altogether, a period lasting from October, 1903, to April, 1904. They secured one satisfactory adjustment in October, and another settlement in April. They involved the exercise of the utmost tact and patience; a gradual process of education, in which each side learned from the other; a constant avoidance of all appearance of interference from an outside source, coupled with a persistent effort to bring the contending parties face to face, and the necessity of creating a mutual confidence in the good faith of both parties. The several steps in these prolonged negotiations numbered nearly a score. Not only did they cover months, but they consumed the time and effort of disinterested persons, as well as of the representatives on both sides, to the extent that the sessions more than once were prolonged to the point of physical and mental exhaustion. The end of the long story may be told at the outset. It was the signing by both sides of a trade agreement, which included a provision for arbitration and a method for securing compliance with the final decision of that tribunal.

The peculiarity of this trade dispute lies in the fact that it originated with the desire of the organized employers to create a joint arbitration board for the settlement of all disputes and grievances, without strikes or lockouts. Upon their side, the organized employes declined to submit themselves to unrestricted arbitration, holding that to do so would be to surrender their right to strike, which was their chief weapon of self-defense, and that there were certain questions which in no event could they consent consistently to submit to arbitration. Instead of agreeing to the employers' proposition, the employes advanced several demands, including a half hour for meals at one and a half pay when on work overtime; a minimum wage, and a half holiday.

The two parties were thus apparently at a deadlock, when the conciliation committee of the New York Civic Federation was requested by an officer of the employers' association to use its good offices. Accordingly, the conciliation committee sent an invitation to the Lithographers' Association and to the Alliance of Unions to meet on Friday, October 23, 1903, to endeavor to reach a settlement "on matters at issue in the trade." This initial invitation was accepted by the Lithographers' Association, but was declined by the unions.

A sub-committee, however, persuaded the committee of the unions to agree to a conference. This first meeting of the two sides lasted four hours, and adopted resolutions advising that the employers concede the half hour for a meal in overtime at the rate of one and a half pay; that there be no strike; that

C. H. CANDLER.

a joint committee be appointed of five members from each organization, with power to draw a complete agreement, to be reported to a joint conference committee.

The two committees met on October 27, but here arose a question that was to reappear many times during the subsequent negotiations. This was the authority of the committee representing the unions to act for their organizations. This point was discussed again and again. It reminded one of the care that is taken in the negotiations of international treaties, which must begin with the interchange of the credentials of envoys representing the governments concerned. In reality, these were four parlors between the representatives of two contending bodies who had been induced to strive for peace rather than for war, and to work jointly for the formulation of a treaty. It was natural that each should demand that the other side demonstrate its authority to act for the organization, or organizations, that it claimed to represent.

Upon this very issue the first meeting of the joint committee resulted in failure. Again conciliation was

EMERSON McMILLIN.

brought into play, and after a conference with Mr. Marcus M. Marks, acting chairman of the conciliation committee, the employers' committee consented to another meeting with the committee of the unions on October 28. At this second meeting the question of authority was again raised, and it was agreed that the committee of the union should secure full power on the next evening from a special meeting of their organization.

This was done, and on October 30 the two committees, now with authority to act, met at the rooms of the Civic Federation.

This joint meeting, after six hours of discussion, agreed that there should be formed a joint commission empowered to settle all disputes, to be composed of an equal number of members, to be elected by the two bodies as each grievance should arise, its decisions to be subject to ratification by both associations; in case of disagreement by both sides, the question at issue to be decided by arbitration; the decisions of the arbiters to be final and binding. It was proposed that both associations should pledge themselves to "co-operate and use their entire joint influence and power to secure compliance with the decisions of this tribunal." The proposed agreement also included a pledge that there should be no strike or lockout during the period when the settlement of any question was pending.

In accordance with this agreement the two committees met in conference on the following day, took up the

several demands and grievances presented by both sides and reached a settlement satisfactory to them all.

It will be observed that at this stage of the case there had been developed a device to insure the enforcement of any decision reached by arbitrators. This is implied in the pledge that both associations would "co-operate and use their entire joint influence and power" to sustain the decision. It is important to emphasize this point, because it reappears in the final agreement, perfected months afterward, and now in force in this industry. Thus ends the first chapter of this dispute.

Its second series of events was caused by the renewal of the desire of the Lithographers' Association for an arbitration agreement. This desire, before expressed as a request, was announced by the association on February 9, 1904, in the form of an ultimatum, that unless an arbitration agreement, to be binding for one year, should be signed by March 15 by the unions represented in the trade in the United States, the employers on that date would proceed to deal with their employes individually, and would no longer recognize the unions. The officers of the unions had refused to enter into such an

HENRY WHITE.

agreement on the ground that it could not be brought before the national bodies before March 15, while the constitution of one of the largest of their national organizations forbade its local unions to enter into any arbitration agreement whatever. It was claimed that this prohibition could not be removed before the national convention of that organization in July. The union representatives offered to sign an agreement to secure stable conditions in the trade for one year, without reference to arbitration. The employers refused at this time to concede a moment's delay beyond March 15.

On February 13 tension was increased by the Lithographers' Association sending circulars to individual employes throughout the country notifying them of the ultimatum. The union officers claimed that this act was a breach of faith. The employing lithographers replied that their circular was only a statement of fact, which they feared the union leaders would not transmit to their membership. Thus an atmosphere of mutual distrust was created, which required much effort to dissipate.

At this juncture the conciliation committee of the Civic Federation was called into a number of conferences with each side. The employers demanded an agreement which should exclude no question whatever from arbitration. They alleged that the individual members of the unions throughout the country were eager to have this demand granted. On the labor side the several organizations involved were the Poster Artists' Association of America, the Lithographers' International Protection and Beneficial Association of the United States and Canada, the Lithographic Artists, Engravers and Designers' League of America, the International Protection Association of Lithographic Apprentices and Press Feeders of the United States and Canada, the Lithographic Stone and Plate Repairers' Association of the United States and Canada, and Local Union No. 19, Paper Cutters of New York and vicinity.

The officers of these organizations declared unalterable opposition to compulsory arbitration in the form of a self-perpetuating agreement, which they claimed was involved in the demand of the employers.

On March 4 the conciliation committee made some progress in a meeting at the rooms of the Civic Federation in urging upon union representatives the advantage of a fair arbitration agreement. On the following day the presidents of the national unions continued to insist to the conciliation committee that the questions of

wages, hours and the closed shop must be excluded from arbitration; but a step had been gained in that the labor representatives no longer insisted that no arbitration agreement of any kind whatever could be reached before March 15, the date named in the employers' ultimatum. On March 12 further progress was made. The conciliation committee had a luncheon in the Fifth Avenue Hotel with the representatives of the employers, and succeeded in persuading them to admit that as the questions of wages and hours, as well as the closed shop, would not in any case be brought to arbitration for a year, these need not be included in their demand for an agreement. The employers finally authorized the conciliation committee to inform the labor side that they would give earnest consideration to an agreement of the kind they indicated, but that they would not promise to exclude the ratio of apprentices from arbitration until after the July convention. On the evening of the same day the labor members of the conciliation committee secured a promise from the presidents of the national organizations that they would propose an agreement of the kind outlined.

On Saturday at 4 p. m. the representatives of the two sides met, the conciliation committee being present. This conference lasted until 2 a. m., resulting in what was then assumed to be a settlement, pending ratification by the unions. Misunderstandings arose, which practically negated what had been done. The lock-out followed on March 15.

This was a condition of open hostility. It was a warfare perhaps secretly deplored by both parties, although both professed their ability to maintain their position indefinitely. Again there were preliminary conferences by members of the conciliation committee with representatives of both sides. Among those who represented the Civic Federation in these conferences, as they had throughout the previous stages of the difficulty, were Lewis B. Schram, Emerson McMillin, Marcus M. Marks, V. E. Macy, J. Alexander Hayden, Samuel B. Donnelly, James P. Archibald, Henry White and William H. Farley. It was finally arranged that conferences should be resumed on April 4. Mr. Emerson McMillin, of the conciliation committee, was chosen as chairman of these conferences, and Robert W. Hawthorne was made secretary. The representatives of the employers at these conferences were C. D. Gray, Charles Wilhelms, J. A. Davis, C. A. Candar, Charles A. Conradis and A. Beverly Smith. The representatives of the employees were J. W. Parker, William A. Coakley, Henry C. Ross, Michael J. Welch, James Pritchard, Matthew H. Smith and Mr. Pettigore. These meetings began at 10 a. m. on Monday, April 4, and from that hour until late on Monday afternoon the time was spent by Mr. McMillin and others in efforts to bring the representatives of the two sides formally into each other's presence. Each side naturally stood upon its dignity, and was reluctant even to seem to be making any overture. Much of this time was devoted to disclaiming a desire to debate various subjects that one side or the other did not wish to acknowledge a willingness to discuss at all. But at last a joint meeting was brought about. Its sessions continued until the following Monday. They usually began at 10 o'clock in the morning, and lasted until 6, 7, 8 or even 10 o'clock at night. Very often, after the formal sessions had adjourned, men on both sides would remain talking over details and moot points until very late at night.

By Friday evening of this week of intense effort all the questions of really essential importance but two had been threshed out and decided. But when Saturday came it was impossible to renew at once the joint sessions. The employees and the employers met in separate rooms. In fact, there were three rooms in use, for the employers were divided into two parties, that consulted separately. All of Saturday afternoon was devoted to persuading each side to agree to hold another joint session on Monday. There were men among both the employers and the employees who declared that the conference was a

waste of time, that peace was impossible, and that the only outcome must be a fight to a finish. In reply to these assertions the argument was patiently and persistently advanced by Chairman McMillin that to break up the conference after a week of effort would be to abandon whatever result had been obtained by a vast amount of work; but would also leave in the air the very questions that must ultimately be brought to a ground of settlement, whether one month or three months hence.

This argument finally prevailed, so that an agreement was reached to meet on Monday. But on Monday again there was required a strong effort to bring the two sides into a joint session. Up to 1 o'clock of that day the outcome was in doubt; but then at last both sides came together. The rest of the afternoon was devoted to a happy and mainly harmonious experience meeting, and the contract was signed at 5.30 p. m.

Throughout these meetings not only was it necessary to be tactful, but sometimes to disregard a strict enforcement of parliamentary rules. Two contracts had been drawn by the two sides as a basis of discussion. There was also a third proposed contract, prepared by a committee of the Civic Federation, many of whose provisions were acceptable to both sides. These three documents were discussed simultaneously. The one prepared on behalf of the Civic Federation and the one prepared on behalf of the employers had been written largely in similar form, and with like subdivision. Whenever a single paragraph was under discussion the meeting was permitted to discuss that paragraph simultaneously, as it appeared in each contract. This method, while perhaps not strictly in order, had the advantage of saving time and of causing each side to feel that its own paragraph had an equal status in the discussion. When the discussion of a single paragraph was concluded, that paragraph in either contract was adopted which had received the least amendment.

Scores of times a speaker of one party would declare, with heat, that if the other party took a certain position it would be useless to remain in the room any longer. The answer of the other side would invariably be that its position had been correctly stated, and that, an agreement being impossible, the meeting might as well come to an end. At such a juncture it became repeatedly the function of Chairman McMillin to say to the wranglers, in effect, "Gentlemen, you are here to agree, not to disagree." He would remind them that if they wanted to fight, the employers might be able to stand it for a certain period, and the employees might be able also to endure the cost of hostilities. But the Chair would also announce that the conference body would not adjourn until a contract had been worked out, ready for the signature of both parties. Then the joint session would resume business. In fact, the representatives of each side seemed glad to find themselves under the guidance of the National Civic Federation. They exhibited great respect for that organization, as well as unlimited confidence in its disinterestedness and its genuine desire to bring about a treaty of peace. It was this feeling that many times restrained some of the conferees from taking their hats and going away.

The intensity of the strain of these long sessions may be appreciated from the fact that on Saturday afternoon, at the end of that week, men were lying about on lounges and on the floor, in a state of physical and mental exhaustion.

Mr. McMillin, the chairman of the conference, says: upon both sides during the sessions of the conference. The representatives of the employees, upon questions of really vital consequence, showed a marked disposition to be fair.

At the same time, they were very stubborn over little matters. This was more fortunate than may appear, for the decisions of the joint meeting as to disputed questions had to be voted upon by the two organizations. It was an advantage to the labor representatives to be able to show to their organization that the employers had made several concessions, where the employees had made one. Upon their side

the employers showed also a willingness to be fair. Several of them displayed a special excellence in debate. They would concede the good points made by the other side, instead of combatting them needlessly. I recall one of the employees who could construct a sentence or build a paragraph in the most clear and forcible way, so as to cover the point in question, and yet to evade a phrase or a word that might have caused trouble. I believe that it would have been difficult for the employers to produce on their side a match for his ingenuity. Several of the employees were strong in debate, including one young man, who at times developed genuine eloquence. These representatives of labor showed themselves to be thoroughly posted upon every point, and were skilled in emphasizing the facts most telling in their favor.

"I recall two incidents that were decidedly amusing. In one paragraph of the contract drawn on behalf of the employees it was provided that the rate of wages should not be 'changed' during the life of the agreement. The employers' contract in the similar clause used the word 'reduced.' Of course, the employees would prefer that word to their own, and vice versa. Each side wanted the word of the other. The word 'reduced' was finally adopted.

"The other amusing incident related to apprentices. It has been the effort of employers to increase the ratio of apprentices. The employees were inclined to concede this, but not to stipulate it in the contract. Their contract embodied a clause permitting the retention by the employers of all with whom they had made written contracts during the lockout. Another provision was that the employers should take back all the union men who had been locked out, and also all who had gone out in sympathy. The employers declared that they would never take back the apprentices who had walked out. Instantly there was a hot fight on this subject. It was necessary for the chairman to point out to both sides that each was opposing a concession which it really desired. That is, the employers were fighting against a possible increase in apprentices, and the employees were fighting for what would result in such increase. In effect, each side was contending for what the other side desired."

CIVIC FEDERATION OF CLEVELAND.

MONTHLY REVIEW

VOL. I. No. 5

NEW YORK, JULY, 1904

TEN CENTS

IS THE CLOSED SHOP ILLEGAL AND CRIMINAL?

THE ILLINOIS DECISION BRINGS FORTH A VALUABLE SYMPOSIUM OF EXPERT OPINIONS
CRITICIZING ITS REASONING AND ITS CONCLUSION.

FRANCIS ADAMS,
P. J., Illinois Appellate Court.

The decision of Judge Adams, of the Appellate Court of the First District of Illinois, rendered on June 6, is in effect that a contract for the exclusive employment of members of a union is in itself illegal and, in Illinois, criminal. If this decision is upheld by the Supreme Court of Illinois, as the expectation of counsel is that it will be, the Adams decision will hold a prominent place in the evolution of the legal status of the closed shop. The decision has attracted general attention among those interested in a question that ranks as a leading issue of the day.

The decision has been widely published in law journals and in the lay press. The portion of its text quoted below is limited as nearly as possible to the one general proposition, enunciated by the Appellate Court, that a contract for a closed shop is per se illegal. The decision discusses at length questions, involved or collateral, such as the exercise of duress, the freedom of contract, labor as property, discrimination between classes of citizens, conspiracy and monopoly.

The Monthly Review has obtained from a number of eminent lawyers and publicists opinions upon the validity and effect of the decisions, which are presented to its readers herewith. The effort was made to confine these opinions to the terms of the decision bearing directly upon the legality of a contract for the closed shop; but the other questions to which reference has been made are incidentally discussed by some of the writers.

The text of that portion of Judge Adams' decision which bears directly upon the question of the closed shop follows:

Judge Adams' Decision.

The purpose of the strike by complainant's employes and their prosecution of it, as described, was to compel the complainant to execute the agreements referred to and made a part of the bill. The drafts of agreements, three in number, purport to be with the different unions whose members were in complainant's employ. The draft of agreement with the Metal Polishers, Buffers, Platers, Brass Moulders, and Brass Workers' International Union of North America, International Union of Steam Engineers and International Brotherhood of Stationary Firemen contains the following:

Article 1. The party of the first part hereby agrees to employ none but members of the aforesaid organizations or those who carry the regular working card of the said organizations, provided the various crafts will furnish such competent help as may be required by the party of the first part within twenty-four hours after notification.

LOUIS D. BRANDEIS,
Lawyer and Publicist, Boston.

Art. VII. There shall be a steward for each craft in each factory appointed by the organization, whose duty it shall be to see that the men working in said factory belong to the organizations.

Art. VIII. It is hereby agreed by the party of the first part that the business agent of the party of the second part shall have the privilege of interviewing any member of the party of the second part in the offices of the party of the first part during business hours.

FREDERICK H. COOKE,
Lawyer and Author, New York.

Art. X. A sympathetic strike to protect union principles shall not be considered a violation of this agreement.

Art. XI. All the apprentices shall belong to the union and carry the working card of the organization.

Art. XII. The number of apprentices not to exceed one for ten men or less of the different crafts.

That the purpose of the strike was to compel the execution of the drafts of agreement is clear. It is averred in the sworn bill and deposed to in the affidavits of De Wolf, complainant's president; Kellogg, its secretary and treasurer, and Edwards, its superintendent, that business agents of the different unions called on complainant and insisted on its executing the agreements and that, when complainant's president refused, on the ground that the proposed agreements were unreasonable, it was threatened by one of said business agents that unless complainant would sign the agreements a strike would be called and that said business agents called a strike, in response to which about 500 of complainant's employes quit its employ. Appellant's counsel admit in their brief the purpose of the strike is to "bring about the execution of the contracts," and at least three of the appellants so admit in their answers. It is unlawful to compel one to execute any contract. A contract executed under duress is voidable, and duress is present where a party "is constrained, under circumstances which deprive him of the exercise of free will, to agree or to perform the act sought to be avoided."

Duress exists when a person is induced to perform an act to avoid a threatened and impending calamity. Especially was the purpose to compel complainant to execute the agreements in question an unlawful purpose. Article I. of the agreement strikes at the right of contract and provides that complainant shall employ none but members of the several unions, thus discriminating in favor of one class of men and excluding all others. In *Matthews vs. The People* (202 Ill., 389), the court, discussing the constitutionality of the free employment agency act, says (page 401): "An employer whose workmen have left him and gone on a strike, especially when they have done so without any justifiable cause, is entitled to contract with other laborers or workmen to fill the places of those who have left him. Any workman seeking work has a right to make a contract with such employer to work for him in the place of any one of the men who have left him to go out upon a strike. Therefore the prohibition contained in section 8 strikes at right of contract, both on the part of the laborer and of the employer. It is now well settled that the privilege of contracting is both a liberty and a property right. Liberty includes the right to make and enforce contracts, because the right to make and enforce contracts is included in the right to acquire property. Labor is property. To deprive the laborer and the employer of this right to contract with one another is to violate section 2 of Article II. of the Constitution of Illinois, which provides that 'no person shall be deprived of life, liberty or property without due process of law.' It is equally a violation of the Fifth and Fourteenth Amendments of the Constitution of the United States. The provision embodied in section 8 'is a discrimination between different classes of citizens founded on no justifiable ground and an attempt to exercise legislative power in behalf of certain classes and against other classes, whether laborers seeking work or employers. It falls under the condemnation of the Constitution.'"

The agreements in question would, if executed, tend to create a monopoly in favor of the members of the different unions, to the exclusion of workmen not members of such unions, and are, in this respect, unlawful. Contracts tending to create a monopoly are void.

The Legislature of the State cannot create a monopoly.

The purpose of the strikers is in violation of the criminal code, which provides as follows:

Section 158. If any two or more persons shall combine for the purpose of depriving the owner or possessor of property of its lawful use and management, or of preventing, by threats, suggestions of danger, or by any unlawful means, any person from being employed by or obtaining employment from any such owner or possessor of property, on such terms as the parties concerned may agree upon, such persons so offending shall be fined not exceeding \$500 or confined in the county jail not exceeding six months.

Sec. 159. If any person shall, by threat, intimidation or unlawful interference, seek to prevent any other person from working or from obtaining work at any lawful business, on any terms that he may see fit, such person so offending may be fined not exceeding \$200.

Not only was the purpose of the strike unlawful, but the means used to achieve the unlawful purpose were unlawful. The means used were the acts heretofore mentioned, and thereby injury to the complainant's business. The appellants and their associates intended to stop the business of the complainant so far as they possibly could, and the evidence shows that they did stop it in great part to complainant's injury. The following is contained in the brief of appellant's counsel, which we quote as illustrative of their view of the cause: "How do picketing, patrolling, persuading, or even slugging affect property rights, except in the most fantastic sense? Injury to business has no independent existence whatever, because business has no tangible existence to be injured in the true and unperverted sense."

In the case of the Union Pacific Railway Company vs. Rue, cited by counsel for appellants, the court says: "And that one's business is his or its property is likewise elementary and is conceded by all."

A man's business is his property. "The freedom of business action lies at the foundation of all commercial and industrial enterprises."

We know of no well considered case, or, indeed, of any case, holding that a combination of persons to injure the business of another is not unlawful. That the appellants, and others associated with them, acted in concert, in unlawfully endeavoring to injure, and, in fact, injuring complainant's business for an unlawful purpose, is fully sustained by the evidence. They conspired, breathed together, to effect the unlawful purpose, and by overt acts did all they possibly could to that end. It is not necessary to approve an express agreement between the appellants and those associated with them. It may be proved by circumstantial evidence.

Each conspirator is responsible for the acts and declarations of every other conspirator in furtherance of the common purpose. The conspiracy originated simultaneously with the calling of the strike and continued until the filing of the last petition, July 14, 1902. It was a single conspiracy. And the court, on the hearing of each of the second and third petitions, did not err in hearing the prior evidence. The evidence was competent as tracing and showing the character of the conspiracy. It is an indispensable condition of the enjoyment by each citizen of the liberty and rights guaranteed by the Constitution and laws that he shall respect and not unlawfully infringe upon the liberty or rights of any other citizen. This cannot be done with impunity.

LEVY MAYER,

Of Moran, Mayer & Meyer, Lawyers, Chicago:

The opinion of the Appellate Court is a thorough and rugged review, both upon principle and authority, of one of the most important questions that have ever confronted the employer. It is the first opinion rendered in this State upon the question of the legality of a contract by which the employer agrees not to employ non-union labor.

All other economic and legal questions aside, it now becomes in this State a complete answer to the demand of the closed shop that the law stamps such an arrangement as a criminal conspiracy. It is elementary that the crime of conspiracy consists of a combination of two or more persons to effect an illegal purpose. It has been asserted over and over again by those advocating the closed shop that an agreement to employ only union labor is perfectly legal and binding.

The courts have frequently heretofore held illegal an agreement among members of an association to withdraw their patronage from any one who sold to one who was not a member of the association or an agreement which permitted members of an association to make purchases only from such as sell exclusively to members of the association. I have never been able to appreciate the distinctions which some courts have endeavored to make between cases of the kind I have indicated, and cases where the right to employ non-union labor was involved. There is no doubt that persons may combine for legitimate purposes and that an individual may refuse to deal with any particular person or class of persons and base such refusal upon mere whim or caprice, but it has been my opinion, and I am more than gratified to find it sustained by the appellate court, that a number of persons can not combine with the object of compelling the adoption of a contract which prohibits the employer from employing non-union labor.

If such a contract is entered into it is illegal, and under the decision of the appellate court constitutes a criminal conspiracy, to which not only the union but the employer becomes a party and for which not only the employee but the employer is subject to fine or imprisonment in the penitentiary, or both, under our criminal statutes. There are a vast number of manufacturing concerns in this

State that have written contracts with labor unions which prohibit the employment of non-union labor. Under this decision of the Appellate Court many hundreds, if not thousands, of employers, as well as many thousands of employees, have thus deliberately become parties to a general conspiracy of which the contracts furnish the written and unanswerable proof. Where such arrangements exist the crime can not be wiped out by the cancellation of the contracts, but a continued recognition of the binding force of such contracts, in the light of the recent decision of the appellate court, may create trouble of a kind little dreamed of by those who have permitted themselves to be forced or lulled into them.

The fact that laborers have the right to refuse to work for a man who does not employ union labor, or in order to better their condition or advance their wages, does not authorize the making of a contract under which the employer is compelled to employ only union labor and to discharge non-union labor. The rights of the employer and employee are, and should be, synonymous, but employees can not, by combination or union, without committing the crime of conspiracy, force employers to agree to employ only union labor. When employers do become parties to such an agreement they are equally guilty of conspiracy.

The opinion of the appellate court should be studied at once by every employer of labor in this State, and when the employer awakes to the situation that he is a party to a criminal conspiracy the floodgates will open and non-union labor will, I think, receive the protection that all of the injunctions and processes of the courts have heretofore been unable to give them.

LOUIS D. BRANDEIS,

Of Brandeis, Dunbar & Nutter, Lawyers, Boston:

The decision in the Kellogg Switchboard & Supply Co. case is merely an application of the well established and sound rule that picketing attended by intimidation and coercion is unlawful and will be enjoined. The opinion, however, contains an elaborate dictum which purports to lay down a rule that is both novel and unsound, namely, that a strike, though conducted in a lawful manner, is illegal if its purpose is to secure an agreement for the employment of union men exclusively. The reasoning of the court is not clear. The conclusions stated appear to rest upon the assumption that an effort to secure an agreement to employ exclusively one class of workmen is unlawful on four grounds:

First. As interfering with the employer's "right of contract."

Second. As unjustly discriminating in favor of one class and thereby interfering with the workman's "right to work."

Third. As tending to create a monopoly.

Fourth. As contravening the Illinois statute prohibiting combinations "for the purpose of depriving the owner or possessor of property of its lawful use and management."

None of these positions seems to me tenable.

As to the first ground: It does not interfere with the employer's right of contract to induce him to enter into a certain contract. Every contract which any person enters into interferes in some way with his future freedom of contract of other action. That is the very purpose of entering into a contract. The "right of contract" is the right to restrict one's freedom of action. This sacred right of contract is limited only by the requirements of public policy as expressed either in rules of the common law or of statutory prohibition.

The privilege for which employers have most strenuously contended in the past is the right to employ, that is to contract with, whom they please, —union or non-union men. The employer exercises this privilege when he elects from day to day to employ union men. No sufficient reason suggests itself why he should not be permitted to agree in advance for a limited time, or until further notice, he will employ only union men.

If the effort of unions to secure from an employer

such an agreement should be held unlawful, it will not be because the employer's right of free contract is thereby interfered with, but because some paramount consideration of the public good requires that the right to free contract be in this respect abridged.

As to the second ground: It is not an unjust discrimination against certain workmen, or an interference with their right to work, for a private employer to employ only persons of a certain class. Nor does an agreement to make his selection on such lines, however capricious or unreasonable, interfere with any one's rights. A discrimination between two classes of workmen cannot be unjust unless there is a right not to be discriminated against, in other words, a right to equality of treatment. So far as relates to private employment, there is no such right. The right to work for a private employer is merely the right to be allowed to work if one can find a willing employer.

In the case of public employment the case is entirely different. The government must be run for the equal benefit of all. Every citizen has an equal right to the opportunity of being selected to serve the public in any capacity, and to receive such compensation as the public pays. Any discrimination in public employment in favor of one class of persons, for instance, union men, either by statute or ordinance or practice, is clearly illegal.

If the effort to secure an agreement to employ union men only is held to be unlawful, it will not be because any right to work now known to the law is thereby interfered with.

As to the third ground: An agreement to employ union men only undoubtedly tends in some degree to a monopoly, but the tendency ordinarily would be very slight and remote. It certainly is not the law that every contract which tends however slightly towards the creation of a monopoly is unlawful. If it were, no large manufacturer could contract to increase his plant, or contract for an exclusive right to a patent which would cheapen production, for such a course tends inevitably towards securing a larger share of the market, thereby driving out competition and to that extent tending towards a monopoly.

In the case of strikes employers usually assert with much vehemence that in the absence of intimidation, violence, or coercion, the places left vacant by union strikers could be readily filled by non-union men. It is conceivable that the union control in one or all branches of trade might become so great, or be exercised in such a manner as to present the evils attendant upon monopoly and call for intervention by laws. But if that time should come there would be no occasion for agreements to employ exclusively union men. At all events it seems clear that, at the present time, the mere attempt to secure for a particular concern with a \$500,000 capital and employing five or six hundred hands an agreement that only union men be employed cannot be said to tend so strongly and immediately to monopoly as to be held unlawful on that ground.

As to the fourth ground: The effort to secure by a strike legally conducted an agreement to employ only union men does not deprive "the owner or possessor of property of its lawful use and management." By making such an agreement, the owner or possessor of property of its lawful use and management. The effort to secure by a legally conducted strike the making of such an agreement cannot be said to deprive the property owner of its use and management unless

(a) the union should control substantially all the labor; in which event there would be no occasion for the agreement; or

(b) the right "to the use and management of property" should be held to include a right to compel people to work for the owner.

It certainly was not the purpose of the Illinois statute to inaugurate such a revolution of the social and industrial system.

The statutes of several of the States show that in the past it has been believed that the public welfare

would be promoted by the development of trades unions. In Massachusetts, for instance, Revised Laws, Chap. 106, Section 12 provides:

"No person shall himself or by his agent, coerce or compel a person into a written or verbal agreement not to join or become a member of a labor organization as a condition of his securing employment or continuing in the employment of such person."

If in the future the public welfare should appear to require it, the legislature may further restrict the right of contract by prohibiting agreements for a closed shop, or further restrict the right of combination by prohibiting strikes for the purpose of securing such agreements; but it is believed that neither the common law nor the statutes contain at present such prohibitions, and it is extremely undesirable that judges should attempt to create them because of their individual views of "public policy." Let them rather bear in mind the words of that very wise and fearless judge, Sir George Jessel:

"It must not be forgotten that you are not to extend arbitrarily those rules which say that a given contract is void as being against public policy, because if there is one thing which more than another public policy requires, it is that men of full age and competent understanding shall have the utmost liberty of contracting, and that their contracts, when entered into freely and voluntarily, shall be held sacred and shall be enforced by courts of justice. Therefore, you have this paramount public policy to consider—that you are not lightly to interfere with this freedom of contract."

Experience—the natural law in the industrial world—will alone teach us the course best to be pursued, and I fancy that course, when laid out, will eventually follow the lines of liberty:—

In the first place, liberty on the part of the employer to agree with the union for a closed shop whenever the inducements offered are sufficient to lead him to voluntarily renounce for a time his absolute freedom to choose such workmen as he pleases. Then, a recognition by the unions that their interests will be best subserved by omitting all attempts to restrict the choice of the employer, and devoting their efforts to increasing the attractions of unionism for the workmen, and to removing the incidents of unionism most objectionable to the employer. The wisest labor leaders have already taken this position, and have among other things declared the policy that the union label must be regarded as a valuable privilege to be acquired through assent to the closed shop, but that where such assent and hence the union label are withheld, the union workman may still work side by side with his non-union brother.

FREDERICK H. COOKE,

Author of "The Law of Trade and Labor Combinations," New York City:

In *Christensen v. People* (Appellate Court Ill. 1st Dist., May 12, 1904), was rendered on a point of vital and far-reaching importance, a decision that to me seems obviously at variance with reason and with law. As, however, the court is not one of last resort, I take it that there remains the hope of correction.

In brief the point seems to be that a strike is unlawful for the purpose of inducing the employer to agree to employ none but members of labor unions. If this be sound law, efforts on behalf of the "closed shop" will encounter a serious if not insurmountable obstacle.

Now let us look for a moment at the reason of the matter, whatever may be technically the law. I suppose that no one in his senses has ever questioned the legal right of a housewife to employ in her kitchen Irish in preference to German servants, or vice versa. I suppose that it has never been seriously contended that such a course constitutes an illegal "discrimination in favor of one class" (i. e., of Irish or German servants, as the case may be) or is illegal as "tending to create a monopoly in favor of the members of" the class of Irish or German servants, as the case may be. (The language quoted

was used in *Christensen v. People*). Take as another illustration the case of a railroad contractor employing Italians in preference to negroes, or vice versa.

I do not see that the action held illegal in *Christensen v. People* stands on any different basis. Until recently at least, I do not suppose that the right to employ union in preference to non-union men, or vice versa, was seriously questioned. How then can it be illegal to merely agree to do what one has a perfect right to do; or to merely request or induce one to agree to do what he has a perfect right to do? If this be illegal, we have surely departed widely from the ancient standards.

In what essential respect was the agreement declared illegal different from the every day agreement to serve another exclusively, or to deal with another exclusively? Time and time again have such agreements been sustained by the courts. I forbear to cite at length from the many decisions to this effect, but, for instances of agreements for exclusive service sustained, see *Carnig v. Carr*, 167 Mass. 544 (1897); *Harrison v. Glucose Sugar Refining Co.*, 116 Fed. Rep. 304 (Circuit Court of Appeals, 7th Circuit, 1902); of agreements for exclusive dealing sustained, *Brown v. Rounsavell*, 78 Ill. 589 (1875); *Ellerman v. Chicago Junction Railways, &c. Co.* 49 N. J. Eq. 217, 252 (1891); *Bald Eagle Valley R. R. Co. v. Nittany Valley R. R. Co.*, 171 Pa. 284, 299 (1895); *Ferris v. American Brewing Co.* 155 Ind. 539 (1900).

The fallacy underlying the decision in *Christensen v. People* is perhaps not hard to discover. Baldly stated (and such statement is sufficient to show the utter lack of reason therein) it seems to be that there rests upon any given employer a sort of obligation to employ all that are reasonably capable of performing the given work; that consequently it is an illegal "discrimination" to employ some in preference to others; at any rate, to employ members of a certain class in preference to those of another class, e. g. Germans in preference to Irish, Italians in preference to negroes, "non-union" in preference to "union" men.

Let us glance for a moment at the statement of the court in *Christensen v. People* that the agreement in question was illegal because "tending to create a monopoly in favor of the members of the different unions, to the exclusion of workmen not members of such unions." The point is in reality covered by what has just been said, but note what seems to be the underlying fallacy, that all "monopolies" are illegal. Now not even the most rabid anti-monopolist (unless perchance he be communist as well as anti-monopolist) really and sanely contends that all monopolies are illegal, though occasionally, even in judicial opinions, language may be used to that effect. Each instance of separate ownership of property, such as a house or watch, involves a monopoly, that is, of the right to use the house or the watch. And so of the instances of agreements for exclusive service or dealing, already referred to. Instances might be multiplied indefinitely. To me the contention that to employ only union men "tends to create an (illegal) monopoly in favor of the members of the unions," seems about as rational as would the contention that the employment by the housewife in our illustration of German servants exclusively, "tends to create an illegal monopoly in favor of" German servants.

It is perhaps proper to add that the doctrine thus applied in *Christensen v. People* may find some encouragement in prior decisions of the Illinois court of last resort. See *Adams v. Brennan*, 177 Ill. 194 (1898); *Fiske v. People*, 188 Ill. 206 (1900), and compare *Woodward v. Boston*, 32 Am. Law Rev. 621 (Super. Ct. Mass. 1898). Perhaps too such doctrine finds encouragement in the much discussed decisions in *People ex rel. Rodgers v. Coler*, 166 N. Y. 1 (1901); *People ex rel. Treat v. Coler*, 166 N. Y. 144 (1901), where somewhat analogous situations were presented. These two decisions were by a divided court, however, and the dissenting opinions of Chief Justice Parker seem to me to furnish by far the better reason.

The decision in *Christensen v. People* may be opposed, in spirit at least, to that line of decisions holding a strike not illegal because of intent to procure the discharge of those not members of the union on whose behalf the strike is instituted. See in particular *National Protective Assoc. v. Cumming*, 170 N. Y. 315 (1902), in line with which seem to be *Commonwealth v. Hunt*, 4 Metc. (Mass.) 111 (1842); *Clemmitt v. Watson*, 14 Ind. App. 38 (1895). It must be confessed, however, that on this much debated point there are decisions seemingly not in harmony with those just cited: see *Plant v. Woods*, 176 Mass. 492 (1900); *Quinn v. Leathem*, App. Cas. 495 (English House of Lords, 1901).

It is perhaps scarcely necessary to add that in the preceding discussion I have taken no account of purely economic considerations. For the sake of the argument I am willing to admit that the movement on behalf of the closed shop is an unwise one; that it is unwise to attempt to procure the making and enforcement of an agreement such as the one now under consideration. But surely no one needs to be reminded that it is not the function of the law, at least not necessarily, to compel men to refrain from merely foolish action.

It should be noted that, whatever be the ultimate decision in *Christensen v. People*, it will not necessarily determine the legality of a strike to induce an employer to agree to employ none but members of labor unions. That is to say, while there is, in my view, nothing in the case presented to the court in *Christensen v. People*, to show that the particular strike under consideration was unlawful, it may well appear to be otherwise in the case of another strike for the same purpose. So far as appears in the report of the decision, there was nothing to show that efforts of the particular unions interested in the strike were prosecuted on so large a scale that if successful they were likely to give them a virtual monopoly of employment in their particular lines. If, for instance, it had appeared that such unions comprised within their membership, say half of the brass moulders, brass workers, etc., in Chicago and vicinity, and that their efforts were directed towards all or substantially all those employing non-union brass moulders, brass workers, etc., in such locality, there might have been plausibility in the contention that the case was within the so-called "trust" cases such as the Sugar Trust, Standard Oil cases and others, in that, as in those cases a monopoly of the supply of sugar or oil was sought to be created, so here a monopoly of labor of a particular kind. The trouble is, however, that here the court assumed without a basis of fact the existence of a tendency to create a monopoly in favor of the members of the unions.

In addition to his opinion upon the decision, Mr. Cooke prepared answers to a series of hypothetical questions as follows:

Q.—Suppose the manufacturer of a certain brand of baking powder makes a grocer a discount, provided the grocer agrees to sell that brand exclusively,—would such a contract be illegal or criminal?

A.—If the decision in *Christensen v. People* be sound, it seems to follow that such contract constitutes an illegal "discrimination in favor of one class" (i. e. those manufacturing such brand of powder) or is illegal as "tending to create a monopoly in favor of" such manufacturers. It seems, however, that the law is, or had been supposed to be, well settled to the contrary. It is interesting to note that the Supreme Court of Illinois (which has general power to review the decisions of the Appellate Court) has passed upon the legality of what is substantially the precise situation described in the above query. That court saw nothing illegal in a contract by which a wholesale dealer in Aetna sewing machines agreed to sell them to retail dealers agreeing to deal exclusively in Aetna machines and to purchase their supplies from such wholesale dealer; the latter, on the other hand, agreeing to furnish them the machines at a discount. The court said: "We see nothing in such a contract so in re-

straint of trade as to make in that respect against public policy, and require that it should be adjudged void. We know of no warrant of authority therefor." *Brown v. Rounsavell*, 78 Ill. 589 (1875). And there is a long succession of decisions to the same effect. In a standard legal text-book (*Greenhood on Public Policy*, p. 677) the author, after declaring the legality of contracts securing the exclusive custom of the party contracting, furnishes with others some of the party contracting, furnishes with others the following illustrations of such contracts, sustained by the courts: "A publican in making settlement with his creditors agrees to buy all his beer of them." "A railroad company agrees that the cars of the covenantee should be the only cars employed in the transportation of locomotive engines and tenders over its road." "A. agrees to buy of B. all the groceries he may need, provided he will furnish them at as low prices as others." "A. covenants not to employ any other person than B. to make cordage for his friends." "A. covenants not to buy any meat for his trade for six months of any but the covenantee." The same author says (p. 680): "A contract binding the party making it to labor exclusively for it or to sell exclusively to one person, either for a limited period or for all time is not void."

JACKSON H. RALSTON,
Lawyer, Washington, D. C.

The following illustrations of contracts sustained by the courts are here furnished: "A binds himself not to write plays for any other than the H. theatre." "A. covenants to work for no one except B. for seven years." "A. covenants to work for B. for life." And many other instances of such contracts sustained as legal might be cited.

Q.—Suppose a labor union, through its authorized agent, were to make a discount upon the prevalent wage, provided the employer agreed to employ only members of that union,—would such a contract be illegal or criminal?

Q.—Suppose a labor union, through its authorized agent, grants an employer the use of the union label, that label being an assurance of patronage by the ranks of organized labor, as a consideration for the employer's agreeing to employ only members of that union,—would such a contract be illegal or criminal?

Q.—Suppose a labor union, through its authorized agent, were to guarantee to an employer a constant supply of superior workmen, capable of turning out a product in quality or quantity exceeding the computed output of non-union workmen, as a consideration for the employer's agreeing to employ only members of the union under its terms as to wages, hours and conditions of work (shop rules),—would such a contract be illegal or criminal?

A.—What has already been said seems applicable to these queries. The instance above given of a valid contract to purchase all of one's groceries from another, provided he will furnish them at as low prices as others, is particularly suggestive here. If

a contract to deal on as favorable terms as others would be sustained, it would seem that a fortiori a contract to deal on more favorable terms would be.

Q.—Suppose an employer were to make it a condition of hiring a workman, or a number of workmen, that the workman or workmen should agree, in accepting the employer's terms as to wages, hours and conditions of work (shop rules), to abstain from belonging to any labor union,—would such a contract be illegal or criminal?

A.—The law seems settled to this extent at least, that a person may refuse to employ another because of membership in a labor union, and may even discharge him because of membership in such union. Indeed, such right of an employer is part of his constitutionally guaranteed liberty of contract. In about a third of the States there have been enacted in the supposed interest of the labor unions, statutes seeking to deprive the employer of such right, but in nearly every instance such legislation has been declared unconstitutional. Thus in Missouri, in *State v. Julow*, 129 Mo. 163 (1895); in Illinois, in *Gillespie v. People*, 188 Ill. 176 (1900); in Wisconsin, in *State v. Kreutzberg*, 114 Wis. 530 (1902). If now an employer has the right to refuse to employ, or to discharge, because of membership in a labor union, it would seem to me to follow that he may make non-membership in a labor union a condition of employment, but it may remain for the courts to make this entirely clear.

Q.—Suppose a workman or a number of workmen, were to offer to work for lower wages or longer hours, or under shop conditions more economical to the employer, provided the employer would agree to employ no workmen belonging to a labor union,—would such a contract be illegal or criminal?

A.—If the decision in *Christensen v. People* be sound, there seems to be plausibility in the view that such contract constitutes an illegal discrimination against members of labor unions. Generally speaking, however, in accordance with what has been said above, it seems clear enough to me that there is nothing illegal in such a contract. It might make a difference however, should carrying out such a contract involve the discharge of union men already in the employ of such employer. Under certain conditions the action of the non-union might be held illegal as against such union men.

The questions quoted above were each answered negatively by Roger Fisher of New York and Louis D. Brandeis of Boston.

JACKSON H. RALSTON,
Of Ralston & Siddons, Attorneys and Counsellors at
Law, Washington, D. C.:

The learned court ignores the fact that labor is property (so to speak) in the hands of the laborer, quite as much as a right to do business is property in the hands of the head of a mercantile establishment. The laborer may dispose of this property as he sees fit. He may allow it to go to waste by not working, and he may determine the price he will demand for it. And, similarly, if one man may determine these questions for himself, why may he not elect to join with one or more others and agree that he will labor or will not labor as they may, by a majority vote, determine? Is his labor any the less his own because he associates another man with himself in fixing the price or the circumstances under which he will dispose of it?

The appellate court apparently takes the position that however proper it may be for one man to determine that he will not work for another, yet the element of criminality is invoked when two or more men in the form of a union announce in advance that they will not work except in company with those whom they may select. But is not the right to take this position inseparable from their property right in their own labor, and having such property right, how can the law properly interfere with their actions? Suppose they unitedly determine not to labor in association with negroes, or under a red-haired foreman, or with men of another nationality?

Why may they not do so? In so doing, they simply dispose of their own property right as seems meet to them.

But it is said in effect by the opinion that if they so exercise their property right, they interfere with the property right of the employer in the conduct of his business. Not so. The two rights have their appropriate spheres of action, and do not interfere one with the other. The employer does not own the laborer, and not owning him, can not ask the courts to control the laborer's action by means of injunction. It is true that the laborer by his strike may injure the employer's business, but so in the laborer's judgment will the employer injure his property right in his own labor, if the employer, exercising that full liberty that belongs to him of right, employs those who are not members of the laborer's organization. In either event, injury may result, but would the application of a laborer to a court to enjoin the employer from employing whoever he may see fit, on the ground that such general employment affected injuriously the laborer's right to employment, be received with any favor? The proposition needs only to be stated, but it is the exact counterpart of the fallacious idea underlying Judge Adams' opinion.

Another fallacy may be referred to. It was said that the draft of an agreement with certain unions was sought to be enforced by threats; but so far as the principle we are now discussing is concerned, the so-called threats appear to have been merely that unless a certain agreement be accepted (the agreement not being, as we attempt to show, contrary to the law) the laborers in question would not work for the employer. As I have sought to indicate briefly, laborers, singly or jointly, have the right to refuse to labor for any reason or no reason. If this right exists, a threat to refuse their labor can not be unlawful. One or more of us may say to our grocer that if he does not attend our church we will not trade with him, because we prefer to trade with our own church members. As we have a right to place our trade wherever we see fit, such a threat can not be unlawful, and can not be the foundation of judicial action. Our right to determine our own employer rests upon the same right. The opinion appears to me to be deficient in not distinguishing properly between illegal threats and announcements that are essentially legal,—to which, in fact, the word threat is scarcely applicable.

The reference contained in the decision to the clause of the Criminal Code, denouncing those who combine to deprive the owner or possessor of property of its lawful use and management, or prevent by threats, suggestions of danger, or by any unlawful means, any person from being employed by or obtaining employment from any owner or possessor of property, does not seem a happy one, so far as the general theory sought to be sustained by the court is concerned. The court has largely inverted the meaning of this section. A combination under which working men refuse to be employed by the owner of property, unless certain conditions be granted, can not deprive the owner or possessor of property of its lawful use or of his property, unless he had a lawful right to the use of the labor of the men so united, and could enforce such use against their will. If he can not procure others to take their place, the employer may be injured in the sense that his property becomes less productive, but that is a consequence he has seen fit to accept for himself. In addition, as has been heretofore pointed out, a refusal by one or more persons to labor in association with another, can not of itself be illegal, unless the person aimed at has a moral right to compel the others to work with him, or unless the methods resorted to are illegal.

If the existence of the union made it more difficult for the employer to employ non-union men, and even if the element of criminality were involved, the employer could not resort to equity, unless he has a property right in the labor of the non-union men—something he could not demonstrate. Without this, reference to the criminal code becomes meaningless,

since a court of equity can not enjoin a crime unless property or the right to property be involved.

Notwithstanding the strong opinion of the writer that the whole decision of the court is filled with logical errors, approaching almost to the point of absurdity, it does not follow that the judgment is erroneous. If illegal methods are employed to bring about even the doing of a lawful act, those guilty of their use may be subject to punishment, and it may have been in this case that there was such illegality connected with the particular acts charged against the defendants, involving contempt of court for violation of injunction against plain interference with what are really property rights as would justify their punishment.

The thing I criticize is the general theory enunciated by the court, and not the conclusion in this case.

**WILLIAM VELPEAU ROOKER,
Lawyer, Indianapolis:**

Judge Adams, it would seem, holds that a contract for a closed shop per se creates a monopoly and it is therefore void because monopolies are opposed to public policy. Judge Adams had not before him for his construction a particular contract for a closed shop (though he did have some proposals submitted

**WILLIAM V. ROOKER,
Lawyer, Indianapolis.**

by some unions, which proposals were not accepted and ought to have been resisted), and his opinion in respect to such contracts is therefore either obiter dictum or he bases his faith upon so broad an application of a familiar principle as to condemn all monopolies. It has long been suspected by some people that Chicago was lax in its standard of morals and integrity, and now Judge Adams makes it clear why his city may be as it is accused of being. The marriage relation creates a monopoly by the husband in the wife and vice versa, and that being contra bona mores, according to the Judge Adams rule, therefore we have Chicago rightfully revelling in free love. The powers of public officers are a monopoly, and therefore, if Judge Adams be right, we have great public trusts in Chicago correctly turned over to the grafters. Private ownership of property is a monopoly, and therefore, vide supra, the thieves and looters of Chicago are good people and all right. It is to be supposed that if some paper manufacturer were to agree that for a certain price, for a certain quality, upon certain installments of delivery, for certain installments of payments, he would for a certain time furnish the Chicago Tribune all its white paper, that contract, according to Judge Adams, would create a monopoly and be void. Or if that paper contract was lawful, then by what rule would the Tribune be denied the right to provide by like means any other of the staples it requires in its business, and whether its ink, its light, its fuel or its labor. To measure the constitutional validity of a

contract by the degree of duress used in obtaining it, certainly brings into being a rule of construction new, alike to those who are familiar with the safe guard of the common law and those who are familiar with the usual limitations of the Constitution.

The purpose of a contract for a closed shop is only incidentally hostile to non-union labor. The object and intent is to give the union authority over the men employed to do certain work. The purpose is discipline. The object is to exact obedience to certain fixed scales of efficiency and decorum. The common law rule as to fellow servants makes employees responsible for the conduct of one another, to the extent of sacrificing limb and life. With so great a charge as this placed upon them, can it be said that there is or ought to be any moral or legal objection to employees exercising a voice in the selection of their fellow workmen—those for whose good conduct so great an indemnity in favor of the employer is by law exacted from the employee? To subordinate men and their individual interests so largely to the general welfare of the State, as Judge Adams appears inclined to do, would, it seems, bring us at once to the practical realization of socialism in its purest forms. Nor are the interests of the employees alone conserved by union contracts. There are times in factories and shops when the work is hard and when even the most faithful servant would rather be absent than present. It is on such occasions that the union must be able to compel obedience to its contract to furnish all the required labor and it to be of a specified quality for a specified price. If the employees were not under compulsion to obey, they could on such occasions leave the task and tell the master to do his own work. That is human nature. For such an offense the aggrieved master could not efficiently follow them elsewhere; there craft can. We must have the power to exact obedience; the same power Judge Adams exercised in his contempt proceedings. How would Judge Adams as a colonel of a regiment of even the bravest men like to engage to make a desperate assault without his men being enlisted or otherwise obligated to give him obedience in performing the task? How many men would be in their ranks when the point of assault was reached if his men in the first instance were not obligated to obedience? Even brave men avoid danger, and good soldiers go to all proper lengths to save their lives. So, good workmen have their preferences as to the labor they are called upon to perform, and as between themselves they require and prefer discipline.

Judge Adams seems to be suffering from judicial strabismus to the extent that he cannot see that the employer's constitutional right to contract would be destroyed rather than conserved by such a rule as the one stated by Judge Adams in the Christensen case. He ought to read dispassionately the constitution of some successful labor unions, then some contracts for closed shops, and then observe the current of authority as to contracts that are void not because they create monopolies, but because they create unlawful monopolies. If he had before him a statute prohibiting the exclusive employment of union men he would promptly declare that statute void because in derogation, not only of the constitutional right to contract, but also of the constitutional guarantees of the liberties of the citizen who has a right to be a member of any organization whose purposes are not within themselves unlawful.

**JOHN E. PARSONS,
Lawyer, New York City:**

In a leading English case it was held, the decision of the lower courts being affirmed by the English House of Lords, that it was the right of parties to make a combination with a view of keeping their trade in their own hands, and that parties who were excluded had no redress unless they could show that the object of the combination was to ruin their trade, or was the result of personal malice or ill-will. This, in my opinion, is the law of this country as

(Concluded on page 8.)

THE OPEN SHOP QUESTION IN GREAT BRITAIN.

ITS ADOPTION THERE GENERAL, ALTHOUGH NOT UNIVERSAL, WHILE UNION LABOR WINS THE PREFERENCE OF EMPLOYERS THROUGH ITS SUPERIORITY.

Much light is thrown upon the treatment of the question of the open shop by organized labor in the United Kingdom, through recent letters from several of its representative leaders, addressed to the National Civic Federation. These letters are responses to an inquiry addressed on behalf of that organization to the secretaries of leading British unions. This inquiry requested information as to the position taken by those unions as to the open shop, as to how it is treated in formal agreements with employers, as to the attitude of employers in general, and as to the comparative significance or importance of the question in Great Britain and the United States. All of the British union secretaries to whom this inquiry was addressed had visited the United States as members of Mr. Alfred Mcsely's industrial commission, and had thus enjoyed the opportunity of comparing labor conditions in the two countries.

The replies here presented are from secretaries of unions that include the organized employes in nine great industries. These industries employ engineers, iron founders, iron and steel workers, tube trades, paper makers, weavers, cotton spinners, tailors and lithographic printers. The replies show that in all of them the open shop obtains either throughout the industry generally, or to a large extent, being greatly limited only in one industry. The lithographic printers have a union rule, of which all employers are notified, that no printer eligible to the union shall be employed, unless a member of the union. But there are exceptions to this rule in a few towns and cities, due to local or peculiar conditions, conceded by the unions. The iron founders secure a closed shop only where their organization is strong enough to enforce it. Elsewhere, they permit open shops, and they refrain from picketing in strikes. In the tube trades, there are cases where union men refuse to work with non-unionists. But this action has been taken without aid from the general union. In practice, the workers in some (the relative number is not specified) iron and steel works are all union men. But there is in that industry no distinct cleavage between union and non-union shops. Employers of tailors are said to prefer union shops, with a trade agreement including arbitration.

These five industries are those of the nine upon which reports are presented in which the open shop appears not to be universal. Of these five, the lithographic printers constitute the only craft in which the open shop is a restricted, local concession, although the effect of the tailors' agreement is to cause employers to prefer union workers. The engineers have a general trade agreement with the employers which stipulates for the open shop. In this craft, only voluntary membership is regarded as valuable to a union. The cotton spinners have also a general agreement which ignores the subject of non-union employes. All mills are open, but 90 per cent of the English spinners belong to the organization, and it is stated that employers as a rule prefer union spinners, although refraining from expressing that preference. Many employers of iron founders will not permit members of the union to be foremen. The tube trades have no general agreement; but in rare cases, employers have refused to permit non-union men to share in a general advance of wages. The agreement of the iron and steel workers ignores non-union men, who must work under its provisions; but the policy of the open shop has prevailed in their industry for thirty years. The weavers' agreement does not mention non-union workers, who of course do not enjoy the benefit of the organization's funds in case of a strike. The paper makers work with non-union

men when the latter receive the same rate of wages as do members of the society.

It will be noted that several of these unions attribute their strength to a high standard of membership that ensures superior workmanship, and to the accumulations of benefit funds. Some of the British union secretaries' comments upon trade union conditions in the United States are of interest.

Lithographic Printers.

George D. Kelley, General Secretary of The Amalgamated Society of Lithographic Printers of Great Britain and Ireland, writes from 63 Upper Brook Street, Manchester:

"In respect to the question of declining to work with non-union men, which you state is becoming a serious one in your country, I beg to say that here, so far as my own union is concerned, we do not experience much difficulty. I enclose the rule by which our members are governed. With every revision of rules a copy is forwarded to every employer, so that he has full opportunity of becoming acquainted with the rules in operation in the society. No serious objection has been taken by the employers to the rule in question, although some have taken exception, and occasionally as a consequence a little friction has arisen, which has generally been allayed and removed by an interview between the employer and myself, and the rule adhered to.

"In some few towns and cities in the United Kingdom the rule is not observed quite so closely as in others, but it is observed generally, and the few places referred to, where it is not operated quite so rigidly, are owing to some local cause or special influence which is respected and given way to. I may add that this society has very few disputes with employers. Should anything arise causing irritation or should we desire certain changes, an interview or interviews takes place between the employer and myself, and the matter is arranged between us, usually to the satisfaction of both, the whole question at issue having been by both discussed in a courteous and conciliatory manner. In fact, my experience, which is a wide one (being for twenty-five years a general secretary) has shown most clearly that better results can be obtained from a talk across the table, on a reasonable request, than by any other methods."

The rule enclosed by Mr. Kelley provides: "No member of this society shall work in any shop where there is also employed a non-union lithographic or collotype printer eligible for membership in this society." Other paragraphs of the rule provide for notification of the local branch of the union in case a non-union man should go to work in a shop, and provide for a committee of the union to "use the best means available to settle the difficulty." "No extreme measures shall be adopted except upon the decision of a special summoned meeting."

Amalgamated Engineers.

George H. Barnes, secretary of the Amalgamated Society of Engineers, established 1851, writes from its general office 110 Peckham Road, London, S. E.:

"You ask in what way the union of which I am secretary deals with the question of the non-union element. In our formal agreement with the employers it is stipulated that we work with the non-unionists. Such agreement has been in operation some seven years, but even before, when there was no agreement, the same practice obtained, that is to say, we relied upon moral suasion in regard to the non-unionists, so far as the attitude of the society as a whole was concerned. Of course, there have always been some members who have adopted a more militant attitude, but such has never received the formal endorsement of the Amalgamated Society of Engineers.

"I spoke in that sense during the proceedings of the Civic Federation meeting in December, 1902. I believe that forced men are no good to any organization which they may be compelled to join. You will note that I look at the matter from a practical point of view. Reams might be written in an abstract sense for and against coercion. Putting my position on it briefly, I should say that, even assuming the justice of force, it is no practical use; and the position of American labour unions, I think, is proof of the soundness of this view."

Amalgamated Tube Trades.

T. Jones is the General Secretary of the Amalgamated Tube Trade Society, which is affiliated with the Midland Counties Trades' Federation and is registered pursuant to Act of Parliament. The general office of the Society is in the London and North-western Hotel, Wednesbury. General Secretary Jones writes from 167 Dudley Road, Wolverhampton:

"I regret to say I can give you but little information on the subject. We have never been able to induce the employers to co-operate with us in the matter. What has been done is due to the action of the men in individual works. We have at some of the works had the men put down their tools and refuse to work with a man who was not paying his union money, with the result that they have had to borrow the money and pay up before they could start. In some cases, the manager has found the money for them. This action has taken place at several works, but I have had nothing to do with it. In one or two instances, the employers refuse to give any advance to those who were not in the society when there has been a general advance.

"The employers preferred non-union men when they could get them, because they could do as they pleased with them. There are but few trades in this locality who have not some of their workmen not in the society. No concerted action is taken, as a rule they use only moral suasion. They all recognize the evil effect of such methods. But the law is altogether in favour of the employers. This is emphasized by the Taft Vale decision."

Amalgamated Paper Makers.

William Dyson of the Amalgamated Society of Paper Makers writes from 7 Station Road, Woodley, Nr. Stockport:

"Our society does not object to our members working with 'non-unionists' providing the latter work under the same conditions and receive the same rate of wages as themselves. Consequently, it has not been necessary to make any agreement with the employers respecting the same. In justice to the employers, I may say the majority prefer unionists and when requiring them they apply to the society."

Society of Iron Founders.

J. Maddison, General Secretary of the Iron Founders' Society, established 1809, writes from its general office, 200 New Kent Road, London, S. E.:

"During my sojourn in America, the slight inquiries I found time to make into the conditions and methods of trade unions in your country elicited the fact that the contributions paid into the unions are much too low. Consequently, the unions have no backbone in them in the shape of benefits. As a result, members are indifferent as to allowing their membership to lapse, having nothing to lose, and re-enter any number of times. If they were liable to forfeiture of benefit with exclusion, they would be more careful about retaining their membership. Moreover, their financial position is very weak. When war is declared, their war chest is very far from being what it ought to be. According to wages received, they ought to pay at least 50 per

cent higher contributions than we do in this country; whereas, they are something like 50 per cent below ours.

"The employers know full well that trade unionism means high rates of wages, which rightly or wrongly they regard as a deterrent to trade. At least their contention is in this strain, when arguing against advances or in favor of reductions in wages. Consequently, they encourage non-unionism as much as possible. A very large percentage of employers will not have a trade unionist in the position of foreman, if they know it. It is no uncommon occurrence for our branch secretaries to be victimised because they hold such positions. Of course, there are honorable exceptions to this rule.

"When a grievance arises that results in a strike or a lock-out, we generally refrain from picketing, leaving the employers to employ whom they choose. But I regret to say that the employers do not reciprocate this treatment by allowing us to go and work where we choose. No, they invariably blacklist our members, which means preventing them from working wherever they have the power to do so.

"Returning to the so-called 'scabs,' or free labour as they term themselves in this country, we leave them severely alone, believing that they do our cause more good inside a struck shop than outside; as from a workmanship point of view, 90 per cent are not worth their shop room. Indeed, the firm would not give them shop room, did peace prevail. Their very looks and get up betray their character, and the tenth man who may be a moderate workman is invariably a confirmed drunkard. So long as the strike may last, these free labor men are allowed to do anything they like.

"The authorities of the towns are largely made up of employers; consequently the law is administered very severely against the strike hands, who scarcely dare look at a 'scab,' lest they may be charged with assault. This is why we refrain from picketing. These 'scabs' are often very aggravating by openly boasting that they have broken so many strikes up, whereas their ability can command a job only where a strike exists. Thus they are always on the look-out for strikes, which are their only chance of obtaining work.

"For a time, these strikes have often appeared to go against us. . . . But by and by the shareholders' meeting takes place. The usual dividend has largely diminished, or disappeared altogether. It may be that the balance is on the wrong side of the ledger, which may be tolerated for a time. But the end must come. You cannot convince shareholders better than by reducing the dividend. The management are asked to give a reason for this falling off, when the truth has to be admitted—the molders' strike. It frequently happens after a strike has continued so long that we have regarded the shop as lost to us, the employers have caved in by clearing out the 'scabs' and sending for our men to return. . . .

"In reference to what you term open shop, I take that to mean open to all comers, regardless of whether they are trade unionists or not. This is what we term working mixed. We certainly do work mixed where we are not so well organized as we could wish; but where we are well organized, we refuse to work mixed.

"I am strongly of opinion that it is in the interests of the employers not to work mixed. Human nature is the same the world over. It is only reasonable to expect that considerable feeling exists between the non-union and union men, as the former are reaping the benefit of conditions brought about by and at the expense of the latter, and at no cost to themselves. Whilst this rankling feeling exists, it prevents men's minds being wholly concentrated in their work as it ought to be; hence they are not doing justice to their employer.

"Probably this feeling against non-unionists may be condemned by the employers and those representing the public in the Civic Federation. But I ask those gentlemen to imagine a case of a few men be-

coming residents of Chicago and refusing to pay rates, whilst they were enjoying the benefit of the sanitary arrangements and other privileges of the city, made at the cost of the ratepayers generally. I ask would such refusal be tolerated five minutes? Yet the one is just about as reasonable as the other.

"I sincerely hope that the praiseworthy efforts of the Civic Federation may be crowned with success."

Associated Iron and Steel Workers.

James Cox, General Secretary of the Associated Iron and Steel Workers of Great Britain writes from its head office, 6 Mount Pleasant, Darlington:

"I am in receipt of your enquiry concerning the action of our trades organization relative to the men who are not members, and the question of an 'open shop.' So far as our trades union is concerned, the policy we have adopted during these last thirty years has been that of an 'open shop.' It is perfectly true that at some works practically the whole of the men are members of our organization, while at other works it may be that not half or even a less number than that are not members.

"So far as non-union men are concerned, they are entirely ignored by us, and so far as general wages questions are concerned, while they have no voice in deciding upon those wages, they have to abide by the decisions of our organization and its agreements with the employers. Any non-union man who demurs to this would have the option given him by the employer immediately of either working under the terms agreed to by the employer and us, or leaving the works.

"We have some mills where employers go so far as to refuse to allow non-union men to work, while at other places non-union men are entirely ignored in all questions affecting either their wages or their work. So far as the iron and steel industry in this country is concerned, we have no shops defined as 'union' and 'non-union.' I do not believe there is a work in this country but what there are some union men and I have never yet met with an employer who has demurred to discuss wages questions with me, even if it affected only half a dozen men.

"Whether this policy of the 'open shop' commends itself to my fellow trades unionists in America I cannot say; but so far as our own industry is concerned in this country, I should be sorry to see any policy adopted which would bring about the distinct cleavage you have in your American mills of 'union' and 'non-union.'"

Amalgamated Weavers.

William H. Wilkinson is the representative of the Northern Counties Amalgamated Association of Weavers in the Joint Committee of Employers and Operators for North and Northeast Lancashire. He writes from the general office of the Weavers' Association, Ewham Chambers, 17 St. James' Street, Accrington:

"So far as the weaving industry is concerned, we never make any agreements with the employers regarding the non-member element. All agreements made between our Amalgamation and the Employers' Amalgamation are made for members, the non-members not being mentioned, neither employer nor operative. I may add that in case of a strike none of the Operators' Amalgamation funds are paid to non-members."

Mr. Wilkinson enclosed the printed rules and regulations under which the joint committee of the employers and operators proceeds. The object of the joint committee is "To consider in their preliminary stages all trade disputes occurring in the weaving department, . . . and thereby endeavoring to preserve good feeling between employers and operators." The joint committee consists of twelve members, six representatives of the employers and six representatives of the weavers' associations. There are regular weekly meetings in Manchester and a special meeting must be held upon seven days' notice on either side. The business of the joint committee is "preliminary and consultative only." "It is not authorized to come to any final conclusion upon any of the matters brought under its

notice." The general results of the various discussions must be reported to their constituents by the two sections of the committee. Its meetings are strictly confidential. The name of any member must not be quoted at any public meeting. Any dispute should first be brought before a local meeting of employers and operators. Failing settlement there, the dispute "should be brought before the joint committee prior to any notices for a strike being given by either employers or operators." These rules have been in force since July 3, 1896.

Society of Tailors.

Terence A. Flynn, General Secretary of the Amalgamated Society of Tailors, responded from the general office of that society, 415 Oxford Street, Manchester. Mr. Flynn wrote: "The question [of the closed shop] is not one which touches us to any extent. Some of the other industries are more hardily struck. I need not say that I wish your movement [the movement for better relations between employer and employed] success. If we had had some such body in past years, much trouble, misery and bitter feeling would have been averted. Still, I am pleased to say that a better feeling is asserting itself and the position is full of promise."

Mr. Flynn accompanied his letter with a paper which he had prepared for publication, upon some of his observations during his visit to the United States, from which the following are excerpts:

"Since Babel, I question if there has been gathered under a settled form of government such diversity of tongues and nationalities as obtains with you. Interwoven are inevitable racial differences, historical antipathies, preconceived and inherited methods of production and organization, all of which tend to entangle and obscure a problem which, even in this old island, remains very much in a condition of nebulous expectancy. As a consequence, difficulties, which are natural with us, are with you very much involved, and the work of a trade union increased in severity of organization to a very considerable extent.

"Under such abnormal conditions it would appear that effective criticism becomes, in a manner, blunted, so much so, that it seems to me the practical question is, 'are there features in the British trade union movement which would repay consideration, if not adoption?'

"At the outset, I venture the opinion that your Federation of Labor exhibits an administrative capacity and brotherhood which entitles it to the good will of all interested in the welding of conflicting life into the solidarity of a nation. Human progress is seldom well ordered, but if discord is the accident, as I believe it is, in the affairs of the Federation, and steady, broad-based progress the ideal, then co-operation becomes an easy and a natural duty."

Mr. Flynn contrasts with this American body the individual unions of England, which, he says, are "ready for immediate defense rather than federation, with its superior controlling, harmonizing and peace-making tendencies." He makes the interesting observation as to the influence of benefit funds against strikes:

"The adoption of friendly society benefits widened the scope of discussion, gave the man who could fight, but would rather give brain first chance, a front seat in council; increased the contribution and the amount in the total funds; and, in short, changed English trade unions from mere fighting machines into solidly established business firms.

"Following this came a close supervision of branches and the abolition (in most unions) of their right to declare a strike."

Mr. Flynn's paper continues:

"In my own union arbitration is compulsory. Every industrial centre has its properly constituted arbitration board, together with a court of appeal, formed of members of our employers' national council and the council of our union. The decisions of this board are final. We would not go back to the days of unlimited strike; our days may be tamer, but our lives are safer, and there is a mutual respect

which counts for more in a tight corner than six months' warfare. That, at any rate, is our insular opinion.

"Our gain, however, does not stop at that. Arbitration tends to abolish strikes (of course, like yourselves, we retain the liberty to strike if needs must), it also tends in an even greater degree to abolish the blackleg, the scab, and the non-unionist. As a matter of fact, our employers prefer their shops to be union shops, as the union stops trouble with a heavy hand, our business being to see that all agreements are carried out faithfully and well, as much by our members as by the employers. Of course, these changes are not the work of a day nor of fifty years. Our union is the oldest trade union in England of which authentic records can be obtained. We can trace back through the centuries our victories and defeats. Sometimes compelling Parliament to abolish laws which especially pressed upon us (no mean task when Parliament was practically elected or returned by our feudal lords), at other times having special acts which aimed at wiping us out. Thus the hurly burly went on, now the top dog, but more often the bottom dog.

"Our last great and most disastrous struggle was in the early thirties of the last century, when we struck for an eight hours day, and although over sixty years have passed, the ill effects of that defeat can still be traced.

"Our present system is not the dream of a night, but the fruit of a hundred years of labored effort; of schemes and dreams and systems put forward and would hest suit our purpose and circumstances; and dropped. From the dead hands of past generations of workers we have taken that which we thought to it we have added a system of arbitration, which we believe gives an intellect and a purpose to our movement that past efforts never had.

"If I may venture one further opinion, I would say the system and methods of organization adopted in America are very similar to ours of 25 and 50 years ago. Perfected, I admit, nay, I am glad to admit the improvement, but in essential detail very similar; and it appears to me that when you come to consolidate the magnificent movement you are creating, like us, you will have to put more goods in your windows."

Operative Cotton Spinners.

Thomas Ashton, General Secretary of the Oldham Operative Cotton Spinners' Provincial Association, and President of the Amalgamated Spinners' Association, writes from the central office, Rock Street, Oldham:

"In reply to your inquiry as to the methods our association pursues with regard to non-unionist operative cotton spinners, I beg to say that the whole of the cotton mills are open for employment, both to union workmen and non-union workmen, and that no pressure is brought to bear upon the latter by the former beyond that of moral suasion, with a view of getting them to join the union.

"Of course, the union members are not supposed to assist non-union workmen in their employments, but union spinners assist one another in many ways, and in this way the non-union spinners are made to feel their position, as they are often placed in an awkward place in the carrying out of their duties. It is almost impossible for organized workers to have any sympathy with non-union workmen, as the latter receive the full advantage of the good work which the trade unions perform in the interests of their members; and yet they are too mean in principle to subscribe anything toward the expenses incurred in making their labour lives far more agreeable than they otherwise would be, were it not for the valuable work of the trade unions. Non-union cotton spinners are paid the same piece work rates and enjoy the same labour conditions, as do the trade union cotton spinners; but it is the latter and the organized employers who agree upon what these shall be. Non-union workmen have no voice in anything relating to work and wages, but they are content to accept of what trade union workmen can do

for them, knowing full well that they will fare just the same as the trades unionist in everything pertaining to their labour. As a rule, employers don't bother their heads as to whether the spinners are union men, or non-unionists, but the bulk of them prefer the former class of workmen, as trade disputes are more easily adjusted by trade union efforts than it is possible when the workmen are not organized. I am pleased to say that upwards of 90 per cent of the operative cotton spinners are members of their trade union organization, and that the best of relations exist between them and their organized employers. From my long experience in the labour cause I am more than ever convinced that it is absolutely requisite for the welfare of the wage earning classes that they should be organized for trade union purposes, and I am surprised that any workman should be so dull in comprehension as to remain outside the ranks of organized labour. In any agreements we make with the organized employers the question of non-union workmen is never considered, but for all that, we have no love for such persons, as they act as a drag to the wheel of labour progress."

IS THE CLOSED SHOP ILLEGAL?

(Concluded from page 5.)

well. In the case referred to, it was a combination by owners of property. The principle equally applies to the case of owners of labor. Strikes are the remedy of workmen against attempted oppression by their employers. So long as workmen do not resort to intimidation or violence, I understand that in the absence of statutory provisions to the contrary their right to strike in larger or lesser numbers is absolute. They may do so without notice and under circumstances which are most favorable to the accomplishment of their wishes even if most injurious to employers, always provided that they do not resort to criminal means or to anything which is in the nature of intimidation or violence. And equally do I understand that in the absence of statutory legislation to the contrary it is the right of employers to employ or not employ whom they choose, and to make with their workmen any agreements which are for mutual interest, always provided that no criminal or illegal means are resorted to for the accomplishment of their end.

The converse is equally true. Strikes which involve intimidation or violence violate the law. And arrangements between employers and employed, the purpose of which is to prevent other workmen from obtaining employment, violate the law.

In my opinion the right, whether of the workman or of his employer, is a property right. It is protected or his employer, is a property right. It is protected by Federal and State constitutions, and no statute which endeavors to put a limitation upon it can stand.

The fundamental principle of our political system is the freedom of the individual and his right to be protected so long as he abstains from the perpetration of anything which is criminal or which violates the rights of others.

In expressing the above opinion I deal with the general situation. Corporations are creatures of statutes. Such statutes may within constitutional limitations subject their charters to reasonable restrictions. And I do not make any reference to arrangements which may be held to be in conflict with the law against monopoly or restraint of trade. They are foreign to the direct subject.

JOHN FRANKENHEIMER,

Of Kurzman & Frankenheimer, Lawyers, New York City:

The Illinois court holds that a contract proposed by trade unionists requiring their employer to hire only union labor is in violation of the employer's freedom of contract to hire any kind of labor that may suit him. But in its anxiety to preserve the sanctity of the doctrine of the freedom of contract,

the Illinois court is blind to the fact that the freedom of contract implies as its correlative the freedom not to contract. If, as the Illinois court holds, the employer has the right to hire or to refuse to hire any kind of labor as his fancy may dictate, then the laborer has an equal right to work or refuse to work for any employer as to the laborer may seem best. If the employer can limit employment in his business to a specified kind of laborers, for instance, to white laborers or non-union laborers, and refuse to hire colored laborers or unionists, then the correlative right must exist in laborers—members of a trade union—to work only for an employer who will recognize their union and refuse to work for him unless he will limit employment in his business to members of their union. If the employer has the right to discriminate against unionists, the latter have an equal right to discriminate against an employer who will not support the union. If the employer in hiring a laborer can make it a condition of the employment that the laborer shall not be a member of a union, trade unionists in contracting with the employer have an equal right to make it a condition of their agreement to render service that the employer should hire only members of the union. If the employer can attach such a condition to his offer of employment, the trade unionists must possess an equal right to attach conditions to their offer of services. In homely phrase, what is sauce for the goose must be sauce for the gander. Unionists can say to their employer, "we will work only with unionists, we make a common sacrifice for a common benefit and we will help each other to get employment." There can be nothing illegal in the effort of unionists to make the shop in which they work a union shop, that is, to agree with the employer as a condition of rendering services to him that he will employ only members of the union. The employer is at liberty to refuse to limit employment to unionists, but if he does this the unionists must be at liberty to cease to work for him—that is, to strike! That is all the strikers did in the Illinois case in so far as they sought to induce their employer to make a contract with them. They had the right to strike for any reason deemed satisfactory to them. They had the right to endeavor by agreement with their employer to make the shop a union shop. They sought therefore by lawful means to attain a lawful end, and never before the decision in the Christensen case has this been declared to be an unlawful conspiracy.

It is to be regretted that the Illinois court went out of its way in the decision under discussion to render an unnecessary pronouncement against the principle of the union shop. Decisions of this kind serve only to undermine the confidence of workmen in the absolute impartiality of our judicial tribunals, and tend to substantiate the charge that in the pending struggle between capital and labor judges are frequently influenced in their decisions by the natural bias which springs from environment.

Labor unions will receive additional protection against foes without from the Prince act, which has become a law in New York through the Governor's signature. This measure was passed by the legislature as a result of the indignation aroused by the disclosures made during the trial of Sam Parks on the charge of extortion. The new law makes the bribery of a walking delegate, business agent or any authorized representative of a labor union, a misdemeanor, punishable by fine and imprisonment. This does not create a new crime. It only specifies an offense that could before be reached only under the statute relating to extortion, which is thus extended to reach the briber. It is an act plainly intended for the benefit of organized labor as well as of employers. Its existence may exercise a deterrent influence upon those in a position of temptation.

The strike should be the last resort, after successive efforts at conciliation and arbitration have failed, and all chances for settlement abandoned.—"Cigar Makers' Official Journal."

LIBERTY, DEMOCRACY, PRODUCTIVITY AND THE CLOSED SHOP.

A REPLY TO THE ADDRESS OF MR. PARRY, CONVERTING AN ATTACK UPON THE CLOSED SHOP INTO AN ARGUMENT IN ITS FAVOR.

In his annual address as President of the National Association of Manufacturers, Mr. D. M. Parry remarks as an apparent cause of congratulation "that organized labor is learning a very valuable lesson in economics." Mr. Parry, himself, deserves congratulation for the rapidity with which he is learning from his own study of economic questions. He has discovered that low wages are not a benefit to society at large. In making this discovery, he has learned in a comparatively brief time a truth that has been attained by economists only after thought and discussion covering several decades. The old theory was that low wages caused low prices for products, and that their tendency was constantly beneficial to the entire community. That theory was long ago abandoned by economic students in favor of what is known as the doctrine of "the economy of high wages,"—the doctrine that in the modern age of machinery the highest wages are paid in those factories which turn out the cheapest products. Mr. Parry shows that he has graduated from the old notion when he announces his conviction that "high wages are a blessing, not a curse."

Opposition too Indiscriminate.

Mr. Parry has still to learn that his wholesale and indiscriminate opposition to the closed shop can not be sustained. He declares it to be his belief "that the day must come when no industry will be allowed to run on the closed shop plan;" and again, "that the closed shop is against public policy." With these propositions he couples the statement that the strides of this country in material welfare and in general intelligence are traceable to "the freedom of the individual," and declares that "all classes profit by the freedom of the individual to do as he pleases with his time, labor and property, so long as he does not infringe the equal freedom of another."

In my opinion, the application of the theory of the open shop to all industries is impracticable. This is a question upon which no sweeping decision can be reached, supported by sound reason, from the exclusive point of view of one side. Nor is it a question that can be answered by an indiscriminate conclusion of universal application. The question of open and closed shop must be considered in its application to different crafts.

The theory of trade unionism is that it tends to elevate the workingman of lowest earning capacity above a rate of payment which is less than the minimum wage necessary to sustain decent living. Its purpose and its actual tendency are to help in establishing an average minimum payment for labor that will be adjusted for the general good of all workmen, and indirectly therefore of the whole community, since the workmen form politically the mass of the voters, and economically the mass of the consumers. It must be conceded that this theory involves a certain sacrifice of that "liberty of the individual" which Mr. Parry regards as of supreme importance. This theory of unionism traverses, also, the general proposition with which President Eliot of Harvard University has approached this subject, if he has been quoted correctly in the daily press he regards the surrender of personal freedom to an association as "almost as great an obstacle to happiness as its loss to a despot or to a ruling class."

Sacrifices of Liberty.

Now liberty is indeed a precious thing. Liberty is in one aspect the fruit and flower of modern civilization. Yet there are some things even more valuable than the freedom of the individual. Liberty must be regarded as a means, rather than as an end in itself. Liberty implies equality, and in politics we have liberty because there exists political equality. But in the economic life, the equality in the

parties to a contract is not always present. The liberty of the strong may become the license of the oppressor; the liberty of the weak may practically come to mean the subjection of the oppressed. It is, therefore, sometimes highly important to make a partial sacrifice of individual liberty in order to secure the maintenance of a greater equality, and thus the conditions for the restoration of an ultimate and enlarged liberty. This is what unionism seeks to do; this is its essential principle, and it is a principle that should command general public sympathy and approval.

Opened and Closed Shop.

Therefore, when Mr. Parry would make the rule of the open shop universal in all industries, on the ground that the closed shop is an infringement of individual liberty, he goes too far. In my opinion, the open shop would be beneficial in some industries

EDWIN R. A. SELIGMAN,
Professor in Columbia University.

and dangerous in others. The same statement may be made of the closed shop. For example, when the open shop would admit into an industry the cheap labor of indigent and ignorant immigrants, so as to create through the fierce competition of unorganized and necessitous labor a wage rate below the minimum essential for decent living, the open shop would obviously be a detriment. So long as this supply of crude labor from foreign countries continues, so long will such a domestic industry as garment-making, for example, need the protection afforded by the exclusive employment of members of a union, able to negotiate with employers a trade agreement that prescribes sanitary conditions of work and a wage which will permit living in accordance with the American standard. The closed shop here stands for the attainment of that equality between employer and employed, which is the surest guarantee of an ultimate liberty.

On the other hand, there are crafts in which the open shop might be beneficial, for the reason that the closed shop would tend to produce a monopoly. This danger of a monopoly of labor would become apparent in such a skilled calling as that of the glass blower. Any monopoly on the side of either capital or labor employed in ordinary industry is almost superfluous to state, in restraint of both production and trade, and is, therefore, a menace to prosperity. In the monopoly of labor in any craft lies the danger of unionism and the danger of the closed shop. A monopoly of skilled labor would

tend to produce the same result as was reached by the guilds in the middle ages. The guilds were organized originally for the benefit both of the skilled workmen and of the consumers of their product. Ultimately they grew into craft monopolies, with resultant evils that are recounted in their history. Without doubt, the more advanced leaders of organized labor recognize this peril and do not hesitate to utter warnings against the danger of permitting the unions to create a monopoly of labor in any craft. It is doubtful, however, whether the rank and file of organized labor, are adequately instructed as to the reality of this peril.

Unionism and Democracy.

In some respects, the theory of the union is parallel to the political theory of democracy. The theory is based upon the proposition of human equality. In a certain and fundamentally important sense, the statement that one man is as good as another is true. The carrying out of that political idea has proved of the greatest benefit in our political system and has had its influence in making the average American citizen in many respects an admirable type. But in that very proposition lie the difficulties of democracy. For in another sense one man is not as good as another. Men are differentiated into classes by opportunity, by education and by efficiency. The real ideal of a democracy must be to level up, not to level down; and in this leveling up the true natural leaders must be given ample scope. But the end, must be a democracy, not an aristocracy.

To transfer the illustration from politics to sociology, there underlies trade unionism a similar proposition on democracy. That is to say, unionism would not drag down the rewards of labor to the lowest earning capacity of the poorest workman. Rather would unionism tend to elevate the poorest workman so as to command a wage established on a minimum average higher than is essential to meet the bare necessities of existence.

The danger, however, in the practical operation of trade unionism lies in its working out toward the establishment of a fixed average payment for a day's work so as to put a check, or limit, upon the higher wages possible for superior individual merit. In that danger—the danger of the repression of individual excellence, and the limitation of its reward—is to be found the opportunity of opponents of organized labor for an attack upon it as a system. Therein, then, lies the necessity for intelligent leadership of organized labor to guard unionism against that attack.

Wages and Productivity.

Mr. Parry advances the general proposition that the rate of wages in any country is dependent upon the per capita production. It is doubtless true that the reward of labor, like the reward of capital, must be a certain portion of the sum of wealth produced in any industry, and varies in accordance with its effective contribution to the common output. Thus, productivity does bear a definite relation to the reward of labor. Moreover, capital and labor are intimately associated in this joint effort. If the productivity of capital can be increased through the use of fine machinery, not only will the return on capital be augmented, but the labor employed in using that machinery is certain to receive a higher reward than would labor employed in using inferior machinery, or no machinery at all. There are familiar illustrations of this truth to be seen on every side. The weaver, for example, using the best appliances in a New England mill will earn higher wages than can the hand loom weaver in the Southern hills.

But admitting Mr. Parry's proposition to be true, that the wage rate is dependent upon the per capita

(Concluded on page 16.)

EXECUTIVE COMMITTEE.

ON THE PART OF THE PUBLIC.

Grover Cleveland, ex-President of the United States, Princeton, N. J.
Andrew Carnegie, capitalist, New York.
Cornelius N. Bliss, ex-Secretary of the Interior, New York City.
Oscar S. Straus, member of the Court of Arbitration at The Hague, New York City.
Charles W. Elliot, President Harvard University, Cambridge, Mass.
Archbishop John Ireland, of the Roman Catholic Church, St. Paul, Minn.
Bishop Henry C. Potter, of the Protestant Episcopal Church, New York City.
David R. Francis, President Louisiana Purchase Exposition, St. Louis, Mo.
Isaac N. Seligman, of J. & W. Seligman & Co., New York City.
James Speyer, of Speyer & Co., New York.
Charles Francis Adams, Publicist, Boston.
John G. Milburn, lawyer, New York City.
V. Everit Macy, capitalist, New York City.
Charles J. Bonaparte, lawyer, Baltimore.
Ralph M. Easley, Chairman Executive Council, New York City.

ON THE PART OF EMPLOYERS.

Henry Phipps, director United States Steel Corporation, New York City.
August Belmont, President Interborough Rapid Transit Company, New York City.
Lucius Tuttle, President Boston & Maine Railroad, Boston.
Frederick P. Fish, President American Bell Telephone Company, Boston.
Francis L. Robbins, President Pittsburgh Coal Company, Pittsburgh.
H. H. Vreeland, President New York City Railway Company, New York City.
Samuel Mather, of Pickands, Mather & Co., Cleveland.
Charles A. Moore, Manning, Maxwell & Moore, New York City.
Franklin MacVeagh, of Franklin MacVeagh & Co., Chicago.
Charles H. Taylor, Jr., President American Newspaper Publishers' Association, Boston.
Dan R. Hanna, of M. A. Hanna & Co., Cleveland.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
Otto M. Eiditz, Chairman Board of Governors, Building Trades Employers' Association, New York City.
Edward P. Ripley, President Atchison, Topeka & Santa Fe Railway System, Chicago.
William H. Pfahler, former President National Founders' Association, Philadelphia.

ON THE PART OF WAGE EARNERS.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President United Mine Workers of America, Indianapolis.
E. E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
James Duncan, General Secretary Granite Cutters' National Union, Washington.
Daniel J. Keefe, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.
P. H. Morrissey, Grand Master, Brotherhood Railroad Trainmen, Cleveland.
Theodore J. Shaffer, President Amalgamated Association of Iron, Steel and Tin Workers, Pittsburgh.
J. J. Hannahan, Grand Master Brotherhood of Locomotive Firemen, Peoria, Ill.
James O'Connell, President International Association of Machinists, Washington.
John Tobin, General President Boot and Shoe Workers' Union, Boston.
Joseph E. Valentine, President Iron Moulders' Union of North America, Cincinnati.
James M. Lynch, President International Typographical Union, Indianapolis.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit, Mich.
Henry White, General Secretary United Garment Workers of America, New York City.
Denis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.

LEGAL AND ECONOMIC ASPECTS OF THE CLOSED SHOP.

It is natural that the recent decision of the Appellate Court in Illinois that a contract between an employer and a union to employ union labor exclusively is illegal *per se* and in that State criminal should attract the attention throughout the country of both employers and wage-earners. That decision strikes at the very existence of the closed shop and of the union label. If its soundness were beyond question it would be a vital blow to an untold number of existing contracts and would place the ban of the law upon all efforts to extend the closed shop system. The open shop would of necessity prevail in all industries.

We believe that the decision is sound neither in law, nor in common sense, nor in policy. It declares that the specified agreement to employ only union workmen strikes at the right of contract. It appears to us that the decision itself strikes at that right. The decision appears also to strike by inference at trade customs that have been upheld in many courts and that are of common practice. If an employer may not agree to employ only a certain kind of labor, then a purchaser may not agree to buy only one brand of goods or to deal with one tradesman exclusively. Statutes to forbid employers to hire workmen upon the condition that they abstain from membership in a labor union have been declared unconstitutional wherever the test has been made. The same principle of freedom of contract underlying the closed shop agreement underlies the agreement to employ non-union labor exclusively. It is this principle that we wish to emphasize, without regard to the legality or illegality of the methods used to enforce a contract for the closed shop. Those methods are aside from the basic proposition. We invite attention to the opinions upon the Adams decision that have been contributed to THE REVIEW by several eminent members of the bar.

The discussion of the legal soundness of the Illinois decision leads to the more general economic question of the desirability of the closed shop. That is a question that may be solved through the practical processes of industrial life. Theory, based upon observation, may select trades or conditions wherein the closed shop would be in accordance with public policy, and may discover other trades or conditions wherein the open shop would be preferable. But it is highly desirable that the way to test theory by experience should not be closed by judicial dictum.

The group of letters also published in this issue of THE REVIEW, from officers of British unions in nine industries, illuminate the practice prevalent in the United Kingdom as to the open shop. It is to be observed that the open shop is there the general although not universal practice, and yet these letters show that the British trade unions occupy a strong position. Indeed, some of the letters, which are all written by men who have enjoyed an opportunity to observe labor conditions in the United States, dwell upon the financial strength of the British unions, due to the greater constancy of their membership and the higher ratio of dues to wages. These letters bring out also the importance to the union of being able to furnish superior workmen. That in several trades is cited as a reason for the preference manifested by employers for union labor, even though they may be opposed to the expressed recognition of an organization of wage-earners. The British unions, it is apparent, are thus encouraging a tendency in practice, if not in contract, toward the closed shop. That is a process of gradual evolution, to be carried forward by incessant striving toward excellence. The observation of that current process in Great

Britain goes to sustain the contention of Henry White, that the danger of open shops to the continued life and progressive strength of unionism is likely to be exaggerated.

LAKE TRAFFIC RESUMED.

Because of the number and variety of the trades affected by the recent tie-up of transportation on the Great Lakes, it was difficult to make any accurate estimate of the loss to shippers and others. But the variety and complexity of these interests doubtless had their influence in causing the captains to return to work, thus enabling some three thousand vessels to be put into commission and permitting about 150,000 longshoremen and seamen to cease enforced idleness. The resumption of traffic is of especial importance to the coal, ore, grain and lumber interests.

The captains resumed work in accordance with the action of the Masters and Pilots' Association, which decided to "make the best of a bad situation," in the words of Captain Paul Howell, it being understood that the mates were to make an arrangement for themselves with the Lake Carriers' Association. The complication with federal laws made this strike peculiar. The successful operation of the agreement between the Lake Carriers and the Longshoremen should point the way to a permanent agreement between vessel owners and the captains, pilots and mates. The hearing of testimony as to the facts in the case by the Cleveland Civic Federation is set forth in an article upon another page.

A DEPARTMENT OF TRADE AGREEMENTS.

The proceedings of the Conference on Trade Agreements, held in New York City under the auspices of the National Civic Federation, possess more than sufficient interest and instruction to warrant the full report which we present in this number of THE REVIEW. A distinct disposition was shown among those who addressed the Conference, representative of both employers and employed, to extend the operation of trade agreements and to learn more of their forms and principles. In furtherance of this desire, a permanent Department of Trade Agreements of the National Civic Federation has been organized and will exercise its activities toward education and the encouragement of this method of securing industrial harmony based upon equitable terms and conditions.

An agreement has been signed at San Francisco between the Steam Schooner Managers' Association and the Sailors' Union of the Pacific, the Pacific Coast Marine Firemen's Union and the Marine Cooks' and Stewards' Association of the Pacific Coast. Generally speaking, the agreement continues for another year the existing conditions. The seamen are safeguarded against a reduction of pay, while the managers are assured of a stable wage rate. The working rules of the sailors' union are embodied in the agreement, which includes matters of overtime and meal hours, which have been regulated tacitly by custom, although more or less in dispute. Under the new agreement, the managers are to provide messrooms on board every vessel under their control, "where practicable." The "Coast Seamen's Journal" says of the agreement, that it "marks another step toward the permanent establishment of peaceful, business-like relations between the two essential factors in maritime commerce on the Pacific. The unions concerned do not pretend that the terms agreed upon are entirely satisfactory in every respect. With all its faults, however, the agreement is a fair and honorable compromise; if it doesn't mark much improvement upon previous conditions, it certainly marks no surrender of anything so far gained."

A NATIONAL CONFERENCE ON TRADE AGREEMENTS.

THEIR SUCCESSES AND FAILURES DISCUSSED BY REPRESENTATIVE EMPLOYERS AND WAGE-EARNERS—DEPARTMENT OF TRADE AGREEMENTS OF THE NATIONAL CIVIC FEDERATION.

The conference upon Trade Agreements, held in New York City on May 7, under the auspices of the National Civic Federation, was highly successful in attaining its purpose, which was the interchange of ideas and the comparison of experiences in forming these agreements. In making them binding, in their success and failure, in their inclusion of provisions for conciliation or arbitration, or both, and as to the subjects which should be specified or excluded. Those who took part in the conference included employers, individual or representing organizations in their industries, and employees, representing national or local bodies of organized labor. The discussion brought out a unanimous expression of belief in the desirability of trade agreements, and that they offer

FRANCIS L. ROBBINS

a practical method of attaining more harmonious relations between capital and labor in all the industries that were considered. In two trades, those of pattern-making and iron-molding, the movement for trade agreements national in scope received distinct impetus. The recital of experiences as well as the discussion of theories, by those who attended the conference was considered so valuable that the formation of a Department of Trade Agreements of the National Civic Federation was afterward effected.

Following is a detailed report of the conference. Direct quotations are from stenographic notes and condensed quotations are based upon them:

The conference was called to order on behalf of the National Civic Federation by Marcus M. Marks, president of the National Clothiers' Association, who stated that its purpose was to discuss trade agreements, with special reference to methods of arbitration or conference, and to the subjects that are proper for arbitration. He suggested that Francis L. Robbins, president of the Pittsburgh Coal Company, who had recently participated in averting a threatened trouble in the soft coal industry, through the successful operation of a trade agreement, would be the most competent man present, at least on the part of employers, to lead the discussion. The suggestion was seconded by Isaac W. Frank, president of the National Founders' Association, and Mr. Robbins was unanimously chosen to preside.

Remarks of Chairman Robbins.

In taking the chair, Mr. Robbins said:

"There is nothing in my judgment that is so important for the future of this country as the joint trade agreement as a method of reaching harmonious relations between capital and labor. I think there is nothing that will solve the problem and avert difficulties, dangers and possibly disaster so well as the coming together of employers and employees to discuss the questions at issue between them and to arrive at what is known as the joint trade agreement.

"There is probably no trade wherein the difficulties are greater than in the coal mining industry, which presents a method of agreement that has been very successful. We do not claim for it that it is perfect by any manner of means, but we do claim that between the leaders of the operators and of the miners there has been that feeling of confidence of belief in each other, of fairness and of a sincere desire to reach an agreement, that has resulted in accomplishing the object.

"We leave nothing to arbitration. We do not believe in the principle, if you can get away from it.

We believe that the people who know the conditions in their trade, both employers and employed, are better able to deal with these questions than any stranger. We believe that if you meet the issues with fairness and with conservatism, you can better come to an agreement that will be satisfactory than by leaving it to be arbitrated by some one else. Compulsion of any kind, either by legal authority or by the decision of some one to whom matters are referred, is never as satisfactory as a voluntary agreement between two interests. You always find that it will work out far better if you will make your own agreement amongst yourselves. Even if, in making that agreement, possibly one side or the other does not think that it is getting exactly what it is entitled to, better far a concession from either side in reaching a joint agreement than it is to leave it to some one else to decide for you. You know the conditions, and you will accept them and live up to them; and the people under you will be better satisfied.

"Mr. Mitchell, who has ably represented the mining industry in this country and who is thoroughly familiar with every particle, both theoretically and in practice, of the principles of joint trade agreements, and to whose conservative action and advice the joint trade agreement with the bituminous miners was reached recently, is here and can speak from

GRANGE SARD

the side of the employee. Mr. Keefe, who is here representing the Longshoremen's Union, stands in the same capacity as Mr. Mitchell—both conservative, fair-minded, competent men, representing interests that are hard to handle. I don't think in all the country there are any two interests harder to handle than those. These men can hear testimony to our methods of settling these questions, rather than by resorting to arbitration. I would be glad to hear from each of them."

Mr. Mitchell's Address.

John Mitchell, president of the United Mine Workers of America, addressed the conference:

"The joint trade agreement is the most unmistakable recognition of the mutual dependence of capital and labor. It is the essence of trade-unionism. In the coal industry, where wages and conditions of employment are regulated by it, we have found that industry has thrived, that wages have been bettered, that conditions of employment have been more satisfactory than under any other method that has been tried in our trade. We have 350,000 coal miners who are working under agreement, whose wages and conditions of employment are determined by a joint conference.

"I do not know of any other industry that will show so marked a change as the coal industry. I remember only eight or nine years ago, when each employer fixed the conditions of employment at his own mines, when the workmen at those mines resorted to strikes or other means to change those conditions. The net result was that wages constantly fell, until the earnings of the miners were so low that they were unable to live and provide for themselves as we all believe American workmen should. And on the other hand, the profits of the operators had fallen so that many of them were in practical bankruptcy. One mine owner did not know what his neighbor was paying for labor. The man at one mine didn't know what the wages were at the neighboring mine. In the competition for business,

there would be a cut here and a cut there, and so on all along the line; and with the desire to secure trade, the outcome was unsatisfactory to both sides.

Competition and Wages.

"In 1897 we held our first joint convention and fixed a uniform competitive wage scale. That is to say, in our trade the wages are not uniform, but they are fixed upon a competitive basis. The principal element entering into the wage scale in the mining industry is competitive opportunity of all interests represented. We have to make our mining scale so as to give, say, Mr. Robbins, in Pennsylvania, a wage scale that will enable him to compete with coal men in Ohio. It so happens that in this case the wages are the same, but if they could not enter into the same markets on the same competitive basis we would have to change the wage scale to enable them to do so.

"Of course, what is true of our trade would not necessarily be true of other trades. For instance, in the building trade there is no competition between men putting up a building in New York and men putting up a building in Chicago, but in the case of any commodity which is transported, such as coal, there is competition that has got to be taken into consideration in determining the wage scale. We adjust all our differences by agreement.

"The agreement provides not only for the wages but the hours of labor, and it determines in detail the conditions under which labor shall be performed. We provide in our agreements for every detail. We leave no question to arbitration.

Faults of Arbitration.

"I quite concur in the statement of Mr. Robbins that arbitration of wage questions should be avoided as far as is possible. Arbitration is provocative of strikes. That is, all my experience has been that where a trade agreement provides for a reference of questions to arbitration, it gives each side an opportunity—indeed, an invitation—to shirk responsibility. There is in every man's nature a certain fear of assuming responsibility. If he can shove it off upon somebody else he is often willing to do so. In our trade we take the position that we have got to settle these questions ourselves, and when we know we have got to settle them, we rise to the occasion and do it. So it seems to me that arbitration should be avoided in these joint agreements as far as possible.

JOHN MITCHELL

"In some of our districts, for instance in Indiana, when an agreement is made, if a dispute arises as to the meaning of it, it may be referred to a Board of Arbitration, in which a disinterested person acts as referee. But our experience there has been that many questions to both the operators and miners seem perfectly clear; but when a disinterested person was called in he could not understand them. He could not understand the technique of the mining code; he could not understand our technical terms. The result has been that decisions have been rendered which were not only unsatisfactory to us, but just as unsatisfactory to the employers. So I think that the best agreement and the best condition under which industry can be conducted is that where the arrangement is made direct between the representatives of the manufacturers and the representatives of the workmen.

The Process of Agreement.

"In the coal industry we have an arrangement

probably different from that existing in any other industry. It is impossible in our trade to put a condition of employment upon an operator, or for an operator to pass conditions upon a miner, that will be unsatisfactory to him. That is to say, in our conventions we cannot vote a condition of employment upon an operator or a miner without his consent. In our inter-State conventions we make a representation based upon all the miners in Pennsylvania, Ohio, Indiana and Illinois, and we give to each of those districts four votes—that is, the miners have four votes from each district, and the operators have four votes from each district. Before a motion can be carried that fixes or affects our scale of wages, it must have the unanimous vote of all the miners and all the operators in that convention. If one miner or one operator vote in the negative, the vote will be lost. So you see the interests of all parties

I. W. FRANK

are protected, because it requires their consent before a motion can be carried; and we have found that to work out in mining matters entirely satisfactorily to us.

Lower Wages Accepted.

"I might say that under this agreement wages have both advanced and declined. I have heard it said by employers many times that this trade agreement arrangement was all right as long as wages advanced, but as soon as the time came when workmen would be expected or compelled to take a reduction of wages, that then the joint agreement would go to pieces. We have disproved that in our trade. It is true we have received more advances than we have declines, but this year the miners represented in our organization and who took part in this joint convention voted to accept a reduction in wages; and I think their action has done more to strengthen and encourage this trade agreement than any other one thing that has happened in our industrial affairs.

Wages Relative to Profits.

"We try to fix our wages based on the selling price of coal. If the mine owners are securing large prices for coal, we expect at the end of our agreement to share in that prosperity. On the other hand, if prices of coal fall off—if there is a depression—we expect to take a reduction in our wages, and share adversity with our employers. Under our arrangement we have grown to know one another and have grown to know one another's business.

"We know just as well as employers what it costs them to produce coal. We know what their profits are, and we know what they pay for their freight rates. We know, in a general way, practically as much about their business as they themselves. And they are willing to let us know that. Indeed, I have on more than one occasion had coal operators ask me to come to their offices and go over their books; if I doubted at all the statements they made as to their profits they have asked me to go over their books and satisfy myself, and to go over their cost sheets so as to know exactly what the reports from their business were, and to know how the business was conducted. In that way we have established, not only very close, but the very closest business relations.

"Aside from that, we have established a very pleasant personal relation. And my experience in the labor movement has been that a close personal relation does very much at times to avoid strikes and turmoil. When we learn to understand that each side is earnestly and honestly striving to do what is right,—when we learn to know that—it does very much to stop these strikes and lock-outs.

Right to Strike and Lock Out.

"I want to express this one personal opinion as to the rights and the relations of each side: I personally favor strikes. That is to say, I would dislike to see

the time come when men could not strike, or when employers could not close their shops, or mines, or railroads. I think behind all this lies our right to strike and the right of employers to lock us out. I think we must not surrender either of these rights. But a strike should in no instance be inaugurated, and there never should be a lock-out, until each side has exhausted every possible peaceful, conciliatory method at their command. I think they should try everything else. But when everything else has failed, and an adjustment cannot be reached, then I think the interest of industry—the interest of labor and the interest of capital—will be best conserved by retaining and maintaining the right to stop work

Conferences Prevent Strikes.

"We have been fortunate, and I believe we will continue to be fortunate in our trade, in averting strikes, whenever we have had conferences. As a matter of fact, we have never had a strike in the coal industry where we have first had a conference. The strikes in the coal industry have invariably taken place in those branches of our trade where employers or workmen have refused to confer. Wherever we have been able to meet in fair conference to consider a question upon its merits, we have reached an agreement. This spring we had some difficulty. It was the impression of many of our people that reduction in wages was not warranted. We adjourned our convention, and went home; but instead of going home and striking we went home and came back to our convention and tried it over again, and we kept at it. We threshed the thing out for weeks. But at the time we were arguing it—the time we were negotiating—everybody was at the mines and the men had work. And if we had stayed there from that time until now, I am sure that the interests of the country, the interests of both operators and miners, would have been better conserved than if we had been on strike.

Combinations of Capital and Labor.

"Now, gentlemen, it seems to me that where industry is carried on by agreement the most satisfactory conditions will prevail. This old idea of men conducting their affairs to suit themselves in doing business, without restraint, if permitted to go on, will lead to chaos and anarchy. It can do nothing else. Where we have these great combinations of employers and where we have great combinations of laborers, as we have and as we are bound to have, I believe firmly that the only possible condition of peace is where industry is carried on by mutual consent and by a trade agreement. It seems to me that that is the outcome, that that is the natural sequence, of these great combinations of employers on one side and the combinations of laborers on the other side; and there is no use of us even hoping that the conditions of industry will change and go back to what they were fifty years ago. We have got the combinations of capital and employers, and they are going to stay. We have got the combinations of labor and they are going to remain. We cannot change it if we would, and I don't think we would if we could. So it seems to me, gentlemen, that the sooner the employers of this country, the sooner the laborers of this country, agree to understand this mutual dependence, the better it will be for not only ourselves directly interested, but the better it will be for society as a whole."

Instructed Delegates.

In reply to a question by Isaac W. Frank as to why the bituminous agreement, involving a reduction of wages for the current year, had been submitted to a referendum, Mr. Mitchell explained that the reference was because delegates to this convention had been instructed. The instruction of delegates was not a rule of the organization. In a majority of cases, they were not instructed. Mr. Mitchell said that if the agreement reached at the conference had been rejected by the referendum, he supposed a strike would have followed. But the men would keep at work so long as negotiations continued. As to output, the only restriction was the eight hours

working day. Practice had proved that miners produce more coal in eight hours than in ten. The agreement contained no restriction upon the quantity of coal to be produced by any miner in eight hours.

As to Union Labor.

Mr. Frank asked whether it was required that all miners employed must belong to the union. Mr. Mitchell replied:

"We do not require that a man who gets employment shall be a union man first, but on accepting employment he becomes a member of our union. In the anthracite region in Pennsylvania men are employed without discrimination. Also, there is no discrimination against a union man. In Central Pennsylvania and in the Pittsburgh District, practically all the men belong to the union. There is nothing said in any of our contracts as to whether a man shall be a union or non-union man; not a single word."

"What is the effect?" asked Mr. Frank.

"The men join the union as a condition of employment," replied Mr. Mitchell.

FRANK BUCHANAN

Mr. Frank: "They do then require that men belong to the Union in order

to be able to work in certain mines, whether the employer is desirous of employing whomsoever he pleases or not?"

Mr. Mitchell: "An employer has that right always to employ whoever he pleases. When a man secures employment, he becomes a member of our Union and works under our contract. The only way we can carry our contract out is by making him a party to it. The contract is between the operators and the union man who works, and the man who is not a member cannot be a party to that contract."

Mr. Mitchell further explained that not once in a thousand cases was it necessary to ask a man to join the union. The men joined voluntarily. The condition of a man not in the union would be no more onerous than that of any single man in a community where every other man believed in one practice. He had never known a strike for the specific purpose of preventing the employment of a minority of non-union men in a mine operated under the union agreement. Mr. Robbins added the explanation that he thought it unfair and unwise to send instructed delegates to a convention. Men should go to a conference free to listen to argument and to agree upon whatever was shown to be just.

Subjects Not Arbitrable.

Questions by Benjamin D. Trattel of the New York Building Trades Employers' Association and by A. Beverly Smith of the Lithographers' Association brought out this further statement as to his attitude toward strikes, lock-outs and arbitration, from Mr. Mitchell:

"Neither side should surrender its right to strike or lock-out. Failing in every other method to settle their differences, the men should always maintain the right to strike, or the employers the right to lock out their men. If they were to surrender absolutely those rights, then the chances are that the conditions of employment would be satisfactory neither to the men nor to the employers.

"My own judgment is that in preference to a strike we should resort to arbitration—I mean arbitration of the question of wages. There are questions I would not arbitrate at all. I would not arbitrate, under any condition, my right to belong to a union. And I would not arbitrate the hours of labor in our trade.

"If the question were raised in our trade as to whether or not we should abandon our eight hours a day, I would not submit that question to arbitration; and our employers would not ask us to, because it has been very satisfactory to both of us.

"There have been some failings, no doubt, which

have increased the cost of production in some instances; but on the whole the operators and the miners will both agree that eight hours is the most satisfactory for our trade. . . . The question of a man's right to belong to a union is particularly a question not to be arbitrated, because it is fundamental. You can't arbitrate fundamental principles. . . . I favor settlement by agreement, and only arbitration in the event of failing to agree, and then in preference to strike. I have advised miners in Kentucky to accept a reduction rather than arbitrate, in order to avoid the interference of outside interests."

Wm. O. Coakley of the Central Lithographic Council called Mr. Mitchell's attention to the statement that in the lithographic industry, after an agreement had been signed, some of the employers started to make individual contracts with workmen. Charles

W. O. COAKLEY

Wilhelms of the joint executive committee of the Lithographers' Association explained that a skilled artist, commanding a high wage, might cripple an employer's business by leaving him. Hence individual agreements with artists for longer periods than the year covered by the trade agreements were desirable. He maintained that his industry was one in which the strike and

lock-out must be eliminated, any controversy to be settled finally by arbitration.

The Longshoremen's Agreement.

At the request of Chairman Robbins, Daniel J. Keefe, president of the International Longshoremen, Marine and Transport Workers' Association, addressed the conference. He explained that his organization includes tug-boat captains, engineers, firemen, marine firemen, oilers, water tenders, divers, longshoremen, lumber inspectors, elevator employees, tally men, grain inspectors and others. Their wages ranged from \$2 to \$15 a day. The organization meets that of the employers once a year. It is one of the oldest organizations under a trade agreement. Each local body sends an accredited delegate to these joint meetings, instructed only to make the best possible agreement. There is no referendum, the delegates having full authority. In the same way the employers come to the meetings with full authority from their association, or the interest they represent, to make an agreement without referring it back. Mr. Keefe continued:

"Our agreements cover the wages and hours and general conditions. There is always a provision for arbitration on questions that are not understood, or in the event of any question arising as to the meaning of any part of the agreement. That, however, does not touch on the wage scale; nor the hours; nor the conditions specified. That is only usual on technical questions, and the arbitration board is only called in, or arbitration is only resorted to, after the employer and the men, or the representative of the men, have exhausted every means to adjust their differences. We have had only one case of arbitration in four years.

"The employers are just as anxious to continue this trade agreement as we are. There is no question of non-union men getting into the agreement, or controversy at all. They treat with the union for union men exclusively, so many as we can furnish them. When we can't furnish them, then they may employ any other men they desire until such time as union men put in an appearance. That is the desire of the employer as well as ourselves. We have no dispute relative to non-union men.

"The employer says to us, 'We want you to furnish all the men and be responsible for their acts during the life of this contract.' That we usually do. We do not have any strikes; we do not have any lock-outs. All the men in the different callings are part of the organization, and there is no opportunity of striking against non-union men. All the employ-

ers are party to a contract, through an association or as an individual, and there is no opportunity of misunderstanding on that side; and I am very much pleased to be able to say that the employers at no time have sought to take any advantage of changed conditions.

Necessity of Strike Removed.

"We, like the miners and some of the other organizations, were unable to present sufficient argument to continue the last year's wage, and so were obliged to take a reduction, but the reduction was taken by the delegates in that convention, who were clothed with power and with full authority to make the best possible arrangement. We have been working under this system for many years, and we have had no strike. We never talk strike. There is no necessity for it. We meet with the employers and discuss wage or conditions, and always arrive at an amicable understanding. It may not be just what we anticipated or think we ought to have, or the agreement may not be just as the employer would wish; it may not be wholly satisfactory to either of us, yet we agree to it and accept it and carry it out.

"We say to the employer, whether it is on a declining or an advancing market, that the very best service within us belongs to him in accordance with the contract. There are no disputes; and I can declare from the experience of one who has served on an arbitration board for years, that the results of arbitration are not satisfactory to either side at any time. Arbitrators, as a rule, cannot go into the thing fully. They are often incapable of understanding the entire matter in detail. They may view it from a law standpoint. One or the other side may be able to put up the abler and more forcible argument, yet it does not follow that the fellow with the most forcible argument is right.

"Many employers as well as workers want to arbitrate everything—to submit the whole agreement to arbitration. Now, that is impractical. It is impossible to have a satisfactory result through arbitration of that kind. Anything you agree to should not be submitted to arbitration—hours of labor, wages and general conditions; but if there is something where there is a question of doubt as to its meaning, and that can't be cleared up or agreed to by the parties directly interested, then it is only fair to submit it to arbitration. The men at all times continuing to work pending the decision.

The Majority Rules.

"I am able to say very little on the strike or lock-out, because we have no experience with them. If there is a violation of the agreement on the part of one or any of the employers, the men can't stop work. They must continue to work while we take the matter up and hear the employer who has violated the agreement or contract, and then we insist on the contract being complied with. But we cannot let the local organizations take it upon themselves to assume that responsibility. The employer, on the other hand, does not attempt to lay his boats up while any matter is in dispute between himself and his employees; he also continues to do business until a satisfactory adjustment is reached. But there is so little of that arises that I could not discuss it intelligently. We don't have any friction. Ninety-four per cent. of our men are working under those trade agreements, and we meet every year and renew them.

"Now, as to the form of the contract other than the wage scale and the hours, it cannot be changed except by a majority of both sides. The general contract must remain as it is, except by a majority vote of both sides, each side having the same voting power. Like the bituminous miners, we cut down the number of votes on each side. The employers may have forty or fifty representatives and we may have a hundred and fifty, but the voting power is identically the same—each side has five votes. They may be cast by individuals, or by one representative, as they may see fit. But the general contract cannot be changed, either by us or by the employers, nor any amendment made, except with the approval of a

majority of both sides. That in itself prevents contention.

"Every member of our organization is furnished with a copy of the contract. He carries it in his coat or vest pocket, and at any time he can pull out his little book. We do that to prevent any confusion or misunderstanding or misinterpretation of the meaning of the contract. By furnishing every man with a copy of the contract he can see for himself just what it is, just what it means; and there is no danger of his making a mistake. The employers furnish their representatives, whether it be a captain, or a dock manager, or a warehouse man, with a similar copy, so that they, too, may know that the contract is being lived up to.

"But there is never any arbitration except on the matters that are not understood. We could not consistently submit anything to arbitration that is

D. J. KEEFE

agreed to. If we agree that the number of hours to constitute a day's work is going to be eight, or ten, or fifteen, we have agreed to that and there is no question about that. If we agree that the wages will be \$2 a day, or \$15 a day, we cannot change those figures; we have agreed to them, and there can be no mistake as to them.

"The other principal parts of the contract are also thoroughly understood. If there is any part that is not understood and the representatives on both sides can't agree on its proper construction, it may be submitted to arbitration. There is nothing further that could be submitted to arbitration. I think that our system is as good as any established in this country, and as far reaching.

"Only recently at a meeting in Cleveland of a branch of the Civic Federation, Mr. Mather, who is one of the executive committee of the Civic Federation, made a statement that was rather flattering to the organization I represent. He said if the laundry workers, barbers and the restaurant employees and newspaper employees and shoe polishers had organizations conducted along the same lines as the longshoremen, he wouldn't let anybody else do any business for him. That is only one instance. During a misunderstanding with some of the Pickands-Mather interests, a statement was made that the longshoremen would strike. Mr. Mather said: 'Well, do you know I would be more surprised to have the longshoremen strike than if I went home and found Mrs. Mather and my family refusing to live with me any longer.'

"Those are the relations between the men we do business with and our organization, and perhaps we have made as much progress as any other branch of labor in this country; perhaps our wages have been increased as rapidly and our hours reduced as much as those of any other branch of labor. I feel confident that the same relations could and will exist if the other employers and the men will get together, setting their personalities aside, the employer removing the idea from his mind that he is going to run his own business just as he sees fit without any interference on the part of anybody, and the employee also agreeing that his local organization or his organization alone cannot make the wage and conditions under which he has got to work, but that the employer is a factor. If these get together and discuss their interests freely and fairly, there is no reason why an amicable understanding and trade agreement cannot be reached.

"The longshoremen when our union was formed were perhaps the most difficult class of men in the whole country to organize and to induce to respect a trade agreement. Since those days, however, the most artistic or scientific men working in connection with the water-front have made every possible effort to become a part of our association. The very highest paid men—men who a few years ago would

not care even to have it known that they recognized a poor neighbor who worked as a 'longshoreman'—are willing to become a part of the same organization, purely from a business standpoint, believing that the method pursued by the 'longshoremen' is practical and that they have been able to gain the friendship and respect of the employers and the public through their fair and business-like policy."

A Broken Agreement.

Walter L. Pierce, formerly president of the National Metal Trades Association, spoke of the trade agreement with machinists, which had been formed by an arbitration committee, of which he was a member. After lasting about a year, that agreement "was broken by the machinists going on strike, although a part of the agreement was that no strikes or lock-outs should take place, and that any matters not covered by the agreement should be submitted to arbitration." Mr. Pierce said:

W. L. PIERCE

"The breaking of that agreement was a very severe blow to the agreement idea among the manufacturers. In that agreement there was a clause that no restriction should be placed upon labor or production. It was discovered after the agreement was made that

the restriction of production and the freedom of employment were subject to the constitution of the union. In other words the employer did not have freedom of production because of the constitution of the union. Our manufacturers, having made an agreement as they supposed in good faith which permitted them freedom of employment, found that it did not permit them that freedom. Upon a number of other questions there was a difference of opinion. Our association notified the union that a committee on interpretation had been appointed and requesting a similar committee, but that was never acted on by the union, and a strike took place in violation of the agreement."

Mr. Pierce expressed the wish that other unions would adopt the principles that had been set forth by Mr. Mitchell and Mr. Keefe. He said that if any man had the right to belong to a union, the converse held true, that any man had the right not to join a union. He thought that if violence could be eliminated, it would affect favorably the attitude of public opinion toward unionism. He discountenanced picketing, as leading men into temptation. He urged the necessity of more uniform action by the unions. They "should establish certain broad principles as right for everybody," and he thought these principles had been enunciated by Mr. Mitchell and Mr. Keefe. If they could be applied to the metal trades, there would be no trouble about forming agreements.

The Chairman, Mr. Robbins, said by way of comment upon the broken machinists' agreement:

"As representing docks on the lakes, in which our company has over \$10,000,000 invested, I shall endorse everything Mr. Keefe has said. We are perfectly willing that all our interests there shall be left in the hands of Mr. Keefe, representing the employees. Their fairness has been such that in one case at Sheboygan, where the local union refused to carry out its contract, they took away its charter from the organization, and there is no union in Sheboygan to-day because of it.

"It is only by conservative and fair action on both sides that agreements can be maintained. It is only by experience, by showing each side that an agreement is fair and that it is being applied to other trades, that a satisfactory conclusion can be reached."

Frank Buchanan, president of the International Association of Bridge and Structural Iron Workers, declared that "an agreement cannot be carried out to the interest of one party unless it is to the interest of the other." He pointed out that the miners

and operators were not alone interested in the production of coal. That was of concern also to the steel industry and the railroads. Hence it was important to extend the principle of trade agreements to all interdependent industries. Justice was in his view essential to any agreement.

Necessity of Fair Play.

Mr. Buchanan added as an illustration: "Say that a labor organization is so powerful that it has the employer in a position where it could enforce an unjust condition on him. I maintain that it is not to the interest of the organization to do so; that it must consider the employer's interest, if that agreement is to be a success. If the employer is in a position where he is strong and the union is weak, if he forces an agreement on the union that is unjust and unsatisfactory, in my opinion it will reflect back upon the employer himself in time, to his injury."

Mr. Buchanan said: "I am a believer in a sympathetic movement, but I am not always a believer in a sympathetic strike. The abuse of the sympathetic movement is not proper, but it cannot be denied that the use of any sympathetic movement is proper. The steel worker is interested in the miner being at work, else the steel mills cannot get fuel. Agreements, Mr. Buchanan pointed out, had been violated by employers as well as by employees. But because a good law had been violated it did not follow that the law should be repealed. Rather, a way should be found to enforce that law. The influence of all should be exerted to enforce fair trade agreements. He held that if the structural iron workers were to take an arbitrary position, it would not only hamper their industry but would injure other trade organizations. It would then become the duty of those organizations to say to the structural iron workers that they must recede from their arbitrary position for the sake of the other industries of the country. "Peace is what we want. Disturbances cost everybody too much. Through such meetings as this, we may learn how to deal with this question of agreements for the best interests of all."

At this point Mr. Robbins was called away by a business engagement, and John Mitchell was unanimously chosen, on motion, to preside. Mr. Mitchell called upon John Flynn, of the Metal Polishers' Association. Mr. Flynn said that all the shop trades are in favor of agreements. He believed that if they were drawn up properly they could be kept by both sides. It was important to go over every question in preliminary conferences. Nothing should be left to arbitration. Yet, if it came to a dead-lock, the shop trades would favor calling in an arbitrator. He deprecated the idea of some employers that they could do business solely to suit themselves.

The Lithographic Industry.

Mr. Parker, representing the allied lithographers' unions, said that he recognized the right of employers to run their business to suit themselves, and also the right of employees to sell their labor as they pleased. But there is no reason, he insisted, why the two sides should not come together and reach an agreement satisfactory to both. An agreement should stipulate certain things that should not be arbitrated. This should be done when a trade is at peace, and when rational thought can be given to the subject. In the lithographers' industry, the employers wished to eliminate the open shop and the piece-work system. The employees were willing that the employers should put themselves on an equal basis with one another. Mr. Parker quoted a member of the Civic Federation as having said that where there was a piece-work system, the employees restricted the output. During a strike, the employers paid non-union men more for piece-work than they had been paying union men. This made it plain that the union itself had restricted output. Thereupon the price of piece-work was cut, until there was another strike. After that, an agreement was drawn by which the piece-work men were to produce all they could, while men paid by the day were to receive as much as they could make by the piece-

work system. It was for the employers so to regulate the piece-work system that they would not be competing with one another. That would prevent cutting under the minimum wage; and at the same time no employee should be restricted in his output and the amount earned.

Mr. Parker argued for the closed shop, on the ground that the non-union man had no right to enjoy a rate of payment that had been gained by the efforts of the union. Nevertheless, any fair arbitrator would declare for the open shop, on the ground that any man has a right to accept employment anywhere. "Therefore," he said, "the unions work in a shop." A trade agreement should apply to all employees. There should be no individual agreements.

The Stove Manufacturers.

The Chairman called upon Grange Sard, of Rathborn, Sard & Co., representing the Stove Manufacturers' Association:

THOS. B. LAVEY

"I have been through the mill, so to speak. I have fought the union. I have thought it was to the interest of manufacturers to destroy the union. But I have been shown the error of my way, and I am prepared to say now and have thought for many years that it is the wise employer who en-

courages, rather than discourages unionism.

"The Stove Manufacturers' Defense Association was organized in 1886 for the purpose of fighting the union, of resisting what we termed unjust demands. We had our fight with the union, and at the end we had both more respect for the power and fighting qualities of the other; so that in 1891 we had a conference committee appointed representing six employees and six employers. They drew up an agreement which should fix the rate of wages and the conditions in shops for the current year. Previous to that time, each manufacturer had settled his own difficulties, but they were settled after the blow was struck. A fundamental principle of each agreement was that if there was any grievance in any of the shops of members of our association, the manufacturer should not lock his men out, nor should the men strike, but that pending a conference to settle the difficulty, the men should all remain at work. Since 1891 we have had no strikes of any consequence.

"If any one thinks that these agreements are going to bring about the millennium, they are greatly mistaken. There is bound to be friction and trouble. But by means of these agreements the troubles are reduced to the minimum. There has been no serious interruption of our business, but we have progressed smoothly and satisfactorily—immensely satisfactorily to the workmen and to the employers as well.

What Agreements Should Embrace.

"We especially want to consider what these agreements shall embrace. No agreement can cover all questions as to the relation of capital and labor. Any attempt to make an agreement cover everything will simply result, in my judgment, in failure. The fewer important subjects it covers the better. You can't start off and have everything as right the first year as you will the second and the third. So do not try to make an agreement that shall provide for every possible contingency that may arise under any circumstances. Above all, don't attempt to put into the agreement matters of controversy which cannot possibly be settled by agreement. There are fundamental views which employer and employee hold, and they do not propose to give them up, and it is unwise to ask either side to renounce them in an agreement. So there are things which need not and ought not to be mentioned in an agreement, but an agreement may be made which I assure you by

my personal experience may be the greatest means of settling disputes between labor and capital and that will remove the bitter feeling that does, but should not, exist between employer and employee.

"In order to make agreements effective you must recognize the union. Making your agreements with the union, you depend upon the union for carrying them out. If a man has a decided antipathy to unions he will not, naturally, participate in any such agreement; but the man who wants to fight it out on his own lines will have his troubles beyond expression. I want simply to impress you, from my experience, with the utmost value of agreements between employers and employees and the importance of having such agreements express certain essential things, such as wages and shop conditions, without any attempt to cover every possible contingency."

An Important Announcement.

James Wilson, president of the Pattern Makers' League of North America, being called upon, announced: "The pattern makers stand ready to meet at any time the representative of the National Metal Trades' Association for the purpose of consideration of an agreement international in its character, to cover the conditions of employment that shall exist in the pattern making industry of this country."

JOHN COOPER

Mr. Wilson said the Buffalo convention of employers about a year ago had declined to enter into an agreement with any organization of employees. He said that there had been one agreement that did not yield good results. But he believed in trying a gain. He believed in a minimum wage, but he knew of no labor organization that would restrict the earning capacity of any man. He added:

"If we have an agreement with any employer—whether organization or individual employer—and our members violate that agreement, we will not only take the charter away, but on strike we will furnish the employer with men to take their places. That should be the principle of the trades union. An employer should realize that with that agreement he is then assured that he is going to have no trouble; and I believe if the metal trades organization will overlook the difficulty that they have had with their first agreement and endeavor to profit by that experience and treat with the other metal trades or metal organizations, that agreements can be had with them that will settle trouble for the time being and lead to better understanding."

Founders and Molders.

The Chairman called upon Isaac W. Frank, of the National Founders' Association. He said:

"Our organization consists of molders. The father of our organization is the Stove Founders' Defense Association, which, as Mr. Sard stated, started for the purpose of annihilating the union. But our association did not start for that purpose; it started for the purpose of doing business with the union. We profited by the experience of the Stove Founders' Defense Association, who are dealing with the heads of the same organization as we deal with, and we endeavor by agreement to secure those harmonious relations between employer and employee that we all desire."

Mr. Frank read the text of the "New York Agreement." He pointed out that what this agreement termed a "committee of arbitration" was in fact a committee of conference, consisting of an equal number of representatives of the Founders' Association and the Iron Molders' Union, a majority to decide, and there to be no cessation of work pending adjudication. The agreement had been kept in the main, although there had been instances of its violation by both sides, in particular shops, or by local

organizations. There existed differences as to fundamental principles. The Founders' Association had been endeavoring for four years to formulate a national agreement. It was represented in the negotiations by two logical and fair-minded men—Mr. Pessano of Detroit and Mr. Pfahler of Philadelphia. The stumbling-block was the demand of the union that it retain control of apprentices; that when a union was established in a shop, that must be a union shop, that piece-work existing would be permitted but could not be extended; and that the agreement must say nothing about improved appliances.

Mr. Frank urged that the unions unite with the employers in reaching an equitable agreement. He read, with comments, the formal declaration of policy by the National Founders' Association. This is the policy outlined in pursuance of resolutions passed at the 1903 convention and subsequent meetings of the administrative council.

An Association's Policy.

Attempts at arbitrary limitation of output, or at arbitrary demands for excessive output, by either molder or foundryman, will not receive the sanction of the association. Limitation of a man's earning capacity is not to be permitted, whether by the day, piece or premium system. The association will not permit fines and punishments to be inflicted upon members of unions for the purpose of handicapping them in their work. Prices for castings made by the piece, contract or premium system are to be such as to enable a competent molder to earn at least an equitable rate of wages, and are not to be reduced except by improved facilities, or agreement. The requirements of the employer solely are to determine the number of apprentices, helpers and handy-men. The foundryman may introduce machines and appliances to be operated by whomsoever he finds to his advantage.

It is the privilege of the employee to leave employment whenever he sees fit. It is the privilege of the employer to discharge any workman when he sees fit. There will be no arbitration with men on a strike. There will be no lockout on any arbitrable question unless arbitration fails. There will be no discrimination against membership in any organization. Every workman will be required to work peaceably and harmoniously with all fellow employees.

In case of disagreement, we advise conference, to be followed, if necessary, by arbitration under the New York Agreement, where it is applicable. In other cases, the question should be submitted to a board of six, three from each side, its decision to be final and binding. There must be no interruption of work pending a decision. Any member refusing to comply with this recommendation shall be denied the support of the association, unless it shall approve the member's action. Employers may pay wages mutually agreed upon, the rates to be governed by local or shop conditions. Mr. Frank concluded:

"Now, those, we believe, are broad principles. We believe that if the union will set aside some hide-bound—if I may use the expression—conditions, that a restricted apprenticeship is necessary to their unionism, that a restricted shop is necessary to their unionism, that a restricted output is necessary—we can get together; but we cannot get together with those principles in force. I believe they are not in force in some of the unions. Let the progressive unions see the equity of the proposition that these things should be open and free to the employer, and then we can formulate an agreement that will be binding and lasting."

"But then comes the question of enforcing the agreement. I believe we can leave that to public sentiment to a great degree. I believe no man can go in the face of what the public declare to be right and just and hope to get public favor, and public favor on these propositions is everything."

The Molders' Side.

Thomas B. Lavey, proxy for Joseph F. Valentine, president of the Iron Molders' Union of North Amer-

ica, was called upon. He congratulated Mr. Sard upon the success of the agreement of his organization with the Molders' Union. In reply to Mr. Frank, Mr. Lavey said: "I am not entirely in harmony with Mr. Frank's views regarding our association. I want to say that in this district, comprising Greater New York and New Jersey, we control in our organization at least 157 shops covered mostly by agreements. We do not practice the abuses he speaks of; on the contrary, the agents here insist that the terms he specifically mentioned are carried out."

"We do not allow men to go out until the matter has been investigated. If they do go out, we order them back, and if they don't go back we insist on their charter being taken away from them. As a result, in this district we have harmony between employer and employee, resulting, so far as it concerns us locally, to the satisfaction of all."

"There is a difference of opinion regarding the

A. BEVERLY SMITH

New York Agreement read here. The terms of that agreement establish a condition that our organization followed until it was interpreted by some one wrongly. I have a copy of a letter showing how the previous president of the National Foundrymen's Association interpreted it. The late commissioner of the Foundrymen's Association interpreted it the same way. The present commissioner and

the present president, I believe, interpret the agreement altogether differently. This is from the former president:

Interpretation of the New York Agreement; how we understand it to be. In any case of difference between employers and employees, the men shall not strike nor the employer lock out their men until there has been arbitration. That either party in the event of dissatisfaction has the right to ask for arbitration, but pending such arbitration there shall be practically no change in the existing conditions in the foundry.

"That is the way we have interpreted that agreement. Within the past year it has been interpreted wrongly—that when either party makes a demand, or when foundry employees make a demand, that the men will work under the conditions demanded until such times as the matter is brought to the board of arbitration or brought to the investigating committee. Isn't that right?"

Mr. Frank said that Mr. Lavey's statement was correct. Mr. Lavey continued:

A Hope for National Agreement.

"So that is one more bone of contention before we are able to get on common ground, as we are with the Stove Foundrymen's Defense Association. I feel we must in the first place interpret any provision and have it fully understood."

"I am in hope, judging from the feeling of the men who expressed themselves here, that there is a prospect of agreement. I know there is. I feel that if at first you don't succeed, go at it again."

"Our hope is along the line of education. We have trouble with our local organization, the same as any national organization has trouble with theirs. We have local organizations that violate agreements. But our hope is in educating our men. We feel that it is necessary to work along the same lines as a good many organizations, and that is toward a successful national agreement. We feel that we will take care of the situation locally if we can get a national agreement. That is our only hope and prospect—a national agreement. But there are a great many differences of opinion that have got to be modified in order that harmony can prevail. The statement of Mr. Sard would verify the statement that I would make, that we are willing and anxious to do all we possibly can for the successful determination of the strike. Those little technicalities about men walking out of the shop because another man

hasn't his card should not prevail. We are immediately notified, and we do not allow a man's business to be hampered until the case can be investigated. We generally provide for the eliminating of that man by mutual consent.

"On the whole, I think the only thing that leaves us very far apart at the present time towards national agreement is that we haven't really simmered all these questions down to a fine point. When we do, there is no question, I think, that we will reach a national agreement for the whole United States or at least the district that our organization claims to have jurisdiction over."

John Cooper, president of the New York Iron League, said that trade agreements depend for success greatly upon the men who handle them. If employers and employees are both reasonable and conservative, there is no trouble. Of the agreement

H. C. HUNTER

with the iron-workers, he pointed out that its conditions are explicit, saying:

Explicit Trade Agreement.

"In the first place the hours of labor are stipulated, the pay for overtime is stipulated, the holidays are stipulated, also that there shall be no discrimination against any of the material given a workman to use in the erection of a building, and no discrimination or curtailment in days'

work. In the event of any complaint under this agreement—as we have on both sides radicals—it is provided that a Board of Solution, composed of three on one side and three on the other, meet and appoint an umpire to settle any point on which they cannot agree. But this Board of Solution only takes up questions that may arise from a misinterpretation or failure to carry out the agreement on the part of either side. We had a meeting of our board last week; three complaints were made and they were all settled without trouble. We haven't any plan of arbitration, because we thought the solution board meant a great deal more. Arbitration means compromise, and compromise means a bad taste in the mouth when you get through with it.

"Under our trade agreement, we propose to settle all matters between us and the iron workers if possible. When it comes to the relation of the iron workers to the other mechanics in the building, we are under another plan of arbitration which provides for no sympathetic strike and all questions of trade jurisdiction shall be settled without any strikes or lock-outs on either side.

Agreements Between Unions.

"Most of the strikes in New York City for the last eight or ten years have arisen over differences between workmen, one party claiming that he should do that or this part of the work. By this morning's mail I got a notice from the general board of arbitration stating a disputed point between iron workers and electrical apparatus workers,—simply a question of the drilling of holes in the building to provide for electric appliances; the iron worker claiming he should do it and the electrical man claiming it as part of his work. One case I remember, of two years ago, where two men both claimed the right to do the same work, and the superintendent, rather than have a strike, agreed to pay them both; so the iron man did the work and the electric light man drew his three days' pay for looking at him. Now an agreement is reached between the two unions as to what portion of the work each shall do, and no strike has taken place; the work goes on. The same condition may occur in another building and the arrangement now will settle the condition in that building also.

"I am thoroughly in favor of trade agreements. There should be no question about their containing all the clauses as to wages, hours and holidays and

also avoiding sympathetic strikes; and a solution board. Get all those things down and get a reasonable number of men on both sides to discuss the matters, and there will be no trouble; but if not, there will be trouble.

Better Union Representation.

"I feel very much that the trend of unions to-day is for a better representation, that the men that we meet to-day are better than we met ten years ago. It is unfortunate that the men will not take as active part in the unions as they ought. They leave that to the men who have less to think of and who are not bound by family ties. They let them go to the meetings and run things to suit themselves. I think on the whole we have a very fair trade agreement, and we expect lasting peace and prosperity from it."

A. Beverly Smith of the joint executive committee of the Lithographers' Association said:

"We have heard to-day about various agreements for various trades. If we single out any one of these, we shall feel that one successful agreement should be applied to our industry, or that one unsuccessful agreement proves that trade agreements are a failure. Either opinion would be erroneous. In my judgment, the best agreement is the one that leaves as much as possible to be settled by joint action. Any agreement is a step out of chaos. It should contain no clause that has to be construed by courts or lawyers. Every clause should be fully understood by both sides. There should result from this meeting many more trade agreements. The violation of an agreement has become a moral crime.

"The first way to enforce an agreement is through thorough organization and united action on both sides. Every trade and all employers in each trade should be organized. Then say to any union that has entered into an agreement that it finds onerous, 'You must keep that agreement to its end and make a better one next time. If you break it, you will get no help from us; on the contrary, we will help the employers.' Equally, the association of employers must say to an employer who breaks an agreement, 'We will not associate with you.' I think that is the only way to enforce trade agreements. We have no courts in the industrial world. Our appeal should be to the public opinion that opposes the breaking, or even the bending, of an agreement during its life.

"There are two kinds of arbitration—before a trouble and after a trouble. To agree upon disputed questions in time of peace is preventive arbitration. Sometimes there are differences of opinion that cannot be justified. Are we then to say that there is nothing but the sword? Why not refer such a question to a disinterested person, before fighting, and abide by his decision for the time being? If his decision is wrong, a year or two will clear it away. It may work an injury to either employer or employee, but that very fact would cause the wrong to be righted by mutual action. I hold that employer and employee are equally interested in the way any business is conducted and in the conditions under which men labor. That interest is equal—not measured by the amount of capital invested or the amount of wages earned. If that is acknowledged, you have a line right down the center between labor and capital to which each must come and agree. In all trade, mutual action is necessary. Any trade agreement should contain a provision that the two parties can at any time agree to disregard the agreement, or to change its conditions, always by mutual act."

Mr. Mitchell, the chairman, said:

"This discussion has been very illuminating. No doubt this interchange of opinion will be productive of much good. I think we should keep in mind that in all our relations we ought to take into consideration human frailties and imperfections, and if we try to put ourselves occasionally in the other fellow's place we probably will be able better to appreciate his position and the feelings and conditions and environment that prompt him to do things that we believe may not be quite right. I think if we try to follow that rule in our business that it will establish a better relation.

"I am requested to announce that the National Civic Federation will appoint a permanent committee on trade agreements, through which we hope to have other meetings of this character and through which we hope to work out a satisfactory plan of trade agreement. In this meeting we seem all to have concurred in the opinion that trade agreements are the proper thing. We hold different views as to their form and what they should contain, but no doubt by getting together this committee will be better able to understand the detail of existing agreements and how to improve them."

Mr. Marks pointed out that the conference had been unanimous in agreeing that there should be agreement upon agreements. He requested that Wallace Downey, president of the New York Metal Trades Association, make a statement.

Mr. Downey announced that his association had

WALLACE DOWNEY

voted almost unanimously that trade agreements are advisable. When it attempted to renew its contract with the boiler makers, they insisted that the contract should require the employment of only union men. Otherwise, they refused to renew the contract. The employers refused to contract with anybody to the exclusion of all individuals outside that body. He thought that trade agree-

ments made in times of heated arguments sometimes contained provisions that were idiotic, from a conservative point of view. Contracts must be made honestly. He suggested that one way to enforce a contract would be for both parties to furnish a bond. That would open the way, in case of dispute, to appeal to the courts. In this way, the law of the land could be utilized. He did not believe in arbitration of rights. He did believe in labor unionism, as he did in the organization of employers. He hoped that organization of both sides would strip the situation of many technicalities.

The conference then adjourned.

LIBERTY, DEMOCRACY. (Concluded from page 9.)

production, it is a proposition that can be made the premise of an argument in favor of the employment of union labor. The aim of the unions, as has been pointed out, should be, and when the unions are wisely led is coming more and more to be, not the limitation, but the development, of individual efficiency, and through it the attainment of superiority of workmanship for the group as a whole. The constant tendency of unionism under such conditions is to lift the lower grades of workmen toward higher capacity and excellence,—in short to raise their standard of life. This increased efficiency must result in greater productivity, both in quality and quantity, and granted a market of adequate purchasing and consuming capacity, the outcome must be a greater sum of wealth to be apportioned between capital and labor as the reward of their trained effort and intelligent co-operation.

EDWIN R. A. SELIGMAN.

Professor of Political Economy and Finance,
Columbia University, New York.

James E. Roderick, chief of the Department of Mines of Pennsylvania, in his report for 1903, issued in June, favors the enactment of a new mining law, for more effective prevention of accidents and other purposes. The mine inspectors and some of the operators are said also to desire new legislation. There has been a slight decrease in fatal accidents in mines, but compulsory employment of assistant firemen is advised by Mr. Roderick. He would advance the minimum age for employment outside the mines to 13 years, to conform with the school law of the State, and would require everybody employed to have a certificate from an inspector.

THE GREAT TEAMSTER TIE-UP AVERTED THROUGH CONFERENCE.

CONCILIATION, THROUGH THE NEW YORK CIVIC FEDERATION, SAVES THE CITY SERIOUS LOSS AND INCONVENIENCE AND EFFECTS A NEW TRADE AGREEMENT.

THOMAS F. MCCARTHY,
President N. Y. Truck Owners' Association.

A strike of organized teamsters, that would have brought to a standstill every truck in New York and, through sympathy, caused untold midsummer inconvenience and distress throughout the city, was recently averted by mutual conference, arranged through the efforts of the New York Civic Federation. Not only was the threatened strike averted, but out of an industrial controversy a satisfactory trade agreement, the first ever made between the organized New York truck-owners and teamsters, was evolved.

The settlement of any strike that causes loss and inconvenience to the community is always hailed with acclaim in the newspaper press and by the public. The averting of a strike, even though it would have caused ten-fold more expense and suffering than a strike that really occurred, usually attracts little public attention. In this case, however, there were attendant circumstances that gave some prominence to the adjustment of the difficulty. While the general public may not have realized fully the inconvenience and even suffering that it thus escaped, business interests were aware of their danger. Both truck-owners and teamsters have expressed their gratification at reaching a friendly settlement of their differences, without resort to costly hostilities. The adjustment illustrated again the practical value of conciliation and conference.

There had been increasing discontent among the local members of the International Brotherhood of Teamsters with both hours and wages. This discontent had grown in January into an open threat of a strike for shorter hours and higher pay, accompanied by a demand that the truck-owners employ only members of the Teamsters' Brotherhood. The New York Truck Owners' Association refused to consider the demand for the exclusive employment of union teamsters, or to recognize the union at all, and a strike seemed imminent.

The situation was made more acute by the existing trouble between the marine freight-handlers and the New York, New Haven & Hartford Railroad Company. The freight-handlers were looking to an alliance with the teamsters in their strike, and such an alliance would obviously have increased the difficulties of the railroad in handling its marine transportation. Even without this complication, a general strike of the teamsters would have meant a disaster to the entire city. It would have blocked all commerce by land and water by preventing the cartage of cases of merchandise. Through sympathy, it might have paralyzed local trade, by interfering

with the delivery of all goods, wholesale and retail. Milk wagons, ice wagons and coal carts would not make their rounds. Household arrangements would have been thrown into confusion through the inability of dealers in all kinds of supplies to meet the regular, established requirements of their customers. The strike would have been felt in the kitchen and in the sick-room, as well as by the great shippers and transportation companies.

These were the circumstances that suggested an appeal to the good offices of the Civic Federation of New York. On Monday, May 23, Henry C. Hunter, secretary of the Truck Owners' Association, invited Marcus M. Marks, chairman of the Conciliation Committee of the Federation, to meet for a consultation the members of the Executive Committee of the Truck Owners. In accepting this invitation, Mr. Marks secured permission to bring with him John C. Eames, vice-president of the H. B. Claflin Company,

MARCUS M. MARKS,
Chairman N. Y. Conciliation Committee.

and J. C. Juhling, of Francis H. Leggett & Co. The entire situation was reviewed at a luncheon in the Astor House on that date. The Truck Owners present expressed strong objections to entering into any negotiations, fearing that they would involve a surrender of what they held to be an essential principle,—the right to employ teamsters outside the unions. It was explained to them that a way could be devised to reach an agreement that, while recognizing the union, would not violate the abstract principle of the "open shop."

Accordingly, a conference was begun between the representatives of the Truck Owners' Association and a committee of the Teamsters' Brotherhood, in the office of Mr. Hunter, at No. 203 Broadway, Mr. Marks presiding on behalf of the Civic Federation.

Those present representing the Truck Owners' Association were: T. F. McCarthy, president; C. F. Copplins, vice-president; H. C. Hunter, secretary; Benjamin A. Jackson, Thomas Orr, J. M. Lowden, I. Goldberg, J. H. Wilks, Paul Vianne and W. Fox.

The representatives of the Brotherhood of Teamsters were: Edward Gould, general executive board; John Clark, William H. Ashton, joint executive council; Richard Condon, Dennis Crane, Philip Gould, Gustavus Becker, William Crawford, Valentine Hoffman, dry goods teamsters; George Prescott, Michael J. Rogan, building material teamsters.

This first conference was in continuous session until 7 p. m. The question of employing union labor exclusively was precipitated; and the conference was on the eve of breaking up without action of any kind,

EDWARD GOULD,
1st Vice-President Teamsters' International Brotherhood.

when Mr. Marks made a vigorous plea for another effort to reach an agreement, pointing out the critical nature of the situation and the importance of persisting in the negotiations. His argument, with the aid of some of the conservative men on each side, had the effect of securing an adjournment until 3 p. m. on Tuesday, May 24.

This second conference was occupied with fixing the hours for a day's work, including the time consumed in going to and from the stables; the rate of wages for the several classes of teamsters; the subject of overtime, about which there was much difficulty, its final adjustment being left to arbitration; and the question of the exclusive employment of union teamsters. Finally, the representatives of the teamsters, in view of the concessions that they had gained as to wages and hours, accepted the proposition that the truck-owners should agree not to discriminate against a driver because of his membership in the Brotherhood. The teamsters agreed to make no restriction or discrimination in the handling or trucking of any merchandise. The average increase of wages is about \$1 a week, and the limit of ten hours for a day's work, excluding stabling, is a gain to the teamsters.

Although each of these subjects contained elements of acrimony, the representatives of both sides were remarkably self-controlled throughout the conference. The agreement was discussed line by line and section by section, in order to make certain the perfect mutual understanding of its terms. This process brought out occasional demonstrations of feeling, in some instances passionate in tone, but the spirit of patient consideration of the plan proposed for averting a grave danger was always resumed. The successful conclusion of the conference and the signing of the agreement were followed by a general interchange of congratulations and expressions of good-will, while Mr. Marks received from all present hearty assurances of appreciation for the manner in which he had guided the negotiations, as the chairman of the Conciliation Committee of the Civic Federation, to a satisfactory conclusion.

The agreement provides that there shall be no sympathetic strike during its term, which continues until April 30, 1905. The agreement is in the form of a contract. It is signed for the Truck Owners' Association by Thomas F. McCarthy, president, and for the International Brotherhood of Teamsters by Edward Gould, vice-president, and is witnessed by Marcus M. Marks of the Civic Federation.

A RAILROAD PRESIDENT TO RAILROAD UNIONISTS.

THE WISE COUNSEL OF CHARLES S. MELLEN TO ORGANIZED LABOR, WHOSE UNIONS HE BOTH CRITICISES AND ENCOURAGES.

Charles S. Mellen, president of the New York, New Haven and Hartford Railroad, delivered an address on April 28, before the West Side Workingmen's Club, in Hartford, upon the subject of trade unions. Mr. Mellen's expression of his opinions has elicited much comment. His address follows in part:

"The hope and future of this country lie in the common people, in the workingmen, in yourselves.

"This is the age of the workingman. Let him, with moderation, with conservatism, show his ability to assume responsibility, and there is no bound set to his attainments. Let him but exercise good judgment, and his ambitions will be attained in less time, with the good will of all, and be of more lasting benefit.

"The captains of industry of the future are among you struggling at day's wages for recognition. Men of affairs are looking earnestly for them, for there is a great dearth of men for the higher positions the modern industrial combinations are creating, and the duties of these positions are so exacting they wear out quickly those who fill them, causing constant changes.

"But they are not looking for firebrands, for trouble-breeders, for talkers, but rather for the quiet man who works while others do the talking—the one who is as much interested in his work as his wages, and such men, when found, need no help from any source to secure either recognition or increase of pay.

"To those of you who belong to unions I wish to say I believe they have accomplished much good; but they are, nevertheless, not an unmixed blessing to the laboring man. They tend to the discouragement of individual effort and reduce man to a part of a machine. They are a good thing for the drone, the inefficient man, for the walking delegate and the officers, but are unnecessary for the man who has the stuff and courage within himself to carve his own way in the world. There are many workingmen who can earn more than they do, whose employers would gladly pay them more, but that they have become classified, and an advance to them means an advance also to their inefficient associates of a similar class, making it often too formidable a matter for consideration. Therefore, when I say unions do much good, I mean they help the lame, the halt and the weary, at the expense of the really competent.

A Means of Averaging Wages.

"Divested of all claptrap, the union is simply a means of averaging wages, and an employer views it as such. It is a device for making those who are willing to work care for those who want to soldier. On the principle that every man must have a living somehow, in place of making the community contribute support openly, to which process there attaches some discredit, the really efficient workmen of a class receive less for their services, and thus help support those who are unable to earn as much, under normal conditions, through establishing a scale of averages.

"Now, having hurt the feelings of some of you by the foregoing, I am going to surprise you by saying that I regard the unions as a condition that has come to stay; that I have no prejudice whatever to properly-conducted ones, and express my wish that our men generally would join them, not that I would run a union plant as such, for I would not coerce my men nor consent to discriminations as between those who were and who were not members, but I would wish to have in the unions the conservative influence of many of the good men who are out, to counteract the floater, the anarchist, the man who has nothing at stake in the world, who works with his mouth more than his hands.

"The trouble with unionism is its intolerance.

"To succeed in this world, one must bear and forbear. The same spirit of intolerance that fills the union man toward the non-union is what history shows us to have prevailed ages ago in religion, in race prejudice, and in

other ways. The cry of 'The Union or the Hospital!' has its counterpart in that of the older one of 'The Church or the Stake!' It is through the elimination of the feeling that physical force is necessary to the accomplishment of results that real progress is made. The time when brute strength shall rule is becoming a thing of the past. The advance has been slow, but looking back to the monuments history has left for our instruction, we can see most substantial progress has been made in this direction. You cannot force things your way, but you may direct them. You hurt immeasurably your cause when you descend to violence in language or action.

Seniority Rule a Bad Thing.

"The rule of seniority is a bad one. It is most discouraging to men of ability. It is repressive and oppressive, and puts many of little wit and less ability into positions they are unfitted for, and keeps out those who

CHARLES S. MELLEN,
President N. Y., N. H. & H. Railroad.

are more deserving and competent. It deteriorates the service. In the short time I have been in authority here I have been restricted from advancing those who had attracted my attention by their ability, through this rule I fail to understand why young men assent to a rule that requires them to grow old in one line of employment before recognition becomes possible, no matter how well deserved. It is all wrong that a man should be held back by this rule from a position he is competent to fill, and see that position go to one his inferior in every respect, for no reason but he is higher up on the list of numbers of his class. The result makes for dissatisfaction, this makes for change, which in turn accounts for the large floating class in each grade of employment, with the responsible positions filled by old men.

"No one interest has done more to promote the trust or combination, the larger corporation, than organized labor. It has forced them into existence, for protection from exaction. And to what does it all tend? Given all your hotheads seek, and there will be no one to employ you, and public corporations must be run by the government. Capital will not seek investment where nothing but loss and controversy is to result. The rule of the radical will not prevail. The hothead must be retired, or in the contest in which he will involve you, you will go down in defeat. The contest will not be determined by numbers. Education and brains will outweigh numbers and brawn. The spectacled student is to be the general of future armies; captains of industry may not always be those who have worked with their hands. Give heed to whither you are drifting, for at the

end there may be a rude awakening, from which those who believe in you, who are of you, would have you spared.

"My advice to you who have families, who have a stake in the world, is to join your unions, and make yourselves felt in them. Be always a force for conservatism. It seems to me as much in your interest to do this as that you shall attend the caucus and nominate good men for office and vote for them at the polls. Your apathy is the opportunity of the demagogue, the anarchist, the floater, who has nothing to lose.

"Whatever tends to better the condition of labor must command the earnest and honest consideration of every right-minded man. The brightest minds, the most practical, are studying the subject, and the great progress made by organized labor, to my mind, has been not by securing an increase of wages here and there, but by attracting the attention of such minds to a study of the conditions that have produced the present state of unrest. That force having been set in motion, it cannot be stayed, and its results can hardly fail to be of advantage to all.

Too Much Arbitrary Conduct.

"If I have criticised the unions, let me now say that I have seen much to deplore in the course of those in authority who have dealt with them. There has been too much of arbitrary and unreasonable conduct on that side, as well, and I desire to go on record here that arbitrary, unreasonable exercise of power by those temporarily in authority is as offensive to me as to any of you, and I am disposed to neither countenance nor condone it.

"You cannot get for a thing more than it is worth, except temporarily, and the cost of maintaining an artificial market is greater than the profit in it.

"Some gentlemen interested in high finance are only just beginning to realize this, and it is no wonder this fallacy has taken root elsewhere.

"With business falling off, day by day, here in New England, I find my political friends opposing an enlargement of our markets and preferring a phrase 'stand pat' to the substance which reciprocity with our neighbor, Canada, would give us; and when I feel they ought to know better, it is not in me to too severely criticise the employes of our company who feel they should have higher wages, when the conditions with which we are surrounded compel us to disagree with them.

"I would like to pay the men of our company better wages and allow them greater privileges than my neighbors, but if I do it some one else will take my place who will bring about an equitable comparison.

"If our employes could only know the struggle it has been the past few months to keep so many of them at work at all, they would feel our officials have had their interests in mind much more than they are willing to admit.

"I have never had so many bosses as I am working for at the present time. I never had to say 'no' so often when I wanted to say 'yes.' I am under more restraint than any of you, and yet I am pegging away all the time with all my strength to prevail, to keep my property strong for the benefit of the public, its stockholders, its employes, and with little advantage to myself.

"The foundation of everything good and desirable in the social or political system of the world is the home. The end for which we all should work is to make that home better, more attractive, more influential. We are permitted to live here not simply for our own gratification, but should so arrange our lives that others who follow us may not have the same old struggle to go through."

The men who emerge from great testings as heroes are the ones who have learned the habit of duty doing and of unselfishness through the quiet, unremembered days.—"Philadelphia Press."

THE CIVIC FEDERATION OF NEW YORK AND VICINITY.

ELECTION OF ITS OFFICERS AND GENERAL BOARD—STRIKING TESTIMONY AS TO ITS SUCCESSFUL SERVICES FOR INDUSTRIAL PEACE.

The first annual meeting of the Civic Federation of New York and vicinity, in the rooms of the Board of Trade and Transportation, listened to addresses by Oscar Straus, who acted as chairman; Otto M. Elditz, Robert E. Neidig, Marcus M. Marks and others. Mr. Straus remarked that a seeming tendency to depreciate the work of the Civic Federation was because its work was not done with noise and clamor.

"I can announce," said Mr. Straus, "that in 95 per cent. of the cases in which we have tried to end labor troubles, we have succeeded." Mr. Straus also announced the progress in organizing other local branches of the Federation.

Otto M. Elditz, chairman of the Board of Governors of the Building Trades Employers' Association,

The following constitute the General Board:

On the part of the Public:—

FELIX ADLER (Professor, Columbia University).
 CORNELIUS N. BLISS (Ex-Secretary of the Interior).
 NICHOLAS MURRAY BUTLER (President Columbia University).
 JOHN B. CLARK (Professor, Columbia University).
 RALPH M. EASLEY (Chairman Executive Council National Civic Federation).
 RT. REV. JOHN M. FARLEY (Archbishop Roman Catholic Church).
 R. WATSON GILDER (Editor Century Magazine).
 HAMILTON HOLT (Editor Independent).
 ALEX. C. HUMPHREYS (President Stevens Institute).
 V. EVERIT MACY (Capitalist).
 EMERSON McMILLIN (Banker).
 WALTER H. PAGE (Editor World's Work).

BENJAMIN D. TRAITTEL (Traittel Bros. & Co.).
 CHARLES WILHELMS (President United States Lithographers' Association).

On the part of Wage Earners:—

JAMES P. ARCHIBALD (Brotherhood Painters and Decorators).
 A. J. BOULTON (Stereotypers).
 JAMES DALY (Dockbuilders).
 CHARLES DELANEY (Granite Cutters).
 SAMUEL B. DONNELLY (Typographical Union).
 WILLIAM H. FARLEY (Mosaic and Encaustic Tile Layers).
 J. J. FLYNN (Metal Polishers).
 M. J. FORD (Machinists).
 EDWARD GOULD (Teamsters).
 JAMES P. HOLLAND (Stationary Firemen).
 W. LONG (Lithographers).
 FRANCIS J. MCKAY (Boilermakers and Iron Shipbuilders).

CHARLES A. MOORE
CHAIRMAN

WILLIAM H. FARLEY
1ST VICE-CHAIRMAN

CORNELIUS N. BLISS
TREASURER

JAMES P. ARCHIBALD
SECRETARY

tion and president of the Mason Builders' Association, said:

"The building industry of New York City during the past four years has been in a deplorable condition. Chiefly owing to the efforts of the members of the Civic Federation it has at last emerged from that condition into what we believe to be the pure light. The most serious single phase of the situation was that in connection with the iron trade, and due largely to the efforts of members of the Civic Federation, this situation was cleared up in a proper way the past week."

Robert E. Neidig, who was active in the reorganization of the Housesmiths' Union, made this statement:

"The committee on our recent settlement and reorganization wish me to express gratitude and appreciation to the Civic Federation for its valuable services in arranging a meeting for us with our employers when it seemed as if such a meeting was impossible."

"We realize that it was entirely through the efforts of the Civic Federation that the several meetings were arranged, and as a result of these meetings we were able to effect a settlement of the disastrous strike of the Housesmiths' and Bridge-men's Union, which had been on for eight months."

The meeting authorized a committee to elect officers and a General Board. That committee has performed its duty. The officers of the New York Civic Federation are: Chairman, Charles A. Moore; first vice-chairman, William H. Farley; second vice-chairman, V. Everit Macy; treasurer, Cornelius N. Bliss; secretary, James P. Archibald.

ROLAND PHILLIPS (Managing Editor Harper's Weekly).
 RT. REV. HENRY C. POTTER (Bishop Protestant Episcopal Church).
 C. T. ROOT (Editor Dry Goods Economist).
 ALBERT SHAW (Editor Review of Reviews).
 OSCAR S. STRAUS (Member of the Court of Arbitration at the Hague).
 FRANCIS B. SWAYNE (Lawyer).
 H. C. WATSON (Editor Dun's Review).
 THOS. F. WOODLOCK (Editor Wall Street Journal).

On the part of Employers:—

W. D. BALDWIN (President Otis Elevator Company).
 EMIL L. BOAS (General Manager Hamburg-American Line).
 JOHN COOPER (The Cooper-Wigand-Cooke Company).
 OTTO M. EIDLITZ (Chairman Board Governors Building Trades Employers' Association).
 WM. GREEN (Chairman New York Typothetae).
 J. ALEXANDER HAYDEN (Chairman Association Interior Decorators and Cabinetmakers).
 HENRY C. HUNTER (Commissioner New York Metal Trades Association).
 REGINALD H. JAFFRAY (R. H. Jaffray Company).
 EDGAR L. MARSTON (Blair & Co.).
 MARCUS M. MARKS (President National Clothiers' Association).
 CHARLES A. MOORE (President The Shaw Electric Crane Company).
 THOS. M. MULRY (Thomas Mulry & Son).
 HOSMER B. PARSONS (Vice-President Wells Fargo & Co.).
 WALTER L. PIERCE (Lidgerwood Manufacturing Company).
 CHARLES A. SCHIEREN (Charles A. Schieren & Co.).
 LOUIS B. SCHRAM (President Associated Brewers).
 C. W. SWEET (Sweet, Orr & Co.).
 CHARLES W. TERHUNE (Edwin C. Burt Co.).

EDWARD A. MOFFETT (Editor Bricklayer and Mason).
 ROBERT E. NEIDIG (Housesmiths).
 GEORGE E. PEPPER (President Amalgamated Association St. Railway Employees, New York Division).
 HERMAN ROBINSON (Retail Clerks).
 HENRY WHITE (Garment Workers).

A summary of the advantages derived from membership in a local union is set forth by J. O. Carson, of Indianapolis, in "The Carpenter," in a manner that may appeal also to craftsmen of other trades. He gives importance to the training in parliamentary law and the preparation for taking part in miscellaneous public gatherings. The use of the referendum accustoms members to appreciate their individual responsibility for their votes. These are influences distinctly educational and promotive of good citizenship. The clearance card assures a welcome in other localities. The funeral and disability benefits encourage that feeling of independence and security which follows investment in a safe form of insurance. The minimum wage scale, which prevails in the Carpenters' Union, is adduced as a method by which the least efficient workman is enabled to make a livelihood, while not interfering with the greater rewards that are due to the sober, industrious and reliable. The support of trade journals tends to technical education. An economic proposition is involved in the claim that as unions raise the scale of wages, they increase the purchasing power of the greater part of any population. Such argumentative methods of forwarding the organization of labor are commendable, especially when they are directed to show that unions should strive for the mutual benefit of employer and employed.

THE GREAT LAKES DEADLOCK.

A Report of the Special Committee of the Cleveland Civic Federation Upon a Recent Important Industrial Controversy.

(From the Cleveland Leader, June 9.)

The report of the special committee elected by the Cleveland Civic Federation to investigate the deadlock existing between the Lake Carriers' Association and the American Association of Masters and Pilots has been submitted.

It is an interesting document of some 5,000 words. It reveals some of the inside history of the trouble and closes by saying that the committee is powerless to adjust the difficulties.

The testimony given at the hearings of the committee is not given in full in the report. It is simply outlined, and some deductions are made from the information obtained. The committee is composed of Hon. John C. Hutchins, chairman; James A. Reynolds, secretary; W. H. Hunt, Colonel J. J. Sullivan, Hon. Elroy M. Avery, W. H. Canniff, E. W. Oglebay, Harry D. Thomas and Peter Hasenpflue. It was elected May 26, and the first hearing was held on May 31.

The whole of that day was devoted to receiving written and oral statements from the two associations, both of which willingly responded to the request of the committee for information. Many questions were asked by members of the committee, and the proceedings were taken down by a stenographer. On the next day the lake carriers' representatives were heard separately and later the masters and pilots, and both positions were gone over with the greatest freedom.

Efforts Toward a Settlement.

The report says that the result of these various meetings made it perfectly manifest to the committee that an agreement could not, probably, be arrived at as a basis for a settlement of the difficulties. Thereupon the committee in executive session voted to authorize the chairman to select two special committees of three members each to wait upon the two warring factions separately to determine whether or not the chief points of difference could not be smoothed over in such a way as to make it possible to bring about a settlement.

These committees, the report says, worked earnestly toward this end, but were obliged to report back the failure of their efforts, as both sides claimed that the questions involved contained important principles which neither side could yield with safety.

The report then gives the history of the organization and the personnel of the two opposing associations. It says that the Masters' and Pilots' Association was organized a year or more ago and that, as such association, negotiations and working agreements were had with it in a greater or less degree, by the Lake Carriers' Association during the navigation season of 1903, and that preparatory to the season of 1904, some time this spring the lake carriers began again to renew negotiations with the Masters' and Pilots' Association.

The unexecuted agreement is given containing section 11, "that all members of the lake carriers will pay their masters and pilots the same salaries as were paid during the year 1903." The history of the hitch on this section is given and the different interpretations of the break in the negotiations are stated.

The Lake Carriers' Contention.

The report states that while the evidence shows that the two associations had up to this point endeavored by meetings between representatives to harmonize their differences, at no time since has the Lake Carriers' Association manifested a disposition to deal longer in any way with the Masters' and Pilots' Association. The reasons of the lake carriers are given as follows: (1) that past experience with the Masters' and Pilots' Association has convinced them that they can no longer recognize the association in any way; (2) that the masters occupy a

unique position to the government in that there is no principle applicable to any class of skilled or unskilled service which is in any degree applicable to them; (3) that the government has placed certain restriction upon the masters and given them certain privileges; (4) that the relation of a master to his ship is that of general agent with possibly the broadest powers known in the laws of agency. He has the power in case of necessity even to sell the cargo or the ship, for the proper exercise of judgment in this respect the owner is responsible.

On this last ground the carriers maintain that they cannot negotiate with an organization in which the masters are associated with their subordinates in such proposition that the latter can outvote them and are oath-bound to rules beyond and inconsistent with the rules prescribed by the government and the full performance of their duties to the ship, the owner, and the public. The lake carriers say that because of the peculiarly close relationship between the owners and the masters they cannot deal with an association of masters and mates. They insist that such a compound organization is inconsistent and unreasonable, and say they are willing to deal with two organizations composed each of masters and mates, and will aid in the formation of such associations.

Masters' and Pilots' Side.

The masters and pilots deny this stand, the report says. They claim the double organization is not inconsistent because from year to year mates become captains and captains become mates. They claim that the carriers would, in event two organizations were formed, use one to disrupt the other.

On this rock the negotiations were wrecked, the carriers refusing to deal with the masters and mates in joint organization, the latter refusing to change their association. The report says that the committee believes that growing out of the change, which has been going on so rapidly, which has resulted in the passing of the ownership of lake vessels from individual and private hands to corporate and syndicate ownership, various abuses have crept in of which the masters and mates have reasonable ground to complain. But the committee believes that many, if not all of these grievances, would be corrected by the present management of the various lake fleets; that representatives of the Masters' and Pilots' Association also believe this.

"We further report," says the committee, "that while the different associations are divided upon a number of propositions, these differences could be adjusted if the two contending parties could see their way clear toward meeting and negotiating these differences."

In view of the foregoing facts the committee decides that no effort on its part would avail, and asks to be discharged. The report closes with the following words:

"In view of the determined attitude assumed by both associations as indicated above, all the efforts which this committee could, by any possibility, put forth to settle their differences, were from the beginning doomed to failure."

AN EVIDENCE OF UNION WISDOM.

(Labor World, Pittsburg.)

The sympathetic strike is no longer a necessary part of trades unionism. This fact was fully demonstrated the other day by President Dolan, of the United Mine Workers. The pilots now on strike on the lakes recently joined the American Federation of Labor. Because of this they became possessed of the notion that other organized bodies identified with the A. F. of L. would, if required, join in the strike. Thus it was that the miners who mine coal for the lake trade were asked to strike against mining any coal for that trade.

President Dolan very pointedly stated that no such strike would be inaugurated by the miners, and he added that he could not see the justice of entering on any such conflict.

This declaration ought to silence Parry and his friends who never tire of asserting that the sympathetic strike is one of the leading features of trade unionism. As pointed out influential trade unionists are strongly opposed to it because of its injustice to the workers and also to employers. It would be difficult on principles of morality to defend miners who resolved to strike in the Pittsburg district simply because seamen were on a strike hundreds of miles away. The difference between the seamen and their employers has nothing whatever to do with the mine operators of Pennsylvania or Ohio. The relationship between the miners and their employers is of the most harmonious kind, and there is no trouble whatever between them. Hence the unfairness both to the public and to the operators of the miners inaugurating a strike because the pilots are in conflict with their employers.

The refusal to participate in this sympathetic strike is a definite indication of the intelligence and moral advancement of trade unions. Not many years ago the request of the pilots would almost certainly have been granted. This sign of progress prompts all classes to have a greater regard for and a stronger faith in organized labor.

SYMPATHETIC STRIKES.

The Longshoremen's President Dwells Upon the Importance of Holding to Agreements.

President Daniel J. Keefe of the International Longshoremen, Marine and Transport Workers, in his latest report made the following statement on sympathetic strikes and the necessity of strict observance of trade agreements:

"The so-called sympathetic strikes cannot be countenanced by our organization. When deserving we can lend our aid and moral support. Yet we must not forget that our honor and manhood is involved in the obligations of our contracts and agreements. The influence and respect we to-day command as an international union is due to the fidelity and faithful performance of each and every agreement entered into.

"Labor long ago complained, and justly so, of the gross injustice practiced on them in the past. Now when we are dignified with the consideration and public approval of just cause, we can ill afford to be swayed by the inexperienced and unthinking portion of the movement, who have but recently been made aware of the existence of a union.

"It has taken years of patient struggle and sacrifice to build up our organization, and the wisdom of the best minds who have suffered in the past contend that unless the provocation is very great, should we order a sympathetic strike. The past policy of this organization has always been to exhaust all means to arrive at a satisfactory settlement and only when every other means failed, to strike, and then do so with a full knowledge and appreciation of what the contest means, and be prepared to endure all the conflict entails.

"But the great secret of the success of our organization has been due to our ability to meet with our employers and have them see where our labor has merited and is entitled to increased wages and better conditions. * * *

"Public sentiment is sure to be with us, if our cause is right, and deserves public support, and our every act should be a studied effort for its approval. Public sentiment to-day exacts that the contracts or agreements of labor be free, as contracts for commodities, under fair and just agreement for services rendered, to the end that the wageworker shall not be obliged to make contracts or terms not acceptable to him. And public sentiment will hold the party who violates an agreement or declines to resort to conciliatory methods of arbitration, morally responsible for all the ill effects growing out of contest or strike."

The label must be respected by union men themselves, and this only will be done as a good mechanic is respected—by making it the emblem of excellency in workmanship.—"Union Label Magazine."

National Civic Federation

MONTHLY REVIEW

Vol. I. No. 6

NEW YORK, AUGUST, 1904

TEN CENTS

A SHORTER WORK-DAY WITH AN UNRESTRICTED OUTPUT.

VIEWS OF MANY EMPLOYERS UPON A PROPOSITION TO OFFSET FEWER HOURS OF LABOR WITH UNRESTRAINED EXERTION BY EMPLOYEES.

The discussion of the desirability and practicability of a shorter work-day in the United States has centered about the eight-hour bill in Congress. That measure, now under consideration by the Department of Commerce and Labor, proposes to limit to eight hours a day all labor performed for the government by contractors and sub-contractors, with exceptions provided as to emergencies and as to goods bought in the open market, and carries with it the machinery for its enforcement. But the proponents

reduction of the hours of labor in virtually all pursuits, and that the movement for a still further reduction is so general and so powerful that probably it cannot successfully be resisted or long stayed. Back of this movement lies a growing perception that the economic result of the shorter work-day is increased consumption of manufactured products, through the gradual elevation of the masses and the simultaneous multiplication of their wants. But this elevation can be ensured only by proper use of in-

uniform throughout an industry is of prime importance, because of competition. A ship-builder is concerned chiefly with the cost of labor to other ship-builders. If hours and wages are uniform in all ship-yards, competition is transferred to skill in buying and assembling the materials produced by many contributory industries, and in construction. So in mining, an operator is interested only in the length of the work-day in mines so far as it affects the cost of coal to himself and his competitors. He is not

HENRY PHIPPS,
Director U. S. Steel Corporation.

SAMUEL GOMPERS,
President American Federation of Labor.

of the bill, including the American Federation of Labor, candidly avow that its design is to bring about a uniform eight-hour work-day in all industries in all the States, which Congress has not the constitutional power to require.

The discussion, therefore, has gone beyond the proposition embraced in the eight-hour bill for public contracts. It has extended to the social and economic philosophy of the shorter work-day and has elicited a mass of testimony from both employers and representatives of labor as to its practicability. It has included consideration of various statutes in States regulating hours of labor under public contracts and upon material for public use and regulating the employment of women and children. Finally, quite aside from the criticism, favorable and adverse, of the eight-hour bill, it has brought to the public consciousness a realization of the fact that the progress of our national civilization has been accompanied by an actual, though gradual,

increased leisure. So that, on its social side, the discussion has recognized the importance of providing the workers the opportunity and the guidance to utilize for their mental and physical culture the added time freed from gainful toil, and to prevent Satan from snatching the new leisure for his proverbial activity in finding mischief "for idle hands to do."

The discussion has included consideration of voluntary trade agreements for a shorter work-day, extending throughout an industry, and including the removal of arbitrary restrictions upon output. Cannot the desire of the employer to be rid of such restrictions be matched against the desire of the employed for shorter hours of toil? Cannot one be made the quid pro quo of the other? In fact, that idea was incorporated in the agreement made in 1900 between the National Metal Trades Association and the International Association of Machinists.

This idea of making the length of the work-day

concerned directly in the hours of work in ship-yards.

The proposition to make reduction of hours gradual is of equal importance, because it relates to the supply and equipment of labor and sometimes to existing contracts. It may involve the training of more apprentices in a given craft. The president of the Wholesale Clothing Manufacturers' Association has furnished a concrete illustration in saying: "Speaking for myself, I would rather see the clothing business of this country upon an eight-hour than a nine-and-a-half hour basis, if it could be brought about gradually and uniformly throughout the trade. But a proposition to go to eight hours in thirty days is revolutionary and could not be considered for a moment. In the first place, it would call for an increased number of cutters, and they could not be obtained, for we barely can get enough for our business now. But, if we had the increased number, we would have no room for them in our factories as

ANDREW CARNEGIE,

JOHN MITCHELL,
President United Mine Workers.

now arranged. We also have contracts for future delivery which are based on the nine-and-a-half hour schedule. There must be plenty of time to adjust to the new condition."

The National Civic Federation has made an effort to ascertain the drift of opinion among employers upon that subject, and will follow that effort with another to ascertain the disposition among workmen to grant, in return for a shorter work-day, the removal of arbitrary restrictions upon output. A circular letter addressed to a list of manufacturers, none of less than \$500,000 capital, contained the following question:

"Do you regard it a practical proposition to gradually reduce hours by voluntary uniform agreement through a given industry, providing the employees agree to abandon any arbitrary restriction upon the output?"

To this question there were nine hundred and twenty answers, of which six hundred and seven said "yes" to the proposition, coupled with opinions as to its practicability, varying from unqualified assent to extreme doubt. The *Monthly Review* obtained the consent of a large number of the writers of these answers, which in the first instance had been confidential, to their publication. Out of these as many have been selected for presentation as space would permit, and as would afford fair representation of the various opinions expressed.

These opinions readily divide themselves into groups, according to the point of view, the conditions of an industry, commercial and social theories and the attitude of the writers toward organized labor. It will be observed that there is a general prevalence of assent to the desirability of shorter hours as an abstract proposition. Those who object on the ground of increased cost of production and the restriction of business expansion are offset by those who propose a proportionate reduction of wages as a consideration in addition to unrestricted output. The purpose of both these considerations is identical—lower cost of production. One trade condition that opposes itself to shorter hours is when the industry requires continuous work, carried on by shifts, or tours. The two-shift system means a twelve-hours' day. There could be no reduction of hours short of the three-shift system, or an eight-hours' day. This, it is urged, would be too violent a change; although there is one instance cited of its economical operation.

There is a considerable group of replies that express a fear of foreign competition, if the American work-day is shortened. In contrast, another group declares that the demand of the home market, for some products and in active periods, is in excess of the supply, thus creating a need for labor that would only be aggravated by shorter hours. Some

manufacturers perceive a tendency toward shorter hours, not by industries, but by localities, beginning in the larger cities and influenced to some extent by time consumed in transit to and from work.

Many employers would welcome removal of arbitrary restrictions from output in return for shorter hours. But some of these regard such restriction as unsound morally and therefore not negotiable. Others raise the questions of both the responsibility and good faith of trades-unions in keeping such an agreement. Still others regard such an agreement as only possible of enforcement when an association of employers is strong. Another group holds that shorter hours can be attained only through the aggressive efforts of unions.

Those who believe that shorter hours would result in better social conditions far outnumber those who fear the abuse of more leisure. There are some who maintain that present hours of labor are not excessive, neither impairing the health nor denying reasonable opportunity for self-improvement.

The answers representative of these opinions follow.

J. P. Brophy, Cleveland Automatic Machine Co., Cleveland.—My idea of changing the hours of labor in this country is that if the labor unions as a whole in any particular industry would ask for say a nine-and-a-half hour day instead of ten hours, and agree to lose the wages while the manufacturer lost the output of his factory for this particular half-hour, and have this take place universally, I have not the slightest doubt that all manufacturers in this country would agree to this proposition because it would look to them as though the working-man was willing to sacrifice something in order to gain this shorter day. I also believe that in a short time his wages would come back to normal, or about as it is to-day. I also believe that after this nine-and-a-half hour day was universal and all the manufacturers on the same footing, then the nine-hour day would come about in the same way and this without any great contention. I believe that if the working-men were educated up to this point by the leaders of unions a great many of the strikes that we now have and bitterness that these strikes cause would be eliminated, and that the employer and employees would get along very smoothly, and would not have any bitterness in connection with this change in the working hours; but as I understand it, the working-men in asking for a nine-hour day with ten hours' pay, are demanding something that is very unjust, especially when this demand is not universal. As you well know, to any company that has got to grant this concession, it means about 20% of loss in their business. Bear in mind that this company as tool builders have very sharp competition, and if we should be forced to a nine-hour day with our competitors working ten hours, it would almost be necessary for us to close up our factory. It is well understood that there are very few manufacturers in this country that are making as high as 20%, and for this reason it is very easily understood that if we have got to compete, working a nine-hour day, the loss of output for this hour and the extra wages to our men would bring us to a standstill. We could not possibly advance the price of our machines be-

cause this price at the present time, owing to competition, is down to rock bottom, and it is very easily understood that if we had to raise the price of our machines, with our competitors working ten hours, this would drive us out of business. If the nine-hour day was brought about in the manner above described, it would, in my opinion, prevent all this bloodshed and trouble that we now have; and before a great length of time it would be the means of bringing together much closer than they are at the present time employers and employees. There is no necessity, in my opinion, for the great and disastrous labor troubles that we have at present.

C. W. Hubbard, Ludlow Manufacturing Associates, Jute and Hemp Goods, Boston.—We would like to see a shorter day in a business which, like ours, employs so many women and children, but at the same time it is a great handicap to economical manufacturing and the success of our business to have a very large and expensive plant operated shorter hours. The writer hopes in future to see some arrangement of double shifts of short hours in place of the present system of one shift of long hours; this would require one shift starting early in the morning, and another ending late in the day, and outside the hours now allowed under Massachusetts laws. Laws which may require the shortening of the hours of labor, and yet prevent double shifts, may work very seriously with concerns competing with other States or countries not so handicapped. We are strongly opposed to any restrictions upon output.

N. E. Whitaker, Whitaker Iron Co., Wheeling.—The proposition to reduce hours by voluntary and mutual agreement is thoroughly practical, especially if arbitrary restrictions are removed and abandoned, provided based upon equitable conditions of compensation, but we do not regard the proposition practical, expedient, or equitable, if involving the same compensation for a less number of hours.

F. A. C. Perrine, Stanley Electric Manufacturing Co., Pittsfield, Mass.—It is our belief that it is a practical proposition to gradually reduce the hours by voluntary and uniform agreement, throughout any given industry, provided that no restriction be placed upon output and providing, of course, that the reduction of hours be limited to a point where the output from a given shop shall be the greatest. As the number of hours is decreased, the output of men, not largely dependent upon tools, is increased; but the output of all large tools and of all automatic tools is decreased. There is a point where these two curves will cross and give a maximum total output. Beyond this point, hours cannot be economically reduced, but up to this point it would be a gain both for the men and the manufacturers to reduce them.

Nathaniel French, Bettendorf Metal Wheel Co., Davenport, Iowa.—In most branches of work we regard it a practical proposition to gradually reduce the hours of work, being of the opinion that a workman in these branches can expend, without injury to himself, all his daily working force in less than ten hours. In other words, he can do as much work in nine hours as in ten, and possibly in eight hours. An agreement to abandon arbitrary restrictions will be of some value, but it will be broken with great frequency, till the workman learns that he cannot

CORNELIUS N. BLISS,

Grand Chief, Order of Railway Conductors.

FREDERICK P. FISH,
President American Bell Telephone Co.

receive more than he produces, that limitation of production must also in the long run prove a limitation of wages, and that increase in production makes possible a higher wage rate.

Thomas Hoopes, Wheels and Wheel Material, West Chester, Pa.—I think it desirable that the hours of labor be gradually decreased, and believe that with the improvements going on in machinery and methods, it is possible to do this and still produce all the goods that are needed.

Thos. H. Williams, A. A. Griffing Iron Co., Steam Warming Apparatus, Jersey City.—This question of hours of labor per day resolves itself in the writer's mind to a question as to whether a shorter day becomes the universal practice or not. As long as all competitors in our line work nine hours a day it makes no difference to any of them, as the relative position of each one to the others remains the same. If, however, the shorter day prevails to such an extent that it is carried to all other lines, then it becomes a matter of national policy, since it would directly affect the ability of this country to compete in the world's markets. In order that the conditions should remain the same as between one country and another, it would be necessary that all countries adopt the same length of working day. What we fear is that this shortening of hours and thus curtailing of product produced would increase the cost to such an extent that it would curtail the demand, and all this is based upon the fundamental principle of supply and demand.

R. D. Reed, The H. B. Smith Co., Iron Founders, Westfield, Mass.—I personally believe that the hours of labor will be reduced probably eventually to eight hours in all lines of manufacture, but I have been led to believe that the reduction in the hours of labor will not follow given industries. It has already started in the large cities, and no doubt next year most of the cities of the first class will in all lines of industry be reduced to eight and nine hours; and I feel that it is just that it should start in the larger cities, on account of the length of time it takes the workmen to get to their respective places of work. I feel that a general reduction of the hours of labor throughout the country will not be attained, and it is not best that it should be attained, until times are much different than at present. It seems to me that the labor leaders should consider that at the present time, when nearly every line is pushed to its utmost, that this is not just the time to reduce the hours of labor. No doubt in the future all lines of manufacture will not be so pushed, and I have every reason to believe that a good many of the manufacturers themselves will voluntarily reduce the hours which constitute a day's work. I am satisfied, however, that in the lines of manufacture which I am familiar with, the reducing of the hours of labor will actually reduce the output with present methods, but I do believe it is the duty of each employer to himself to consider this matter seriously, and prepare himself for this reduction in the hours of work of his employees.

E. W. Peck, Co-operative Foundry Co., Rochester, N. Y.—The chief restriction is as to the number of apprentices. We deem this feature the most objectionable and tyrannical, and our experience this year has been such as to arouse our strongest antipathy to it; more especially in the unions connected with

stove manufacture are young men prevented, through restrictive apprenticeship rules, from learning the trade. We should not look with disfavor upon a uniform and voluntary reduction of hours by the employers, provided the union would agree to some modification of apprentice rules to the end that there might be enough mechanics to fill requirements of the trade, as now there are not, in our particular line, and the situation is growing worse monthly. If, in addition to this, hours of labor were shortened, a very serious condition of affairs would quickly ensue.

E. A. Mallory & Sons, Fur Hat Manufacturers, Danbury, Conn.—There are all sorts of restrictions put upon us, as to limit our production, methods of work and use of machinery. Those we consider the most serious. The men are limited as to maximum and minimum wages they can earn. We are handicapped in putting in machinery, and changing methods of work in order to make savings. We are also limited as to the number of apprentices we can teach, to such an extent that we cannot at times fill our shops with necessary workmen for the business we have to do, and the union does not supply this demand. In unskilled jobs we have to pay 30c. per hour, which is entirely too high.

C. B. Orcutt, Newport News Shipbuilding and Dry Dock Co., New York.—It may be practicable to gradually reduce the hours of labor, but this can only be done successfully in large plants with a system of supervision so complete that there can be no doubt as to employer getting the full benefit of the hours actually worked; the cost and difficulty of securing proper system of supervision makes one hesitate to state that the proposition is a practical one.

Theo. Bollmann, The Hoefinghoff & Laue Foundry Co., Cincinnati.—We are heartily in favor of the reduction in hours provided the employees will agree to abandon the arbitrary restrictions of output and the apprentice question.

E. L. Shuey, Lowe Bros. Co., Paint, Dayton, Ohio.—We believe it possible to secure reduced hours with comparatively small reduction in output if employees meet the employers' offer in the right spirit and recognize his desire to be just to all interested.

F. E. Wheeler, International Heater Co., Utica, N. Y.—As a general proposition, reducing the hours of labor means increasing the cost of production. Increased costs means higher prices, and a consequent curtailment of trade. But to leave entirely out of the question the policy of a reduction in hours, or to concede for the moment that the hours of labor are to be reduced in any particular trade, then the most practical manner of doing this is by a voluntary, uniform agreement throughout that trade, made through an association of employers which is large and powerful enough to control the situation, and who, when granting the concession will at the same time insist upon the removal of all limitations as to the number of apprentices employed, and all restrictions as to the amount of work done by any employee, in any given time.

G. C. Sherman, St. Regis Paper Co., Watertown, N. Y.—In our industry several of the best mills are running 144 hours a week, with three sets of men

instead of two, and this with the consent of the union. We think the mills refusing the shorter hours gradually lose their best men to competitors, who grant shorter hours at the same rate of pay. If eighty per cent. of the mills are running uniformly and twenty per cent. the other way, we should feel we were not suffering if we were in with the majority. On the other hand, if the percentage operating at the shorter hours was reversed, of course it would be necessary for us to adopt the short hour system and the lower rate of wages. The men understand, of course, that it is up to them to insist upon the short hour system, as otherwise the union would not be controlling.

Salling, Hanson & Co., Lumber, Grayling, Mich.—We believe it practical by national legislation to gradually reduce laboring hours from ten to eight hours a day, but this can only be done by national legislation, for the reason that if laborers are allowed to work ten hours in one locality for a day's work and nine in another and eight in another, the employers working only eight and nine hours could not compete with those working ten hours. We firmly believe that eight hours a day would provide a good living for the people of the United States and put 20% more of our laboring forces to work, and in a measure avoid idleness and over-production. We realize, however, that we have to compete with the rest of the world in our pursuits for a livelihood, and unless we can in some measure fortify ourselves so as not to come in competition with foreign labor, we would be practically a failure.

T. I. Hickman, Graniteville Manufacturing Co., Cotton, Augusta, Ga.—Hours of labor, sixty-six per week. We would be perfectly willing to reduce this to sixty hours a week if other cotton manufacturers would conform to the same rule; or we would favor a universal ten-hour law for cotton factories. I think that ten hours per day is enough for any person to work, but of course we cannot work ten hours while our competitors in the same field are working eleven.

F. C. Caldwell, H. W. Caldwell & Co., Engineers and Machinists, Chicago.—If an agreement were made which, as you state, would be voluntary and uniform, and would cover an entire industry, such an agreement would certainly be effective. Our idea of the question of shorter hours is that in so far as the reduction of hours is for the purpose of improving the social condition of the employee, the reduction can be brought about; but if the hours are shortened for the ulterior purpose of requiring the employment of a greater number of men, such action would be economically wrong and certainly would fail in the end.

Fred F. Smith, Ferracute Machine Co., Bridgeton, N. J.—We have always believed that the world could work with many less hours than now practised, if all would agree to it, and if there was no great amount of waste. At present we do not think it wise to change the number of working hours to less than ten in our line of business. In some kinds of business, where the men are exposed to great hardships or unusual strains, the hours should be less, but owners of factories and each set of employees should decide these matters themselves, as it is impossible for outside "delegates," who are not always men of experience, to decide arbitrarily a number of these details. We certainly do not favor a restriction upon

OSCAR S. STRAUS,
Of The Hague Court of Arbitration.

FRANCIS L. ROBBINS,
President Pittsburgh Coal Co.

JAMES DUNCAN,
Secretary Granite Cutters' National Union.

output, "for the sake of protecting the poor brother." Every one should produce all he can properly, and the world would then be richer.

H. Wittenberg, Pacific Coast Biscuit Co., Portland, Oregon.—The conditions in America are changing each year. Free schools, public libraries, and on all sides higher degrees of civilization are having their effect upon the workmen of our country. They are becoming more intelligent and observant, and have a good understanding of what their rights should be and how they should be treated by their employer. With a better condition and higher education comes a desire for more luxuries and more time for recreation, just the same as the operator, or employer, who, starting early in life, works late and early, practises every possible economy in his effort to accumulate and increase his worldly goods. This he continues until he has reached a certain point in life where he feels that he can take a little more comfort and reduces his hours of labor. Now, if this is the plan of the employer, why should not the employes have the same object in view, and why should it be denied to them? We can see no good reason for a counter argument. The people of this country, both as individuals and tax-payers, furnish the ways and means to improve the condition of the general public, and as they furnish them such means they should expect that the workmen, or general public, in securing such knowledge, should desire to profit and improve their condition, and in doing so, better pay and less hours of labor is required to satisfy their desires and new conditions. The only danger that presents itself in the labor situation in America, in my opinion, is whether labor will use good judgment in adapting itself to its new conditions. Not having the same experience and, if you please, the cool, conservative judgment which the employer in general has learned through years of contact with the business public, the employe is apt to overstep the bounds of prudence and injure himself many times over, before he has learned it is only by slow degrees that he can further improve his condition. Let us hope that the employe will realize that the interests of his employers should be safely guarded by him; that he should feel an interest in his employer's business, for only through the success of such business can he hope to secure further benefits. When such a policy will be adopted by the working men of this country, there is no doubt that the acme of good feeling and pleasant relations will have been reached.

Several establishments, compelled by the nature of their business to run consecutively, point out that they are confronted, not with the proposition of a gradual reduction in hours, but of a sudden reduction from twelve to eight hours:

H. J. Brown, Berlin Mills Co., Lumber and Wood Pulp, Portland, Me.—Most of our works run continuously, the day crew working from 7 to 6, six days in the week, the night crew working from 6 until 7, five nights in the week, each man having an hour's intermission, but his work being kept along by his mates. There can be no modification of this, except the jump to an eight-hour day, the men working through the eight hours without any time for meals, except to eat a lunch alongside their work. We do not see how this change can be brought about gradually. It might, however, be brought about by an agreement to all go on to this system at a fixed day

sufficiently far in the future to allow present contracts to run out and new ones to be made on the new basis. The only restrictions in our business are that the men in the paper mill will not work extra for extra pay at seasons of the year when we need to have them. This would be obviated by an eight-hour day, which would keep the mill running the entire week excepting Sunday.

Fox River Paper Co., Appleton, Wis.—It will be necessary for us to substitute three tours of eight hours each for the present two tour system in order to make any reduction of hours to those working, and in this connection it is well to say that we do not believe that our tour workers would favor the three tour system, as they recognize that if put in practice it must be a reduction of diem pay, and also that it would increase the number of skilled hands, which in dull times would make it more difficult for the individual to obtain work.

But another paper company, which made the change, writes:

F. L. Moore, Raymondville Paper Company, Watertown, N. Y.—Part of the mill is working on the three tour system, and part on the two tour system. In changing part of our mill from the two to the three tour system, making a day of eight hours, we found we could cut off a few extra men and that the same work could be accomplished with fewer men, and they would work harder and take more interest in their work than when working twenty-four hours in two shifts. We find in doing this our production is somewhat larger and the men are better satisfied with the hours.

Several replies object to shorter hours on the ground that they would increase cost on the amount produced and would retard business expansion:

Arthur E. Barlow, Newark, N. J., Malleable and Gray Iron Castings.—The foundry business cannot profitably be run on shorter time than nine hours per day. The only productive part, strictly speaking, is the time when they do the molding, and if an eight-hour work-day were enforced it would allow only six or six-and-one-half hours for molding; therefore, nine hours per day is the minimum time for a work-day in a foundry.

B. L. Stowe, Eureka Fire Hose Co., Jersey City, N. J.—We do not find that people will do as much work in fifty-five hours as in fifty-nine, as is sometimes claimed, and actually Saturday forenoon is not as valuable as other forenoons. The shorter week, therefore, places us at some disadvantage in competition with our competitors who work fifty-nine hours, but we have no intention of increasing our time.

The Bain Wagon Co., Kenosha, Wis.—We do not regard it practical to reduce the hours of labor; our goods are sold to the farmer almost exclusively. With nature for his master, the farmer must work such hours as are necessary to meet natural conditions, that is, he must sow his grain in the right season or it will not come to fruition; he must harvest it at the proper time or nature will waste it. Any attempt on our part to add the cost of reduced hours of labor to the product he consumes would be met by the sternest kind of oppo-

sition from him, and in our opinion ten hours per day is no more than the laborer's share of time to be expended in the production of our goods, when compared with the hours of labor that the farmer must spend in producing his crops.

Schofield, Mason & Co., Carpets, Philadelphia.—We do not doubt it might be practicable to gradually reduce hours by voluntary, uniform agreement throughout a given industry on the conditions you name, but we should deprecate such action in our business, as our machinery will only produce a certain amount of work, and to reduce the time 10% would be to reduce our output that much, and make our plant 10% less valuable.

Several establishments held that there is not always enough labor supply to warrant reduction in hours. These are frequently in industries having seasonal demand for their products. But the following replies were written before the present period of comparative industrial laxity:

C. H. Smith, Western Wheeled Scraper Co., Aurora, Ill.—When men are scarce I would not regard it as practicable to reduce the working hours to eight, or even nine. Our business has been restricted because we could not get help enough to turn out the work offered.

G. H. Schulte, Milwaukee Harvester Co., Milwaukee, Wis.—We have no objection to shorter hours, if the reduction can be brought on gradually and simultaneously throughout our line of business. We object to restrictions upon output for the reason that there is not enough labor to be hired at times to produce our output even at ten hours a day.

Wm. A. Lynch, The Aultman Co., Oil Engines, Canton, Ohio.—When the production is equal to or exceeds the demand, we would favor a gradual and general reduction of hours of labor, so as to keep all workmen employed a part of the time, but to reduce the hours of labor say from ten to nine hours in a period of great activity would be a loss to the productive capacity of the whole country.

C. G. Hussey & Co., Pittsburgh Copper and Brass Rolling Mills, Pittsburgh.—We doubt if we are competent to make reply, having had practically no experience with union labor, but we think it doubtful if your proposition would work satisfactorily for the reason that the labor employed, say this year, in all probability would not be to the extent of 50% of the same employed two or three years later, when it might be proposed to carry out the scheme and put any restrictions upon the output. The labor employed, say three years later, might object to these conditions, if the labor were non-union.

H. E. Hardin, Acme Harvester Co., Peoria, Ill.—The number of hours which employes are expected to work should be optional with the employer, especially if he shows a disposition to be fair, and should be a matter of mutual agreement before the employe goes to work. Conditions are such, especially in our line of business, that an iron-clad rule limiting the number of hours of labor to eight or nine per day would work as a great hardship

WHAT IS WELFARE WORK ?

ESPECIAL CONSIDERATION FOR PHYSICAL COMFORT, RECREATION AND MENTAL DEVELOPMENT OF EMPLOYEES.—CONDITIONS OF SUCCESS AND CAUSES OF FAILURE.

The announcement of the formation of its Welfare Department has brought to the National Civic Federation various inquiries as to the nature of the subject with which that department deals.

Welfare Work.

Welfare work involves special consideration for physical comfort wherever labor is performed; opportunities for recreation; educational advantages; and the providing of suitable sanitary homes; its application to be measured by the exigencies of the case.

Before discussing the several divisions of this definition, a brief statement of the theory underlying welfare work will be advisable.

The first essentials to the welfare of the employee are steady work, an equitable wage, and reasonable hours of labor. It is an economic truth that employment without interruption is of the first importance to the prosperity of the wage earner. The employer, however exacting, whose foresight and good management make steady work possible is a greater benefactor than can be the employer, however benevolent, whose business is of spasmodic activity. Hunger is only a fortnight behind the average worker thrown into idleness.

The payment of the market wage creates in the mind of the worker confidence in the justice and fair dealing of the employer. This confidence is absolutely essential to the prosecution of welfare work, which must fail whenever the workers are led to suspect that its cost is taken from their wages. It is difficult to explain to employees that the total cost of welfare work in any establishment, if distributed among them, would be individually an infinitesimal amount.

The relation of the hours of labor to welfare work lies in their effect upon the physical health of employees and in the opportunity they leave, especially where there is much "overtime," for recreation and education after the close of the day's work. It is recognized that, where competition is keen, a reduction in hours can only be brought about by agreement involving practically all the competitors in a given industry.

Each Industrial Establishment a Separate Problem.

In the application of welfare work, every industrial establishment presents in itself a separate problem, requiring special study. Every beginning is an experiment. Every general rule has its exceptions. Nevertheless, while the welfare work in any single

establishment can not as a whole be applied to another, various features can be adapted to the special conditions peculiar to a particular concern. Welfare work has proved of value in small as well as large establishments.

Special Supervision of "Welfare Manager."

A general rule for all welfare work in large concerns is that its successful conduct requires the employment of a welfare manager. This manager should not only possess tact, executive ability, common sense, acquaintance with local jealousies and sometimes with racial prejudices, but a knowledge of industrial subjects. He must recognize and in no way interfere with the authority of the superintendents, who are responsible for the successful operation of their departments, the administration of labor, and the maintaining of discipline. He must gain in advance their full approval of each effort, and use every proper method to enlist their full co-operation. He must have the patience to endure the slow realization of his plans. In time it will become evident that they are for the benefit of all, of the employer and of the executive chiefs as well as for the mass of employees.

Many employers would introduce welfare work into their establishments were it not for the time and trouble needed for its organization. The employment of a welfare manager removes this obstacle. Successful prosecution of welfare work requires concentration of responsibility. All of its branches must be under the supervision of one person, or efforts in different directions may conflict, or special and, perhaps, pressing needs may escape attention. Pressure of daily business routine usually relegates welfare work to the last consideration. This is another reason why in large establishments it should receive the entire time and attention of one person. Welfare work has sometimes been started enthusiastically, but has afterward failed because there was no one person to keep its operation active and apace with daily needs.

Participation of the Employer.

The part of the employer in welfare work invites special comment. His active participation and that of the executive heads of the business in the work is a prime requisite to its success. The employer should not expect demonstrations of appreciation or expressions of gratitude for his fulfillment of a moral obligation. He has within his control influences that affect the physical, moral and mental de-

velopment of the human beings in his employ. It becomes then clearly his duty to direct these influences for their welfare. Nor should the employer expect welfare work to avert a strike against unjust conditions.

The question is often asked whether the employer should take the initiative in welfare work or await suggestions from employees. In practice it is found that whenever an initial step is taken by the employer to meet an urgent need, abundant suggestions for his consideration of further betterments will follow from employees. It is essential in taking this initial step, however, that confidence in the employer's motive should be unquestioned by the employees.

Confidence in the Employer's Motive.

The employer must show that his interest in the welfare of the employees is genuine. An agreement with executive heads as to plans and purposes will ensure an understanding of his sincerity which will be helpful in reaching the rank and file. In securing confidence of employees at the outset of welfare work, it is necessary in unionized establishments to explain its purposes to the union officers; and in non-union establishments it is important to obtain the co-operation of selected committees of the employees. This may sometimes be promoted by the printing of placards in different languages.

Should Not be Used for Advertisement.

The employer, it has been shown, should not pervert welfare work into an advertisement for his business. This impugns his motive and discredits the plan. When publicity is inevitable, there should be care that the subject is treated in a dignified manner.

Paternalism and the Democratic Plan.

The spirit of welfare work must not be that of condescension, nor have the appearance of thrusting benefits upon subordinates, nor rob the worker of self-respect. But any effort at welfare work may be regarded as more or less paternalistic. A resort to direct paternalism, however, is necessary or desirable only for recent immigrants who in their native lands have been accustomed to the guardianship of superior authority. Going to the other extreme, in the so-called democratic idea, is also to be avoided. When their confidence has been gained, employees will generally prefer to entrust the direction of welfare work to the employer. The need of relaxation and the natural impulse homeward should not be denied or checked during intermissions or at the

close of the working day by too much committee work. It must be borne in mind that the chief purpose of committees of employees is advisory and to enlist their interest, rather than to initiate or execute welfare plans. Committee work is also valuable in developing among the employees a spirit of helping one another, while it is, in its very nature, educational.

Some Causes of Failure.

Especially inquiry has been made into cases of failure in welfare work, in order to ascertain its causes. One cause of failure has been found in its too rapid introduction. As a general rule improvements should be adopted gradually, so that the workers may become accustomed to them. For example, if an employer were suddenly to erect a fine club-house at an impressive expense, the workers might conjecture that its cost was to be in some way taken out of their own pockets. If a library is not patronized by employees, its failure may be caused by the absence of interesting catalogues for leisurely inspection in the homes, or by lack of special effort to overcome diffidence in frequenting the library building. Prices charged for luncheons may be too high for wages in a given industry. A lunch room may not be patronized because it is untidy, or unattractive, or too small, or because there is no place for men to smoke. Elaborate toilet facilities with cold water only and no soap may be scorned for the drilling compound which does remove oil from the hands. In brief, failures are usually traceable to insufficient preliminary study of the particular need to be met. This study may often be forwarded by enlisting the co-operation of committees of the employees. There have been some failures of welfare work not justly chargeable to its conduct. These have been brought about by a change of management in the establishments concerned, the new management showing opposition to what had been done before.

Physical Welfare of Primary Importance.

The beginning of all welfare work must be directed toward meeting the pressing necessities for the physical well-being of the employees in their place of work. These most pressing needs are provisions for cleanliness, pure drinking water, adequate toilet rooms, ventilation, light, separate lockers for outdoor clothing and dressing rooms. In some industries, provisions for cleanliness should include especial attention to the relief of men whose toil induces profuse perspiration. There should be free laundries for washing their working clothing. Baths will be of benefit and will be much used. Ventilation in factories should include devices for removing dust. Much suffering in such superheated places of labor as rolling mills, foundries, and forge shops can be relieved at comparatively small expense, while more attention should be paid to damp substructures and

unnecessarily cold and and drafty places. Abundant light is important to cheerfulness as well as to health. Besides rest-rooms for women, it is important to have, when the task permits, fixed rest periods, even if brief.

All of the details that have been specified are primary. They are literally the first letters of the alphabet of welfare work. Yet these very things, simple as they seem, are of the utmost practical value to the employer. The one provision for cleanliness alone, for example, improves the spirit of every worker as well as the health, and raises the moral tone of the force, even improving discipline. Taken altogether, all the separate provisions that have been noted have the effect of attracting to any establishment a higher and more constant class of labor. Workers everywhere enjoy and will seek improvements in the surroundings in their hours of toil.

A further step toward physical welfare of employees is the establishment of lunch rooms. The importance of the midday meal to health and vigor is obvious. Also, forenoon luncheons and breakfasts are valuable, especially when the breakfast at home, through lack of appetite or haste in starting for work, has been skimmed or skipped entirely, and when there are several shifts. Luncheons in overtime are important. Any establishment should at least provide a place to keep from spoiling or drying the prepared food brought from home. A still further step will be care for the sick and injured. It is but humane to furnish a couch on which a prostrated woman may be restored, instead of permitting her to lie on the floor or on two chairs. Wherever serious accidents in a factory are likely to occur, a doctor should be continually present, and an emergency hospital is necessary. Under this head also would fall the guarding of machinery.

Protection for Women Workers.

In applying these primary beginnings of any system of welfare work, several moral questions are encountered. In factories where both men and women are employed, it is desirable, though unfortunately not always possible, to separate by a period of three or five minutes their times for beginning and quitting work. This simple precaution for the protection of the feminine element among the employees of any large establishment has the effect of preserving respect for womanhood. Experience shows that, where this system prevails, the establishments soon acquire a higher tone. An additional protection is the employment of a matron, who will also be a confidential adviser and render temporary relief in cases of illness. When the general morale of a factory is not in good repute, it is difficult for the employer to induce desirable working-women to accept employment.

Recreation.

After providing for immediate physical needs, the recreation of employees is the next step in welfare work. Here again the peculiarities of individual establishments must be considered. A gymnasium, for example, would be desirable only in establishments where the work is more or less sedentary, so

that the employees are in need of exercise, or for the young men and women employed in factories. A gymnasium would be superfluous in a place where the work itself involved severe bodily exertion. Athletics, both indoor and outdoor, are highly desirable. They may involve organizations. In large establishments, the plan of recreation may include a clubhouse, with rooms for theatricals, dancing, entertaining and for games. The entertainments may include music and, perhaps, lectures, which approach a further development of welfare work—that looking to the education of employees.

The question of vacations is important. Where the industry is located in a large city nearby camps in the country for laborers and their families may be conducted. Information as to the location of summer resorts, rates and transportation, is especially desired by clerical workers.

Educational Efforts.

The possibility of extending welfare work to the education of employees is contingent upon the hours of labor. A scheme of education may begin with technical classes for the younger men, and may include instruction designed to replace the loss of earlier schooling. Women employees may be taught to help themselves in such ways as in millinery, dressmaking, cooking, and all household affairs; and in some pursuits they may also profitably receive technical instruction. In a large settlement a kindergarten may be provided. The instruction of children becomes a direct contribution to better citizenship when the parents employed are largely immigrants. A reading-room or circulating library, or both, will be of great benefit. A company may publish with advantage a periodical in the several tongues used by the workers. Sometimes an establishment may be so large that its plans of education may come into co-operation with the municipality, or may even assume all the functions ordinarily performed through municipal agencies. This has been the case in towns which have been created for the industry, where the company has been obliged to provide public schools as well as churches and social halls.

Homes of Employees.

Welfare work concerns itself also with the housing of employees. The two purposes to be kept in mind in this branch of the work are the health and the self-respect of the employee. The reflex social and moral influence upon the people of a community in encouraging attractive home-making is of far-reaching consequence.

Plans for Saving and Lending Money.

Mutual plans for saving and lending money have proved highly beneficial to employees, through protecting them in times of stress, when desperation forces agreement to any terms, against the extortions of the "money-shark." To avoid encouraging the tendency to borrow, any plan for lending should be conditioned upon a system of saving.

Insurance and Pensions.

Beneficial insurance societies are quite commonly included in welfare work, both compulsory and voluntary plans having been tried with varying degrees of success. Related to these are pension plans, in which there is a growing interest. This entire class of projects requires more original research and experiment than any other phase of welfare work, as their inception and successful operation are complicated by many problems.

THOUSANDS OF WAGE-EARNERS TO SEE THE WORLD'S FAIR.

THE WELFARE BUREAU AFFORDS EMPLOYERS AN OPPORTUNITY TO ENCOURAGE WORKERS TO ENJOY ITS EDUCATIONAL ADVANTAGES WITH COMFORT, ECONOMY AND GUIDANCE.

The Welfare Department of the National Civic Federation has established a bureau at the St. Louis Exposition for the convenience, comfort and guidance of the thousands of wage-earners in the United States, for whose instruction a systematic study of special exhibits and observation of the World's Fair as a whole are highly desirable. Large employers of labor already show appreciation of this opportunity to add to the intelligent productivity of workers. To a number of such employers the following letter, which explains itself, has been addressed by H. H. Vreeland, chairman of the Welfare Department:

"On behalf of the National Civic Federation, I beg to call your attention to the unequalled advantages offered for the mutual benefit of the employer and employee through attendance at the Louisiana Purchase Exposition.

"It is generally conceded that in very many respects this Exposition surpasses anything of the kind in history. The sum of \$50,000,000 has been spent in construction, and its exhibits represent over \$500,000,000 in value. It is safe to assume that this generation will never have another opportunity of viewing such a stupendous exhibition of the world's latest and best achievements in industry and science.

"The Executive Council of the National Civic Federation recognizes that it would be most unfortunate

were not every possible effort exerted to place within the power of each wage-earner, where practicable, the opportunity to visit this Exposition. It is convinced that the superintendents, foremen and other leading workers in every manufacturing plant or commercial institution should enjoy the educational advantages presented at St. Louis. With the object of helping to solve the problem of how to visit the World's Fair to the best possible advantage, the National Civic Federation has, with the hearty approval and support of the Exposition management, authorized its Welfare Department to establish a World's Fair Bureau in the Transportation Building, on the exposition grounds.

"This bureau will be glad to arrange, free of all charge, for economical accommodations through responsible agencies, to prepare and furnish itineraries for the systematic observation and study of objects of special interest in the various departments, and otherwise to do everything possible to contribute to the profitable enjoyment of those who visit the Exposition under its auspices. It will undertake to engage lodgings in hotels, private houses or tented cities, meet parties at trains, and guide them to their stopping places.

"As experience demonstrates that the attendance at all expositions increases in the closing months,

it is obvious that more favorable terms can be obtained now than later. We would therefore urge the advisability of making your arrangements at the earliest possible moment. Exclusive of railway fares, the visitor can spend six days in St. Louis and see the Exposition comfortably at a total expense of \$15 for lodgings, meals, car fares and admissions.

"There is enough instructive entertainment in the main exposition palaces, the United States Government Building, State buildings, and the pavilions of foreign countries, to all of which admission is free, to occupy attention for a much longer period.

"One of our Illinois members is arranging to bring 6,000 of his employees in groups to the Exposition, and an Ohio member will bring 2,500, while others are arranging for from 100 to 500 foremen and superintendents from more distant sections. In some cases employers pay part of the expenses; in others, they help in securing low railroad rates; and in one case, the employer has advanced the money, deducting a stated amount from the weekly wage. One large manufacturer states that he regards it as a good business investment for both employer and employee—and he is defraying one-half the cost.

"If this subject interests you, our World's Fair Bureau will be glad to furnish any further information desired."

CONFERENCE COMMENDED.

President Covell Advises the National Metal Trades Association to Encourage Trade Agreements Consistent with Fundamental Principles.

A liberal attitude of organized employers toward organized labor was the subject of a portion of an address delivered by H. N. Covell, president of the National Metal Trades Association, to the sixth annual convention of that body, in Philadelphia. President Covell said:

It is not my purpose to enter upon a theoretical discussion of the great subject of capital and labor. You will find all the printed matter on every hand that you will be able to read on that subject, written by learned and wise men. It is not theory, but facts, with which we have to deal. This association is created to deal with men who hold no theories save that they are after all they can get. They should obtain all they are entitled to, but no more.

The question of our relations with organized labor is a most important one. I believe that the tendency is growing to a more liberal spirit; that is, that more employers have come to view the situation in a broader and less conservative manner, and have

eradicated from their minds, the idea that all is absolutely had in organized labor and, conversely, wholly good on the employer's end.

More lasting, ultimate good may be accomplished by an endeavor to correct the abuses of organized labor than by crushing it (if such a thing were possible).

I am of the opinion that no harm will be done, but that much good would ensue, by occasional conferences with representatives of organized labor. We cannot ignore the fact that organized labor is prominent in our nation's affairs. Were it not that labor is organized, this association would not be organized; and, therefore, in the mere fact of our own organization, we recognize the organization of labor.

The use of the word "recognize" as applied to labor organization, is, perhaps, not a happy one. To use the word from the labor union standpoint, would mean the adoption of the closed shop, minimum rate, hours work, limitation of apprentices, and, throughout, the whole category of labor union restrictions; which is a condition strictly contrary to our Declaration of Principles, and is in no sense to be considered by this association. But, using the word "recognize" in a broader sense, we cannot deny the fact of their existence. We recognize the fact of their existence, hence recognize them to that extent; and this is something we cannot avoid.

Organized labor has rights and a standing in the

community, whether we like it or not. If through conference we can impart some of our ideas, and we certainly can, it will be sowing seed which some day may take root and grow and thrive. If two persons disagreeing upon a matter, should stand upon opposite sides of a street and hurl epithets, stones and sticks at each other, no good will be done to either. Surrounding property and passersby would be liable to receive injury. The more stones thrown the more angry would they become. It would be infinitely more sensible if both sides should conclude to come to the middle of the street and talk it over.

And so it seems to me that the National Metal Trades Association should meet organized labor in conference. I am a firm believer in national agreements. I do not mean any agreement, but agreements which must be based upon our fundamental principles and this without any infringements of our rights as employers, citizens of the United States or members of the association.

It is not logical that we should disparage or disapprove of agreements with organized labor as a body when component parts, as represented by local associations, make local agreements, and are, in numerous instances, successfully operating under them to-day; and, in fact, using as a basis of the agreements a form officially sanctioned by this association.

William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.

THE OPEN SHOP AN OPEN QUESTION.

The organs of the "Smash the Unions" employers' associations unite in making much ado about the pronouncement by Judge Adams of Chicago, that a closed shop is illegal and criminal. Those anti-union organs persist in ignoring the fact that Judge Adams' declaration was not a decision but a dictum, and that the consensus of opinion of able members of the bar is that it stands the test neither of law nor of logic. Experience, not dicta, will solve the case of the open vs. the closed shop.

For that case is one of practice, not of principle. But it is a case that must be decided in accordance with principle. That principle is the principle of liberty. In turn, liberty must accord with the interests of society as a whole. The despot and the anarchist each has his definition of liberty. Neither can be right. Liberty does not mean freedom to do as one will with one's own. Liberty imposes duty. That is the duty to direct conduct and to use property for the common weal. The gain of the individual, whether from the use of capital or the increment of earnings, must not mean the loss of society.

It is the interest of society that the relations between employers and employed be such as to encourage the active and profitable use of capital so as to leave a margin for improving processes, and that they be such as to elevate continuously the condition of the great body of workers, so as to increase consumption. Anything that checks this progress opposes civilization and must be removed.

Apply this principle to practice in the case of the open or closed shop. The union is a means for securing the rights and bettering the conditions of labor. It is, therefore, wrong for the employer to discriminate against the union. The employer who aims to make the open shop mean a shop closed against the union, occupies an untenable position. On the other hand, the employer is responsible for the successful conduct of his business. Only such conduct makes possible the employment of labor and the betterment of wages and conditions. It is, therefore, wrong for the union to wrest from the responsible employer the control of his business. The union that dictates to the employer whom he shall vest with executive authority or whom he shall hire or refuse to hire, occupies an untenable position, and the employer is warranted in trying to smash it in self-defense. If all the workers in any establishment belong to the union, that is in effect a closed shop regardless of any specific contract. Should any one or several prefer not to join the union that is their right. But the union has also the right to refuse to work with any outside its membership. Such refusal does not deny the right of the non-unionist to seek employment, or the right of the employer to employ whom he pleases.

Whenever the employer discriminates against union workers because the union is the organized force that he confronts, he compels the union to fight for the closed shop as a necessity of self-preservation. The union then has the right to make that fight, because it is a fight for its life. It is idle for the "Smash the Union" employers' associations to attempt to deceive the unions or to mislead the public upon this issue. Their orators may prate upon the rostrum about the right of labor to organize and may protest that they do not fight the principle of unionism, but its excesses. But their insincerity is betrayed by their boasts in private of how they will break this or that union through the open shop. Such men force upon the union the issue of life or dissolution.

While the union has the undoubted right to strive for a closed shop, the employment of any form of coercion must be unequivocally condemned. If the union can convince the employer that the closed shop means a steady supply of

superior labor, it will have won its purpose by demonstrated merit. The closed shop upon any other condition would be intolerable.

CRITICISM AND FACT.

The animus against organized labor of some editorial writers for the daily press leads them occasionally into inconsistencies that are amusing. They are also instructive, as disclosing a disposition upon the part of these writers not to credit trades unions with evidences of growing self-restraint, self-respect and enlightenment, that are to be found in the record of facts published in their own news columns.

A typical newspaper critic of unions recently made these editorial remarks:

Labor cannot divest itself of responsibility for the excesses, the oppression, the cruelties and the crimes of individuals and organizations until it finds courage to disown the leadership and teachings of demagogues and agitators, and to relegate to obscurity men who, in executive control of trades-unions, have made them dangerous to the public interest. . . . If wage-earners by thousands are willing to march in public procession under the leadership of a convicted bribe-taker and barroom bully during a brief interval from deserved incarceration in State prison, . . . they have only themselves to blame if they are misjudged and saddled with a very large share of responsibility for the misdeeds of individuals and organizations.

This is a misstatement of fact. The same newspaper was more accurate at the time of the occurrence, leaving to others the distortion contained in the above quotation. When the convicted Parks was released from prison through a certificate of reasonable doubt, this same journal said editorially:

Judge Sewall acted within his rights. . . . Judge Sewall thought him entitled to a new trial, and he will have it. . . . He [Parks] is entitled to his rights, but the fewer honors he receives, the better for the interests of labor.

Despite this recognition that the convicted Parks had been restored to civil rights pending a new trial, but quite in accordance with its own advice, the news columns of the same journal during that week afford voluminous evidence that the great body of organized labor turned its back upon Parks and his political patron of that period. Of the 150 different labor crafts in New York City, only thirty involved in the building trades considered the Labor Day parade. Of these thirty, the twenty-three that had signed the arbitration agreement with the employers quickly turned it down. Of the other seven, supposed to be under Parks' influence, five of the largest also revolted, leaving only the two unions to which Parks belonged. As a matter of fact, only a small fraction of those two unions joined in the parade, the rest of his following being Devery heelers. On September 8 this critical journal thus headed its report of the Labor Day parade: "Labor Day Fizzle. Only 8,593 Men in Line, as against 25,000 Last Year." Editorially the same issue observed:

What promised to be the largest parade organized labor had ever had in New York was spoiled by the fatal mistake of placing Parks at the head of it. . . . The most hopeful feature of the whole unhappy and deplorable incident is that so many unions refused to parade under such leadership, and that of those which were not permitted to refuse so many self-respecting men remained at home.

Later, when Parks was apposing bitterly the negotiations that finally resulted in the arbitration agreement between the building trades unions and the employers. President Samuel Gompers and 1st-Vice-President James Duncan, of the American Federation of Labor, came to New York and investigated the situation. As a result, these two labor leaders issued a letter to the unions advising those who had been locked out or were on strike to sign the plan of arbitration. This was in effect a clear repudiation of Parksism, whose influence was recognized as the one obstacle in the way of restoration of harmony in the building industry. These national labor leaders explicitly recommended the plan of arbi-

tration which Parks was fighting. These facts were published by this same journal on October 14, under the caption, "Arbitration Plan Urged by Gompers." Surely, this was finding "courage to disown the leadership and teachings" of a demagogue and agitator, as it was a step "to relegate to obscurity" one of the "men who, in executive control of trades-unions, have made them dangerous to the public interest." Editorial criticism should be made to accord with news history.

THE "MUGWUMP" AND THE "SCAB."

Adherents of political parties heartily hate the "mugwump." The regular partisan rates the "mugwump" as the personification of dilletante selfishness. He beholds the tomahawk of the "mugwump" brandished against every nomination that does not please his personal taste. With all the hard physical and mental labor of forming national, State, county, city, ward and precinct organizations, of attending caucuses and primaries, of attracting allegiance of voters, of awakening interest in public issues, of educating citizens to their meaning, of all the toil involved in the control of conventions, the making of platforms, the conduct of campaigns,—with all these varied, incessant activities, without which there could be no republican form of government, the "mugwump" will have nothing to do. He holds aristocratically aloof from association with a political organization whose workers devote themselves to its extension in the interest of specified principles. Nevertheless, the partisan beholds the "mugwump," while thus escaping the hardships, the self-denial and the exacting efforts of partisan conflicts, enjoying, in common with other citizens, and accepting with irritating complacency the benefit of whatever progress in good government is the outcome of party competition for public approval.

There is a striking parallel to this partisan view of the "mugwump" in the attitude of the union worker towards the "scab."

Like the political party, the union is formed for the realization of certain ideals. These include higher wages, shorter hours, and generally better conditions of labor. These objects can be attained only through organization, as they could not be brought about by individual workers. To form and maintain 150 national and international craft organizations, 45 State federations, 1,200 city federations, and 25,000 local unions requires infinite effort and incessant self-sacrifice. Their officers must be chosen through all the machinery of caucuses, conventions and elections. Dues must be paid. There must be picnics, excursions, and all kinds of entertainments to awaken interest. There must be meetings, lectures, speeches, debates. Every member must face, with heroic fortitude, the prospect of suffering for the cause. These are some of the unescapable burdens of the loyal unionist. They are not lightly borne.

But in their bearing, according to the unionist, the "scab" takes no share. In securing the results severely attained by organized labor, he takes no part. He pays no dues. He robs his leisure of no hours for the elevation of his industrial group. Like the "mugwump" in politics, the "scab" holds selfishly, scornfully, hypercritically aloof. Nevertheless, while thus escaping hardships and self-denials necessary to win, through organization, by conflict or negotiation, from the employer better conditions for the employed and more rightful relations between them both, the "scab" shares all the benefits won by the systematic struggle of organized labor. Thus it is that the scorn of the regular party adherent for the "mugwump" is equaled by the scorn of the unionist for the "scab." The parallel suggests that an appropriate definition of the "scab" would be the industrial "mugwump."

If organization is essential to good govern-

ment, it becomes the patriotic duty of every citizen to enter a party organization and seek to make its policy and conduct conform to conscientious conviction. If organization is essential to advance the cause of labor, it becomes the duty of every wage-earner to enter the union of his craft and to eliminate from its conduct everything detrimental to the attainment of its purpose. But neither "mugwump" nor "scab" should be coerced into his organization by ostracism or bludgeon.

THE SHORTER WORK-DAY SYMPOSIUM.

The question of a shorter work day is very much alive. It is an issue of active current discussion and of present importance. The eight-hour bill, long pending before Congress, was referred by that body to the Department of Labor and Commerce, which is preparing a report upon the probable effects of its enactment. The American Federation of Labor has included the support of this measure among the questions that it is asking every candidate for Congress to answer. For these reasons, the opinions of employers upon this subject, presented in this issue of THE MONTHLY REVIEW, are of interest and value.

EXECUTIVE COMMITTEEMEN.

The countenances that look forth from the pages of this issue of THE MONTHLY REVIEW are those of members of the Executive Committee of the National Civic Federation. These are citizens representative of three groups, the general public, employers and employed, united by a common public spirit and devoted to the promotion of rightful relations between labor and capital. To that cause they unselfishly and patriotically give their time, their talents and their zeal.

INDUSTRIAL WAR AND PEACE.

Strikes are industrial war. They wake the echoes with discordant din and arouse public attention as they affect public interest.

Controversies between employer and employed, so long as they are kept within the pacifying scope of conciliation and conference, receive usually the notice only of the parties directly concerned. If a third party, by mutual agreement, is called in to arbitrate the difficulty, little more outside attention is attracted. It is when a controversy has exhausted or rejected these methods of industrial peace and reaches the stage of a strike that general public attention is excited. Idle cotton mills in New England and riots in Chicago stock yards distort the perspective. The great body of undisturbed industry is ignored.

The failures of conference and of arbitration, thus made conspicuous, are really of less importance than their successes, which are too quickly forgotten. The imagination shrinks from the paralysis of industry and the halting of transportation that would have followed the threatened bituminous strike, so happily averted through conciliation; while the pacific outcome of conferences in the tin and sheet iron and the longshoremen's industries is of incalculable value, although unnoticed because of its silent calm.

International diplomacy also has its ruptures. The Hague Court of Arbitration had its inception in the advocacy by the present Emperor of Russia of that method of deciding disputes between governments. Yet Russia and Japan today, despite the strongest, most earnest and persistent efforts of civilization to avert war, fill the Orient with the clash of arms, while their peoples suffer the expenditure of blood and treasure. But the world waits only the favorable moment when the good offices of some power may be invoked for the restoration of honorable peace. There is no reason to despair of the eventual settlement

of industrial conflicts, even when they are most bitter and passionate.

A COLORADO OPINION.

The Man Who Pays the Militia Believes that the National Civic Federation Could Have Averted Trouble.

Sheldrake, N. Y., July 25th, 1904.

To the Editor of the Monthly Review:

Sir.—As a citizen of Colorado, where for more than twenty years I have been a large employer of labor, I have been keenly interested in the work of the National Civic Federation. I have studied its literature about its purpose and scope, which you courteously furnished at my request, and I feel that I must express to you my conviction that the methods advocated by your organization form the one avenue of avoidance, in this country, of violent collision between the forces of capital and labor.

I write during a vacation in the east, which has afforded me opportunity of getting a new perspective upon the spectacle, presented in my own state, of the overthrow of normal civil processes and the substitution of military rule.

I write also as a member of Governor Peabody's administration, having been elected State Treasurer upon the same ticket with him.

Many things have occurred in Colorado, in the enforcement of law, that are to be deplored, and that probably would not be justified under ordinary circumstances, but the general policy of the Governor undoubtedly meets with the approval of most of our law-abiding people.

But that a military alternative should be presented to the executive authority of any state in the Union is itself an evidence that the public services of your voluntary organization, conciliatory and educational, are absolutely needed to insure the pacific fulfillment of the mutual obligations of social order.

The organization of labor is a necessity of self-defense, arising from the selfishness of human nature. In Colorado, this system of self-defense has developed into aggression, which has grown from defense against capital into assault upon capital in its physical property and in its independent employment of labor. This, in turn, has excited reprisal, itself a method of defense against anarchy, which in its turn has become a usurpation, temporarily essential, of the authority exercised under normal conditions by the courts and police. This extreme exercise of executive power is warranted only by necessity. The necessity is that of upholding the social order, recognized and beloved throughout all of the United States.

The intelligent and far-sighted citizenship of Colorado has no desire to set up a system of government within its borders different from that of any other state. But to restore a condition harmonious with that of the other Commonwealths of the Union, a reconciliation between the forces of capital and labor must be brought about. The men arrayed on each side must be made to see that the law is supreme, and that it must be obeyed by each alike. The men on each side must also be educated to perceive that harmonious co-operation between capital and labor is essential to profitable industry, because it is essential to both production and consumption. When this economic fact is brought home to opposing minds, they will become reconciled, if only through self-interest.

I believe that if the National Civic Federation had established a branch organization in Colorado two years ago, all of the blood-shed, riot and loss in wages and in the earnings of capital that have marked the dire months of 1904 could have been avoided.

Truly yours,

WHITNEY NEWTON.

The man who has nothing to sell but his services may be taught differently by demagogues and fanatics, but his interest in the maintenance of law is greater than that of most men who have great possessions of money, lands, buildings and securities. The rich man can get away from disorder. The poor man must stay and face it and stand the consequences.—"Chicago Chronicle."

Manufacturer.

JAMES O'CONNELL,
President International Association Machinists.

THE EMPLOYER AND TRADE UNIONISM.

THEIR RELATIONS, ADJUSTED TO CERTAIN PRINCIPLES, SAYS LOUIS D. BRANDEIS, WOULD BRING ABOUT AN ERA OF PEACE AND PROSPERITY.

"The Employer and Trades-Unions" is the subject of an address delivered recently at the annual banquet of the Boston Typothetae by Louis D. Brandeis, Esq. This address has taken rank as a brochure remarkable for its high purpose as well as for its keen analysis and lucid statement of the several duties and responsibilities of the employer and of organized labor. Its quality is the reason for reproducing here the general part of the address.

Mr. Brandeis reviewed the history of a rupture early in 1904 between the Boston Typothetae and the Boston Typographical Union, resulting in a strike, during which the Union induced pressmen and feeders to leave their work, which action was enjoined by the Supreme Court. The strike was finally declared off by the President and members of the Executive Committee of the International Typographical Union. Taking this as an instance of erroneous leadership in a local union and as a lesson of experience, Mr. Brandeis said:

Mr. Brandeis' Address.

So much for the past: what shall the future be? What should you do to make it an era of peace and prosperity? The answer involves a discussion of certain broad principles which, in my opinion, should govern the relations of employer and employe in all branches of industry, though in their application they would, like every rule, be subject to exceptions more or less temporary, dependent upon the peculiar facts of the individual case.

First. Prolonged peace and prosperity can rest only upon the foundation of industrial liberty. The peace which employers should seek is not the peace of fifty years ago, when the employers were absolute masters of the situation. The peace which the employes should seek is not the peace of mediæval guilds, with their numberless restrictions. Industrial liberty must attend political liberty. The lead which America takes in the industrial world is no doubt due to our unbounded resources; but of these resources none are so great as the spirit and the ability incident to a free people. We lead the world industrially, not so much because the resources of nature are unbounded, as because the faculties and aspirations of men are comparatively unfettered. The prosperity of New England—this poor rich country—is ample evidence of this. We must have therefore for the development of our industries, as for the development of our citizens, the highest degree of liberty attainable. Industrial democracy should ultimately attend political democracy. Industrial ab-

solutism is not merely impossible in this country at the present time, but is most undesirable. We must avoid industrial despotism, even though it be benevolent despotism. Our employers can no more afford to be absolute masters of their employes than they can afford to submit to the mastery of their employes, than the individual employes can afford to have their own abilities or aspirations hampered by the limitations of their fellows. Some way must be worked out by which employer and employe, each recognizing the proper sphere of the other, will each be free to work for his own and for the common good, and that the powers of the individual employe may be developed to the utmost. To attain that end, it is essential that neither should feel that he stands in the power—at the mercy—of the other. The sense of unrestricted power is just as demoralizing for the employer as it is for the employe. Neither our intelligence nor our characters can long stand the strain of unrestricted power. Every business requires for its continued health the memento mori of competition from without. It requires likewise a certain competition within, which can exist only where the ownership and management, on one hand, and the employes, on the other, shall each be alert, hopeful, self-respecting, and free to work out for themselves the best conceivable conditions.

Second. The right of labor to organize is recognized by law, and should be fully recognized by employers. There will be in most trades little probability of attaining the best conceivable conditions unless in some form a union of the employes exists. It is no answer to this proposition to point to instances of trade union excesses and of the disasters which attended them. We believe in democracy despite the excesses of the French Revolution. Nor are claims of the trades-unions disproved by pointing to the instances where the best results have been attained in businesses in which no trace of unionism existed. Wise, far-seeing employers act upon the spirit or the hint of union demands instead of waiting to have them enforced. "A word to the wise is sufficient." The steps in advance have been taken often for the express purpose of preventing trades-unionism from finding a lodgement, often, unconsciously, as a result merely of the enlightenment which comes with the necessary thinking that trades-union agitation compels. Such successful businesses are, indeed, the greatest triumphs of unionism; and their marked success is due in large part to the fact that they have had all the advantage of unionism

without having to bear the disadvantages which in their imperfect state attend the unions. We must not forget the merits of unionism in our righteous indignation against certain abuses of particular unionists.

Most people admit the immense service which the labor unions have rendered to the community during the last twenty-five years in raising of wages, shortening of the hours of labor, bettering of conditions under which labor is performed, and protecting women and children from excessive or ill-timed work; but the services which the labor unions can render in the future are even greater than they have been in the past. The employer needs them "to stay him from the fall of vanity"; the employes need them for their own protection; the community needs them to raise the level of the citizen.

Strong, stable trades-unions can best serve these ends. The leaders of strong unions only will adequately feel the terrible responsibility resting upon them. The leaders of stable unions only can get the experience essential to an adequate performance of their duties; and experience almost invariably makes the leaders reasonable and conservative. Only long service as a labor leader can give that knowledge of the employer's side of the controversy which is essential to its just and proper settlement. Peace and prosperity, therefore, are not to be attained by any attempt to weaken trades-unions. Our hope lies rather in their growing strength and stability.

At all events, the employer, whether he wills it or not, has in most trades to reckon with the union. What shall his attitude be?

Third. Employes are entitled to be represented by union officers. A short time ago it was common for an employer not to "recognize the union." That is, although he knew a large number of his employes were members of the union, he refused to negotiate in matters relating to the employe with its officers, on the theory that the employer should deal directly and only with his employe, and may not brook the interference of an outsider. This plausible but unsound theory has yielded generally to facts and to reason. One hears little now of employers arbitrarily refusing to deal with the chosen representatives of union employes. But, of course, recognizing that union officers are the proper representatives of the employes in any matter requiring consideration by the employer does not mean yielding to union demands, any more than recognizing a customer means conceding his demands.

FRANKLIN MACVEAGH,
Franklin Macveagh & Co.

ISAAC N. SELIGMAN,
Banker.

JOHN TOBIN,
President Boot & Shoe Workers.

How, then, shall the employer deal with the union's representative when a demand is made to which he feels he cannot accede, or a controversy has already arisen? Many are ready with the answer: Arbitration; others again say: Conciliation. Arbitration and conciliation are each at times wise, but each involves the intercession of third parties. In arbitration it is the referee; in conciliation, the common friend. Ordinarily, neither is needed.

Fourth. Employers and employees should try to agree. A very able man, who taught the law of partnership at Harvard, once asked the class, "What shall he do if a controversy arises between partners?" The students suggested one legal remedy after another,—a receiver, an injunction, a dissolution. "No," said he, "they should try to agree." In the most important sense, employer and employee are also partners. They, too, should try to agree; and the attempt made in a properly conducted conference will generally be successful.

Nine-tenths of the serious controversies which arise in life result from misunderstanding, result from one man not knowing the facts which to the other man seem important, or otherwise failing to appreciate his point of view. A properly conducted conference involves a frank disclosure of such facts,—patient, careful argument, willingness to listen and to consider.

Bluff and bluster have no place there. The spirit must be, "Come, let us reason together." Such a conference is impossible where the employer clings to the archaic belief commonly expressed in the words, "This is my business, and I will run it as I please." It is impossible where the labor representative, swaggering in his power to inflict injury by strike and boycott, is seeking an unfair advantage of the employers or would seek to maintain even a proper position by improper means. Such conferences will succeed only if employer and employee recognize that, even if there be no so-called system of profit-sharing, they are in a most important sense partners, and that each is entitled to a patient hearing, with a mind as open as the prejudice of self-interest permits.

The potent force of right reasoning in such conferences can hardly be overestimated. If applied with tact and in the aid of right action, it is almost irresistible. But it must be used only in the right spirit and in the aid of right action.

Fifth. It is necessary that the owners or the real managers of the business should themselves participate in the conferences, partly because the labor problem requires the best thought available and the most delicate treatment, and partly because the employees feel better satisfied and are apt to receive better treatment when they are dealing with the

ultimate authority and not with an intermediary. Such conferences are necessarily time-consuming, but the time cannot be better spent. They are as instructive to the employer as to the employees. We must remember that there are no short cuts in evolution.

The greatest obstacle to the success of such conferences is the suspicion of the labor representatives,—a suspicion due partly to ignorance of the employer's actual attitude, partly to knowledge of individual acts of unfairness of other employers, and partly also to a belief, which is frequently erroneous, that the employer will get some advantage through his supposed superior skill and ability. Suspicion yields only to experience; and for this reason, among others, the conferences are most successful when participated in by labor leaders of long standing. The more experienced the representative, the better.

But conferences, though wisely conducted and with the best of intentions on either side, do not always result in agreement. Men fail at times to see the right; and, indeed, what is right is often in doubt. For such cases arbitration affords frequently an appropriate remedy. This remedy deserves to take its place among the honorable means of settling those questions to which it properly applies. Questions, however, arise, which may not be arbitrated. Differences are sometimes fundamental. Demands may be made which the employer, after the fullest consideration, believes would, if yielded to, destroy the business. Such differences cannot be submitted to the decision of others. Again, the action of the union may appear to have been lawless or arbitrary, a substitution of force for law or for reason.

What, then, should be the attitude of the employer?

Sixth. Lawless or arbitrary claims of organized labor should be resisted at whatever cost. I have said that it is essential in dealing with these problems that the employer should strive only for the right. It is equally as important that he should suffer no wrong to be done unto him. The history of Anglo-Saxon and of American liberty rests upon that struggle to resist wrong, to resist it at any cost when first offered rather than to pay the penalty of ignominious surrender. It is the old story of the "ship money," of "the writs of assistance," and of "taxation without representation." The struggle for industrial liberty must follow the same lines.

If labor unions are arbitrary or lawless, it is largely because employers have ignominiously submitted to arbitrariness or lawlessness as a temporizing policy or under a mistaken belief as to their own immediate interests. You hear complaint, too, of lawless strikers in the legislature and in the city council; but, if lawlessness and corruption exist

there, it is largely because the great corporations and moneyed interests have forgotten the good old maxim, "Not one cent for tribute, but millions for defence."

Who bribed Sam Parks? The rich contractors—pre-eminently the huge corporations on whose boards of directors sat many of the leading financiers of the country. They corrupted Sam Parks or fed his corruption, corrupted him either to get an undue advantage over their employees or over their competitors, or as a seemingly inexpensive way of meeting what they deemed to be unreasonable and extortionate demands. At last employers, employees, and a large part of the community paid the penalty. Fortunately, the world is so ordered that we must pay the penalty for our sins, be they sins of commission or omission, of doing wrong or of suffering wrong to be done unto us.

You may compromise a matter of wages, you may compromise a matter of hours,—if the margin of profit will permit. No man can say with certainty that his opinion is the right one on such a question. But you may not compromise on a question of morals, or where there is lawlessness or even arbitrariness. Industrial liberty, like civil liberty, must rest upon the solid foundation of law. Disregard the law in either, however good your motives, and you have anarchy. The plea of trades-unions for immunity, be it from injunction or from liability for damages, is as fallacious as the plea of the lynchers. If lawless methods are pursued by trades-unions, whether it be by violence, by intimidation, or by the more peaceful infringement of legal rights, that lawlessness must be put down at once and at any cost.

Likewise industrial liberty must rest upon reasonableness. We gain nothing by exchanging the tyranny of capital for the tyranny of labor. Arbitrary demands must be met by determined refusals, also at any cost.

In our international relations we are told that the best assurance of peace lies in preparedness for war. This is equally true in the industrial world. The union has its strike fund. The employer must also pay in some form the premium for insuring an honorable peace. He has adopted long since the guaranty fund for his credits, the depreciation fund for his machinery. He should now adopt another reserve fund to guard him against the losses attendant upon strikes, and, above all, should so organize his business as to be less vulnerable to them. Known weakness invites arbitrary attack, as opportunity makes the thief.

These are the principles by which alone the labor problem can be satisfactorily solved. They are broad, indeed; for they are the eternal principles of Liberty, Fraternity, Justice, Honor,

JOSEPH F. VALENTINE,
President Iron Moulders' Union.

A SHORTER WORK DAY.

(Continued from Page 4.)

at certain seasons of the year. An employee, who has the interest of a company at heart, should not, in our opinion, be averse to making an extra effort to help them out at such times as it is really necessary, and should not take advantage of such conditions to force the payment of double his regular wage for all overtime.

A large number of answers emphasize foreign competition as a serious obstacle to shortening hours:

C. O. Bartlett, The C. O. Bartlett & Snow Co., Mill and Labor Saving Machinery, Cleveland.—If the hours of labor are reduced, it will be to the detriment of our business. We have already lost nearly all of our foreign trade, of which we had quite a large one worked up. Germany and England have taken it practically all. This is chiefly on account of paying high prices for castings and other materials going into our machines.

C. W. Post, Postum Cereal Co., Ltd., Battle Creek, Mich.—We would like to see a universal eight-hour day in all countries, but it is very plain that if we reduce the amount of labor two hours per day out of ten, equivalent to 20%, we must either increase the producing capacity or stand a 20% handicap in the markets of the world. Foreign buyers are not going to pay a 20% increase in the cost of our goods in order to supply us with an eight-hour day. I would like to see the hour system take the place of the day, and if some plan could be devised by which a man would be permitted to work ten or even twelve hours if he saw fit, and thereby earn an increased amount of money, it would be more in keeping with the American idea that a man should be allowed to earn all he can. On the other hand, I hope to see the day when under the hour system, or some other practical plan, wage earners will not be compelled to labor over eight hours per day. To restrict a man's energies by force or to compel him to labor beyond a reasonable time seems un-American.

Asher Miner, Colonial Pure Cereal Foods, Wilkes-Barre, Pa.—The hours of labor of the engineers, firemen, millers and oilers is twelve, of laborers, teamsters, etc., ten, and the office force, nine. We do not consider it a practical proposition to gradually reduce the hours, as a considerable portion of the output in flour and corn mills is for export, and the business is done on an exceedingly small margin. If the hours of labor were reduced the cost of milling would be so great as to wipe out all profit.

J. H. Webster, Assignee, The Variety Iron Works Co., Cleveland.—Reduced hours of labor mean large increase of fixed charges in capitalization, salaries, real estate, machinery, etc. An industrious man naturally inclines to labor from sunrise until sunset. It has been so ever since labor began. A uniform agreement throughout a given industry can never be reached until that agreement extends to all civilized nations whose products of labor can come in competition. Making it uniform throughout the United States would not prevent the competition of the Old World except by building the wall of

tariff still higher. Are we ready to do it? An agreement of employees to abandon any arbitrary restrictions upon output is as hopeless as it is fantastic.

M. E. Clow, J. B. Clow & Sons, Cast Iron Pipe, etc., Chicago.—We do not believe it practical to reduce the hours of labor unless it is the intention of American manufacturers to follow the example of England. If we are to maintain the position we have taken as the greatest manufacturing nation on earth, we must maintain the same reasonable conditions that exist in other countries, and if men are well treated and properly cared for, there is no reason why they cannot work ten hours.

T. H. Thieme, Wayne Knitting Mills, Fort Wayne, Ind.—Foreign competition must be taken into account, and a ten-hour work-day to my mind is the only safe stand to take. Even if a given industry under present conditions would be safe adopting an eight or nine-hour schedule, conditions through competitive industries or tariff changes may seriously injure such an industry working on a shorter work-day. In our industry we are just able to compete with foreign competition, we needing ten-hour schedule, and with possible tariff changes shorter hours would receive no consideration on our part. The question of imposing restrictions upon output by employees or labor was settled in our factory a year ago at the close of a two-months' lock-out, when we put a minimum capacity on every machine with penalty of discharge for non-delivery of required product. This seemed hardship at first, but when our employees got accustomed to their larger pay envelopes, they showed every indication of being satisfied with the change.

F. A. Wilde, Nordberg Manufacturing Co., Engineers and Machinists, Milwaukee.—We regard it as entirely practical to "gradually reduce hours by voluntary, uniform agreement throughout a given industry provided the employees" abandon all restrictions upon the output. Indeed, we sincerely believe the shortening of hours to be most desirable and, therefore, to be earnestly striven for by employers everywhere. But in order to reduce the hours of labor of all, without diminishing the earnings,—the enjoying of the comforts of life—it is absolutely necessary to increase the product of each worker in even a greater ratio than that of the decrease in hours. This increase is to be accomplished by improved machinery, better processes and methods and greater ability on the part of each and every employee.

R. D. Wood & Co., Philadelphia.—My impression is that the hours given to any employment can best be arranged by the character of employment, rather than try to have a uniform rule covering all work. In other words, there are some duties at which people can comfortably work only six hours, and some where twelve hours is not too long. This question of eight hours finally resolves itself into simply whether mankind is going to be satisfied with what they can produce in eight hours instead of what they can produce in ten hours' work, or confining the question to the United States, the question is, will not some other countries work longer hours and take our export trade from us?

J. E. Mooney, American Oak Leather Co., Cincinnati.—Its effects would be to increase cost of pro-

duction to the extent of reduction of the availability of the plant, plus the proportion of tax, insurance and maintenance, placing home production to a fatal disadvantage for international and domestic trade, as compared with the production of other countries. In other words, arbitrary restrictions on the output of plants or on individual workmen would, we believe, be a fatal economic error.

A few establishments consider that the short hour movement must begin, if at all, in districts and cities, and not be general for a line of business, as:

W. D. Sargent, American Brake Shoe and Foundry Co., New York.—We regard it as a practical proposition to reduce hours where the employer finds he can do so without seriously interfering with his rate of production or his profits; but conditions differ so much over the country that we doubt if a shorter work-day can be brought about uniformly throughout the country, and feel that it must come by districts, and that each district should demand from its employees the abandonment of arbitrary restrictions, as suggested in your question, before consenting to the shorter day.

Several establishments regard restriction of output by workmen as not a matter for compromise but as wrong in itself, and not to be taken as a basis for agreement:

Samuel Moyer, The Lunkenheimer Co., Brass and Iron Steam Specialties, etc., Cincinnati.—We believe it practical to gradually reduce the hours of labor by voluntary, uniform agreement throughout a given industry, but we cannot afford to diminish the hours of labor in our shop unless all of our competitors do the same. As regards making an agreement with the employees to abandon any arbitrary restrictions upon output and giving them, in return, reduced hours of labor, would say that, looking at the matter in an abstract way, we cannot consider any such proposition, and any manufacturer who would, had better sell out his business. No manufacturer should recognize the right of any union to place restrictions upon the output, and, if we found that such a case existed in our shop, we would go out of business rather than permit its continuance; hence we do not consider this feature any element in connection with any labor organization, it being non-arbitrable.

G. O. True, Northern Engineering Works, Detroit, Mich.—In reference to an agreement with the employees to abandon restrictions upon output, in exchange for shorter hours, we do not believe the questions are on the same moral plane. We employ our men on a basis of hours and wages mutually agreed upon: under this agreement the workman owes his employer a fair day's work. If he limits his output he cheats his employer. Your proposition implies the gift to the workman of an hour or so a day, in consideration of a promise of the workman to quit stealing his time. We doubt the wisdom or morality of such a bargain.

L. B. Keiffer, Keiffer Bros., Shoes, New Orleans.—We think the only practical manner for the reduction of hours is by voluntary, uniform agreement throughout a given industry. We should not be willing to admit that employees had a right to restrict the output.

CHARLES FRANCIS ADAMS,
Publicist.

DAN R. HANNA,
M. A. Hanna & Co.

JAMES M. LYNCH,
President International Typographical Union.

A large number of those who oppose a reciprocal agreement of this kind give as one of their reasons their belief that unions would not live up to their agreement:

S. W. Watkins, Christensen Engineering Co., Milwaukee.—If this question had been written "Provided employes abandon arbitrary restrictions upon output," our answer would have been, Yes. As written, "Provided the employes agree to abandon restrictions upon output," would answer, No.

T. C. Wood, The Ball & Wood Co., Automatic Engines, New York.—We do not regard it as a practical proposition, first, because the conditions surrounding the different shops vary so greatly that it will be impossible to obtain the consent of all the employers in any given industry; and second, because employes could only make such an agreement through their union, and as these are irresponsible, no such agreement can be enforced.

H. D. Sharpe, Brown & Sharpe Manufacturing Co., Machinery and Tools, Providence.—It is difficult to say whether such a proposition is practical, but it would in no way depend upon what the employes agree. "Restrictions upon output" is not a matter of agreement but one of disposition on the part of both employer and employe. The solution of the question depends upon the proper working together of both.

E. T. Gilbert, Michigan Bolt and Nut Works, Detroit, Mich.—We believe it is practicable to gradually reduce hours by voluntary agreement. Would have no objection to such a movement if it was universal and if we obtained in return a real abandonment of restriction of output.

H. F. Wanning, Birmingham Iron Foundry, Derby, Conn.—We do not think it is a practical proposition to gradually reduce the hours. In fact, we started to do this as members of the National Metal Trades Association, but when the arrangement with the International Association of Machinists was repudiated, we went back to ten hours, after winning the strike. It will be necessary, in our opinion, to tie down the membership of unions in some manner to make them live up to their promises in regard to the restrictions of output. If there were really no restrictions whatever, it would be very easy to make up for a nine-hour or even an eight-hour day in contrast with the present ten hours.

G. W. Fuller, A. S. Cameron Steam Pump Works, New York.—Our plant is now operated on the nine-hour basis, or fifty-four hours a week, instead of ten hours as formerly, but on the same rate of pay per day as before. In other words, ten hours' pay for nine hours' work. We do not regard any further reduction in hours, voluntarily or otherwise, as a permanently practical proposition, for we do not believe there would be any increased volume in the output that would compensate for the added cost of labor due to the reduction in time, which would include payment at the same rate per day; and we would look upon a removal of "restriction upon output" as a specious offer, and one which past experience has proved the fallacy of.

R. M. Downie, Keystone Driller Co., Beaver Falls, Pa.—We do not believe it is a practical proposition to gradually reduce hours by voluntary, uniform agreement throughout a given industry for the simple reason that labor organizations are not chartered, are not responsible, and it has been our experience that an agreement cannot be made with them which will hold over night if they are disposed to break it. We have tried this and failed. If an agreement is made and a workman finds that he can get more money elsewhere he goes—which, as a matter of fact, is proper and right, but it prevents the possibility of making an agreement in advance which will bind workmen to stay with you any length of time at any given wages. We believe it is wholly useless to try to bind employes to agree to abandon arbitrary restrictions upon output because in so doing the unions would abandon their whole theory of procedure. Their limiting of apprentices is arbitrary, i. e., not founded upon any defensible right or principle of justice. Their limitation of hours is arbitrary and contradicts all personal freedom and even natural law. Their limiting the number of automatic machines a workman may watch is, likewise, arbitrary, and all are urged for one central purpose—the limitation of product. Our large factory to-day lies a heap of scrap iron and ashes because, after all offers to arbitrate had been refused, we presumed to permit apprentices and regulate hours without the consent of the union. We don't see how we could unite comfortably in any agreement whatsoever with that which ignores the common rights of all men.

J. H. Day, The J. H. Day Co., Machinery, Cincinnati.—We have no confidence in any agreement made by labor unions, and particularly with regard to restrictions upon the output. There are undoubtedly restrictions upon the output in our shops. We know this and see it almost every day, and the only way that hours of labor could be reduced without restrictions upon the output would be by the "premium" or "piece" work system. Several of our workmen have told us that they could easily do the ten hours' work which they are now doing in eight hours, and we believe it, but we found when we reduced the time from sixty hours per week to fifty-seven hours per week that the output was reduced even in a greater proportion.

G. C. Murphy, East Liverpool Potteries Co., East Liverpool, Ohio.—We would deem it a practical proposition to gradually reduce the hours of labor by voluntary, uniform agreement, providing the employes agree to abandon any arbitrary restrictions upon output. But we have very little confidence with any contract with employes, as our experience has taught us they will not live up to any contract, and are never satisfied. Any proposition of this kind we would not consider binding.

Some replies maintain that shorter hours can only be attained through the efforts of organized labor:

N. O. Nelson, N. O. Nelson Mfg. Co., Bath Tubs, Brass Goods, etc., St. Louis.—I don't regard it a practical proposition to gradually reduce hours by purely voluntary consent of the employers. Only after long agitation, repeated demands enforced by more or less strikes, can uniform agreements for reduction of hours through any given industry be reached. The employers look at a reduction of

hours as an increase in the cost. Even when a demand is made upon all similar employers in the same industry, they do not see that it simply raises the price and does not injure their profit. Commonly, the demand does not come in this shape, but affects one employer or one city or locality by itself. In that event, it is a direct invasion of the employers' profits. The building trades' hours were reduced from ten hours to nine and to eight by local demands and strikes continued throughout many years. The shortening of factory hours from ten to nine is now going on, and is possible only by the more complete national union organizations and the American Federation of Labor. The Civic Federation Industrial Department will also lend itself to the shortening of hours, by bringing employers' associations and National unions together. Restrictions upon output need not be considered an obstacle. It is not a union principle or a union demand except in a local and sporadic sense. It is not countenanced by the general authorities.

Everett Morse, Simplex Electrical Co., Boston.—We do not consider it practicable to reduce the hours in our particular industry on the basis mentioned. Our principal business is the manufacture of insulated wire, and with the most of our competitors the business is complicated by being in each case a department only of a much larger industry. We do, however, expect that within a few years the probable working hours in our works will be reduced to fifty-four per week, and that it will be quite general in manufacturing work. We do not believe that eight hours per day will be adopted except in special trades which are in the nature of a labor trust.

Some establishments hold that only a national law or uniform State laws can bring about reduction of hours:

Jacob Stephens, W. H. Haskell Mfg. Co., Bolts and Nuts, Pawtucket, R. I.—As to reducing the number of hours, were this to be a national law so that all branches would work a certain number of hours, we certainly should be in favor of it, but we are decidedly against an eight-hour law that is not a National law. A law that is made for government employes, or for any particular branch of trade, is certainly a detriment to business.

Thos. F. Parker, Monaghan Mills, Greenville, S. C.—We hardly regard as practicable to greatly reduce hours of labor by voluntary uniform agreement among mill men. While we favor a reduction to what may be reasonable and right hours, we however think that this will have to come through the education of public opinion and legislation.

A considerable number of replies indicate that there are social evils which follow on shorter hours:

Kalamazoo Corset Co., Kalamazoo, Mich.—The question of the benefits to be obtained by a reduction of the hours of labor is a very large one. Unless the character of the work is of such a nature as to make large drafts upon the strength of the employe, we think shortness of hours may prove to be a positive damage because of the tendency to bring on habits of idleness with all its attending evils. In other words, we believe it is best for every one to keep busy.

JOHN G. MILBURN,
Lawyer.

WILLIAM D. MAHON,
President Street Railway Employees.

MARCUS M. MARKS,
Pres. Nat. Ass'n Clothing Mfrs.

H. M. Kinney, Winona Wagon Co., Winona, Mich.—We do not think it wise to have a loafing period morning and night for the men who are inclined that way to drop into saloons on their way to and from work, and we believe they will be happier and more prosperous, and their employers will be better able to give them continuous work, on the ten-hour per day plan.

E. D. Johnston, P. H. & F. M. Roots Co., Rotary Blowers, etc., Connersville, Ind.—We do not regard it a practical proposition to gradually reduce hours by voluntary, uniform agreement, because if the employes agree to abandon any arbitrary restrictions upon output, we could not force them in any possible way to turn out as much work in eight hours as in ten. Generally speaking, we believe it is better for a laboring man to be employed ten hours than eight. It might be all right for some of the more intelligent class, but for the average laborer, he is better at work ten hours than eight. We believe if there was a general movement to adopt the eight-hour system, in ten years we would have more crime and drunkenness and, generally speaking, a lower order of intelligence among our laboring classes than if we adhere to the ten-hour rule.

F. B. Cole, Cole Manufacturing Co., Saw Mills, Engines, etc., Newman, Ga.—We do not favor reducing the hours of labor. We still believe in the doctrine that an idle mind is the devil's workshop, and in our forty years of manufacturing we have never noticed that any man's health was injured by ten hours' work.

The following reply is typical of a considerable number that maintain that the hours worked in their establishments, which are usually ten, are not excessive:

F. H. Stillman, Watson-Stillman Co., Hydraulic Machinery, New York.—Relative to the reduction of the hours of labor by voluntary agreement, I would say that machine tools as used in the shop do not get tired, nor do I believe that in our line of business the attendants upon them are over-wearied by a sixty (or a sixty-six hour week, when the residence is convenient to the shop), and I believe the fifty-four hour week the shortest that is possible at present rate of wages.

OTHER EMPLOYERS' EVIDENCE.

Opinions Favorable to Universal Shorter Hours Gathered by a Hostile Agency.

In the course of its campaign against the eight-hour bill in Congress, the National Association of Manufacturers addressed to employers a series of questions which included: "What are your general views as to the wisdom or unwisdom of the shorter work-day principle?" The inquiry was successful in developing opposition to the eight-hour bill. Nevertheless, it elicited many responses favorable to a universal shorter work-day, irrespective of the specific proposition to limit to eight hours all work on government contracts. A few of these replies are quoted:

Barry Lumber Co., Foley, Ala.—If universal and not permitting two or three shifts, we think it would affect us favorably.

Lathrop Hatten Lumber Co., Riverside, Ala.—We could not compete, unless all are on eight-hour basis.

California Cotton Mills Co., Oakland, Cal.—We would like to see a national enactment, applicable to every State, making a nine-hour day a full day's work.

California Fig Syrup Co., San Francisco.—We favor an eight-hour day, because you can work men for that time at higher speed and accomplish more.

California Barrel Co., San Francisco.—We hope to see the actual number of hours of physical labor shortened gradually. We believe that this is a natural process . . . and that with the gradual introduction of labor-economizing appliances, the actual hours of physical labor will be curtailed. We are rather doubtful that the time has as yet come rendering it possible to limit generally the day's work to one of eight hours.

Pacific Tank Co., Los Angeles, Cal.—A universal eight-hour law would suit us well.

Denver Engineering Works, Denver, Col.—The shorter work-day principle is all right, but we think this is a matter to be settled between the employer and the employee.

The Billings & Spencer Co., Machinists' Tools, Hartford, Conn.—We are willing to concede that the nine-hour work-day is of advantage to the workmen and of no great disadvantage to the employer, provided it is made universal.

The Bullard Machine Tool Co., Bridgeport, Conn.—We believe that a shorter work-day is desirable, but it should not be forced upon the manufacturers by law in such a manner that they cannot regulate their own shops to the best advantage.

E. A. Mallory & Sons, Danbury, Conn.—If it were compulsory on all manufacturers in our line, we would all be in the same boat; hence it wouldn't affect us much.

Lobdell Car Wheel Co., Wilmington, Del.—Excessively long working hours necessarily not only impair a workman's vitality, but detract from the social engagements to which he and his family are justly entitled. A ten-hour day requires a man's wife or family to be up early and late, and the trite saying that a woman's work is never done is fully exemplified.

Southern Spring Bed Co., Atlanta, Ga.—If universal, it would make no difference except in cutting short one-tenth or one-fifth of our product.

A. Rossi & Co., Lumber, Boise, Ida.—If universal in the United States, it would not affect us.

American Electric Telephone Co., Chicago.—We believe eight hours best if generally adopted; also we believe in a minimum wage and age scale.

Burson Knitting Co., Hosiery, Rockford, Ill.—Shorter hours are bound to come, but should come as the result of economic conditions and not of legislation.

The California Mfg. Co., Doors, Chicago.—It would in our opinion be better for the greatest number in the country to run uniform length of time, and even at eight hours' labor we believe American skill and machinery would fairly compete with outside products.

Rockwell & Rupe Co., Filing Cabinets, Chicago.—From actual experience, the writer, after careful

observation, considers that a man working forty eight hours a week can do a great deal more work than the man working sixty hours a week, or even longer, for the reason that he has more time for recreation and is fresher.

Acme Milling Co., Indianapolis.—The writer believes that an eight-hour day would be a good thing providing we could induce our men to be content with the short day.

J. A. Everett, Publisher, Indianapolis.—Let us have a ten-hour day and a five-day week, rather than eight-hour days and six-day weeks.

Haugh Noelke Iron Works, Indianapolis.—We believe that if an eight-hour law for all labor should prevail throughout the United States, that it then would be equitable to both employer and employee.

Topeka Milling Co., Topeka, Kan.—Short-hour days should not be compulsory.

American Steam Gauge and Valve Co., Boston.—Unless the law were universal, we could not compete.

American Optical Co., Southbridge, Mass.—We take the position that if the short day is to be adopted, it should be by national legislation, and to affect the entire country.

Covel Machine Co., Fall River, Mass.—This law has got to be a uniform law throughout the nation to be just.

A Massachusetts Manufacturer of Iron Pipes (name not stated).—We are thorough believers in a short day, but not an eight-hour day. We recognize the economical advantages that have come from shortening the day, but there is a point beyond which these advantages will not be gained.

Hastings Wool Boot Co., Hastings, Mich.—We would not object to it, if it could be applied to all classes of business and in all sections of the country.

The Michigan Stove Co., Detroit.—If eight or nine hours became a universal law, we could stand it.

Michigan Brass and Iron Works, Detroit.—We believe the shorter work-day is coming, but we do not believe it is wisdom for the government to enforce it at this time.

Michigan Bolt and Nut Works, Detroit.—We think shorter hours are likely to come. We think they will come slowly, and that the economic conditions of the country will secure it in good time.

Northern Engineering Works, Detroit.—If eight or nine hours could be universally adopted, both here and abroad, we would favor it, provided the Saturday afternoon holiday could be maintained during the summer.

The Walsh De Roo Milling Co., Holland, Mich.—Shorter days of work would have to be a world-wide practice, or those factories working shorter hours would be at a disadvantage.

The Millers' Exporting Co., Omaha, Neb.—Can see no objection to the eight-hour system, provided that all use it.

J. H. Bawden & Co., Grate and Fender Work, Freehold, N. J.—We are in favor of the eight-hour system, as we are able, under it, to obtain better results from our men than on the ten-hour run; but we cannot compete with other shops that run their men ten hours.

A. F. Griffing Iron Co., Radiators, Jersey City.—We can say that there are only certain industries

CHARLES J. BONAPARTE,
Lawyer and Publicist.

WILLIAM H. PFAHLER,
Stove Manufacturer.

DENIS A. HAYES,
President Glass Bottle Blowers.

which cannot be successfully conducted upon fixed hours, shorter days and half-holidays.

Newark Rivet Works, Newark, N. J.—If it were universal, it would not affect us more than others, but under present conditions it would be disastrous.

A New Jersey Manufacturer of Woollen and Waxed Goods (name not stated).—We believe a shorter work-day will gradually spread throughout the industrial world, and only because of its world-wide extent can it be successful or desirable.

Geneva Optical Co., Geneva, N. Y.—A general eight-hour law placing all manufacturers on the same basis would not injure us.

Hecia Iron Works, Brooklyn.—We think that any man ought to be able to earn a living by working eight hours a day.

Ithaca Calendar Clock Co., Ithaca, N. Y.—I have been long of the opinion that the eight-hour day is coming, not only in government work, but in all work, and it will be the standard day, the same as ten hours has been.

The Weber Piano Co., New York.—We think well of it, if all in our line would do so.

The Akron Beiting Co., Akron, O.—We do not object to a voluntary eight hours a day law.

The F. H. Lawson Co., Household Goods, Cincinnati.—If an eight-hour day law was made in each State, we would not have to pay labor any more than our competitor would; so it would give us better labor, if laborers in general had more time to improve themselves in every way.

The Lunkenheimer Co., Engineering Specialties, Cincinnati.—If every concern in the land would work but eight hours per day, it would be all right; but such a thing is out of the question at the present time.

O. H. L. Wernicke, Furniture, Cincinnati.—I think it is bound to come; therefore, the wise man will be on the outlook for offsets.

The American Pulley Co., Philadelphia.—It is our general impression that when men are working at their very best, on piece-work, fifty-four hours a week is about enough.

H. Belfield & Co., Castings, Philadelphia.—We would not object to a nine-hour day, if universal in every department of trade.

Thomas Devlin Mfg. Co., Castings, Philadelphia.—We favor a universal eight-hour day.

Falkenau Sinclair Machine Co., Philadelphia.—From a broad point of view, we believe that if an eight-hour day were universal, it would be a benefit to mankind.

Merritt & Co., Iron and Wire Ropes, Philadelphia.—I think the eight-hour day will come in time, but should not be forced.

W. T. Smith & Son, Textiles, Philadelphia.—We feel satisfied that in the future there will certainly be a curtailment of the hours of labor.

Chicago Brass Co., Kenosha, Wis.—We believe that the times are tending toward an eight-hour day, and undoubtedly it will come, and we would prefer it to come in a manner which makes it universal rather than haphazard.

Gold Metal Camp Furniture Mfg. Co., Racine Junction, Wis.—The time is coming when the eight-hour system will be generally observed, and the writer feels the sooner the better.

Hoffman & Billings Mfg. Co., Brass and Iron Goods, Milwaukee, Wis.—We favor a universal eight-hour day.

Thomas B. Jeffery & Co., Automobiles, Kenosha, Wis.—I think that it will be in a few years the prevailing rule, and think that the arrangement would be a wise one, but do not approve of any law which interferes with free and independent contracting for services.

ANOTHER TEAMSTERS' STRIKE AVERTED.

Representatives of the Teamsters' Brotherhood and of the Contractors' Protective Association Form a Trade Agreement at the Rooms of the New York Civic Federation.

The past month has witnessed another avoidance of strife between teamsters and employers and the formation of a trade agreement, between the International Brotherhood of Teamsters and the Contractors' Protective Association of New York City. This agreement is the second to be made in this city between employers and the organized teamsters, the previous one having been consummated in June with the Truck Owners' Association, through the mediation of the Conciliation Committee of the New York Civic Federation, thereby averting a threatened strike that would have caused incalculable loss and inconvenience.

The members of the Contractors' Protective Association are engaged chiefly in excavating work, including those at work on the subway. In all, they employ about 8,000 men. There had been for some time a spirit of discontent among the organized teamsters with irregular rates of pay. This feeling displayed itself early in July, when the teamsters employed by Clarence Smith refused to work. They would not treat with Mr. Smith directly, but referred him to the officers of their International Brotherhood. A meeting of the Contractors' Protective Association was promptly called. It was considered that the strike at Mr. Smith's stable was probably the beginning of a series of demands for uniform wages, to be made upon one contractor after another. Some members of the Association suggested that this method warranted retaliation by a lock-out. But it was pointed out that such a course might involve many other contractors, particularly those in the building trades, in a conflict with the teamsters in their employ, and that, furthermore, through sympathy, all the wheeled carrying trade of the city might be tied up.

Accordingly, negotiations were opened with the Teamsters' Brotherhood. It was found that the formation of an agreement was not difficult, after the associated contractors had decided to confer with representatives of the union. The teamsters' representatives showed a spirit of fairness in assenting to the requirement that all drivers help load

their trucks in cellar work and also whenever teams are crowded at loading points, in order to break the jam. The maximum work-day was fixed at twelve hours, the hours to be adjusted to suit business conditions of the employer, overtime to be paid in proportion to a uniform wage-scale. This scale made a slight average increase of pay. The question of "open shop" was met by the stipulation that "Preference shall be given, in hiring new men, to competent members" of the union. A clause provided for the reference of differences between employer and employee to a board composed of an equal number of teamsters and members of the contractors' association, with power, in case of disagreement, to select an umpire, "whose decision shall be final and binding." Pending that decision, no lock-out or strike shall be ordered, and the union binds itself to order no sympathetic strike. The agreement is in force until June 1, 1905.

The agreement was put into final form and signed by representatives of the two parties at the rooms of the New York Civic Federation on July 7. The agreement is signed on behalf of the Contractors' Protective Association by A. McC. Parker, Patrick Reddy, Edward J. Galway, John L. Keating and Hugh Thomas; and on behalf of the International Brotherhood of Teamsters by Edward Gould, James M. Brady, Michael J. Rogan, George W. Prescott, John Martin and John P. Brannigan.

CO-OPERATION IN MASSACHUSETTS.

The State Arbitration Board Welcomes the Boston Branch of the National Civic Federation.

In its eighteenth annual report to the Legislature, the Massachusetts Board of Conciliation and Arbitration states:

"The Board at the end of its eighteenth year reports that the confidence of employer and employed, so necessary to a tribunal of voluntary resort, continues to increase. The attention which the public has ever given to the Board's work is manifested by invitations to address clubs, societies, schools and religious organizations, and by the requests of students and teachers, writers and speakers, for information concerning its work. This interest, which is one of the most encouraging signs of the times, was manifest when the transportation strike of 1902 was brought to a speedy close through the timely aid of public-spirited men of this State. In its efforts to secure the speedy termination of the strike and to prevent its recurrence during the month following the settlement, the Board was heartily assisted by the secretary of the National Civic Federation and its members. It is gratifying to note that these men, devoted to the promotion of peace between industrial parties, contemplate a branch of their organization in Massachusetts."

OTTO M. EIDLITZ,
Chairman Building Trades Employers.

RALPH M. EASLEY,
Chairman Executive Council.

HENRY WHITE,
United Garment Workers of America.

HOW LABOR UNIONS HURT THEMSELVES.

When Internal Labor Quarrels Disturb the Public,
Trades-Unionism Suffers.

(Editorial, "N. Y. Evening Journal," July 22.)

The threatened strike in New York City's underground railroad illustrates strikingly and unpleasantly one of the greatest difficulties in the progress of union labor.

There are two rival unions of painters, "The Amalgamated Society of Painters and Decorators," and "The Brotherhood of Painters." Both of these associations consist of union men, both seek employment for their members. The agents of each association, of course, do only their duty in protecting the members whom they represent.

But unions quarreling among themselves should find a way to settle their difficulties without exposing the public to great inconvenience, and without attacking the interests of any innocent third party.

This strike of painters should prevent the opening of the underground railroad, millions of people would be inconvenienced.

There is nothing more damaging to the interests of union men, nothing that so much undermines respect and sympathy for union labor as these quarrels between the men themselves, in which they sacrifice the interests of innocent parties—employers and the general public—to carry on internal rows.

When an individual employer or city is willing to hire union men, willing to pay fair wages, it is preposterous for the unions to say the work cannot go on, that a man's business must be ruined, or the public imposed upon, because the union men are fighting among themselves.

Let them fight among themselves if they want to. Problems of unionism, like other problems, must be worked out through struggles and misunderstandings.

But let rival unions fight each other, and pay the cost of their own fights, instead of making the public or the innocent employer pay the bill.

Perhaps the union men will ask: "Haven't the unions a right to quarrel and fight with each other, the same as the great corporations? Don't the corporations get into rows and fight to the death?"

Yes, the unions have a right to fight as much as they please and imitate, if they choose, the most elaborate cut-throat methods of the trusts and the big corporations. But, in the first place, the fact that a trust or a great corporation does harm certainly does not excuse evil-doing on the part of a labor union.

In the second place, and what is more important, when the trusts and the big corporations go to fighting the public is benefited.

But when unions fight, instead of fighting each other, they fight the public or their employer, threatening ruin to one or inconvenience to the other, and that is foolish childishness.

It is nonsense to say that the questions cannot be arranged without making the public suffer.

Suppose Belmont, the builder, should have a misunderstanding with McDonald, the contractor, and lock out all the men and delay the tunnel indefinitely pending an agreement. Would the public stand that kind of nonsense?

It would not, and there is no reason why it should stand the nonsense that results from a fight between the unions.

Unions are the most important factor in modern life. They alone stand between the working people and the unlimited greed of the corporations.

They alone, by compelling the payment of fair wages, can bring about at least a partial distribution of wealth.

The good that they can do is enormous, and intelligent working men should see that they are not damaged in the public estimation by foolish fights between brothers.

FAULTY SHOP MANAGEMENT.

Mr. Du Brui Iterates and Explains His Statement
That a Large Percentage of Strikes are the
Fault of the Employer.

The statement made by E. F. Du Brui, commissioner of the National Metal Trades Association, before the National Association of Manufacturers, that "eighty per cent. of the strikes in this country are the fault of the employer" is repeated by him, together with the following explanation, in the "Boston Transcript":

"Strikes and labor troubles are the fault of the employer to a very large extent because the employers, whom one would naturally expect to be more intelligent than their workmen and therefore more familiar with industrial conditions, have not studied questions of labor. They are too busy to read things about labor, and too busy to bother about many things that go on in their own shops. It is the employer's fault if he has a foreman or superintendent who treats the men unfairly, thereby giving an excuse for the agitator to come in and work on the prejudices of the workmen, drawing away their loyalty from the employer to the organization. His fault is probably one of omission rather than of commission.

"Many strikes in their last analysis are demands for better shop management, and it is a fact that shop management is being reduced to a science; the abuses where they have existed in the piece-work system are caused by a lack of definite knowledge on the part of both employers and employees as to

how long a job should take, and so, too, with many other things. It is the employer's fault that employers' associations were not formed long ago to control strikes."

PUBLIC SENTIMENT THE ARBITER.

The President of the Employers' Association Points
the Way to Peace with Unionism on the Basis
of Justice.

In a recent communication to the National Civic Federation, in relation to a contemplated meeting, Mr. Phil. R. Toll, President of the Kansas City Employers' Association, expressed the following sentiments:

"We believe unionism and contra-association of employers are products of necessity; that both parties are right; that the tendency of the employers' association will be to educate unionism, and aggressiveness on the part of the unions will tend to eliminate selfishness and injustice on the part of the employer; and that the product derived will be happiness, prosperity and peace; that the American people can be depended upon to act as arbiter between the two, and that public sentiment, to which both appeal for a verdict, will decide in favor of justice.

"Unionism was born from necessity, that necessity being the selfishness of humanity in the guise of the employer. Employers' associations were born from a necessity, that necessity being arbitrary restrictions, unjust demands and violations of law on the part of unionism. Employers must recognize the justice and demands of employees, and employees must not make unreasonable nor restrictive demands upon the employer. Both sides must recognize justice, and neither must attempt to cast the mote out of the other's eye until they have removed the beam that is within their own.

"On both sides of the question we have too many who will not recognize the justice of the other's position, and until this condition is remedied, we may expect industrial disturbances."

The London Society of Compositors, with 11,270 members, has a reserve fund of \$361,000. Nearly \$80,000 was paid to the unemployed last year. The society maintains 330 superannuated members, who received for the year \$33,000 from the general treasury. The funeral benefits for the twelve months totaled \$11,740.

When violation of contracts through sympathetic strikes is declared by the official representative or agent of labor organization to be harmful, dishonorable, and not to be tolerated, obedience must be rendered by the local unions which compose its membership, or discipline is lost.—Tampa "Union Label."

MONTHLY REVIEW

VOL. I, No. 7

NEW YORK, SEPTEMBER 15, 1904

TEN CENTS

A SIGNAL VICTORY FOR FACE-TO-FACE CONFERENCE.

A STRIKE ON THE GREAT INTERBOROUGH SYSTEM AVERTED THROUGH MEETINGS BETWEEN CORPORATION OFFICERS AND LABOR REPRESENTATIVES.

The partisans of organized capital, the adherents of organized labor and the interested general public may all rejoice in the establishment of peace between a great corporation and its army of employees.

The significance and the consequences of the contract just signed between the Interborough Rapid Transit Company and its organized employees cannot be exaggerated. The attainment of that contract meant the avoidance of a strike whose enormous inconvenience to the public was in the mind of every one, while its extension to all the railroads centering in New York, through the action of the railway brotherhoods, was only the beginning of a chain of possibilities that would have agitated the whole country.

But these dangers, now happily banished, were physical. It is the moral effect of the success of the candid conferences between employer and employed that invites emphasis and the earnest attention of all students of the ever-present labor question. The Interborough is the largest public service corporation upon this continent, if not in the world. Its business of urban transportation employs thousands of wage-earners, whose number is to receive a large addition through the operation of the new subway. That corporation found itself confronted by certain demands backed by three national organizations of labor and their local branches,—the Amalgamated Association of Street and Electric Railway Employees, and the Brotherhoods of Locomotive Engineers and Firemen.

This largest employer in its line of business in the United States did not reply to these demands with the old-fashioned answers that it would "manage its affairs in its own way"; that it would not brook the "interference of outsiders"; that it would

"meet only the men in its employ"; that there was "nothing to confer about"; that there was "nothing to arbitrate." Instead, it accepted, through an enlightened directorate and its president, August Belmont,

The consequences of this agreement, it is hoped, will be far-reaching. Thousands of other employers will be impressed with this object lesson of the effectiveness of the plan of having representatives of two

clashing interests meet face to face, and through verbal interchange, make each thoroughly acquainted with the claims, the beliefs and the desires of the other. By this method a middle ground, perhaps of compromise, perhaps of mutual conviction of what is fair and just to both capital and labor, can be reached. This method receives the force of influential example from the list of directors who stood behind Mr. Belmont in its adoption. Their well-known names are: E. P. Bryan, Andrew Freedman, James Jourdan, Gardiner M. Lane, John B. McDonald, Walter G. Oakman, John Pierce, Morton F. Plant, William A. Read, Alfred Skitt, Cornelius Vanderbilt, George W. Young.

The adjustment of the difficulty between the Interborough and its employees is of great and general importance to both the capital and labor employed in all parts of the country, particularly in and near the centres of population. The change on the Elevated from steam to electric power was a visible forerunner of the predicted similar change on all railways carrying suburban traffic, as well as for local trains along their systems. This meant much to members of the Brotherhoods of Locomotive Engineers and Firemen, whose occupation would become that of motorman, still ranking as skilled labor but not requiring much of the technical training necessary to run and

manage a steam locomotive. In this change labor was naturally anxious to protect itself against a reduction of wages; while capital perceived an opportunity to urge that less exacting ser-

that method of round-the-table conference whose efficacy in securing industrial peace has been practically demonstrated elsewhere, and whose promotion is the main object of the National Civic Federation.

vice should accept lower wages, and perhaps longer hours.

Without doubt, the use of the method of conference was made easier in the case of the threatened strike on the Elevated by the fact that contractual relations already had been established last year between the company and the men, through conferences brought about by the New York Civic Federation. When the Elevated passed into the control of the Interborough company at that time, a union including practically all of its employees had been formed. This branch of the Amalgamated Association made demands upon the Interborough which were put into the form of an ultimatum. That would have meant a strike, or surrender. But the Conciliation Committee of the Civic Federation persuaded the executive committee of the union to delay, brought the International President of the Amalgamated Association into conference with the new management of the road, and thus effected a settlement without a strike.

The existence of this contract, between the Interborough company and its employees, was a substantial precedent for the negotiations as to the terms and conditions of employment upon the subway. The reader is freshly familiar with the series of conferences between the president and executive officers of the Interborough company and the representatives, national and local, of the three labor organizations concerned, at Mr. Belmont's residence, his private office and the office of the company. That series of conferences culminated in the now famous conference between the representatives of the company and of the employees in August Belmont's office at 23 Nassau street on September 6.

Both sides felt that this conference was crucial. While hopeful of its success, each side had made grim preparations for its failure. The labor leaders had arranged for the men to quit work on the entire Elevated system at a moment's notice. The company had fitted its car horns with cots and cooking utensils, and had garrisoned them with a small army of strike breakers. With the diplomats of both sides striving for peace, they were ready for war. The entire police force had been ordered on full time duty, sleeping in the station houses, ready at an instant's warning to preserve public order. The city was pervaded by a feeling of the keenest anxiety. A large portion of its population went to bed on the night of September 6 not knowing the result of the conference. Not until they saw the reassuring headlines in the morning papers of September 7, did thousands know that their daily journey downtown would not be interrupted.

Thus all the circumstances and conditions whetted and concentrated public attention upon the consecutive phases of the prolonged negotiations. The demands of the men, their justice or extravagance, the attitude of the company and every strategical move by either side were all eagerly and critically discussed.

It was not, however, of general public knowledge that, throughout this time of anxiety, the Conciliation Committee of the National Civic Federation was holding innumerable conferences with both sides of the controversy. The fact that the president of the employing corporation and each of the national labor leaders involved are members of the Executive Committee of the Federation, and the fact that it was that organization that had previously been successful in bringing about the existing contract on the Elevated, rendered its good offices peculiarly acceptable to both parties.

At one stage of the negotiations the entire subject of dispute came near to being submitted to arbitration. The plan proposed and favorably received by all concerned was that Mr. Belmont should select from the labor group of the Executive Committee of the National Civic Federation John Mitchell, President of the United Mine Workers of America, and E. E. Clarke, Grand Conductor of the International Brotherhood of Railway Conductors; and that Messrs. Mahon, Stone and Wilson select from the employers' group of the same committee Lucius Tuttle, President of the Boston and Maine Railroad, and Frederick B. Underwood, President of the Erie Railroad. In case these four could not agree, they

were to select from the representatives of the general public upon the Executive Committee of the National Civic Federation a fifth arbiter, whose decision should be accepted as final. Had the final conference of September 6, between Mr. Belmont and the labor leaders, not been successful, arbitration would have been the only resort to prevent a strike.

It was on the very day of this final conference that members of the National Civic Federation, realizing its grave importance, made a special effort to smooth the way for a successful outcome. At noon of that day, Charles A. Moore, Chairman of the Conciliation Committee, Oscar S. Straus, Emerson McMillin, Louis B. Schram, Ralph M. Easley and S. B. Donnelly, met the interested parties at luncheon. This social gathering was devoted to a final analytical review of the progress of the negotiations up to that hour and a critical examination of every demand on the part of the men. In fact, there was a general and thorough threshing out, around the luncheon table, of every question involved. The result was that all those directly concerned went to the formal conference of that afternoon in a conciliatory and judicial frame of mind, calculated to go far towards bringing about an agreement which, if not wholly satisfactory to either side, would ensure harmonious relations between the company and the employees.

It is notable that at the time when the question of the "closed shop" was the crux of almost every other labor difficulty, in this case it was never mentioned.

Summarized, the demand of the men was that preference be given to Elevated employees in manning the subway; that the hours and wages in force on the Elevated be extended to the subway; that seniority of service on the Elevated be counted in making promotions in the subway; that the medical examination of applicants for work be not what is known as the "standard railway" test, but one called the "practical" test, which is much less severe. The demand as to wages would have meant \$3.50 and a nine-hours' day for motormen in the subway, the same as is paid under the existing contract on the Elevated. When these demands were first made publicly known, on August 20, President Pepper of the local branch of the Amalgamated Association claimed that the extension of the Elevated contract to the subway and the preference to Elevated men in appointments to subway positions were part of an oral agreement made sixteen months ago between his organization and officers of the Interborough company. The company's officials denied knowledge of such an understanding. But from the outset Mr. Belmont expressed his belief that all the differences between the employees and the company would be satisfactorily adjusted.

In fact, Mr. Belmont made epigrammatic expression of his confidence in the method of conference, when he replied at a critical stage of the negotiations to a query whether he would grant yet another hearing to the representatives of the employees:

"Certainly! I will attend a hundred conferences if necessary, if only they will bring about a peaceful solution."

But this faith in the ultimate peaceful solution of the difficulty did not make the company's officials unmindful of the company's obligation to the public convenience. Their precautions, in the contingency of a strike, against a tie-up of the Elevated system, were both prompt and energetic. Knowledge of these precautions did not lessen the determination of the labor leaders to stick to their demand. At the same time it impressed them with the importance of exhausting every possible means of settlement, before resorting to a strike.

An alliance between the Amalgamated Association and the two railway Brotherhoods brought into the field three national labor leaders,—President W. D. Mahon, of the Amalgamated, and Grand Chief Warren S. Stone of the Engineers' and Vice-Grand Chief Charles A. Wilson of the Firemen's Brotherhoods. Before their arrival there had been conferences between General Manager E. P. Bryan and Superintendent Frank Hedley of the Interborough, and Presidents George Pepper of the local branch of the Amalgamated and William L. Jencks of the local division of the Engineers' Brotherhood. These local

leaders, with their executive committees, also participated in the conferences that followed directly with President Belmont, the General Manager and the Superintendent of the Elevated.

The direct conferences with Mr. Belmont began on August 31 and continued until the final meeting of September 6, and the subsequent formulation of details of the agreement on September 7, and its signature on September 9. The conference of August 31 was inconclusive. It looked as though the company and the men were dead-locked on the question of wages and hours. But the arrival at this juncture of President Mahon and of Vice-Grand Chief Wilson opened the way for the conference of September 3.

At that conference a proposition was formulated which was acceptable to the company, as it provided for a wage of \$3 for a ten-hours' day in the subway, while it embodied various concessions to the Elevated employees, including retention of seniority.

But this proposition was rejected by all the local committees of the men. Not only was it rejected, but new demands were made, including that for a modified medical examination, to which reference has been made. Rumors of a strike were rife. President Mahon demonstrated, however, that the local radical spirits in the Amalgamated Association could be held in check by the national organization and he was able to hold together also, for still further conference, the grand chiefs of the Brotherhoods. It was this spirit on the part of the labor leaders that resulted in the final and successful conference of September 6. In a letter agreeing to this conference, Mr. Belmont had excluded from its discussion the question of wages and hours. But although they knew that this question absolutely could not be excluded if a strike was to be prevented, the labor leaders accepted the terms of Mr. Belmont's letter, having faith that when once more face to face with the officers of the company, the question of wages and hours would naturally come up. As one of them said: "These interchanges of letters may be very well for international diplomats, but I believe in talking face to face." The outcome proved the wisdom of this counsel, since the final conference did adjust hours and wages. The agreement was for \$3.50 for a ten-hour day. Its other conclusions, relating to the modified seniority and minor details, retained the standard railway examination.

After the final conference, Mr. Belmont said: "I am glad that all of our long, hard tedious work has not been in vain. I am more than ever convinced of the soundness of the policy advocated by the National Civic Federation. We ought to be too civilized in this day and age for capital to refuse to meet or organized labor in conference. This present experience confirms my belief in meeting the representatives of employees face to face."

In speaking of the adjustment of the difficulty, Mr. Mahon said: "This conference, with its successful outcome, reflects vividly the wisdom of the policy of conciliation of the National Civic Federation. It was through the intervention of the Civic Federation more than a year ago, that the national and local representatives of the Amalgamated Association and the officers of the Interborough company were brought together and made acquainted. That was the beginning of a candid interchange of views that has been uninterrupted ever since. There never has arisen an occasion when both President Belmont and General Manager Bryan have not been as willing as ourselves to meet and discuss any subject of controversy."

"The great value of these conferences is that they bring the men of two sides face to face, when they can talk over, informally, all the features of a case in dispute. That is a far better method than the exchange of formal, written communications, or the making of demands and counterdemands through the press. When one side draws up a letter, its effort is to present as strong a case as possible, without any suggestion of compromise. In preparing a reply to any proposition made in that manner, the opposing side will also, naturally, try to frame as strong a document as possible. Each side is afraid to concede anything whatever in writing. So the two parties in negotiation, instead of getting together, may get farther and farther apart."

"But in a personal conference, where men sit together in one room, it is possible to create a mutual belief in a common purpose to arrive at a satisfactory settlement. In spoken conversation, misunderstandings are cleared away and each side begins to see the way open to reach ground on which both can stand. The officers of the Interborough never have raised any question of 'recognizing' the union, and as a result all fear and suspicion in dealing with them have been removed from the minds of the leaders of our labor organization. As to the agreement we have reached, I have only to say that it is satisfactory to us, as was shown by its unanimous ratification by the members of the New York Division of the Amalgamated Association."

Mr. Stone said of the conferences: "This is my first contact with the National Civic Federation, as I

have only just become a member of that body. I am certainly pleased with its method of operation. I commend highly the spirit shown by Mr. Belmont and the officers of the Interborough throughout the conferences, and I am highly gratified at their successful conclusion. Without a doubt, there is great advantage to be gained by having representatives of the two sides, in any controversy about labor, meet and talk over every phase of the difficulty. That prevents misunderstandings and brings out the facts. Misunderstandings are the frequent cause of keeping apart interests that should be harmonious. The success of our conferences illustrates these statements."

Mr. Wilson said: "The officers of the three labor organizations involved in the controversy worked hard to hold the men back from striking. A strike would have been a public calamity, but when we

arrived here it needed only a match to fire a strike. The officers of the unions are to be congratulated for their conservatism and deportment through many long and trying hours. So are the officers of the company, who met us squarely and courteously on every issue. We all deplore strikes, and believe in exhausting every resource before striking. The present is an impressive example of the value of getting together and talking things over. If we had conducted negotiations at a distance, our differences could not have been adjusted so rapidly, if at all. The agreement is the best that I ever helped to frame. It will form the basis for dealing with all future developments in the subway. It is unprecedented in that it is an agreement for wages, hours and conditions of labor on a railroad not yet in operation."

THE COUNTRY ESCAPES ANOTHER ANTHRACITE STRIKE.

THE MOST NOTABLE SYSTEM OF CONCILIATION AND ARBITRATION SAVED FROM A BREAK-DOWN, THROUGH REFERENCE OF A DISPUTE TO JUDGE GRAY.

"I regard this reference as preventing a repetition of the anthracite strike, with all its resultant disaster to the country."

That was the comment of Carroll D. Wright upon the reference to Judge George Gray, by the Anthracite Conciliation Board, of a deadlock in the Board which, if not relieved, would have set aside an award of the Anthracite Strike Commission, would have smashed the machinery of arbitration which it had created, and would have plunged the country, at the end of summer, into the woes of another strike throughout the anthracite regions of Pennsylvania. It would have been a moral disaster as well, for it would have shattered the confidence of the industrial world in the principle of arbitration of which this Anthracite Board is the most conspicuous example in history.

This is an event the more impressive because of the magnitude of the interests thus retained in harmony, in contrast to a period when labor troubles were unusually frequent. All of these troubles were made conspicuous in the daily press, while comparatively little attention was paid to the prevention of a threatened rupture more serious than all the existing strikes combined. This avoidance of a repetition of the disastrous anthracite strike of 1902 was made possible by the willingness of the miners' representatives in the board to acquiesce in the manner of reference of the question at issue to Judge Gray. The representatives of both interests in the board have expressed their determination in advance to abide by the decision of Judge Gray, so that the prevention of a strike upon this question is not temporary, but probably permanent. The expectation is that this action will result in eliminating entirely from the anthracite industry a knotty problem that has been fraught with danger,—that of the payment of check weighmen and check docking bosses.

The existence of this Board of Conciliation, it will be recalled, grows out of the award of the Anthracite Strike Commission, appointed by the President of the United States, October 16, 1902, at the request of both the operators and the miners. The report of this commission, made March 18, 1903, included the following award:

That any difficulty or disagreement arising under this award, either as to its interpretation or application, or in any way growing out of the relations of the employers and employed, which cannot be settled or adjusted by consultation between the superintendent or manager of the mine or mines, and the miner or miners directly interested, or is of a scope too large to be so settled and adjusted, shall be referred to a permanent joint committee, to be called a Board of Conciliation, to consist of six persons, appointed as hereinafter provided. That is to

on the part of the operators: W. L. Connell, chairman, of Scranton; S. D. Warriner, of Wilkes-Barre; R. C. Luther, of Pottsville. On the part of the miners: T. D. Nichols, secretary, of Scranton; W. H. Dettrey, of Hazleton; and John Fahy, of Pottsville. The accompanying cut is reproduced from a photograph of the board in session at the time of the reference to Judge Gray, Mr. Luther being absent.

THE ANTHRACITE BOARD OF CONCILIATION

say, If there shall be a division of a whole region into three districts, in each of which there shall exist an organization representing a majority of the mine workers of such district, one of said Board of Conciliation shall be appointed by each of said organizations, and three other persons shall be appointed by the operators, the operators in each of said districts appointing one person.

The Board of Conciliation thus constituted shall take up and consider any question referred to it as aforesaid, hearing both parties to the controversy, and such evidence as may be laid before it by either party; and any award made by a majority of such Board of Conciliation shall be final and binding on all parties. If, however, the said board is unable to decide any question submitted, or point related thereto, that question or point shall be referred to an umpire, to be appointed at the request of said board, by one of the Circuit Judges of the Third Judicial Circuit of the United States, whose decision shall be final and binding in the premises.

The members of the Board of Conciliation are,

tion of the subject of check weighers and dock bosses (involved, as will be explained, in the fifth award of the Strike Commission) to Judge Gray. The operators' half of the Board would not agree to this unrestricted reference. Instead, they insisted upon the following form of reference, to which the miners on the Board finally assented:

The question at issue is whether the resolution of the Conciliation Board of July 9, 1903, conflicts with Mr. Wright's findings in the case of grievance No. 106, concerning this question, and if the resolution still remains effective; or whether it was annulled by the declaration of Mr. Wright in the case of grievance No. 106, and in order to settle this question, and to avoid any further delay or friction, the operators' and miners' representatives now propose to refer the question at issue to Judge Gray.

If, after a proper presentation of the facts to him, he will find that the resolution of the Conciliation Board of July 9, 1903, is still effective, then, in order

that the whole text of the Anthracite Strike Commission's 5th award relating to check weighmen and check docking bosses shall receive a proper interpretation, the operators and miners agree that the said 5th award shall be submitted to Judge Gray, and if his interpretation shall be at variance with that given by the Board of Conciliation, in its unanimously adopted resolution of July 9, 1903, the operators and miners agree that the said resolution shall be formally withdrawn and that a new resolution of the Board of Conciliation will be adopted in conformity with Judge Gray's finding.

There was an interesting colloquy at the meeting of the Board next following this reference. Col. Wright, the umpire, was present, and at the conclusion of hearing several cases submitted to him for decision, remarked informally: "I am highly gratified by the action of the Board in referring the check-weighing matter to Judge Gray. I do not regard that action as reflecting upon my decision in the premises. I still hold that for me to have decided otherwise would have vacated the award of the Commission, and that I could not bring myself to do. I regard this reference as preventing a repetition of the anthracite strike, with all its resultant disaster to the country."

"Oh, our objection to your decision," exclaimed Mr. Warriner, a representative of the operators on the Board, "was not as to its merits, but as to its application. The operators would not impugn your opinion. We shall abide by the decision of Judge Gray, whatever it may be."

"Yes, we also shall abide by his decision, whatever it may be," responded Mr. Nichols, of the miners; "but I do not hesitate to say in the presence of Mr. Warriner, now that the reference to Judge Gray has been made, what I would not say before, lest it be construed as a threat, and that is that the situation was very serious—far more serious than Mr. Warriner apprehended."

The following is the text of the Commission's fifth award, whose disputed interpretation and application caused the danger of another anthracite strike.

That whenever requested by a majority of the

contract miners of any colliery, check weighmen or check docking bosses, or both, shall be employed. The wages of said check weighmen and check docking bosses shall be fixed, collected, and paid by the miners, in such manner as the said miners shall by a majority vote elect; and when requested by a majority of said miners, the operators shall pay the wages fixed for check weighmen and check docking bosses, out of deductions made proportionately from the earnings of the said miners on such basis as the majority of said miners shall determine.

The difficulty arises out of the method of paying the wages of check weighers and check docking bosses. As they are employed in the interests of the miners, it is conceded that the miners should pay their wages. But should the minority of the miners in a colliery, who do not care for this protection, be forced to pay for it? And how shall the money be collected? If all the miners are to pay, can a proportionate assessment be legally withheld from the wages of the minority without their assent? If the minority refuse to make an assignment to the company for this purpose, should they be protected in their refusal by the operators? Or should they be required to make an assignment as a condition of employment? Would such a requirement be legal? If not, could the assent of the miners to the award of the Commission be regarded as waiving their constitutional rights to the extent of its terms?

The operators' side of the case that has been referred to Judge Gray is stated by Mr. Warriner, of the Conciliation Board, and superintendent of the Lehigh Valley Railroad Company, to be based upon two facts, viz.:

First—The Board of Conciliation at one time passed upon the check weighmen question, and its action gave sanction to a plan which was then and is now pleasing to the operators. That plan was to collect the wages for a check weighman from the men employed at a colliery who requested the appointment of said check weighman.

Second—The operators object to the opinion of Umpire Wright, which reverses the above plan and sustains the contention of the United Mine Workers that the wages for the check weighman should be collected proportionately from all the men at any colliery where the majority of the men request it

The objection of the operators is that in the first place the check weighman question has been dealt with, decided, and is therefore dismissed by the Board of Conciliation, and secondly, that the opinion furnished Mr. Nichols by Umpire Wright was a personal one at the solicitation of Mr. Nichols, and was not asked for by the Board, and hence is not to be considered binding.

The resolution adopted by the Board of Conciliation on July 9, 1903, to which Mr. Warriner refers, provided that the person elected by the miners as check docking boss should be accepted by the operator, and that his wages "shall be paid by the miners requesting such appointment"; and that for this purpose the employer "will make the deduction from the earnings of such miners as make a legal assignment."

Mr. Nichols, of the miners' representatives in the Board, claims that the position of the operators would in effect vacate the award of the Strike Commission. He submits that the Board is itself in the nature of an umpire; that the Board had not limited its action to a technical detail in another case, that of Coes Bros. & Co., but had passed upon points not submitted to it, so that it was inconsistent for the operators to object to Umpire Wright's decision on the ground that it went beyond the specific point submitted to him. Mr. Nichols argued that the entire interpretation of the fifth award of the Commission should be referred to an umpire, and that it should not be restricted to the technical form presented on behalf of the operators. He held that the question at issue was the observance of that award; that the agreement of the miners to abide by the decision of the Commission would absolve the operators from legal responsibility for making a deduction from the wages of all miners to pay check weighers elected by the miners. In conclusion, Mr. Nichols says: "We believe that we have done all that we can, consistent with the responsibility of taking care of the interests of the miners, to bring harmony out of disagreement."

With these arguments, the case went to Judge Gray.

WILL LABOR MAKE CONCESSIONS FOR A SHORTER WORK-DAY?

ITS LEADERS AND EDITORS DISCUSS GRANTING TEMPORARILY LOWER WAGES OR UNRESTRICTED OUTPUT FOR FEWER HOURS OF TOIL.

The voice of organized labor, in answer to questions relating to the proposed shorter work-day, is heard in a collection of opinions, here presented, of its leaders and of editors of labor periodicals. These opinions are a response by wage-earners to the symposium of employers upon the same subject, which appeared in the August number of *The Monthly Review*. That symposium revealed a prevalence of assent among employers to the desirability of a shorter work-day as an abstract proposition. Most of their qualifications or objections were based upon the assumption that fewer hours of labor would increase the cost of production. Many employers urged that workers, as a consideration for fewer hours, should reduce this assumed increase in cost of production either by accepting temporary lower wages during an adjustment of trade and prices to the new condition, or by removing what the employers claimed to be arbitrary restrictions upon the quantity of production.

Labor's response to the employers was obtained by asking its prominent leaders and guides the following questions:

"Do you believe that organized labor should be willing to make a concession, either of temporarily lower wages or unrestricted output, in return for a shorter work-day?"

"Do you believe that a shorter work-day lessens production, or increases the labor cost of production?"

The collection of opinions thus gathered is of great value and interest. The symposium reveals a high order of thought and a widely diffused understanding of the philosophy of the shorter work-day in its relation to production, consumption, domestic and foreign markets, wages, prices,

legislation, trade agreements and the standard of American citizenship. It is a valuable contribution to the current discussion of the desirability and practicability of the shorter work-day which, at first centering about the eight-hour bill for government contracts, now under consideration by the Department of Commerce and Labor, has extended to the social and economic aspects of fewer hours of daily work and has developed the existence of a demand on the part of employees for fewer hours that cannot be denied recognition.

Out of the replies received, some fifty have been collated, representing many distinct national industries and, of course, a far greater number of crafts and a vast multitude of wage-earners. The editorial expressions range from New England to the Pacific. The representative character of these replies will be perceived by a mere glance at the titles in labor organizations and the callings of the writers. A perusal of the text of the replies will be necessary to appreciate their pertinence and acumen and, with few exceptions, the spirit of amity and the desire to attain the highest good of the community at large that animates them all. They are a notable evidence of the absence of enmity toward capital or of class hatred among the leaders of labor.

An analysis of the replies indicates that approximately 36 per cent. of their writers are willing to return for a shorter work-day, the concession of temporarily lower wages or of unrestricted output. Only ten replies would refuse any concession whatever. It is to be noted that this result is to some extent affected by a misunderstanding of some of the writers as to the purpose of the suggestion of temporary lower wages. That purpose was intended to be understood as purely tactical,

with the idea that the concession, at least in some industries, might increase the willingness of employers to grant the shorter day, and with the further idea that existing wages would be restored as soon as the industry had adjusted itself to the new condition.

To confusion upon this point may be attributed the fact that about half of the replies oppose, and a few of them bitterly, any reduction of wages whatever. For this denial, a variety of reasons is advanced. Several writers assert that the present rate of wages is barely sufficient for existence; that even now many wage-earners are forced to deny themselves a full allowance of the necessities of life; that lower wages would lower the standard of living below the physical welfare and self-respect of the American working-man. Others assert, more moderately, that the present wage for a day of nine or ten hours would be only a fair equivalent for eight hours' work. An allied opinion is that the present margin of profit upon production is so large that the employer should rightly bear the entire additional labor cost, if any. Others argue, from experience in industries where the eight-hour day already prevails, that the shorter day increases production and lessens its cost, so that there would be no reason for lower wages. Another argument offered is that lower wages would lessen consumption, wage-earners constituting 98 per cent. of the consumers; and that this would result in over-production and injury to the employers. Coupled with this is the theory that lower wages, through diminishing the home market, would force manufacturers more than ever to enter into competition in foreign markets.

About a score of writers favor temporary reduction, all insisting that it must be only temporary.

Several would make the concession only where lower wages would not reduce the earnings of the worker below the comfort line. Others regard this as a proposition to be answered according to the conditions in each industry. Several regard the permanent benefit of a shorter day as worth a temporary sacrifice, which would forward the movement. One writer esteems leisure as an asset; and another declares that where eight hours now prevail, the workers would prefer a reduction of wages to a return to the longer day for the same pay.

The other suggested concession, that of removal of arbitrary restrictions of output, evoked at least a dozen denials, several of them very emphatic, that such restrictions exist in the writers' crafts, together with declarations that it is the sincere policy of unionism to place no limit upon the amount to be done by any worker in a given time.

But nearly a score of replies declare that restrictions (thus assuming them to exist) should be removed for economic reasons. They pronounce restriction short-sighted, because increased productivity is essential to higher wages. One writer remarks that only ordinary "gumption" is needed to perceive that union workers should strive "to produce the most in the least time possible." "The only limit should be the normal capacity" of the worker, remarks another. But these advocates of unrestrained energy protest against the "pace-maker" among workers, that is, against pitting workers against those of exceptional skill, strength or swiftness. Others believe that restriction will voluntarily disappear, because of the greater energy and willingness of workers. Only one writer advances the theory that restriction is necessary to prevent throwing large numbers out of work through over-production.

About three-fifths of the replies declare that the shorter work-day will not increase the labor cost of production. In support of this claim, the most important argument is that which cites the proof of experience in industries where the eight-hour day prevails, notably in the building trades. The replies from these trades have been grouped, and the especial consideration which they merit is given them further on.

Other reasons urged why the cost of production would not be increased are because of the greater zest of the short-day worker; because (in some industries) machinery would be run longer hours, by more shifts, thus lessening fixed charges on plant; because the total output would be greater; because the refreshed workers will welcome the sound of the morning whistle; because the manhood of the worker would spur him to do his utmost for the employer who had granted a boon. The writers who urge that the shorter work-day would increase the number employed, thus creating the same output as in the longer day, of course contradict those who assert that the same number of workers will produce in eight hours a result equal to their output in ten.

Only ten replies admit, more or less distinctly, that the shorter day would increase the labor cost of production. One reason adduced is that machinery is already speeded to the limit, and fewer hours would necessarily mean less product per worker. Against this is the claim that the output would be greater but that its cost would at first be higher, pending adjustment of the industry. One writer declares that the higher cost of production would be offset by increased purchasing power of the home market. Another avers that decreased output would remedy present over-production and cause steadier employment.

A few writers volunteer the opinion that a uniform eight-hour day can be accomplished only by legislation. One writer favors legislation because the shorter work-day is of the same public policy as the public schools and the statutory regulation of child labor. Another believes that unions should debate political questions and vote for candidates who favor an eight-hour law. Several advocate national voluntary trade agreements, so that the shorter day would be uniform, and to that end favor more thorough organization of both employers and employed. One writer discusses at length the history of the battle for the prevalent eight-hour day in the building

trades and its effect upon wages, output, cost and morale.

With notable enthusiasm, several dwell upon the social and moral effect of fewer hours of toil. They point to better, brighter, more attractive homes, an uplifted citizenship and consequent national prosperity. Several of them take pains to contradict the notion that workers would abuse added leisure, and declare that long hours mean ignorance, poverty, drunkenness and a degraded citizenship.

BEST SERVICE, NO LOWER WAGES.

W. R. Fairley, Member National Executive Board, United Mine workers of America:—I am glad to notice that the prevailing opinion among employers of labor is in favor of a shorter work-day as an abstract proposition. But they claim that it will increase the cost of production and urge that workers as a consideration for fewer hours should reduce this increased cost of production either by accepting lower wages or by removing what the employers claim to be arbitrary restrictions upon the quantity of production.

I believe that organized labor should be willing to remove any arbitrary restrictions on outputs to secure the shorter work-day, that they ought to render the best service of which they are capable, so that outputs would not be decreased and thereby increase the cost of production. I am not in favor of lower wages, even temporarily, to secure a shorter work-day.

After years of close observation and experience, I do not believe that shorter hours lessens production. If it does, it is only temporarily until the system adapts itself to the changed condition created, and therefore does not increase the labor cost of production.

RESTRICTIONS MUTUALLY INJURIOUS.

John D. Pringle, Editor of The Labor World, Pittsburgh:—In answer to the first of the two questions you forward me, I beg to state that I certainly deem it right that organized labor should grant unrestricted output in return for a shorter work-day. This concession would apply more to time workers than to piece workers. Under present industrial conditions, restrictions that are put upon production by some of our labor unions are injurious to trade and react disastrously to both employer and employed. Experience has led me to believe that a reduction in wage is not necessarily requisite for a shortening of the work-day.

Your second question is comprehensive, and brief statements must suffice for arguments. I do not think that a shorter work-day "lessens production," and therefore does not increase the cost of production. The natural course of industrial evolution has proven this to be true. Except in rare cases shorter hours of work have actually resulted in increased production, increased profits and wages and cheaper commodities. The history of various trades proves this.

In the mining industry, even before machinery was introduced, the highest per capita output of the English miner was when his work-day was shortest. The same holds good, as a rule, in this country. A shorter work-day without any artificial restrictions on the output tends to supply the workman with a motive to do his best, and particularly when he works "by the piece." It is the motive that maintains the standard and keeps down cost of production.

AN ARGUMENT FROM EXPERIENCE.

William S. Carter, Grand Secretary-Treasurer Brotherhood of Locomotive Firemen:—I believe that with the introduction of improved methods, a shorter work-day does not lessen production or increase the labor cost of production. If a like cause will produce a like effect, we may reasonably expect the reduction from a ten-hour day to an eight-hour day to produce the same result that the reduction from a twelve-hour to a ten-hour day produced. Then, why not simplify an intricate problem by reducing an unknown quantity to a known quantity, and ask: "Do you believe a shorter work-day did lessen production or did increase the labor cost of production?" I believe that with a shorter work-day, increased production and decreased labor cost.

You also ask, "Do you believe that organized labor should be willing to make the concession, either of temporarily lower wages or of unrestricted output, in return for a shorter work-day?" I have said that the shorter work-day neither lessened production nor increased the labor cost of production. Then why should have organized labor accepted lower

wages? Wages are not lower with the present ten hour day than they were with the former twelve-hour day. Then, why should wages be lower with the coming eight-hour day than with the present ten-hour day?

Now, what is meant by "unrestricted output"? If it is meant that a locomotive engineer should be permitted to operate his engine until, exhausted by continuous labor, he falls asleep and hurls to destruction a train laden with passengers or with fellow-employees, I do not believe that organized labor should make the concession.

If it is meant by "unrestricted output" that a task shall be set by an employer for a hundred employees to perform, which task is fixed by the ability, strength and endurance of the ablest and strongest of that hundred, I do not believe that organized labor should make the concession.

If it is meant by "unrestricted output" that employees should not place a maximum limit to the amount of work performed in a given time, I believe that organized labor should not only make the concession, but prohibit such practice, should it exist, among members of labor unions.

Continuous improvements in "labor-saving" machinery have reduced the labor cost of production until a comparatively small number of shoemakers can produce more shoes than our eighty millions of people can consume. There can be no doubting that modern machines have "saved labor"—but for whom? For the laborer himself only as the work-day has been shortened. For the employer, as he has added to his wealth. For the consumer, as he has obtained the product cheaper.

Since labor-saving machinery has performed its part in the development of this country, the employing class has profited so greatly that the world now stands amazed at the accumulated wealth of the "American Trusts." Since labor-saving machinery has performed its part in the development of this country, the American consumer has learned to class former luxuries as every-day necessities. Since labor-saving machinery has performed its part in the development of this country, the American workman finds that his labor has been "saved," that his work-day has been shortened only as his trade union has possessed the power to extort from the employing class.

The working-man has now turned to the law-making body of the nation for some of the good things which that body has so lavishly bestowed upon others. They have asked that the United States Government stipulate in all contracts entered into with manufacturers that working-men shall be employed only eight hours per day in prosecuting those contracts. So far, the law-making body of the nation has denied working-men this request.

FAIR EMPLOYERS DESERVE NON-RESTRICTION.

W. C. Plateil, National Vice-President Metal Polishers, Buffers, Platers, Brass Molders, Brass and Silver Workers' Union of N. A.:—In reply to Question 1, I will say that this is a very broad question, and a great deal depends upon the fairness which may be displayed by both sides in the controversy. I honestly believe that where the employer shows a disposition to be fair in the matter, organized labor should not restrict the output in any shape. But it has been my sad experience in a number of cases that where the output was restricted it was in cases where the men worked by the piece.

I would therefore frankly say that where any employer is fair enough to establish a shorter work-day without any reduction in wages, the employees should in turn do all they can in the way of getting out as much work for such an employer without killing themselves, and thus show to him that they are at least willing to play fair.

In reply to Question 2, I will say that I do not believe that the shorter work-day lessens the production, and I do not believe that in the end the cost of labor is increased. Here again it depends upon the fairness and spirit of good will shown on both sides, for it has been my personal experience—and I have enjoyed the shorter work-day for over three years—that where men work short hours, and they are treated fairly and like human beings, that before the end of the first year they will produce as much or nearly as much as they did under the ten-hour system. Men who are or are required to work eight or nine hours per day without having their pay reduced will, if they have a manhood in them at all, work for the interests of the employer granting them the shorter work-day, and show to him in many ways that the concessions he has granted his employees are not thrown to the winds. A man working shorter hours feels more like working when the whistle blows in the morning than the ones who do not enjoy the shorter hours, and when the whistle blows at night he is happy in the thought, knowing that he has dealt fairly and honestly by his employer, and he hastens home to spend a couple of hours of daylight at least with his wife, sweetheart or family. As one who enjoys the shorter work-day, I find that instead of production being lessened, in the end it will almost be as much as it was before the hours were reduced, and the cost of labor will be no more

considering the amount produced in less hours of labor. Hasten the shorter work-day, give us fair and humane employers, and the organized employees will in more ways than one show their appreciation.

NO RESTRICTION, IF NO PACE-MAKER.

Edgar A. Agard, Member Executive Board, Glass Bottle Blowers' Association of the United States and Canada:—I believe in the highest possible standard of life for the workers. To secure and maintain this standard, a shorter work-day is necessary. If it is impossible to reduce the hours of labor in any given industry and still leave the employer a fair profit, without corresponding reduction in wages, then I believe that labor should concede a lower wage scale in return for a shorter work-day. Provided, however, that the lower wage does not fall below the comfort line. Any enterprise which demands the entire time of those employed therein, at a wage so low as to make it impossible for them to save something for a time of future idleness, without denying themselves present comforts, is a curse to organized society and has no right to live.

I would also favor an unrestricted output, not only as a means toward the securing of a reduction in the hours of labor, but at all other times, if manufacturers will cease their pitting of the man of exceptional strength, skill and swiftness, like a gladiator, against the willing worker who is simply the average man.

Where the hours of labor are destructively long, that is, of such length that human endurance goes to the limit each day, I do not believe that shortening the work-day will decrease production or add to the labor cost thereof. Upon the other hand, if the hours are more humane, I certainly am of the opinion that a shorter work-day means an increased labor cost, because of a decrease in production.

I further believe that ultimately a shorter work-day will be more greatly to the advantage of the employer than to the employee. That it seems to be a vexed question I will admit, but if the parties who are primarily interested will get together for the purpose of agreeing upon some plan to bring about its consummation, and not for the purpose of proving that it cannot be done, or that the other side is illogical and unfair, I am sure that a plan could be agreed upon without any great difficulty, which would be injurious to none, but fair and beneficial to all.

LEISURE AN ASSET.

John A. Dyche, General Secretary-Treasurer International Ladies' Garment Workers' Union:—I believe that organized labor should be willing to accept lower wages in return for a shorter work-day. Leisure, even if it possesses no exchange value and one cannot deposit it with the banker, is yet as useful as any other form of wealth. A demand for a shorter work-day at the same rate of pay means not only a demand for increased pay per hour, but such a demand may also involve a rearrangement in the factory which may cause more inconvenience to the employer than an increase of pay. The resistance on the part of the employer may be such that the game may not be worth the candle. Wherever a shorter work-day will increase the cost of production—and this will probably be the case in a good many instances—the increase will only be temporary.

The restriction on production practised by some unions is to my mind quite unjustifiable. It is the result of a short-sighted policy on the part of the organizations pursuing it. Some of our unions seem to forget that the increase of the productivity of labor is the most important factor in a permanent increase of wages. I believe, however, that the restriction of the hours of labor by legal enactment to be more economically advantageous and socially useful than by voluntary agreement between manufacturers and employers. Voluntary restrictions of the hours of labor will give an opportunity to the sweater and tenement-house employer to compete with the regular manufacturer by working his hands abnormally long hours; while under legal restrictions competition can only be carried on by adopting better methods of production and by introducing new machinery which must lead to the concentration of capital and the elimination of the sweater and tenement-house worker as a factor in production.

INDIVIDUAL CAPACITY GAUGES OUTPUT.

J. E. Mulkey, Editor of The Advance Advocate, Official Organ of the International Brotherhood of Maintenance-of-Way Employees:—Where the wages of labor are sufficient to enable the worker to submit to a temporary reduction of wages without depriving his family of the ordinary comforts of life, if the hours of labor are such that the worker does not have reasonable time for rest and recreation, it would be proper and beneficial for him to submit to a reasonable reduction of wages in return for a proportionate reduction of hours.

In regard to output, that should be limited only to the normal capacity of the worker, and one worker's capacity should never be gauged by that of another.

Where a man is required to work longer hours

than his physical nature will stand, a reduction of hours would tend to increase his output per hour until his normal capacity for endurance is reached. To assert in a general way that shortening the working-day would increase the output of labor would be equivalent to saying that the greatest output would result from no labor at all. This applies also to the labor cost of production.

NO LIMIT TO AMBITION.

John F. McNamee, Editor Locomotive Firemen's Magazine:—In reply to your two questions would say: First—It is a question of considerable importance to determine to what extent laboring men could sustain a reduction in their earnings, and yet provide themselves with the necessities of life at the present prices of those articles which they require for their subsistence, and this is a question that should call forth the best thoughts of our political and industrial economists. While it might be politic on the part of organized labor in order to secure the benefits of a shorter work-day to temporarily endure a reduction of earnings and run chances for securing subsequent restorations to the former standard, it is an indisputable fact that such a course would work a decided hardship upon a large majority of wage-earners. In view of the immense fortunes that are being built up all about us as the joint result of the investment of capital and the expenditure of labor, it would seem that the public welfare could best be subserved by the burden of this change being sustained by the employing classes.

As to the subject of unrestricted output, I will state it as my belief that the welfare of organized labor would be best furthered by unrestricted output under any and all conditions. There may be reasons for restricting the capacity of the laborer in certain trades of which I have no knowledge, but it would seem to me to be contrary to the ultimate well-being of any organized craft to place restrictions upon the ambitions, skill and attainments of its individual members.

Second—It is my opinion that a reduction in the number of hours of daily labor would have but a temporary effect upon the volume of production, if it would have any. Perhaps it might partially disorganize some branches of industry until the new conditions could be so systematized as to produce the maximum results with the amount of effort expended. The individual laborer with more time at his disposal occasioned by the shorter work-day would undoubtedly have greater opportunity to give thought and attention to the development of his skill and ability, and as a natural consequence invest greater vigor and productive effort in his work during the shorter day than when the hours are long and wearisome.

PRODUCE MOST, IN LEAST POSSIBLE TIME.

John L. Britton, Member National Board, United Mine Workers of America:—Do you believe that organized labor should be willing to make the concession, either of temporarily lower wages or of unrestricted output, in return for a shorter work-day? Answer: No, to temporarily lowering the wages. The wages are too low already in lots of trades and callings, and to bring them lower temporarily would not help matters or bring the results that organized labor is aiming at, viz., a living wage.

There should be no restrictions on output, because, if intelligence or gunption rules—and it ought to rule,—we as progressive trade-unionists must aim to produce the most in the least time possible.

Do you believe that a shorter work-day lessens production or increases the labor cost of production? Answer: No to first paragraph of this question, because, with the advancement made by machinery, there is specializing in most every branch and up-to-date methods in most every calling or trade. I believe it can be shown that these increase production, and if it can be shown it answers the second paragraph, for if we can produce more in a given time, it must necessarily lower the cost of production.

UNIONS DO NOT RESTRICT OUTPUT.

W. D. Mahon, International President Amalgamated Association of Street and Electric Railway Employees of America:—No, the shorter work-day does not increase the cost of production at all. As to the restriction of output, there is no such a thing practised by the trade-union movement. The trade-union seeks the reduction of the hours of toil, but in no way does that interfere with or restrict the output. We say at the present time, eight hours should be the work-day. This does not in any way interfere with the shop, factory, or any other business, so far as the output is concerned.

We represent street and electrical railway workers. Some years ago we labored fourteen and sixteen hours per day. We have brought the work-day down in many cases to a nine-hour work-day, but the shorter work-day does not interfere or restrict in any way the operation of the roads. When a man has completed his nine-hour work-day, the car goes

right on and is operated by another. It is true that during these past years wages have from time to time increased, but that does not affect your question. That has been due to the increased cost of living and other environments and conditions that surrounded us. The charge that the trade-union interferes and restricts the output is a proposition raised by those who are either ignorant of the subject or else by those who are seeking some pretext to destroy the trade-union movement.

THE CHEER OF SHORT HOURS.

S. M. Sexton, Editor Mine Workers' Journal, Indianapolis:—In reply to both questions would answer, No. The questions are so entwined that it is hard to disintegrate them so as to answer clearly. For instance, Question 2 implies a doubt as to the proposition in the latter part of Question 1. I state with all confidence that shorter hours do not lessen production; therefore, to accept lower wages for the same or larger output is giving something for nothing, a proposition not based upon equity.

When the coal miners worked twelve or fifteen hours per day the average tonnage for the days worked was a little over three tons. To-day, in the same mine, same height of coal with the same tools, the same men average over four tons.

Under the long-hour system the miner had to take his small sons to help him. Under the shorter hours he does the work himself and sends his sons to school.

I do not pretend to analyze the mental process which makes a man readier to attack a large and difficult piece of work when he knows that he will not have to toil from sun to sun, and the hesitation and disinclination the same man exhibits when he attacks similar tasks when he knows that he must toil from the "rising of the sun until the going down of the same." But the fact exists, and the cheerful and hearty manner in which the short-hour man sets himself to work and keeps to work more than overbalances the advantages he gains from the same pay.

The short-hour man is rested; his muscles and brain have become refreshed; he is eager to begin his task; gives it better attention and is able, from physiological reasons, to give it better attention. The long-hour man has not recovered from the toils of the previous day. He is stiff and sleepy, unconsciously careless. His body has not fully recuperated from the exhaustion of the previous day's toil; therefore, he is not as fit to render the same services as the short-hour man.

The overwhelming fact in favor of the shorter hour, the one that clears away all doubt as to whether hours lessen production, is the fact that the piece workers, like pick miners, printers, machinists, and bricklayers are the most urgent in the demand for shorter days.

If these men were not fully convinced they could earn more under the short-hour system they would not advocate it. If a printer could set 10,000 ems during a ten-hour day, the natural deduction is that he would set but 9,000 ems during nine hours. But the fact remains that since the nine-hour system has been adopted he sets nearer 11,000 ems.

Again, when the pick miner with the aid of his son could dig and load a little over three tons per day during the twelve hours, it seems a mathematical fact that he would mine and load a little over two tons with the hours reduced to eight. Yet the fact remains, impregnable to successful assault, that a reduction of hours increased his output.

Were a man a machine capable of being geared up to a certain number of revolutions per hour, of course the less number of hours he ran the less revolutions he would perform. But a man is not a machine, but a living, breathing, thinking, sentient being, and improves in health, morals, citizenship, manhood, when he is not used as a dumb, driven brute.

FEWER HOURS FOR EMPLOYER'S BENEFIT.

Thomas Taylor, Secretary Fall River Loom Fixers' Association:—In answer to your first question, I would say that where it was proved to the employer that such change was causing financial loss to his employer, so far as to make his business unprofitable, a mutual arrangement might be made where wages could be adjusted for the time being, until the normal balance of business that might be disturbed by the change could be restored.

If such an arrangement as the above could be carried out with regard to shorter hours, I believe the question of restricted output would settle itself, inasmuch as the working-man would then be an interested party as well as the manufacturer, and would naturally give his best service to secure the higher rate of wages.

With regard to your second question, I would say that I thoroughly believe in the shorter working-day as ultimately being to the advantage of the employer and employed. It would be conducive to the working-man's benefit, morally, socially and physically, and in my opinion the employers would eventually reap the benefit in a larger output and of better quality.

CONCESSION CONSIDERED FAIR.

C. E. Layman, Member Board of Directors, Order of Railroad Telegraphers:—I believe that organized labor should be willing to make the concession, either of temporarily lowering wages or unrestricted output, in return for a shorter work-day.

I do not believe that a shorter work-day lessens production or increases the labor cost of production.

EIGHT HOURS NEAR AT HAND.

J. L. Feeney, Editor "The International Book-binder," Washington:—I believe that the eight-hour day will be the universal work-day in all branches of skilled labor before many years have passed away. In our branch of trade, bookbinding, our craft has received the eight-hour day in several cities, and it is expected that a general demand will be made for same on or before January 1, 1906.

I do not believe that any local union of our International Brotherhood will be allowed to concede a decrease in wages for the shorter day. It cannot be denied that the eight-hour day will lessen production, but not to the great extent that some manufacturers believe it will. A slight increase in the price of a manufactured article where there is a minimum profit will more than compensate the manufacturer for granting the shorter day to his workers.

There are but very few trade organizations that limit the output of its members, and such trades, we believe, are now enjoying the eight-hour day, but where there is a restriction upon the quantity of production in any branch of trade where the workers are now under the ten or nine-hour schedule, we believe a slight increase in the output should be conceded, but no decrease whatever in wages.

TEMPORARY REDUCTION; NO RESTRICTION.

John B. Lennon, General Secretary Journeymen Tailors' Union of America:—In reply to Question 1, I deny positively and without reservation that the trade-unions restrict output. It may have been true to some extent a number of years ago, and there may even be isolated unions where it is still practised to some extent, but as a rule the trade-union movement does not stand for the restriction of output by its members. I believe that where the hours of labor are reduced that there should be a temporary reduction in the wage until such time as the industry can adjust itself to the new conditions that come with the establishment of an eight-hour work-day.

In reply to Question 2, I believe unquestionably that, as applied to industries in general, the reduction of the hours of labor to eight means less product by the same number of employees as were previously employed ten hours a day. Were this not true, one of the greatest of all the reasons for the demand for the eight-hour work-day would disappear, to wit, an opportunity for the unemployed to secure work.

As to whether the cost of production is increased or not under the eight-hour work-day, I am not prepared to answer specifically. Some employers with whom I have talked, who should be experts on this phase of the matter, have stated that it did not increase the cost; others have held to the contrary. A careful investigation would probably demonstrate the truth as to this phase of the question.

LESS HOURS, GREATER SPEED.

Albert Hibbert, General Secretary United Textile Workers of America:—So far as the textile workers are concerned, the cost of labor would not enter the question so much as in other industries, because of the fact that a very large percentage work by the piece. I believe in a shorter work-day, and am of the opinion that in a day of eight hours, if in universal practice, no industry would suffer.

I do not believe that a shorter work-day, unless carried to extremes, decreases production. In 1892 the hours of labor were reduced in the State of Massachusetts from 60 to 58 per week, and the production is greater to-day than when the operatives worked 60 hours. Of course, the difference is accounted for by the extra speed put on the machine.

PAY WORK FOR ITS QUALITY.

J. E. Schwarz, Vice-President Retail Clerks' International Protective Association:—I do not think it is necessary for labor to reduce wages on the unrestricted output, for I feel that good workmen should be paid according to their work, and if they can produce more than the poor men, they should naturally be paid accordingly. I feel that the manufacturers in co-operation can readily regulate the matter of higher salary being put in the product manufactured even if he has to pay more, and at the same time get more for his goods.

It naturally would appear that a shorter work-day would mean an increased cost of production; but if labor is unrestricted, I think the difference could be made up.

LESS HOURS FOR MEN, MORE FOR MILLS.

James F. Fitzgerald, International Representative, Brotherhood Paper Makers, Pulp, Sulphite and Paper Mill Workers:—I do not believe that organized labor could accept a reduction in wages as a return for the eight-hour day, and I do not see why it should be asked when it has been clearly demonstrated by several manufacturers of paper that the eight-hour work-day ensures better dividends to them. For example, in our line, pulp and paper-making, the working days per week are from Monday, 7 o'clock A. M., till Saturday, 6 o'clock P. M., there being no work done Saturday night, Sunday or Sunday night, and the working hours for the mills giving the eight-hour work-day are from 7 o'clock P. M. Sunday night till 7 o'clock A. M. Sunday. In other words, the manufacturer giving his employees the eight-hour work-day is able to run his mill 24 hours more per week than on the long day, thereby lessening to a great extent the fixed charges on his plant. While I do not believe that the employees could accept a reduction in wages, I am in favor of running the pulp and paper mills more hours per week for the manufacturer giving his employees the eight-hour work-day. I have found that where the employees work the eight-hour day, the manufacturers generally agree that he is able to do enough extra and better work to offset the hours reduced from his day, and I have found the management of mills operated on the eight-hour day so well pleased with the results, both financially and in workmanship, that they could not be induced to return to the long hours per day.

I believe that the eight-hour day increases production, and decreases the cost of production, and I also believe in our line of business that we should increase the working days per week for the eight-hour manufacturers, over the long-hour-day manufacturers, which we are ready and willing to do.

TEMPORARY INCREASE OF COST.

George Preston, General Secretary-Treasurer, International Association of Machinists:—Replying to question No. 1, I beg to reply in the affirmative. Wherever it can be shown that the reduction of hours will increase the cost of the production I believe it would be good policy for the organized employees to accept a corresponding reduction of wages, believing as I do that said reduction of wages would only be temporary and would show a tendency to rise as the market became adjusted to the new conditions. As to the restricted output, this is not a feature in our organization, no man being limited to the amount of work he can perform in any one day.

Question No. 2. Do I believe that a shorter work-day lessens production or increases the labor of production? My answer to the first part of this question is No. In fact, I believe that the shorter work-day will have a tendency to increase production; first, because the workers, having more time for recuperation, will be handled more energetically while employed, and they will be apt to perform more effective labor than under the reduced hours. In reply to the second part of the question I would like to say that I believe reduction of the hours of labor will in a majority of instances increase the labor cost of production. The effect, however, would be only temporary, inasmuch as new methods and improved devices in productive work are more apt to be introduced under the shorter work-day than they are in the longer hour day.

FEWER HOURS, GREATER EFFICIENCY.

Thomas M. Nolan, Editor of The Union Label Magazine, Boston:—While answers to your questions must in some cases be governed by local conditions, I believe an eight-hour day would prove satisfactory to employer and employee.

It has been stated in trade and other papers that in some unions there is a rule for the restriction of output per hour or day. I do not know of such an arrangement in any industry in New England. It does not prevail in the printing or publishing trades.

As to what arrangement or concession might be made by members of different crafts in return for a shorter work-day, it would be based, as suggested, upon peculiar conditions applying to each trade which it would be difficult to cover in general terms. In securing the nine-hour day in the book and job branch of the printing trades there was no general curtailment of wages, in the greater number of cases the same wages being paid for nine and a half and nine hours as formerly prevailed for ten hours, and since the adoption of the shorter work-day (nine hours) there are cases in which wages are paid greater than those prevailing under a ten-hour day. While some employing printers have taken position against further shortening of the work-day, the time is not far distant when they will adopt the eight-hour day.

Another important point is that the general morale of the craft has advanced as the hours have decreased. Temperance, morality and a general uplifting tendency has been observed to a greater extent among the rank and file of the printing crafts

This is referred to, because of criticism expressed by certain employers, and their solicitude whether it would be dangerous to reduce the hours, as the men would then be inclined to spend the time in saloons. This has been disproven so many times it seems those using it are at desperate straits for arguments against the shorter work-day.

Where agreements cannot be made between employer and employee upon a national basis—this by far being the better way, as is obvious—it would be well for both parties to arrange conferences providing for a gradual reduction in the hours to eight per day, and if the shorter work-day can be secured in no other way employees might accept a reduction for a certain time to be mutually agreed upon, pending its universal adoption that is, providing wages already were not below a living rate. The shorter work-day is the "ultima thule"—given that, the question of wages will adjust itself.

So far as I have observed in my own and other trades decreasing the hours has not lessened production nor increased the labor cost to the employer.

GREATER ACTIVITY, EQUAL OUTPUT.

B. A. McCormick, Correspondent Div. 332, Amalgamated Association Street and Electric Railway Employees of America:—In my experience, both as an employer and employee, better results can be obtained by the granting of shorter hours than ten per day, and the paying of such wages that will permit men to live comfortably and so conduct themselves as to gain the respect of the community. While often money is the root of evil, it is also the source of much good, and the good wife of a man earning fairly good wages will make his home so attractive that he will shun places to which the poor man frequently resorts for an extremely unhealthy change of scene.

With an eight-hour work-day the employee feels that his efforts in his employer's behalf are appreciated, and this will produce harmony and good-fellowship between what I may call (apologetically) the two classes, and certainly lengthen the life of a piece of machinery which has become a valuable adjunct in the shop or mill.

NO LESS PRODUCTION, NO GREATER COST.

Philip Christ, Member Executive Board, National Brotherhood of Coal Hoisting Engineers:—In reply to your first question, I would like to say, Yes. In our business the employees have worked under the eight-hour system for nearly five years, and I am firmly convinced that should the time come when they should be compelled to choose between longer hours for the present wages or a reduction in wages but the shorter hours, they would certainly accept the reduction in wages.

In reply to the second question, I beg to say that in my personal experience the shorter day did not lessen the production, nor do I think that it has increased the cost of production. We are producing more under this eight-hour system than we did under the ten or twelve-hour system. We who have had a chance to try both systems do not agree that ten hours' work is as good as eight for an employee. There is no more drunkenness now than prior to the change; less, I think.

STEADIER EMPLOYMENT, EQUAL OUTPUT.

C. E. James, Member General Executive Board, Boot and Shoe Workers' Union:—I am very much interested in the work of the Civic Federation, and believe that much benefit will result to both employers and employees through its efforts. I read with much interest the views expressed by various large employers of labor in your last issue as to the desirability of a shorter work-day, and am not surprised that most of them are favorable to a shorter work-day as an abstract proposition. This method of ascertaining the views of both employers and employees seem to me to be the very best means of starting a crusade for a shorter work-day.

As to your first question, I have no hesitancy in saying, that I believe that the most practical way of bringing about a shorter work-day (under the existing conditions) would be for organized labor to make the concession of temporarily lower wages, excepting of course, in those industries working under the piece price plan.

If both employers and employees were so well organized that a general eight-hour day could be arranged, so that the same condition would prevail in all industries, and no employer would be placed at a disadvantage because of his competitor being able to work his employees for a longer period, this would not be necessary. But under the prevailing condition I believe there are many employers who would be willing to grant a shorter work-day providing they could do so without their labor cost being greater than their competitors. In those industries where the piece price plan prevails this is not necessary, as whether the work-day is eight hours or twelve, the labor cost is equal.

OFFICERS.

Samuel Gompers, First Vice-President.
Oscar S. Straus, Second Vice-President.
Henry Phipps, Chairman Executive Committee.
August Belmont, Chairman Finance Committee.
Cornelius N. Bliss, Treasurer.
Charles A. Moore, Chairman Conciliation Committee.
H. H. Vreeland, Chairman Welfare Department.
Francis L. Robbins, } Chairmen Trade Agreement Com.
John Mitchell, }
Ralph M. Easley, Chairman Executive Council.
Samuel B. Donnelly, Secretary.

EXECUTIVE COMMITTEE.

ON THE PART OF THE PUBLIC.

Grover Cleveland, ex-President of the United States, Princeton, N. J.
Andrew Carnegie, capitalist, New York City.
Cornelius N. Bliss, ex-Secretary of the Interior, New York City.
Oscar S. Straus, member of the Court of Arbitration at The Hague, New York City.
Charles W. Elliot, President Harvard University, Cambridge, Mass.
Archbishop John Ireland, of the Roman Catholic Church, St. Paul, Minn.
Bishop Henry C. Potter, of the Protestant Episcopal Church, New York City.
David R. Francis, President Louisiana Purchase Exposition, St. Louis, Mo.
Isaac N. Seligman, of J. & W. Seligman & Co., New York City.
James Speyer, of Speyer & Co., New York City.
Charles Francis Adams, Publicist, Boston.
John G. Milburn, lawyer, New York City.
V. Everit Macy, capitalist, New York City.
Charles J. Bonaparte, lawyer, Baltimore.
Ralph M. Easley, Chairman Executive Council, New York City.

ON THE PART OF EMPLOYERS.

Henry Phipps, director United States Steel Corporation, New York City.
August Belmont, President Interborough Rapid Transit Company, New York City.
Lucius Tuttle, President Boston & Maine Railroad, Boston.
Frederick P. Fish, President American Bell Telephone Company, Boston.
Francis L. Robbins, President Pittsburgh Coal Company, Pittsburgh.
Henry G. Davis, Coal Operator, Elkins, W. Va.
H. H. Vreeland, President New York City Railway Company, New York City.
Samuel Mather, of Pickands, Mather & Co., Cleveland.
Charles A. Moore, Manning, Maxwell & Moore, New York City.
Franklin MacVeagh, of Franklin MacVeagh & Co., Chicago.
Charles H. Taylor, Jr., President American Newspaper Publishers' Association, Boston.
Dan R. Hanna, of M. A. Hanna & Co., Cleveland.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
Otto M. Elditz, Chairman Board of Governors, Building Trades Employers' Association, New York City.
William H. Pfahler, former President National Founders' Association, Philadelphia.

ON THE PART OF WAGE EARNERS.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President United Mine Workers of America, Indianapolis.
E. E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
James Duncan, General Secretary Granite Cutters' National Union, Washington.
Daniel J. Keefe, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.
Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers.
P. H. Morrissey, Grand Master, Brotherhood Railroad Trainmen, Cleveland.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit, Mich.
Theodore J. Shaffer, President Amalgamated Association of Iron, Steel and Tin Workers, Pittsburgh.
J. J. Hannahan, Grand Master Brotherhood of Locomotive Firemen, Peoria, Ill.
James O'Connell, President International Association of Machinists, Washington.
John Tobin, General President Boot and Shoe Workers' Union, Boston.
Joseph F. Valentine, President Iron Moulders' Union of North America, Cincinnati.
James M. Lynch, President International Typographical Union, Indianapolis.
Denis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.

THE SHORTER WORK-DAY.

The attitude of organized labor toward the proposition to grant some concession in consideration of a shorter work-day, and the consensus of opinion of organized labor as to the economic and social effect of fewer hours of toil, are disclosed by the symposium presented in this issue. In the August number, the opinions of many large employers upon the same subject were published. It was shown that there is a general disposition among employers to assent to the desirability of the shorter work-day as an abstract proposition. Their objections were in the main based upon their belief that production would be lessened or its cost increased.

The desire of organized labor for the shorter work-day has no exceptions. That universal desire, it is now shown, is accompanied by a considerable willingness to quicken its realization by a temporary reduction of wages, or by the pledge of unrestricted output, when restriction is admitted. The belief is held by the majority of wage-earners that fewer hours of work would neither lessen production nor increase its cost. The experience of the building trades, where the eight-hour day has prevailed almost universally for several years, is cited as proof positive of this assertion.

The history of the eight-hour movement in the building trades shows that its initiation and progress have been the result of strikes. The import of the views of labor leaders and editors now is that the time is at hand when the movement can be extended in other trades through negotiation, without the use of the strike. They find apparent basis for this hope in the general recognition among employers of the economic benefit of the shorter work-day, if only it can be brought about gradually, so as not to disturb violently production and trade; uniformly, so that the innovation shall bear equally upon all; and upon such terms as shall not impair seriously the present margin of profit. The response of labor shows a disposition to meet these demands, where their necessity to business prosperity can be demonstrated.

Economists, leading publicists and journalists will next be invited to elucidate the general principles involved in the movement for fewer hours of toil. The purpose is to gather their well-considered thought upon the philosophy of the shorter work-day and its relation to industry, production, consumption, wages, and the cost and standard of living. Their disinterested judgment, following the expressions of both capital and labor, may be received as representing the attitude of the general public toward this subject.

STATISTICS THAT DO NOT APPLY.

Widespread comment and some criticism have been stirred by the bulletin of the Bureau of Labor at Washington, analyzing data of retail prices of food, wages and hours of labor, from 1890 to 1903. Partisan motives, sharply accentuated by a Presidential campaign, have caused both attack and defense of these data. From their economic consideration, these motives may be wholly excluded. The welfare of the individual wage-earner and its relation to the prosperity of the country at large may be considered quite apart from these arguments for or against the legislative and administrative policies of any political party.

What should interest labor and capital alike

upon scientific ground, is the patent fact that this report of the Labor Bureau has no pertinent bearing upon the present capacity of wage earning, or upon the present cost of living; nor does its compiler claim that it has. Its figures, in that view, are properly subject only to such criticism or defense as professional statisticians may make of the method of their collection and classification. They share the fault, perhaps inevitable, of all governmental statistics. They may enlighten retrospect, but as to the immediate present they are out of date. Even more disappointing examples of delay are reports of Stat. Commissioners of Labor. A report upon the "Growth of Industry in New York" has just made its appearance; yet this document is a part of the report of the Commissioner for 1902, and its statistics are no later than the year 1900.

The national labor bureau was confronted, while carrying forward its compilation, by an exceptional and sudden change in commercial and industrial conditions. It was as if the smooth pathway of its calculations had encountered an abrupt downward curve in prices and business activity that left its figures in the air.

The sharp midsummer panic of 1903, known as the "Wall Street panic," or "The millionaires' panic," had the wholesome effect of squeezing the water out of securities. To such dimensions had grown the rush to organize and reorganize industrial enterprises that their capitalization at that time was estimated at \$6,000,000,000. The collapse of some, such as the shipbuilding trust, and the disclosure of the limitations of others, such as the steel trust, caused a shrinkage of prices that extended throughout almost the entire list of securities. These financial phenomena were not alone distressing to over-confident investors. They checked the activity of capital in many industries.

Of these, the most familiar is that of transportation. Railroad companies that a year ago regarded large additional facilities as necessary to their traffic suspended new construction, throwing into idleness many thousands of workers. Iron, steel and coal were affected along with transportation. The trade year began with the acceptance by the bituminous miners of a cut in wages of 7½ per cent. Among steel workers there was a cut of from 15 to 30 per cent. in the wage scale, while at the present time there is a strike in this industry against a cut of from 25 to 60 per cent. The longshoremen on the Great Lakes accepted a reduction of 10 per cent. in their wages. Almost simultaneously the textile industry encountered speculative values for raw material and a shrinking market for its product. The consequent effort to reduce wages closed New England cotton mills. The metal trade industries, employing molders, machinists, boiler-makers, blacksmiths, etc., because of reduced orders began laying off men. Officers of the international unions of these trades became alarmed, and sent circular letters warning against demands for higher wages and expressing the hope that workers would be satisfied if they were able to maintain existing wages.

These are but the more conspicuous events directly affecting wages. But as it is a rule that in hard times lower wages are the economy of last resort, it is not surprising that the official figures for 1903 fail to disclose the lower earn-

ings which did not become prevalent until about January, 1904.

The danger of a misapprehension of statistics that do not apply to the present lies in its possible encouragement of mistaken tactics on the part of labor. For a series of years previous to 1903 there had been great business activity and large profits. Public opinion had strongly sympathized with the demand of organized labor that it share with capital the prosperity of the boom. Thus the captains of the wage-earners had been able to wrest many concessions from the captains of industry. When the period of shrinkage and depression arrived there was danger that the captains of wage-earners might not appreciate the changed conditions confronting them. The deciding factor in the ceaseless adjustment of the relations between capital and labor, public opinion, now recognized the fairness of a reasonable revision of wage scales. To continue demands for higher wages, which two years ago might have been warranted, was to fly in the face of forbidding circumstance. To strike against moderate reductions, as in the case of the meat strike, was to invite defeat in a contest most inopportune.

Conversely, there was danger that capital, with the opportunity to urge business necessity as a reason for economies, might push its reduction of wage scales to an unreasonable degree.

These are the reasons why both sides have been urged to moderation and to mutual forbearance, which would go far to secure the respect and future good-will of both. The belated official statistics of the labor bureau do not impair this counsel and should not change the policy of caution adopted generally last winter by leaders of labor and considerate employers.

UNIONS AND THE MILITIA.

An incident occurred during the recent convention of the International Typographical Union at St. Louis that has entirely escaped the notice of the daily press. Great prominence has been given to the isolated case at Schenectady, where a worker was expelled from a radical local union, because he was a member of a militia company. A committee reported adversely to the convention a resolution that "no member of the Typographical Union shall enlist in the service of any state in the United States as state guard, militiaman or ranger, under the penalty of expulsion and being barred from reinstatement."

A few advocates of this resolution tried to have the convention reverse the action of the committee and adopt the resolution. The chairman of the committee, Delegate Anderson, of Macon, Ga., defended its report. In the course of his remarks he quoted the lines of Sir Walter Scott. "Breathes there a man with soul so dead, Who never to himself hath said, This is my own, my native land." The quotation threw the convention into a tumult of enthusiasm and the resolution was rejected, amid cheers, by an overwhelming majority.

Surely this is an act by an international body of organized labor that merited as prominent publicity as was accorded to the lamented and local art of stupidity at Schenectady. It is in accordance with the opinion expressed by Samuel Gompers, President of the American Federation of Labor, who made the following reply to an inquiry:

Yes, a member of the State militia can be seated in a trade council. In fact the matter is so obvious that it ought not be open for discussion at all.

A man who is a wage earner and honorably working at his trade or calling to support himself and those dependent upon him has not only the right to become a citizen soldier, but that right must be unquestioned.

The militia, i. e., the citizen soldiery of the several States in our country, supplies what otherwise might take its place—a large standing army.

The difference between the citizen soldiery of the United States and the large standing armies of many European countries is the difference between a republic and a monarchy—it is the difference between the conceptions of liberty and tyranny.

Practically no mention was made in newspapers of the overwhelming rejection by the annual convention of the United Garment Workers of America of an anti-militia resolution. Had these events been more widely published, the prevalent but erroneous impression that unionism is opposed to the militia might, in a measure, be corrected.

INFORMATION FOR EMPLOYERS.

The Welfare Department of the National Civic Federation is prepared to furnish, upon request, a consulting agent to study the especial needs of employees in a given plant, advise the best methods of introducing such features of welfare work as may be deemed most essential, direct their installation, and, when required, recommend a permanent agent or "welfare manager" to administer the work.

A central bureau is maintained at the headquarters of the Welfare Department for the exchange of experiences by employers. Information with reference to the latest efforts by employers to give especial consideration to the physical or mental welfare of their employees may there be obtained. Some of the subjects covered are:

- Sanitary Work Rooms;
- Wash Rooms and Baths;
- Hospital Service;
- The Luncheon Room;
- Recreation;
- Educational Efforts;
- Housing of Labor;
- Pensions;
- Insurance Associations.

AGAINST SYMPATHETIC STRIKES.

The International Miners' Congress Side-Trackd a Perilous Proposition.

Suppose that a strike occurred in Austria, Belgium or Wales, what justification would that be for the miners of the United States to break their contracts? It would, as urged, "show that the miners were a world power," and it would also show that reason had been debased and folly had usurped its place. It would have been more to the point to have entered upon a scheme to render mutual financial aid. It was due to the eloquence and sound reasons advanced by Messrs. Mitchell and Dodds that the chimera was side-tracked.—"United Mine Workers' Journal."

A DRASTIC LABOR LAW.

An old labor law of England, in force 121 years ago, would satisfy the most radical member of the Manufacturers' Association. It contained the following six clauses:

1. Any tailor who joined a union was to be sent to jail for two months.
2. Tailors must work from 6 in the morning until 8 at night.
3. Wages were not to be higher than 48 cents a day.
4. Each tailor was to be allowed 3 cents for breakfast.
5. Any tailor who refuses to work was to be imprisoned for not more than two months.
6. If any employer paid bigger wages he was to be fined \$25, and the workmen who took the increase were to be sent to jail for two months.

Intelligent workers the world over favor voluntary arbitration for the settlement of trade difficulties, rather than being forced to submit their grievances to professional arbitrators.—"International Wood-Worker."

CONCESSIONS FOR SHORTER DAY.

(Continued from page 7)

As to granting concessions as to unrestricted output possibly my experience in the labor movement has not been extended enough to answer that question intelligently. However, I do not know of any organizations who sanction the restriction of the output. Certainly they do not in my organization, and I am sure that as a general proposition organized labor does not attempt to restrict the output.

As to your second question, I do not believe a short work-day would lessen production. Undoubtedly the individual would not be able to turn out as much work as under a longer work-day (although the difference would not be as much less in proportion to the number of hours worked), but there would be less idle people. The opportunity of obtaining employment would be greater, and in most industries there is a long period of idleness, and I believe a shorter work-day would result in more steady employment, and the same amount of output would result.

WAGES SOON RESTORED.

Thomas O'Donnell, Secretary Fall River Cotton Mule Spinners' Association:—My people would be willing to work less hours with a corresponding reduction in wages, as it would only be a short time when the wages would be restored to their former rate.

WORK UP TO THE LIMIT.

J. L. Sullivan, General Secretary Bartenders' International League:—In my opinion, organized labor should, in the first place do all in its power to attain the eight-hour day, and it should be willing to sacrifice the wage to obtain the effect; for in obtaining the eight-hour day, the dawn of a new era will be a fact instead of a fancy, and it will be but a short time when the employers will begin to realize that more can be accomplished by the eight-hour day than could be by the former long day. When the laborer can feel like working right up to the limit, he will be able to accomplish more, and do it better. This will be the result of the new order of things,—eight hours to work, eight hours of rest, and eight hours to play.

As for the other question, No, for I believe that any working-man can do as much work in eight hours as he can in ten.

GREATER VIGOR WILL MEET LABOR COST.

H. J. L. Atwood, Editor Union Labor News, Los Angeles, Cal.:—Organized labor should not, in my opinion, be asked to make a concession in wages for the reason that they, in no case, receive now more than a fair day's wage for an eight-hour day. The cost of a manufactured article should be fixed after allowing for all necessary cost of production. Not as is now done, i. e., making a price and then forcing the cost down so as to meet it.

As to the unrestricted output, will say frankly, that I know of no union regulation in any organization that restricts the output.

I am of the belief that a shorter work-day will not materially decrease the amount of production nor will it increase the labor cost after a short period when the workman has begun to get the full benefit of a more vigorous body and mind made possible by longer hours in which to rest and recuperate.

THE MUSICIANS' TENDENCY.

Owen Miller, Secretary American Federation of Musicians:—I am a representative of a business that cannot be classed as productive, but will say that in our business, since we have been organized, the tendency has been to reduce the hours of labor without reducing the price, as for instance: Formerly, we played from eight o'clock until five o'clock in the morning for \$5.00. That was reduced to 4 a. m. for the same price. Now, most of the musical unions in the country have adopted a system of charging \$4.00 for a ball until 2 a. m. and \$1.00 per man per hour for each hour thereafter. This would make a ball until 5 a. m., pay \$7, \$2 more than formerly for the same time, and until 3 a. m., the price would be \$5. Therefore we receive just as much now for seven hours' work, as we formerly did for nine hours' work, but of course we cannot apply the manner in which the musicians do business to any other class of labor.

WORKERS SHOULD AID EMPLOYERS.

Homer D. Call, Secretary-Treasurer Amalgamated Meat Cutters and Butcher Workmen of N. A.:—When an employer is willing to grant the eight-hour day, I believe that organized labor should be willing to assist him in his efforts to adjust his business to those conditions, even if it does in some instances necessitate a slight reduction in wages. We all fully understand that the large industries of the

country are operated under certain systems, which are based upon the ten-hour day and that they can not be successfully changed without some injury to the employer in some cases, and where those contingencies arise, I believe that organized labor should use judgment and be willing to meet the employer half way in his efforts to conform to the eight-hour day.

I do not believe that in the long run the shorter work-day would lessen the production or increase the labor cost. It might possibly temporarily, but I feel confident that a body of workmen after having become familiar with the workings of the eight-hour system would make an extra effort and be successful in producing fully as much in eight hours as they do under the present economic system in ten.

WAGES AND RESTRICTIONS MAY VARY.

Bert H. Beadle, President Watch Case Engravers' International Association:—I am heartily in favor of the eight-hour day. While of the opinion that this point cannot be gained all at once, I think that it is only a question of time until it will be granted. It is a question that cannot be taken up by one here and there, but one that will require the combined efforts of all manufacturers. Let them all agree to the eight-hour day, and you may be sure that when it comes to the workman he will not be lacking in his efforts to do his part. As to a reduction of the wage, that is a question that would require the consideration of those to whom it would apply directly; that is, to unions as unions, and is therefore a question that would be very hard to answer. It would be the same in regard to the restriction of output.

As to the increasing the cost of production, I do not think it would. The average man of to-day would, I think, if he be given an eight-hour day, more than do his share toward the betterment of himself and his employer, and would in no way throw stumbling blocks in the way of those who through this means had at least tried to aid him in bettering his condition.

A UNIVERSAL DATE SUGGESTED.

John F. Ream, Member National Executive Board, United Mine Workers of America:—To your first question, will say that as a matter of justice the wage-earners should be required to make no concessions for the purpose of making their work-day shorter. If, however, the work-day cannot be shortened without some concessions from the laborer, he should not hesitate to accept slight reduction in wages which, as your question implies, would not be permanent, for the purpose of shortening his day's labor. But it appears to me that with its strong combinations capital could easily shorten the hours of labor and still maintain the present rate of wages. I say this, because the prices of the manufactured articles would be fixed by the wages paid to workmen, so that if shortening the work-day increased the cost of production the employers would make the loss good by getting increased prices for their goods. The principal difficulty about securing the adoption of this great and much-needed reform is that each corporation employing workmen fears that it will be the first one called upon to make the concession, and will thus be placed at a disadvantage with its competitors. What is wanted to bring about the transition from a long work-day to a short one is for every man who works for wages to enroll himself a member of the union of his trade, have all trades affiliated with the American Federation of Labor, and let that organization meet representatives of the employers of labor and fix a date on which eight hours shall, throughout the country, constitute a day's work.

To your second question, will answer that in many, perhaps in most trades the shorter work-day lessens production, nor do I regard the lessening of production per capita for the workman now employed as an evil.

NO LOSS UNDER NATIONAL AGREEMENTS.

Charles O. Sherman, General Secretary United Metal Workers' International Union:—I am not unmindful of the fact that the various labor organizations are endeavoring as fast as they believe it is feasible to shorten the hours of labor and I am quite familiar with the arguments made against the policy by the employers. In a sense, both sides are correct. There is no doubt but what the argument holds true that by shortening the hours of labor from nine to eight hours it would make an increase in the expense of production, but past experience has demonstrated that the increase in cost is not as high in percentage as quoted by those who object to shorter hours of labor.

In your second paragraph you ask "do I believe that organized labor should be willing to make concessions?" In reply to the same I will say that I have known of specific cases where labor has made concessions in the way of accepting lower wages, which would practically balance the difference when receiving the shorter work-day and feel that it might be necessary for some industries to grant such concessions temporarily.

From my observation of the shorter work-day, I feel that the greatest drawback in securing the same is through the employers who are not willing to have their labor organized. If any industry carried on in the United States is thoroughly organized and in a position to make a national agreement with all of the employers engaged in that industry, I cannot see where any loss could be brought about on any employers, for, if they all employ labor on the same basis of remuneration and the same number of hours work, it leaves them at liberty to go into the competitive market and every individual has an equal opportunity. Where the difficulty comes in and where the good employer is punished or suffers through the shorter work-day, is not through the fault of the union or the members, but it is the fault of the unfair employer who objects to his men being organized and does not permit them to place themselves in a position to move forward with other union men in the same industry.

I am the last one to consent to reduced wages in any trade, as I feel that I am quite well posted on the cost of production of most of our products in the United States and I am quite positive that there is a wide difference between the cost of production and the price placed on the same when put in the market and there are very few goods produced in the United States but what there is not a good, fair and, in some cases, large profit made from them. I am opposed to reduction in wages, as I cannot see what would warrant the same when taking into consideration the cost of everything that is used by the human family.

LOWER WAGES IMPOSSIBLE.

John E. Bruner, President International Union of Steam Engineers:—I give you my views from the standpoint of one who has been in close touch with both employer and employee.

To your first question I will say that under no consideration would I approve of a lower wage. The workmen of to-day, comparatively speaking, are receiving a lower wage than ever. Statisticians may collect a vast amount of data on this question, and attempt to prove by their figures that the workmen of to-day are receiving a better wage than ever before recorded, but the wage-earner himself will tell you that under the existing conditions, he and his family must more than ever deny themselves the actual necessities, to keep body and soul together.

I am of the opinion that every workman should give value received for his wage, and under that condition there will be no restricted output.

To the second question I will say that this question is broad in its scope. In cases where employers are working their men eighty-four hours per week, there is no doubt but that the cost of production will increase if the hours are reduced to fifty-six. But is it not a fact, that it is inhuman to insist that a man spend over one-half of his existence in the shop or factory, so that the margins of the employer may not be reduced? In the shop or factory where the hours were reduced from ten to nine, there has not been a lessened output. Conditions are changing so rapidly, and improved machinery is increasing the output of man to such an extent that the manufacturers' margin is as great, if not greater than ever.

The building trades are an object lesson to the employer as well as the wage-earner. The reduction of hours in these crafts has not lessened the output of the man. The work is more satisfactory and cost of production has not increased.

FOR UNIONS TO WIN.

George H. Taylor, General President International Glove Workers' Union of America:—I do not believe that organized labor should, or would agree to accept a reduction in wages for a shorter work-day. In fact, the very reverse is in the minds of men who toil; the "slogan" of labor for years past, and which is stronger and louder to-day than ever is, "Less hours and more pay."

As regards the apprehension of those employers who pretend to take such an interest in the moral welfare of their employees, as to where they would spend their extra hours of leisure, if such were granted, if they would look around and be willing to be convinced, they would find that long hours means ignorance, poor wages, poverty, drunkenness, and naturally poor citizens.

A shorter work-day would mean, a greater intelligence, a higher standard of manhood, better wages, more time for study and recreation, a chance to enjoy the pure air in the sunshine every day in the week instead of Sunday's only, and an opportunity to become acquainted with one's wife and family.

That the eight-hour day will succeed the ten-hour is certain, but working-men will have to fight and get it for themselves; it is human nature to wish for better conditions, and it's the labor unionist who is fighting for a better future, and a better nation; not only for himself, but also for those unfortunates who seem to have lost faith in mankind, and are willing to drift down with the current of events, a drag on their fellows, yet always willing to share in

any benefits that may be secured without any sacrifice to himself.

The supposition that the union restricts the quantity of production of a member's day's work is fallacious, and in my opinion arises from greed and thoughtlessness on the part of the employer. There appears to be a general impression, that a union man conceals a portion of his vitality, and it seems an impossibility to disabuse the minds of certain employers that such is not the case. As to what constitutes a day's work, a wide different opinion exists. The employer claims there is not enough work being done and the employee declares he is doing too much already. So far as my experience goes, it is the employer, and not the union who sets the task which constitutes a day's work, and in general, the task is based upon the quantity of work which the strongest and most speedy man can turn out; and when the average man is compelled to keep the pace thus set for him, anyone can imagine his physical condition at the end of ten hours' labor.

These, and other evils are created through the helplessness of unorganized labor, and later, when the men form a union, and as a body demand a voice in the matter as to what conditions they shall work under and insist upon different treatment, immediately a protest is raised by the employers against what they term the tyrannical and arbitrary conduct of the union.

CAPITAL INVESTED AT HIGHER INTEREST.

W. Macarthur, Editor "Coast Seamen's Journal," San Francisco:—I do not think it advisable or necessary that organized labor should accept lower wages in return for a reduction in the daily hours of labor. To do so would be to negate the benefit of the shorter work-day and to impose a positive and permanent loss upon the employers; whereas, under the system of maintaining wages at the old figure the loss to the employer, if any, is only relative and temporary. From the purely economic point of view, the purpose of reducing hours is to increase the consuming power of the worker. A reduction of wages would lessen the consuming power. In other words, to reduce the hours and keep up wages is to invest so much capital at an increased rate of interest; to reduce both hours and wages is to withdraw so much capital from the business and leave it entirely idle.

As to the question of conceding unrestricted output in return for shorter hours, I am unable to speak for the reason that I know of no instances of restriction in that regard. Probably such instances exist; in which case I am inclined to believe that they are based upon exceptional circumstances, of which only those personally concerned are competent to speak.

Generally speaking, it may be conceded that the reduction of hours lessens production and, where wages are maintained at the rate paid for the longer work-day, increases the cost of production. But that is merely saying that any improvement in industrial methods increases the initial cost. In the end, however, the most efficient labor, like the most efficient machine, is the cheapest—that is to say, it brings in the largest returns. The shorter work-day may cost more in wages, but it also brings back more in the form of an increased demand for the products of labor. If long hours means profitable production, we should find the American worker outstripped by the coolies of Asia and India. If lower wages is a natural or necessary accompaniment of the shorter work-day, we should find that wages generally are high as hours are long. As a matter of fact, we know that the opposite of these conditions is the universal rule.

"THE MEN BEHIND THE GUNS."

John Bradley, Chairman Executive Board, Iron Molders' Union of North America:—I do not believe in temporarily lowering the wage scale for the following reasons: The history of the wage-earner proves that when once lowered it is a difficult matter to have the employers agree to a restoration of wages to the former scale. Another objection is the increased cost of the necessities of life and a lowering of the present wage scale is likely to lead to untold miseries among the working classes, bringing on discord, strikes and lock-outs. These, I believe, we should avoid.

An unrestricted output in return for a shorter work-day would meet with my approval, providing the men in shops, "the men behind the guns," receive the encouragement given to the superintendents and others higher up, who, at the end of a successful year's business, are called before a board of directors and presented with diamond pins and voted handsome increase of salaries. This rarely occurs to the working-men, no matter how large may be the output.

That a shorter work-day lessens production or increases the labor cost of production, I do not believe, as in all instances coming under my observation where the change has been made to a shorter work-day, the output has not been diminished nor has the cost of production been increased.

A CURE FOR OVER-PRODUCTION.

John Roach, General Secretary-Treasurer Amalgamated Leather Workers' Union of America:—There seems to be a great difference of opinion as to the probable effect of the shortening of labor's work-day. The average laborer will expend as much muscle or brain power in eight hours as he did before in ten. I do not believe that he intends doing it, or that intelligent people who have kept apace with improvements in production expect the worker to work as hard to-day as he did in days of comparatively crude methods of production.

I believe the very idea of the shorter work-day is to lessen the laborer's burden by giving idle hands, unemployed hands vainly seeking employment, a part of his work to do. If as much work is performed in eight hours as was formerly done in ten, manifestly none of the unemployed will gain relief through the shorter work-day. I believe in the philosophy of the shorter work-day if it means a rest for the worker, a lessening of the expenditure of energy. The great evil all the civilized nations suffer from to-day is, not that they do not manufacture enough, but rather they make too much, so that a foreign market must be found for the surplus.

OUTPUT INCREASED WITHOUT CONCESSIONS.

James Cliffe, Secretary Operative Mule Spinners' Association of Rhode Island:—I believe the hours of labor should be reduced in our cotton mills, and favor a universal nine-hour law for cotton operatives. Of course, we could not expect our manufacturers in the North to run their mills nine hours while their competitors in the South are running from ten to twelve.

I do not believe that organized labor should be willing to make concessions of either temporarily lower wages or of unrestricted output. It is an admitted fact that whenever the hours of labor in our mills have been reduced, the output has always increased.

PRODUCTION AND COST UNCHANGED.

Thomas McDowell, Member Executive Board, Glass Bottle Blowers' Association of the United States and Canada:—I believe that a shorter work-day would result in better social conditions, but no concessions for lower wages. I don't believe in an unrestricted output.

A shorter work-day will not lessen production in this age of machinery, nor will the labor cost of production increase, for this has already been proven by manufacturers who have adopted this system. The manufacturers of glass bottles in connection with their employees have been working this way for twenty years, and would not make a change.

LOWER WAGES WOULD CHECK CONSUMPTION.

John P. Le Point, 3rd Vice-President, International Brotherhood Paper Makers, Pulp, Sulphide and Paper Mill Workers:—I do not believe that organized labor should be willing to grant any concession, temporarily of a lower wage, for in my opinion the laboring class are the greater in number, and therefore said class are the greater consumers, and if deprived of the consuming power by accepting a lower wage would certainly flood the markets and consequently the employers would restrict the output of their manufacture in order to retain their prices. Therefore, the laborer must suffer from both sides and in my opinion it would be disastrous both to employer and employee.

I do not believe that a shorter work-day lessens production, because if a man turns out as much work in eight hours by paying close attention to his work as in ten hours, how can it increase the cost of production? I know of instances in the paper industry of shortening the hours from seventy-seven per week to sixty-five hours, and with one machine less, and less help, and said mills are turning out more production than ever before. Therefore, I believe the shorter work-day would lessen the cost of production by causing less wear and tear on machinery, instead of increasing the cost, and in such cases the employers as well as the employees have been satisfied and work to a much better advantage.

HOPE AND VIGOR SAVE MONEY.

Arthur E. Holden, of "Monthly Journal," International Association of Machinists:—I do not like the way this question is put. In the first place, there are two questions, that require a division. In the second place, there is a clumsy invitation to make an admission (concerning restriction of output) which I refuse to acknowledge with the bulk

of the trade-unions in the United States. First, I believe that if organized capital is at all sincere and really desires to know how to obtain a shorter work-day without great loss, they should be willing to meet their organized employees and let each figure the question out scientifically and fairly, and let whatever losses might occur (and I believe they are largely in the imagination) be equitably shared by the employer and the employee. They will soon find out with a fair, honest experiment what they are, and remedies will soon be forthcoming, by the ingenuity of men who are conscientiously trying to accomplish an honorable task.

The restricted output talk is mere hush and bugaboo; it is not general, and never was, only to this extent: when a man has to get up in the morning at 6, rush to work by 7, rush at his mid-day meal like a half-famished wolf, rush for a car at night and hang on by a strap for another hour before he gets a square meal for the day, putting in 13 hours instead of 8, all under a strain and exhausting on nerve,—this makes a natural and unavoidable restriction of output, that all the worrying, and all the driving and nagging of modern industrialism cannot replace. It is positively out of the question; human flesh and blood are not equal to it. It is the most horrible reflection upon the results of several generations of training in the American schools and universities that we have not been able to muster enough intelligence to direct affairs industrially without putting in all the hours of the day, and many that properly belong to the night, in order to be able to make a living for the bone and sinew of the land.

As to your second question, I can draw from an experience which has covered thirty years in some of the largest machine shops in this country and that of England. I have also worked for some of the largest corporations in positions of trust, where mechanical accuracy and production were required of a high grade.

During that time I have found that the shorter work-day lessens production as a total product. The amount that was produced in ten hours is less than what is produced in eight hours. The proportionate amount that is produced in one hour on the ten-hour basis is not as much as that produced in an hour on the eight-hour basis, because of the human fact mentioned in the previous answer, which is this: Men are fresher and brighter; as a consequence they have more vim and vigor, they are better tempered, there is more energy left for work and less required for brooding. This affects the supervising force equally with the underlings. Any business man can therefore see the saving of fixed charges, less coal, less gas, less friction on machinery, less everything which makes the cost of production high.

What is wanted more than anything else at this time is a little more common-sense and less passion. None are exempt: we are practically all alike; but a suggestion to the man with the dollar may not be out of place. Let him exercise a trifle more human thoughtfulness, let him become more confident and less suspicious, let him put more trust in the honor of the toiler who may be only a drudge. He can save many dollars on what now goes to waste by the extraordinary effort to increase the number of non-producers, like clerks and foremen, who make more trouble than what is avoided, and make the path ready for tedious labor fights that are scarcely ever necessary beyond the fact that these meddlers presume it is necessary for them to earn their pay by making trouble.

Friction, worry, suspicion, envy and jealousy are the poorest kind of investments. They injure the worker, spoil the boss, and deteriorate the product. Substitute hope, sunshine, vigor, fairness and honor. They pay. I have had many chances to put them in practice for men who have made millions, and there are millions left to be made by sensible men who will read these few words from a humble worker and get some stock, which cannot be purchased on any stock exchange, but which can be personally manufactured by all.

THE ARGUMENT OF EXPERIENCE.

James P. Archibald, President New York District Council, Brotherhood of Painters, Decorators and Paperhangers:—Temporary lower wages may in some cases be conceded as a method of getting the shorter work-day. Restriction is already rare. No, the shorter work-day will not increase cost of production nor lessen output.

I have prepared some observations upon the history of the achievement of the shorter day in the building trades and its result.

It is an important fact that the eight-hour day now obtains throughout the building trades in the United States. The history of how this condition was brought about is pertinent. The first practical step was taken in 1866, when the first National Trades Congress, held in Baltimore, adopted a resolution favoring the eight-hour day and appealing to the unions in the several States to agitate the cause

and to obtain official bureaus of statistics to prove its practicability. In the same year the Journeymen Stone Cutters of North America ordered strikes for the eight-hour day. They were successful, and that is the single trade that has maintained the eight-hour day, without interruption, from that time to this.

The movement progressed in other trades with varying success. The agitation was reflected in the introduction of eight-hour bills in Congress, the first of which was presented by Representative George Julian of Indiana in 1867. In 1871, the local organization of painters in New York City struck for the eight-hour day. This strike soon involved nearly every union in the city, the length of the day then prevailing being from ten to eleven hours. Many mass meetings were held and several bloody riots occurred. Year after year saw May Day demonstrations for the shorter day. These kept the subject before the public in all the large cities.

In 1866, the American Federation of Labor formally declared in convention at Cleveland in favor of the universal eight-hour work-day. There was a rivalry among the affiliated national unions for the distinction of leading in the fight. The Cleveland convention selected the Brotherhood of Carpenters to head the movement. That Brotherhood ordered many local strikes, which were so successful that within a year or two many strikes occurred in other building trades. By 1890 the movement had progressed so far that the eight-hour day had become established throughout many building trades, although in some, where the ten-hour or longer day had been the practice, a compromise on nine hours was effected. From 1890 even these exceptions grew more and more rare, until by 1896 it could be said that eight hours had become practically universal throughout the building trades in the United States. There are, it is asserted, not more than a dozen towns of noteworthy size where the old longer day still holds.

"Inferior habits are as much the cause as they are the result of lower wages," wrote John Stuart Mill. "Reducing the hours of labor acts more directly on the habits of the people than any other measure heretofore proposed." How far is the truth of these propositions proved by the actual experience of the building trades in New York City?

The habits and the standards of life among all the 800,000 workers, of all grades, in the building trades in New York City have been visibly and materially elevated since 1886. This is clearly the result of the shorter work-day, which has enabled the heads of families to devote more time to all phases of their education. The consequent elevation of thought causes a more refined home life, improved dwellings and a higher standard of morality.

I wish to emphasize the fact, also, that higher wages have followed the shorter day throughout the building trades. For example, wages of marble-cutters, electrical workers, carpenters, painters, structural iron-workers, varnishers, have doubled or nearly doubled, while the wages of all other building trades have been largely increased. The statement that less hours of labor means less wages is historically untrue and is based upon a false theory of the law governing wages. If wages were regulated by the number of hours of work, then wherever the day's work is longest wages would be highest, and where the day's work is shortest wages would be lowest. Exactly the reverse is true. Civilization follows the line of the shorter work-day, and means the highest purchasing power of a day's labor.

The assertion is frequently made that restricted output prevails in the building trades. I have ascertained that quite as much and in many cases more work is now accomplished in these trades in eight hours as was formerly done in ten. As to arbitrary restrictions, I have made an investigation which shows that there is but one union among the building trades in New York City that fixes a limit to the amount of work that a man may do in a day. That is in the plasterers' union, which has a trade agreement, satisfactory to the employers, limiting the quantity of a day's work for each man. But in that case, the standard is fixed so high that it not infrequently happens that a journeyman fails to reach it; and it is the custom for his faster fellows then to make up his deficiency.

OUTPUT HAS NOT BEEN LESSENE.

J. C. Skemp, General Secretary-Treasurer, Brotherhood of Painters, Decorators and Paperhangers of America:—Organized labor considers the shortening of the hours of labor a matter of the most vital importance, and is prepared to make many sacrifices to secure the shorter work-day. A reduction in wages may appear to be the most practical method of securing the consent of the employers to the desired change, but as the wages paid to 90 per cent. of the wage workers are barely sufficient to enable them to exist, the adjustment of the matter by a reduction of wages is impossible. It would mean the lowering of the standard of life below the point necessary for the maintenance of the physical welfare and self-respect of American working-men. I feel confident that should any employer who advocates this method

of adjustment temporarily confine his expenditure to the income of the average wage worker minus 20 per cent., he would agree with me that a reduction in the wages commensurate with the shortening of the hours of labor is out of the question.

I believe in removing arbitrary restrictions upon the quantity of production, which, if they exist at all in the United States, do so to a very limited extent. In the building trades with which I am most familiar, there are no such restrictions. They have been attempted in one or two instances locally, but have never been enforced or advocated by any national organization of the building trades.

In the building industry the adoption of the eight-hour day has not lessened the amount of work accomplished. Keen competition has resulted in every man upon a building being compelled to perform as much labor as he is physically able to do, and in many instances more work is now performed in the eight-hour day than ever was done when the ten-hour day was in vogue. I believe this same condition prevails in every trade where the labor of the worker is not regulated by the machine he operates. Of course, men who operate machines can not perform as much labor in eight hours as they can in ten hours unless the machinery is operated proportionately faster, but in such industries it is unprofitable to run a machine faster than it can be properly attended to by the man in charge of it, and he is compelled to regulate his work and reserve his strength so that he may be able to complete his day's work. If he has to work ten hours, he will expend his energy so much more slowly than he would if he knew his labors only lasted for eight hours.

Consequently it is my belief that the shorter work-day would lessen production in but few instances, and would not increase to any considerable extent the labor cost of production.

Personally I believe in the regulation of the hours of labor and the fixing of a minimum wage by law. This has been done successfully in the Australian colonies and New Zealand, and although this is denied by many newspapers opposed to governmental regulation of such matters, the fact remains that the people of Australia would not consider for a moment the repeal of the eight-hour laws which have been in effect for a number of years.

This sentiment is not confined to trades-unionists, but is the sentiment of the entire people, and is the best kind of proof that these laws are effective and beneficial.

If, as a matter of public policy, it is wise to maintain public schools, to support which every citizen is taxed, whether he has children to educate or not,—if for the national welfare we are justified in regulating the age at which children shall be employed and the hours and conditions under which women shall work, is it not equally to the national interest to guard the physical welfare of our wage-working citizens, and to ensure to them sufficient wherewith to feed, clothe and educate themselves and their families in a manner befitting the citizens of an enlightened country?

NO REDUCTION, NO RESTRICTION.

Frank Buchanan, President International Association of Bridge and Structural Iron Workers:—It is generally conceded that the eight-hour day in labor is productive of the best results to the country, in that it gives the laboring man a chance to have a part of his time to the improvement of his own mind, and takes him out of the category of the draft horse.

The objections upon the part of the employer to the eight-hour day are based upon (1) the increase of the cost of production, (2) that it restricts the output.

To the first of these objections, I would say that the work produced by men working eight hours a day would fully equal the work produced by men working ten hours. Because of the added rest and the renewed zest of the employee, a man working steadily and consistently for eight hours will accomplish more than the man who drags through ten hours, just as the fresh draft horse will draw more than the overworked draft horse.

Aside from this, it is well known that there is an over-production in all industries, and the result is frequent shut-downs. By the eight-hour system the work would be more continuous and the result the same. Again, I would say that while the hours are shortened, the wages should not be reduced, because, as I have stated, the amount of work produced by men working eight hours would equal, or nearly equal, the amount produced by men working ten hours; and moreover, it must be remembered that if the eight-hour system is uniformly adopted by all employers, it eliminates this item of the cost of production from competition and affects all alike, so that if it should be added to the cost of production, as is always the case, it would necessarily come out of the general public, of which the working man goes to make up the bulk, and if any one has cause to complain it would certainly not be the employer.

So far as foreign competition is concerned, the tariff has always seemed to be able to take care of that. Moreover, the increased facilities of machinery and modern labor-saving inventions has in-

creased the working capacity of the men a great many times, so that a man working eight hours today can produce a great many times the amount that a man working ten hours could produce a few years ago, and there is still room for improvement.

In regard to the restriction of the output, no fair-minded union man objects to unlimited production. The vital question affecting the output is the amount of consumption, and necessarily always will be.

In this brief synopsis I have eliminated the moral and humanitarian view of the subject, about which I could write a volume.

NO RESTRICTION IN PRACTICE.

James Duncan, National Secretary-Treasurer Granite Cutters' National Union:—It is a healthy sign of the times that many employers not now using the shorter work-day, or what we call the eight-hour system, are looking with more favor upon it than heretofore, but when they offer new thought on that subject simply as a condition that workers shall consider the removal of restrictions upon the quantity of product, they are dealing with a practical versus a theoretical situation. I have endeavored to set forth in as strong language as I could, that in as far as our trade is concerned and those with which we are closely allied, there is no such thing as a limit to production. It is true that both employers and employees are taking more kindly in recent years to the day work system than to piece-work, but wherever the piece-work system is a practical feature in the output of a manufactured article, employers have the option of hiring either by the day or by the piece, as they see fit. If workers are employed by the day, the trade agreement, which in importance should be considered along the lines of a Magna Charta or our own Declaration of Independence in this country, names a minimum wage rate for the established work-day, and employer and individual workman may agree for as much more than that per day as may be mutually arranged.

If piece-work is followed, the trade agreement is right there with its practical utility. The piece scale suggests the pace, and the workers employed are paid according to the amount they produce. It is not true that at any time the trade-union movement calls upon or requires employers to pay the same price to a slow workman that is paid to a fast workman.

Experience proves beyond question of doubt that the eight-hour work-day is not detrimental to the amount of output, and thereby causing an increase in the cost of production. Practical management and the desire of the workmen to perform a day's work adjusts those matters, so that employers in my own trade, for instance, will promptly aver that granite cutters are doing as much per diem on the eight-hour day as they were previously doing on the nine-hour day. All told, the reduction to eight hours is beneficial both to employer and employee. It gives additional opportunity of social intercourse to both, and the more that is enjoyed, the better both become. I desire, therefore, to be quoted as urging, as far as possible, the fullest introduction of the eight-hour work-day and as giving bona-fide evidence that the shorter work-day does not increase the cost of the finished product.

NO CONCESSIONS AND HIGHER COST.

Alfred See, Vice-President Branch 3, Amalgamated Society of Carpenters and Joiners:—Question 1 implies that there is a reserve of energy not yet put forth by American wage-earners, which certainly does not apply to the building industry, in which eight hours already prevails in the United States. It is equivalent to getting "net" quotations and then expecting discounts. No! I do not believe that organized labor would, or should, be willing to obtain shorter hours by the concession of lower wages or attempting to keep pace with record-breaking specialists, bell-horses, or by whatever term those hacks of the sub-contractor and lumper are known.

Question 2. Messrs. Woods, Jenks & Co., of Cleveland, O., in 1890 conceded the nine-hour work-day, the operatives in planing-mill undertaking to produce the same amount as under the ten-hour day, which condition they were unable to fulfil. The reasons are apparent. Wherever machinery is applied, manual labor is brought into competition with, instead of co-operation with, a social product which should be socially used for the betterment of the largest part of society, not for its demoralization. Therefore, this question, relating as it does to actual practical methods of production, must be answered in the affirmative: Yes! I do believe, and know, that a shorter work-day lessens production in all cases where machinery is running, and time is a more important factor than in the case of mental operations. Will a shorter work-day increase the labor cost? Yes! it would and should, is the opinion of most labor students.

A MATHEMATICAL ILLUSTRATION.

James F. McHugh, General Secretary-Treasurer Journeymen Stone Cutters' Association:—I note that

the shorter work-day has many friends among the larger employers. They appear to dread, though, that the eight-hour day will increase cost of production. I do not see how this could enter into the matter as the men are employed by the hour, and are only paid for the number of hours worked. I do not think the unions should lower their wages in order to secure a shorter work-day, and should not ask for nine hours' pay for eight hours' work.

I do not believe that the short-hour-day lessens production, for if an employer has a piece of work to perform within a limited time, he will increase his force, and that is the real reason that the worker strives for the shorter working day. It furnishes employment to a larger number of men, and at no increase of cost, for if an employer had twenty men working ten hours to complete a job in one week at 50 cents per hour it would cost \$600. At eight hours a day twenty-five men would be employed whose wages would amount to \$600. This same rule would apply whether twenty men were working or 20,000.

PUT HEART INTO WORK.

Lawrence H. Fitzgerald, General President, Journeymen Stone Cutters' Association of North America:—Where the employer has various interests (for instance, the manufacturer who has accepted orders for goods in advance of any knowledge of extra cost of production on the part of the workman), I believe it would be only showing the proper spirit on the part of employees to accept temporary reduction in wages, except in cases where the wage is so small that further reduction would work a hardship on the employee. In such a case I believe it would be not only fair on the part of the employee, and justice to the employer, but that it would redound to the mutual interest of all concerned.

As a general proposition, I have always favored and so advised the organization desiring to secure the eight-hour day to first secure the reduction of the hours of labor, and that in due time the wage question would regulate itself. To illustrate this by a case in point: The stone-cutters of New York City some thirty-five years ago made a demand for an eight-hour day. The employers refused to yield, but made the offer to raise the ten-hour scale from \$4 to \$5. This offer the stone-cutters refused to accept, but agreed to accept \$2.50 as the scale for an eight-hour day. The result was that a year from that date the wage had so regulated itself that the stone-cutters were receiving the ten-hour scale for an eight-hour day.

As to the cost of production: There are certain kinds of labor where the brain and muscle are taxed to produce, where it has been proven that the same amount of work is now produced in eight hours as was produced when the ten-hour day was in vogue. This is a recognized and an acknowledged fact in the building trades.

As a general proposition, better results will accrue to all concerned by recognizing the short-hour work-day. The employee now working the ten-hour day very often becomes so fatigued that he loses heart in his work long before the hour for quitting has arrived. Give him the eight-hour day and he will put his heart in his work. Combined with the energy and force that he sometimes grudgingly spent on his ten-hour task will now be focussed on the one point, with the one end in view, to produce in eight hours what he formerly produced in ten.

WITH CONCESSIONS, OUTPUT NOT LESSENE.

T. E. Burns, 1st Vice-President International Shingle Weavers' Union:—I do believe that organized labor should make some concessions for a shorter work-day, both in reduction of wages on men receiving over 20 cents an hour and in unrestricted output.

I believe that an eight-hour day would not lessen production to a great extent, as many factories and mills would run 16 hours where they only run 10 now and 24 hours where they run 20 now. I believe it will increase the labor cost of production very little.

No doubt agreement evasions, and subterfuges, reward, more or less, those indulging in them, with the self-satisfaction that they got the best of the other fellow, but the practice is invidious and is simply carrying on the strife, in another way, that the agreement aims to get rid of. Whether indulged in by workers or employers, agreement evasion and subterfuges are not only wrong but injurious, and often cost more than the gain expected from them.—"Shoe Workers' Journal."

More than 100 labor unions in Cleveland, Ohio, will be united into one great organization, to be known as the United Trade and Labor Council. A large building will be erected for the organization, to be used exclusively as a labor temple.

TRADE AGREEMENTS APPLIED TO OPERA AND THE DRAMA.

ORGANIZED THEATRICAL MANAGERS, MUSICIANS AND STAGE EMPLOYEES CONVERT "DISCORD" INTO "HARMONY," PREVENTING "DARK" PLAYHOUSES

Lovers of music and those who enjoy theatrical performances will be interested in the introduction into that field of formal trade agreements between organized labor and organized employers. These agreements are between the musicians' union of New York, known as "Local 310," the Theatrical Protective Union, and the Association of Theatre Managers of Greater New York. In addition to their novelty, these agreements are of interest because of the negotiations which led up to their formation, as they illustrate throughout the value of candid conference between the authorized representatives of opposing interests.

ROLAND PHILLIPS

It is certain that had not the two sides in this controversy been organized and had not these conferences been held, the resulting harmony would not have been attained. Instead, the relations between the orchestras and the managers would have been "jangled and out of tune," millions of habitual theatre-goers would have been deprived of their accustomed entertainment, the business of the managers would have suffered and the employment of thousands of artists, actors, singers, stage hands and others dependent upon the prosperity of public entertainments for their livelihood would have encountered serious and costly interruption, not only in the metropolis, but throughout the United States. For the controversy in its possible developments, had it not been thus converted into an agreement, might have involved every play-house in the country, from the Metropolitan Grand Opera House to the rural "one-night stand."

The New York Civic Federation was invited to exercise its good offices in harmonizing the differences between the musicians and the managers as to rates of payment, substitutes, rehearsals and minor details, because of its success in bringing about an agreement between the managers and the Theatrical Protective Union. That union is composed of mechanical and other stage employees. Through the Civic Federation, Mr. Phil Kelly, representing that union, was brought into communication with the managers.

JOSEPH WEBER

A conference was held, on May 12, at which all the managers in the city, with a few exceptions, who were out of town, were present; while the union was represented by Messrs. Kelly, John H. Cunningham and John J. Taylor. The managers presented a series of rates of wages and conditions of employment. To these demands the union representatives demurred, pointing out that there had been no increase in their wages for many years. They presented the reasons for their attitude, which explained away many details which the managers had considered as grievances. This conference was so satisfactory that at its conclusion many of the managers voluntarily expressed themselves as satisfied with a continuance of existing arrangements, and as impressed with the intelligence and diplom-

acy of the union representatives. Subsequently, in Milwaukee, in July, this arrangement was commended by the national convention of the Theatrical Protective Employees. Certain special arrangements desired by Manager Conried for stage employees in grand opera were left open for adjustment later in the season, with every prospect of amicable arrangement.

A. L. ERLANGER

In the meantime, Manager Conried had become so interested in trade agreements that he attended the conference upon that subject, held on May 7, at the Fifth Avenue Hotel, under the auspices of the National Civic Federation. He listened attentively to the addresses of Francis P. Robbins, John Mitchell and others. When invited to speak himself, Mr. Conried said emphatically: "I did not come here to make a speech, but to learn how to apply the principle of trade agreements to the production of grand opera, through a rational arrangement with musicians and theatrical employees."

The Musical Mutual Protective Union of New York City had been for thirty-five years an independent local body, chartered by the Legislature, without connection with any national organization save for a brief association with the National League of Musicians. It had held aloof from other organizations in the belief that, as artists, its members could command a market of their own and that their service and skill would be sufficient to secure from managers the rates of payment fixed by their local union. But an officer of the union says that experience demonstrated that some managers would pay individual musicians as little as their circumstances might force them to accept. It was found, says this officer, that the union scale of rates for musicians was maintained in only three or four theatres in the city, while in several theatres members of the union were playing for less than the wages of unskilled manual laborers.

This condition convinced the members of the Musical Mutual Protective Union that only through connection with organized labor as a whole could they secure a scale of wages, both living and uniform, and also commensurate with their artistic worth. They therefore sought affiliation with the national body, the American Federation of Musicians, which is itself affiliated with the American Federation of Labor. This was accomplished through amalgamation with "Local 41," the New York branch of the national body. The reorganized union was designated "Local 310" of the American Federation of Musicians; and thus, in July, 1903, the former Musical Mutual Protective Union became a part of national organized labor.

In August, 1903, "Local 310" appointed a committee to visit the theatrical managers one by one and make with them individual agreements, thus causing the union rates to prevail in every theatre. These negotiations were successful, although pro-

longed into the autumn. But the individual managers, after making these concessions, determined to combine on their side, and formed "The Association of Theatre Managers of Greater New York."

One incident of the season of 1903-4 that attracted much public attention, while contributing to the antagonism felt by at least some of the managers to the musicians' union, was the enforcement of a rule that its members should not perform with non-members. This was a rule of long standing. But as women artists were not eligible to membership, in the old union, this rule did not apply to them; so that a lady harpist, for example, could be accompanied by union musicians without difficulty. But qualified feminine artists were eligible to membership in the reorganized union, as a part of the American Federation of Musicians. This brought them

under the operation of the old rule, from which they had been exempt. Accordingly, the union, to be consistent, felt itself obliged to insist that a lady harpist, before being accompanied by any of its members, should herself become a member, after passing the regular examination as to her professional capacity.

Early in April, 1904, the Association of Theatre Managers issued what was regarded as an ultimatum. So far as this related to the Theatrical Protective Association an agreement was reached as previously narrated. A preliminary conference was held on May 13, relating to the terms and conditions of the employment of musicians. It was decided then to postpone the subject until after the national convention of the American Federation of Musicians, which met in New York on May 16. That

convention authorized Local 310 to confer, through a committee, with the organized managers. The managers' ultimatum set forth a list of what they held to be grievances. The union welcomed the prospect of a conference, and appointed a committee of five to meet the managers. The committee of the New York Civic Federation, which was invited to join in the negotiations, was composed of Roland Phillips, chairman; R. H. Jaffrey, Samuel B. Donnelly, Henry White, Charles Delaney, V. Everit Macy and James P. Archibald. The committee representing the musicians' union consisted of Frank Evans, Frank J. Hauser, Ernest H. Clarke, Maurice F. Smith and James Beggs. The executive committee of the managers authorized A. L. Erlanger to meet the committee of the musicians together with the committee of the Civic Federation. Previous to

this two conferences had been held with Mr. Erlanger which produced no definite result, and the negotiations might have ended there, had not the Conciliation Committee of the Civic Federation persuaded Mr. Erlanger to agree to the appointment of a special committee of as many managers as there were members of the union's committee. Accordingly, the managers sent as their representatives to

JAMES BEGGS

MAURICE F. SMITH

OSCAR HAMMERSTEIN

PHIL KELLY

HENRY W. SAVAGE

the next conference A. L. Erlanger, Marc Klaw, Oscar Hammerstein, Henry W. Savage and Al. Hayman. These committees took up one by one the list of the concessions demanded from the union by the managers, and the list of prices and conditions demanded of the managers by the union. As these discussions went on, it became evident that progress would be more rapid if the committees were somewhat smaller. Accordingly, the union formed a committee of three—James Beggs, Maurice F. Smith and Edwin Walther. With them acted Joseph Weber President of the American Federation of Musicians. To confer with them the managers deputized Messrs. Erlanger, Savage, Hammerstein and Hayman.

AL. HAYMAN

The series of conferences brought out strikingly that the matters in dispute, many of which the managers regarded as grievances, were largely the result of misunderstandings. There was much complaint on the part of the managers of various acts which they considered as discourtesies and as interfering with the effective and harmonious presentation of public entertainments. It was disconcerting, for example, when an individual player had become familiar with his part to have a green substitute suddenly appear in his place at a rehearsal or a performance. The managers required that no substitutes should come to the theatre without the previous consent of the leader. They were surprised when it was pointed out to them that the union itself made this very requirement, Section 6 of its by-laws reading as follows:

Any member accepting an engagement from another member and disappointing him, shall be fined to the amount of the engagement, and it shall be deemed an offense equal to a disappointment, and fined accordingly, for a member to take an engagement and send a substitute, without the consent of the person that engaged him.

Several causes of dispute were also quickly adjusted when mutual explanations were made. In short, the progress of these conferences was a continuous demonstration, to both the committees of the two sides and to the committee of the Civic Federation, of the effectiveness of frank discussion, face to face, between men whose interests had been at variance through many years, and who had now been brought together for the first time.

Upon point after point agreement was reached. At the final conference there remained but one question in dispute,—that of free or paid Sunday rehearsals. Each side made an extreme demand. The union asked payment for all Sunday or evening rehearsals, to be limited to four hours. The managers wished Sunday rehearsals to be free, day or night, but assented to their limitation to four hours. The musicians urged that many of them had opportunities to earn money through private engagements on Sunday evenings. A compromise was reached by which the union granted a free Sunday rehearsal once every six weeks, from 3 to 7 p.m., payment to be at the rate of \$1 per hour after 7.

In consideration of the acceptance of the union rates by the managers, the union representatives agreed to a special schedule for the production of grand opera in English. This was because it was shown to them by Manager Savage that the receipts must be less than for grand opera in a foreign

language, while the large number of persons employed in a representation of "Parsifal" in English made the concession of special rates of payment essential to the reasonable pecuniary success of the enterprise. It was agreed that higher rates of payment were warranted for the musicians engaged in Manager Heinrich Conried's productions.

A comparison of the two sets of demands, as they stood at the beginning of these conferences, will show how far apart they were then. The differences related to grand opera in English, to dramatic musical comedies, extravaganzas and comic opera; and to vaudeville, burlesque and popular price houses.

JOHN MITCHELL

The managers made the following propositions, applying to all these classes of performances:

All members have the right to engage their musicians and leaders, subject to the rules and discipline of the house in which musicians perform. No substitutes will at any time be permitted, unless agreed to by the managers. No extra pay when required to play behind the scenes. The manager shall have the right to engage extra musicians for appearance before an audience. No extra charge for Sunday rehearsals, day or night. No rehearsal longer than four hours in duration.

The counter proposition of the union for all classes of performances was:

Agent or leader engaging musicians must be member of the organization. Have no objections to rules and discipline of the house in which musicians perform, provided such rules are not at variance with above conditions. The question of substitutes rests between the manager and the leader solely. No extra pay when required to play behind the scenes. (This does not apply to grand opera.) Musicians appearing before an audience, such as stage bands, etc., must be engaged by agent or leader who is a member of the organization. Sunday or evening rehearsals must be paid. No rehearsal over four hours in duration.

Yet these opposing propositions were reconciled, through patient conference, into an agreement which, it is hoped, will result in harmony, without as well as within the play-houses.

RACIAL LABOR STATISTICS.

Professor Walter F. Willcox, of Cornell University, has made an exhaustive study of the census negro statistics, and presents some valuable information bearing upon the industrial situation in the Southern States. One fact relating to the future labor supply in the South is that the negro population is not increasing as fast as the white, in that part of the country. The increase among the negroes in twenty years, from 1880 to 1900, was 33.1 per cent., while for the same period the increase in white population for the same section was 56.5 per cent. Moreover, the rate of increase among the negroes is constantly declining. Of interest to cotton growers is the increasing tendency among the negroes to leave the rural regions for cities, although the great majority of the race still live in the country districts. The percentage of negroes engaged in gainful occupations to the total negro population was in 1900, for the entire country, 45.2, against 41.1 in 1890. For the Southern States the percentage in 1900 was 44.7 against 40.7 in 1890.

No contract should be more sacred than the trade agreement of organized labor. It is a matter of honor between the contracting parties that is neither circumscribed by surety companies' bonds nor by compulsory edicts which enslave the body or dwarf the mind. It is regrettable that in too many instances these principles are violated both by the unscrupulous employer and by ignorant or unadvised workmen; but such mistakes should not be viewed as the failure of the labor movement any more than the collapse of a business venture should be considered a slap to civilization.—James Duncan, Secretary Granite Cutters' Union.

STRUCTURAL BUILDING TRADES ALLIANCE. A New International Combination of National Unions, Designed to Promote Industrial Peace Through Trade Agreements and Arbitration.

A new international labor organization has been formed, called the Structural Building Trades Alliance of America. It is designed so to regulate the organized building trades as to bring about harmony between employers and employed throughout that industry, to encourage the investment of capital

FRANK BUCHANAN

in structural operations, to substitute arbitration for strikes or lock-outs, and to make impossible anywhere such a situation as has existed of late in the building trades in New York City. The General President of this new organization is Frank Buchanan, President of the International Association of Bridge and Structural Iron Workers.

Mr. Buchanan said of this new combination of unions:

"We hope for the co-operation of employers in the building trades who are friendly to labor in carrying forward this movement. The Building Trades Alliance will say to such employers, who will organize, we hope, on their side, if they will enter into trade agreements affording fair conditions to the building-trade craftsmen of the country, we will see that your work proceeds regularly, without stoppage. We desire to create a status of stable harmony that will free capital from any hesitation as to investment in structural operations, because of fear of troubles with labor. This is a new step in national labor organization. We wish the step to be at a walking rather than at a running pace. We would make haste slowly. While we are progressing, we would invite suggestions from employers. We wish their comradeship in this advance toward industrial peace and we shall welcome friendly advice."

The recent history of this movement begins with an informal meeting at Indianapolis on August 18, 1903, attended by George Gubbins, then president of the Bricklayers' National Union; Michael Carrick, secretary of the Painters, Decorators and Paperhangers of America; Frank Duffy, secretary of the Carpenters' and Joiners' International Brotherhood; Herman Lillian, president of the Building Laborers' International Union; and Frank Buchanan. These men considered plans to unite the national organizations of the building trades, with fair terms as to membership and allotment of work and with the general idea of formulating methods as to prevent industrial war. Their meeting sent communications to the national organizations of building trades, requesting them to send three delegates each to a convention at Indianapolis on October 8, 1903. That convention was attended by delegates from the national organizations of bricklayers, carpenters, painters, hoisting engineers, plasterers, building laborers, bridge and structural iron workers and electricians. They formed a preamble and constitution, which were referred to the several organizations for approval and which were formally adopted, at the first regular convention of the Alliance, held at Indianapolis on August 8-11, 1904.

The preamble to this constitution declares that its purposes are: The establishment of local and international boards of arbitration to settle disputes without strikes; to give international sympathetic support, when necessary, to all trades affiliated, when local boards fail to adjust difficulties; to safeguard the interests and to protect the autonomy of the trades represented; to keep agreements with employers inviolate; to avoid strikes by substituting arbitration; to annihilate dual and rival bodies and assist only unions affiliated with their respective national and international unions; to maintain fraternal relations with central bodies and to emphasize the necessity of a centralization of organized wage-earners.

A local union is just what the members make it. If it isn't right don't kick, but go to work in an earnest manner to make it right. That's the way to accomplish something.—"Union Label."

EDWIN WALTHER

WELFARE WORK INVOLVING PROVISION FOR PHYSICAL COMFORT.

I.—VENTILATION OF THE FORGE SHOP AND ROLLING MILL, AND LIGHT WORK ROOMS FOR FACTORIES, WITH PRACTICAL ILLUSTRATIONS.

In the August issue of *The Monthly Review* a general discussion of Welfare Work appeared. It was defined briefly as follows:

Welfare Work.

Welfare work involves special consideration for physical comfort wherever labor is performed; opportunities for recreation; educational advantages; and the providing of suitable sanitary homes; its application to be measured by the exigencies of the case. Plans for saving and lending money, in-

sured with a man as with a plant, nothing produces health and strength like good air and daylight. They practically mean life to the workman, and he is certainly entitled to them if there is any way of getting them for him.

"In the rolling mill and forge in which the writer is superintendent, we have never ceased experimenting along this line. In the rolling mill, time and time again we have had men give out at the rolls, and at times in very hot weather were obliged to shut down the entire mill, the workmen thereby losing their wages and ourselves the product of their work.

"About three or four years ago we hit upon the plan of putting a large suction fan outside of the mill building, and blowing the air through a large galvanized iron pipe, with which was connected smaller pipes so as to cover the space each workman occupied at the rolls. Since this fan was started we have not lost a single day or an hour on account of the workmen being unable to perform their duties.

"These fans were immediately put into the forge department, but on account of the large number of open fires, the sulphur smoke still bothered the workmen, and this smoke also developed the problem of proper light.

"To give them better light we cut large sky-lights in the roof, but in a few days they were covered with soot and smoke, and our shop was as dark and grimy as ever. This led to a plan that has been the most successful of any that we have tried. We took out the sky-lights, and covered these openings with sliding doors, which can be operated from the inside of the shop. We now have unobstructed daylight, and I might say here that I have never seen our men appreciate anything as they do this, and, in addition to the light, these openings seem to act as flues and draw every bit of the smoke out of the shop, together with the hot air.

"The company feels more than repaid by the satisfactory working of the shop during this hot weather, and I repeat that I have never known anything to be so thoroughly appreciated by the workmen."

With reference to light work-rooms in a factory, E. F. Olmsted, the Welfare Manager, says:

"Our building is of steel, with just enough brick to cover the girders, the balance of the wall space being devoted entirely to windows. Each window is double glazed in order to exclude the dust and smoke. The fan system is used for ventilation, the air being changed in the manufacturing section automatically every fifteen minutes, and in the offices every seven and one-half minutes. It is brought in from a tower two hundred feet above the ground and is conveyed to the first floor of the building, where in the winter it is heated and then forced throughout the building. Electric thermostats regulate the temperature."

Ventilation is discussed by W. E. Nazro, Welfare Manager of a large mill:

"We installed a modern system of ventilation, which has given most satisfactory results. The air is taken from out-doors by large fans, and, in winter, is forced over coils of steam piping. When heated, the air is forced through ducts to the floors above. The windows are dropped at the top, and the bad air has a chance to get out, thus making a complete system of ventilation. During the summer months the air is taken from out-doors by the same

system, but, of course, it does not pass over steam pipes. The mill thus ventilated in summer is from three to four degrees cooler than in our No. 1 mill, where the system is not installed. In rooms where dust or fumes accrue, they are removed by a system of exhaust fans that helps materially to keep the air clean and pure."

John H. Patterson, president of a company whose plant has light work rooms, says:

"Attention is given to the hygiene of the factory. Large windows admit plenty of light and sunshine. The ventilation and heat are properly looked after. Every fifteen minutes the air in the factory and

SYSTEM OF PIPING TO THROW FRESH AIR IN THE FACES OF THE MEN OCCUPIED AT THE ROLLS.

surance and pensions are also included in welfare work.

The several divisions of welfare work will be discussed in the *Review*, the first to receive attention being "Special consideration for physical comfort wherever labor is performed." This discussion will include such subjects as ventilation, light, sanitary work-rooms, adequate toilet facilities, baths, lockers, pure drinking water, rest rooms, lunch rooms, seats for women workers and emergency hospitals.

A FACTORY WHERE SPECIAL ATTENTION HAS BEEN GIVEN TO PROVIDING LIGHT WORK ROOMS.

Light and air in a rolling mill and forge shop are described by E. E. Adams, Superintendent:

"The problem of proper ventilation is one that must come to every man in charge of a large forging department, not only from the standpoint of the comfort and health of the workman, but as to how many fires he can crowd into a given space, and the endurance of the man who is to work in that space. In the same class with proper ventilation, comes the problem of properly lighting the department.

"No one will argue that a satisfied, healthy workman is not the best investment for the employer.

A GRINDING ROOM, SHOWING EXHAUST SYSTEM TO REMOVE DUST FROM THE EMERY WHEELS.

offices is changed by means of a fan system."

The value of light and well ventilated shops is emphasized by L. A. Osborne, vice-president of a large manufacturing company:

"The floor area of the works used for manufacturing purposes comprises, approximately, one million eight hundred thousand square feet. Natural illumination for this area is obtained by means of skylights and side windows, the total area of the former being 250,000 square feet and the latter 212,000 square feet.

"Artificial illumination in the works is obtained through the use of the Bremer arc, incandescent and

ANOTHER FACTORY WHERE THE CONSTRUCTION INSURES LIGHT WORK ROOMS.

Nernst lamps, which are sufficiently numerous and carefully placed to give an even effusion and a minimum of fatigue to the eyes of the operatives. The interior of the buildings is finished in white. The force of painters constantly employed upon this work is sufficient to give the surface two coats of paint each year.

"The buildings are heated by hot air, drawn from apertures in the roof through coils of steam pipe. The heated air circulated throughout the works maintains a temperature of about 70° F. The fans are kept in service during the hot days of summer for air circulation. The general ventilation is further assisted by means of adjustable side and roof windows, controlled from the ground floor."

A TRADE AGREEMENT INTERPRETED.

A Notable Decision by Emerson McMillin as to Arbitration of a Request for Higher Wages, under the Lithographers' Contract.

An interesting feature of the conferences that were held last spring, under the auspices of the Conciliation Committee of the New York Civic Federation, Emerson McMillin of the committee presiding, was a controversy between the representatives of the allied unions of employes and the National Lithographers' Association as to the use of the words "changed" and "reduced." These words occurred in relation to wages in the highly important trade agreement in that industry, which was the successful outcome of many arduous days and nights of earnest conferences. In commenting upon the character of these conferences, Mr. McMillin observed: "One paragraph of the contract drawn on behalf of the employes provided that the rate of wages should not be 'reduced' during its life. The employers' contract in the corresponding clause used the word 'reduced.' Of course, the employes would prefer that word to their own, and vice-versa. Each side wanted the word of the other. The word 'reduced' was finally adopted."

EMERSON McMILLIN,
of the Civic Federation Conciliation Committee.

This incident was the prelude to a recent serious controversy as to the interpretation of this clause of the agreement, which was submitted to Mr. McMillin for decision. Thus unexpectedly he was called upon to decide a serious question, affecting the entire trade, growing out of a phase of the framing of the contract that at the time caused laughter. His decision, rendered on August 16, virtually involves arbitration concerning arbitration. The question was referred to him by W. D. Coakley, General President of the Lithographic Apprentices' and Press Feeders' Association, and Charles Conradis, representing the Lithographers' Association, West. Its reference and decision are an interesting example of the peaceful settlement of a dispute by a rational method, thus preventing the rupture of an agreement and a resort to hostilities.

The question at issue arose out of a request of the Cincinnati Press Feeders for an increase of wages. The trade agreement, framed with so much care, contained a section (2) providing that wages should not be reduced, and a section (4) providing that only such matters as were not specifically covered by the agreement could be arbitrated. It was the contention of the representatives of the employers that this debarred from arbitration the request for an increase of wages, while the representatives of the union held that the intent of Clause 2 was to provide only against lower wages, and not against an increase.

The essence of Mr. McMillin's decision is in his statement: "A scale of wages to obtain throughout the life of the contract was not specifically provided for in the agreement, and therefore a request for an increase of wages to be paid to any of the employes may—under the provisions of Section 4—properly be submitted to a joint commission, and if necessary, to a board of arbitration, for final settlement."

A bald statement of the case would seem to carry its own answer. The agreement had been drawn with painstaking care, every word and sentence being weighed by adepts in the use of the English language. "Nevertheless," says Mr. McMillin in his decision, "one is compelled to concede that there are grounds that warranted the raising of the question at issue."

The employers made the following quotation from a colloquy between Mr. Conradis and Mr. Parker, of the union, as follows:

Mr. Parker: If we are to interpret that the rate of wages should remain the same—that is entirely satisfactory?

Mr. Conradis: Absolutely.

Mr. Parker: And that is not necessary to be arbitrated?

Mr. Conradis: Not at all.

This passage, in connection with other remarks by Mr. Parker, was held by the employers to show that the whole question of wages was settled by the agreement.

The employers also referred to a colloquy about the use as synonymous of the words "changed" and "reduced," as indicating that they were binding themselves not to reduce, while they asserted that it was mutually understood that wages could not be increased, because of the condition of the trade.

The contention of the employes was that the intent of Clause 2 was to protect employes against reduction of wages, but to leave open the question of increase; that the word "reduced" was adopted after careful consideration in preference to the word "changed," which latter would be required if it were the intention to exclude the wage question in every form from arbitration; that the Cincinnati employes had asked for an increase months before the adoption of the agreement; that it was a representative of the employers who withdrew the word "changed," which he had offered as a substitute for "reduced"; that the employers wanted stability, and to guard against the enforcement of a demand for increase by strikes; that the ratification of the agreement by the local employes' associations was obtained only through representations that it contained nothing to prevent an increase of wages; and that the right to ask for an increase had been conceded, and an increase granted, by the Lithographers' Association of the Pacific.

The decision of Mr. McMillin carefully dissects and reviews these contentions, and arrives at the conclusion quoted, thus opening the way to a judicial determination of the equity of any request for higher wages in the lithographers' industry.

ARBITRATION IN PRACTICE.

President Lynch of the International Typographical Union, in his report to the convention of that body, made the following statement as to the working of the arbitration agreement with the American Newspaper Publishers' Association:

"The arbitration cases have been conducted and completed harmoniously and satisfactorily. Of course, the use of the word 'satisfactorily' does not mean that in the few cases where the verdict has not been favorable to local unions, these unions have been wholly contented. But the agreement has preserved the peace, and whether the verdicts have favored the union or the publishers, work has continued, and strikes, friction and disaster have been averted. The continuance of present relations with the vast majority of the great newspapers of this country is worth something, and when the cases that we have won and the cases that we have lost are taken together and the results averaged up, it will be found that we have made considerable progress."

The practice of union men anywhere to hire professional "wrecking crews" and two-by-four entertaining committees to "put men to sleep" or "out of commission," as has been and is in some instances still being practised in one or two cities, is a blot and disgrace on the historical pages of trades-unionism that trades-unionists everywhere must expose and cause the punishment the abominable crime merits. —"Labor Compendium."

MEDIATION ENDS A STRIKE.

The Good Offices of Louis B. Schram Mend a Rupture Between Labor and Capital that Threatened Serious Consequences.

A strike of firemen in the Heurich brewery in Washington, D. C., which threatened to involve a large number of other employes, with possible complications in other cities, has been brought to a peaceful end, through the mediation of a representative of the National Civic Federation, Mr. Louis B. Schram. Curiously enough, it was a conflict between rival forces of capital that caused this difficulty with labor. The Heurich Brewery company was engaged in a trade war with four other concerns. The competition became so fierce that the employes feared that one or more of the rival breweries would be driven to the wall, thus throwing many innocent persons out of work.

Accordingly, the firemen in the Heurich brewery struck, to enforce their demand that the rival breweries make peace. Their action brought all mechanical operations in the brewery to a standstill.

Timothy Healy, President of the International Brotherhood of Stationary Firemen, was summoned

LOUIS B. SCHRAM,
of the Civic Federation Conciliation Committee.

to take charge of the strike, to which the New York branch of the Brotherhood offered financial support. After looking the situation over, he held a conversation over the long distance telephone with Mr. Schram, who is chairman of the labor committee of the United States Brewers' Association, and an officer of the India Wharf Brewing company of Brooklyn.

As a member of the Civic Federation, Mr. Schram perceived an opportunity to restore peace. He went at once to Washington and quickly convinced both Mr. Healy and the local union that the strike had been precipitate and that its purpose could be attained through pacific and business-like methods, while to persist in the strike would only invite the brewing company to stubbornness in its trade policy. Mr. Schram then held a conference with Mr. Heurich, whom he induced to take a conciliatory attitude. He agreed, if the firemen returned to work, to make no discrimination against the union. At the same time, the trade war between the breweries was put in process of settlement. Both the firemen and Mr. Heurich expressed their satisfaction at the conclusion of the controversy.

Justice and fair dealing must ever be a prominent part of the policy of trade-unionism. Without this none of us need hope for the permanent success of organized labor. Deference to the rights of others must be a guiding light, and if this be so there will not be an over-eagerness at any time to inaugurate "sympathetic strikes."—"Labor World," Pittsburg.

If you make your services indispensable the wage question will not be a hard one to solve.—"Advance Advocate."

National Civic Federation

MONTHLY REVIEW

Vol. I. No. 8

NEW YORK, OCTOBER 15, 1904

TEN CENTS

AN INTERNATIONAL CIVIC FEDERATION TO BE FORMED.

AN IMPRESSIVE ASSEMBLY OF REPRESENTATIVES OF EMPLOYERS, OF WAGE-EARNERS AND OF MANY NATIONS DISCUSSES WORLD-WIDE INDUSTRIAL PEACE.

The formation in other countries of bodies similar to the National Civic Federation in the United States, with their affiliation with an International Civic Federation, was the central idea of a luncheon at the Hotel Astor, in New York City, on September 26. At this luncheon, the Executive Committee of the Federation were the hosts, and the guests were delegates to the Interparliamentary Union, selected because of their interest in industrial affairs. These delegates are all members of the parliaments of

their respective countries. Other foreign guests were the delegates from French organizations of labor and industrial corporations, sent by the French government to study industrial conditions in the United States.

This was the first international gathering in history in which employers, employed and the general public were all represented.

The purpose of the Interparliamentary Union is the maintenance of international peace through the

reference to arbitration of differences between nations that diplomacy fails to adjust. At the time of the luncheon, the Interparliamentary Union had concluded at St. Louis the first session that it had ever held in this country. Both the time, therefore, and the personnel of the company cooperated to bring out in the speeches at the luncheon a parallelism between international peace and industrial peace; between the processes of diplomacy and the methods of conciliation and conference between representa-

THE INTERNATIONAL CONFERENCE ON INDUSTRIAL PEACE

tives of capital and labor; between the proposed substitution of international arbitration for war and the utility of voluntary arbitration of differences between capital and labor, in preference to the final resort of strikes and lock-outs.

The speeches also brought out the fact that compulsory arbitration is a plan not acceptable to organized labor in this country.

The following is a list of those present at the luncheon:

Members Interparliamentary Union.

America :—Hon. Richard Bartholdt, President Interparliamentary Union; Hon. T. E. Burton, of the Committee of Congress on the Interparliamentary Union; Hon. S. J. Barrows, Secretary of the same Committee; Hon. James Rupert, Member of the Committee.

Austria :—Viadimir Ritter Ladislaus V. Gnielowsz, Member of Reichsrath.

Belgium :—X. Houzeau de Lehaie, Senator; Emile Vanderveelde, Deputy.

England :—W. Randal-Cremer, M. P.; Thos. Lough, M. P.; Fred. Maddison, ex-M. P.; W. P. Byles, ex-M. P.; Dr. G. B. Clark, ex-M. P.; Corrie Grant, M. P.; Col. Pryce-Jones, M. P.; Dr. E. C. Thompson, M. P.; John Wilson, Secretary Durham Miners; Jeremiah Jordan, M. P.; D. V. Pirie, M. P.; J. Bryn-Roberts, M. P.; William O'Doherty, M. P.

France :—M. Paul Strauss, Senator; M. Dr. Delbet, Deputy; M. Noel, Deputy.

Germany :—Prof. Hoffmann, Member of Reichstag; M. Dr. Hauptmann, Member of Landtag.

Hungary :—Count Albert Apponyi, President Chamber of Deputies; Andre Gyorgy, Deputy.

Italy :—Prof. E. Coccotti, Deputy; M. F. Di Palma, Deputy; M. Edoardo Daneo, Deputy; M. G. Cerruti, Deputy; M. Marquis di San Gueiliano, Deputy.

Netherlands :—M. Tydeman, Deputy.

Norway :—M. John Lund, Deputy.

Roumania :—Stanislaus Cihoski, Deputy.

Sweden :—John Olsson, Deputy; Ernst Beckman, Deputy.

Switzerland :—Alfred Brustlein, Deputy; Dr. Albert Studer, Deputy; Herman Greulich, Statistician.

Delegation of French Labor Representatives.

M. Albert Metin, Professor of Political Economy in the Colonial and Naval Cadets Schools, and the representative of the French Minister of Commerce; L. Benoist, Technical School of Shoemaking, Nice; H. Buisson, a Director of Le Travail, Co-operative Union of Painters and Glaziers, Paris; H. Dugue, Federal Union of Ironworkers, Havre; A. Fouclause, Director of the Co-operative Union of Musical Instrument Makers, Paris; C. Gignoux, Director of the Co-operative Union of Printers and Typographers, Nimes; E. Hyolet, Hat Makers' Union, Paris; M. Jaquet, National Union of Post and Telegraphers, Paris; J. Le Blanc, National Federation of Engineers, Le Vallois; J. Maibranque, National Union of Railway Workers, Amiens; Charles Rousseau, Director of the Union of Painters, Puteaux; E. Martin, member of the Wool Spinners' Union and a member of the State Superior Council of Labor; Charles Vulcte, Director of the Co-operative Union of Industries of Precision, Paris; A. Manoury, of the Central Union of Co-operators of Paris.

Members of the National Civic Federation.

Representing Labor :—Samuel Gompers, President American Federation of Labor; E. E. Clark, Grand Chief Conductor, Order of Railway Conductors; P. H. Morrissey, Grand Master, Brotherhood of Trainmen; John J. Pallas, President New York State Federation of Labor; Edward A. Moffett, Editor "Bricklayer and Mason"; James P. Archibald, Brotherhood of Painters and Decorators; Samuel B. Donnelly, Typographical Union; Edw. Gould, Teamsters; William H. Farley, Mosaic and Encaustic Tile Layers; J. W. Sullivan, Typographical Union; P. F. Quinn, President Central Federated Union; Herman Robinson, Retail Clerks; George E. Pepper, President Amalgamated Association Street Railway Employees, New York Division.

Representing the Public :—Cornelius N. Bliss, Ex-Secretary of the Interior; Oscar S. Straus, Member of the Court of Arbitration at The Hague; John

G. Milburn, Lawyer; C. R. Miller, Editor "The Times"; St. Clair McKelway, Editor "Brooklyn Eagle"; Isaac N. Seligman, Banker; Oswald G. Villard, Editor "Evening Post"; Bradford Merrill, Editor "New York World"; James Speyer, Banker; Hamilton Hoit, Editor "The Independent"; Charles Stewart Smith, ex-President New York Chamber of Commerce; Roland Phillips, Managing Editor "Harper's Weekly"; H. C. Watson, Editor "Dun's Review"; Warren H. Page, Editor "World's Work"; Lyman Abbott, Editor "Outlook"; John Finley, President College of the City of New York; Ralph M. Easley, Chairman Executive Council.

Representing Employers :—August Belmont, President Interborough Rapid Transit Co.; W. A. Clark, President United Verde Copper Co.; Charles A. Moore, Manning, Maxwell & Moore; Isidor Straus, R. H. Macy & Co.; H. H. Vreeland, President New York City Railroad Co.; John D. Crimmins; Francis L. Rohhins, President Pittsburgh Coal Co.; B. J. Greenhut, Treasurer Siegel-Cooper Co.; William Green, President New York Typotheta; Louis B. Schram, President Associated Brewers; John Cooper, President Iron League; John S. Huyler, President Huyler's; J. Alexander Hayden, Chairman Association Interior Decorators and Cabinetmakers; Edward A. Filene, Treasurer William Filene's Sons Co.; Charles W. Terhune, Edwin C. Burt Co.

The speech-making was introduced by Oscar S. Straus, who performed the duties of chairman, proposing "the health of all the sovereigns whose distinguished representatives are in this country in order to promote the good cause of international peace." This toast was followed by another to the health of the President of the United States, proposed by the Hon. Thomas Lough, M. P., of Great Britain. All responded to these toasts standing, amid hearty enthusiasm.

The Chairman, Mr. Straus, then addressed the assembly as follows:

"Gentlemen of the Interparliamentary Union and Distinguished Guests:—It becomes my privilege and pleasure to thank you on behalf of the National Civic Federation for your presence here to-day. We have every reason to congratulate you upon the initial success that has attended your great cause for the good of mankind in the prompt decision on the part of the President of the United States to summon a second International Conference in order to further strengthen and complete the work of the Hague Tribunal and to bring 'the future of humanity under the majesty of the law.' (Cries of "Hear, hear," and great applause.)

"National happiness is the best guaranty for international peace. National good-will—the welfare of the people in the respective countries—is, at the best, an international good-will and an international peace. It is for that reason that we have asked you gentlemen of the Interparliamentary Union to come here and in this informal way discuss with us the best means for promoting the harmonious relations between the great forces of our industrial life.

"When we organized the National Civic Federation we recognized that the relationship between the forces of industry is one that closely touched the whole people. In following that idea we determined that in order to bring the representatives of the whole people together we should divide them into three groups, all of which are equally interested in the country's welfare and in the harmonious relations between the industrial forces. These three groups are the employers on one side, the employees on the other side, and standing between the two, the great public. At the head of the group representing the general public we have placed our most distinguished private citizen, Ex-President Grover Cleveland. (Applause.) At the head of the employers' group we have placed that man whose name and fame is known in every land, and who from his deep interest in the cause of international peace has dedicated to the world a temple where the Court of Peace shall be held. I mean Mr. Andrew Carnegie. (Applause.) At the head of the third group we have placed a man who wields as great power for good as any private citizen in this land. In the council chamber of our National Civic Federation, in which he has always participated, we have seen from day

to day surest evidences of his conscientious and deep devotion to the great cause of industrial peace—at the head of that group stands Samuel Gompers, the President of the American Federation of Labor. (Applause.)

"I will not take up time in discussing the triumphs and defeats that the International Civic Federation has met with since its organization three years ago. But I will say that we have succeeded and are succeeding in cementing the relations between the great industrial forces by bringing about a better understanding and by accustoming them to consider the great questions around a council table on an equal plane, with an equal interest in harmonious relations.

"The great problem of industrial peace I know is one that confronts the people under the governments which you represent here. We have inaugurated a plan—the best that we have been able to discover—and that it is not perfect no one is more conscious than we. Expansion of commerce marks the spirit of our day. Commerce means peace. It travels along the highroad of peace. It is based upon mutuality, and brings happiness to both sides. The great labor leaders, recognizing this expansion of commerce, are beginning, and have already begun, to organize their associations internationally. So have many of the large corporations controlling large interests; they have passed beyond national lines and have international interests. I ask you, has not the time arrived when the forces that make for the harmonious relations of the great industrial enterprises should also cross national lines, and that you may carry home with you, and also bring back to us, the idea that is embodied in our National Civic Federation?

"We will heartily join hands with you in cementing a mighty power for securing Industrial Peace; uniting the wage-earners and the wage-payers, the employers, the employees and the general public; confederating the industrial forces of our several countries for their peoples' welfare, happiness and peace, under an International Civic Federation.

"I now call upon the Honorable Richard Bartholdt, a Representative in the Congress of the United States, and President of the Interparliamentary Union." (Applause.)

Mr. Bartholdt said:

"Mr. Chairman and Gentlemen:—Permit me to congratulate the National Civic Federation upon the noble work in which its members are engaged. The endeavor to lay the foundation for industrial peace is worthy of the efforts of the best and noblest of all nations. Centuries have passed with our present industrial system in vogue, and during all this time the so-called social question has been the subject of study and thought of all civilized nations. No remedy has as yet been found for the occasional differences between capital and labor, but at last the light seems to be breaking in,—the light which will illumine the pathway leading to industrial peace and tranquillity. We have finally come to the conclusion, and fortunately both sides to the controversy seem to agree upon the proposition,—that an appeal to the spirit of conciliation and mutual concession, and if that fail, an appeal to the principles of arbitration, are the right remedies. (Applause.)

"A bill is pending in the Congress of the United States providing for industrial arbitration, and it has been referred to the Committee on Labor, of which I have the honor to be a humble member. This bill would have been considered even in the last session, had it not been for the fact that the eight-hour bill consumed practically all of the time at the disposal of that committee. For me, I am frank to state here and now, that if the great Civic Federation, in whose judgment I have implicit confidence, and in which both sides are properly represented, will say to me that they are in favor of such legislation, I am ready to support it in the next session of the House of Representatives.

"In view of the gigantic growth of the industrial forces in our country, it has always seemed to me that organizations on the part of labor and also organizations on the part of capital should not only be tolerated but encouraged. A method must then be provided to enable the representatives of both sides and in the several industries to meet and by

amicable agreement fix the hours of labor and the amount of wages for a certain period of time. If no agreement upon these conditions is possible, then both sides should invoke the great principle of arbitration, for which a machinery should be provided by law. It must be remembered that in all industrial controversies there are not only two sides but actually three. There are the employed and the employer, but there is also the general public, which in cases of great strikes is even a greater sufferer than either of the contending parties; which I submit is an additional reason, and certainly a very strong one, why in the interest of our common good these conflicts should be averted if possible.

"The Interparliamentary Union, of which I have the honor to be president, is striving not to abolish war 'with one fell swoop,'—because that is impossible,—but to starve to death 'the dogs of war,' by promoting a policy of mutual agreement between the nations entered into in times of peace, and submitting any controversy which may arise to arbitration.

"Every man who favors such a policy in our international relations is bound to favor a policy of arbitration in the industrial arena. Law must be substituted for physical force wherever it can be done. This is the demand of the interests of civilization and humanity, and the condition sine qua non of social peace and general prosperity."

In introducing the Hon. W. Randal-Cremer, M. P., Mr. Straus said:

"Mr. Cremer is par excellence a 'Prince of Peace.' He stands as the pioneer of arbitration, of conciliation and of the harmonious adjustment of the relations of men, both nationally and internationally. To him was awarded the great Nobel prize as the most distinguished promoter of international peace,—a prize of eight thousand pounds,—which was immediately devoted by him to the cause to which his life has been consecrated."

Mr. Cremer said:

"My forte is not speaking, but working. I have done a great deal more working than speaking in my now fairly long life, and I am not going to break my record by attempting to make a long speech this afternoon.

"I can only account for the fact that I have been not merely invited but almost compelled to speak by the mandate of our chairman by the fact that I am, I think, the oldest man in the assembly, and certainly I am the oldest member of any organized body of the industrial classes. I have been for nearly fifty years a trades-unionist, and my life has been spent amongst the people with whom I was born and reared and with whom I have shared their aspirations and their hopes and desires. I have seen, Mr. Chairman, during the fifty years of my connection with trade-unionists of the United Kingdom of Great Britain, and with my co-workers on the continent of Europe, some very remarkable changes.

"I have been engaged in two or three industrial wars; the first, in 1859, perhaps one of the most severe conflicts that ever took place between capital and labor. For nearly five months 100,000 working-men in London were locked out by their employers, and for nearly five months we struggled with our employers to succeed in the objects which we demanded from them. For the time being we failed, but in the end we triumphed. But one of the morals that I learned upon that occasion, and which was subsequently burned into my memory by other struggles in which I have been engaged, was that it was an act of folly, if not of madness, almost, on the part of either employer or employed to engage in conflicts of that kind. (Applause.)

"The amount of suffering on the part of the poor, the loss of capital on the part of the wealthy, each was such as scarcely any of us could calculate. I learned the great lesson many years ago, and I have tried to give effect to it ever since throughout my life by doing my very best to remedy those conflicts by arriving at a peaceful solution of the problem of the difficulties between capital and labor.

"It is because I have found that this great movement of yours, the National Civic Federation, is built up on such peaceful lines that I am glad to have the opportunity of being present to-day, and especially

of renewing my acquaintance with my old friend, Mr. Gompers, with whom I was associated—not too well but only slightly, I regret to say—but whom I learned to admire because of his heroic efforts in the United States nearly eighteen years ago.

"Mr. President, we have been trying—and the lesson I learned in the trades-union world and in the industrial world was that we should try—to introduce into industrial life and industrial strife the same principle for which we are contending and which we are trying to introduce into political life amongst the nations of the globe.

"I have said a great deal more than I had intended. I told you my forte is not speaking, but working; and all I can say in closing is that I hope the Civic Federation, under whose auspices we are assembled here to-day, will be as successful in preventing social and industrial wars as the Interparliamentary Union has been in providing for the future discouragement of war between the various nations of the earth." (Applause.)

Mr. Straus then called upon Samuel Gompers, President of the American Federation of Labor, to speak for the National Civic Federation.

Mr. Gompers said:

"Perhaps, gentlemen, I ought to wish that I could have been advised that I was to address this meeting to-day, so that I might have been enabled to give to the subject some little more mature thought. Let me say, in supplement to the most eloquent welcome that has been extended by our honored toast-master, that we also welcome the delegates of the French working-men who come here by the authority of the government of France to investigate conditions of American industry, commerce and civilization.

"I cannot permit the opportunity to pass without saying a word or two in regard to my old friend—my young friend in spirit and heart, though many years have crept upon him, but they have left no indelible impression other than maturer and ripper judgment—our friend Cremer. It is now seventeen years ago when he, in company with Sir Lionel Playfair, came to the United States and sought to fulfill the mission which he so eloquently describes. I remember, too, that there were but very few men who met him in a spirit of cordiality. There were very few men in our country who bade him good cheer and Godspeed in his mission, but the gentleman to whom our toastmaster has referred as heading the representatives of the employers in the National Civic Federation—Mr. Andrew Carnegie—gave his unqualified support to the movement at that time. (Applause.) It was very pleasing—aye, more than pleasing; exceedingly gratifying—to find that he has been a consistent friend and advocate of international peace from that day to this; and I think our friend Cremer will agree with me, too, that the organized working-men of America at that time were those who gave the strongest impetus to the movement of any of our fellow citizens in the United States. I am proud to recall the fact that Mr. Cremer and Sir Lionel Playfair came to the American Federation of Labor held at Baltimore, and a resolution was unanimously passed pledging the organized labor movement of America to international peace.

"Assembled here this afternoon are not all the great Englishmen, are not all the great Frenchmen, are not all the great Irishmen, are not all the great Norwegians, nor Scandinavians, nor all the great Americans; but I think it goes without saying that the gentlemen assembled here this afternoon are of the best types of our respective countries. You are constituted of the best men of your countries, because you have done something, and not only done something but done something useful for humanity. The men who work, the men who pave the way of commerce, the men who pave the way for civilization give it its fullest and amplest opportunities for development.

"I am one of those who believe with Mr. Bartholdt, Member of Congress and honored President of the Interparliamentary Union, in favoring the organization of capital and the organization of labor. I don't believe that in our time it is possible for the fullest development of all the abilities of our people, except by the concentration of effort and by the association of men.

"I believe, too, in arbitration of the industrial problems that cannot be solved by these two contending forces of capital and labor. I am free to say, however, without attempting to inject any spirit of controversy into these proceedings, that I must dissent from his expression of opinion when he says that in the last analysis the government should determine the condition of labor, the payment of wages by the employer, or the reception of wages by the employee. I would not mention this except that my silence might be construed to be an assent to that proposition.

"Let me say that the National Civic Federation undertakes to do the thing in industry that ought to be done. It is the voluntary mediator, which undertakes to bring about a better relation between the employer and the employee, and it has done much more than that for which it is already given credit. It has alleviated distress, avoided and averted contests and controversies and conflicts—many more than is known to the world. It has done much to bring men together who formerly looked with disdain upon one another and who could not, by reason of their positions in life, meet each other around the table and discuss their respective interests. It has made possible in our country a condition of affairs by which the largest employers of labor—a number of whom are at this table, and grace it,—can meet with the representatives of organized labor and discuss the relative interests that are involved in a controversy which may be pending, or a controversy which is contemplated, avert them and bring about a feeling between the men of lasting desire at least to do no harm to each other.

"The National Civic Federation represents, as our Chairman, Mr. Straus, has so well said, not only the employers, but its members are the employers themselves; not only the representatives of labor, but the employees themselves; and also the public, by a portion of the public itself; and by meeting and discussing the great problems of the day as well as the problems of the future, tries to find a way out by which no man will lose his interests, by which no man will lose his honor, or have his dignity impaired. But after all we shall have to depend for our success in establishing peace, both industrially and internationally, upon the growing intelligence and humanity of our peoples; for unless it rests upon that growth of intelligence and spirit of humanity it cannot be successful, no matter how it may be writ in law.

"We want to change ourselves, we want to improve ourselves; and in the same degree that we shall improve ourselves we shall by example improve our fellows. We are making for industrial peace, despite the conflicts that arise here and there; and deplorable as is the disturbance of the international peace which we now observe, I think we all agree that we are nearer the time when international peace will be the realization of our dreams and our hopes, our prayers and our work; that is, if all make an effort; and he who does this not only does himself honor, but benefits his fellow-man."

The Hon. Dr. Hauptman, Member of the Prussian Landtag, who was next introduced, spoke in German, which was translated as follows:

"I have never regretted in all my life more than now that I am unable to speak the English language, as I would like to properly express my gratitude for the many evidences of American hospitality I have received since arriving here.

"The European visitors, including myself, have received very many object lessons in our tour through this great country; one of them being the apparent equality of the classes, which proves to me that democracy here is not an empty word, but is a reality. We have all learned something this afternoon about the efforts which are being made in this country by the National Civic Federation to conciliate and bring about a harmonious understanding between capital and labor. I think the proper way to do this has been chosen by you, namely, to bring representatives of both factors together so that they may discuss and understand the principles underlying these controversies, and, better yet, to understand each other, and that their mutual interests lie along the line of mutual concession and harmonious relations. This

is not only the best way, but is also the easiest way to settle these differences.

"I thank the Civic Federation for the invitation and the hospitality extended to my colleagues and myself on this occasion, and I wish to express my gratification that our people who come to this country—the German-Americans—have become such loyal American citizens, although they have not forgotten their mother tongue or the great lessons learned from German literature and philosophy." (Applause.)

The Hon. Paul Strauss, of the Senate of France, spoke in his native tongue as follows:

"In the name of the French people I will say that I am particularly pleased to be able to concur in the sentiments which have been expressed here this afternoon in regard to the promoters of this interesting meeting and the organizers of the Inter-parliamentary Union. I am also pleased to say that there are here not only the representatives of the universal suffrage of Europe and the United States, but we have the good fortune to have among us those who are representatives of the working-men and of the associations of Frenchmen—representatives of both labor and capital; and if the time had been given us, and if you should have opened your doors, you would have not only representatives of these French associations, but also representatives of all European working-men.

"I want to express the wish that the International Civic Federation shall become a unit of harmony, and that in its meetings there will be not only representatives of organized labor, but also members representing capital, both taking an active part in the deliberations to bring about a harmonious result. The ground was broken and this work was really begun by the Berlin Convention, in which the first bill was passed for the protection of women. I hope that the plan submitted to the International Conference at Basle, in Switzerland, will be followed, and that next year we shall be permitted to see the beginnings of international legislation for working people, which will be welcomed by both the members of parliament and the members of unions representing working-men and capital as well.

"The peace between capital and labor—industrial peace—is the necessary beginning of a general peace of nations." (Applause.)

Prof. E. Coccotti, of the Chamber of Deputies, Italy, spoke as follows:

"I did not expect that I would be invited here to speak, and because I admire your language and your great poets, I would not speak that which would offend your sensibilities. I would speak in my own great Italian, but because I want to be understood—perhaps I would be better understood if I spoke in Italian—I will try to express myself in English.

"Mr. Chairman and Gentlemen, I am a Socialist, but I am, too, a practical man. (Laughter.) I hope to be more and more a practical man. I learned to be a practical man in America. You teach so many things to the world here, that you teach the Socialists, even, and others, to be practical. I agree with you in every wish and hope that we will alleviate these contests. I believe with the great English poet, Charles Algernon Swinburn, that this reality must be brought about by the worker, and that when the contest between employer and employe shall be settled, that may be the moment in which we may expect to see final human justice." (Applause.)

Charles Stewart Smith, for many years President of the Chamber of Commerce of New York, was next introduced. He said:

"I have no mandate here to speak for the Chamber of Commerce; at least I have not been sent here as a delegate. I am indebted for my presence here to the friendship of Mr. Straus. But I assure you that I am very glad to be here.

"I have been very much gratified by the speeches made here to-day, and I have been also very much instructed. It seems proper that I should speak on this occasion, because I recognize in your first speaker, Mr. Chairman, my old friend Mr. Cremer, a gentleman who came here seventeen years ago, and when I chanced at the time to be President of the Chamber of Commerce and had the honor of inviting him to our annual banquet on that occasion.

He made us one of the very best speeches that we had that evening. He was received with glorious applause, and he gave great impetus in that presence to the association of which he was a delegate.

"Now, gentlemen, I think I may say that the Chamber of Commerce is in full sympathy with all the views I have heard expressed here to-day. (Applause.) We have passed resolutions in favor of the utmost reciprocity with the different nations of Europe. We believe that it is perfectly right for both capital and labor to organize in the most efficient way possible. We believe it is their right, and not only their right, but their duty. But if I were permitted to express an opinion in conflict with my old friend Gompers, who is an expert on all questions of labor, I would ask him to consider the proposition whether he was not ready to advise his friends to organize in corporations, so that they would give the laboring class the same power with the capital class, so that they can approach these questions with a larger organization behind them—an organization which would guarantee their contracts, which would give them power distinct from the people; and I should be very glad indeed to see labor organizations take that position.

"Now, I have said that the Chamber of Commerce is in favor of reciprocity. I believe that is one of the most important questions that can affect international peace. Reciprocity involves acquaintance between the great nations of the world. Trade goes always for peace, and if we have mutual reciprocity and mutual relations we cannot fail to have peace. Merchants always oppose war; men of commerce always oppose war, and the labor unions, I think, Mr. Gompers, are equally opposed to it. Consequently, what I want to see is labor unions made strong, and I believe their organization into corporations would give them power which they do not have now. They could speak with authority then; and I am very much in hopes that my friend Mr. Gompers will advocate that system for the people whom he so ably represents.

"Now, Mr. President, only a word more. I believe the question between capital and labor is the greatest question, the most enormous problem, that confronts industrial peace, not only in the United States, but in all industrial nations. It has not been solved yet, and I hope that this National Civic Federation, which is represented here to-day, is on the right track. I believe it is, and that it is on the way to solve that question in accordance with the highest ideals of rectitude and justice. If that can be accomplished, I think that we may look for commercial prosperity such as we have never seen before. Look at the enormous amount of money lost in strikes, both to capital and labor, which may be saved if the principles which you are advocating so bravely and earnestly can be universally adopted and carried out! And I sincerely hope that that may be the end, and that your organization, Mr. Chairman, may have this effect. If it does, you will certainly earn and receive the gratitude of the civilized world." (Great applause and cries of "Hear, hear.")

The Hon. Emile Vanderveide, Deputy from Belgium, said:

"In speaking to you I must say that I am a little embarrassed because I was not prepared, and secondly and mainly because I have not a commission to speak in the name of the whole Belgium delegation, because it is composed of men of different opinions, partly Conservatives and partly Socialist. I myself am a member of the Socialist party, and I am afraid I will be considered by some here a 'black faced sheep.' But all the Belgium delegates agree to be grateful to the President of the United States for his initiative in a second Hague Conference, which we must recognize is to prevent war, but which we must say is not sufficient, because to have international peace we must have national good-will and peace of labor. Peace to be stable and sincere must be founded on justice, and perhaps here we differ not only in the principle but in the application which we make of this principle.

It must be understood that the question of work must not be resolved by bloody conflict, but by peaceful conciliation. Class struggle is not necessarily class war. I am in favor of arbitration and concilia-

tion, and I am pleased to see how much that view has progressed in the big Democracy of the United States to-day.

"Social peace is only possible with strong and well organized labor unions, and nowhere is capital so well organized as in the United States or working-men so well organized as in the federations of labor in the United States.

"To-day we see the greatest industry in the world in this country, where everything is larger than anywhere else, but the best remembrance of the liberty of this country which I shall keep is that we have seen in the City of New York twenty or thirty thousand organized people; and in a few days, when we will be on the other side of the ocean, we will say to the working-men, 'Be organized as the Americans are organized.' And why is this possible? Because the United States are a republic, because the Statue of Liberty is at the entrance of the harbor of New York, and because that is not a lie but a reality." (Applause.)

"I hope it will be permitted me to again see the United States of America, and not only that but in the near future to see the United States of Europe, and I hope the moment will come when New York and London and Paris and Berlin will be united, and we will be able to toast the United States of the World." (Applause.)

The Hon. Andre Gyorgy, Deputy from Hungary, said:

"It is not many years since in England the name of Mr. Morley was immortalized by these agitations between capital and labor. We are trying all over the world to settle these differences, but just now Mr. Vanderveide told us that there should be and must be conciliation and arbitration between capital and labor, and our efforts must be directed to this. We have in every nation and country of Europe these arbitrations, and I am very sorry to find that you have not in the United States, but you are before the continent of Europe in this—you are doing what we are trying to do.

"We are trying in the Interparliamentary Union to bring about arbitration, and you are trying to do the same thing between capital and labor,—and I was told very successfully.

"You are trying to bring about peace before arbitration, and I think it should be the greatest glory of the National Civic Federation when you shall be in a position not to want any arbitration bill, but shall be able to settle all the disputes between capital and labor in a social way, by way of your Civic Federation—not to have any arbitration bill or any legislative interference between those social divisions." (Applause.)

The Hon. John Olsson, Deputy from Sweden, said:

"I was not notified before that I would have to say some words here, and therefore I am in the same predicament as my friend the Italian professor. I am sorry that I cannot speak much to you in your own language, because I speak the English but very imperfectly. Therefore you will please allow me to be very short and only to make one remark.

"We in our land have also organizations between labor and organizations between employers, and I think this National Civic Federation is just in the right way. This Federation, as I understand, is trying to help, and permanently help, the conciliation of labor with capital. I think that is the way for all countries to go forward, to get arbitration between capital and labor.

"Now, Mr. Chairman, I am not able to speak more because I cannot speak the English language, but you will allow me to express for myself and my Swedish companion our great thanks to this Civic Federation for your kindness in inviting us to this splendid entertainment." (Applause.)

The Hon. Alfred Brustlein, Deputy from Switzerland, addressed the assembly in French. The following is a translation of his remarks:

"I am the only Swiss man here, and that is why I have the right to speak in the name of my country. But in speaking I will remember one thing that I have learned while I was in France, and which exists, perhaps, also in England. It is the brief poem which says you have two eyes and two ears but only one mouth. I have drawn from this verse the lesson

that when arriving in a foreign land you must mainly open the eyes and ears and speak the least possible, because the little that you would say might seem stupid, as the sentiments are so different in one country from another.

"In this country, capital and labor are engaged in a real struggle, although not a bloody one. That is because the two classes may meet readily. You have not in America the difference of classes, and that is why, very likely, in America events will take a different turn from that which we have in our own country. You sit at the same table, and you speak the same language all over the United States. It is not the same in our country. The struggle between the classes has deeper roots; and it is in our home, not in America, that the struggle between the classes has been discovered.

"There is a great difference between the relations between nations and the relations between labor and capital. The relations between nations are affected by the difference of language, while the difference between labor and capital lies in the difference between two classes; and consequently they can be reconciled only through a reign of justice which must be open to all.

"Your President, Andrew Carnegie, in his beautiful book on the use of riches, has said that a man who gains riches with only the idea of transmitting them to his heirs will not be worthy of having them. And that is why, feeling this sentiment, I think we should have before us many good years of peace and love; and although we have some differences now, in the final end of things we will be united. And that is why I shall now shake the hand of your president." (Applause.)

The Chairman introduced Professor Albert Metin, as the head of the delegation of French working-men. Professor Metin spoke in English:

"We members of the delegation of working-men sent by the French government appreciate highly this beautiful reception you have given us, and also the magnificent welcome we have received to this Empire City.

"Allow me to present to you the fourteen members of the working-men's delegation sent here by the French government. These gentlemen have been nominated by the French government from the working-men's associations to which they severally belong. They are partly corporators and partly members of the unions, but it is not necessary to observe very closely to see that the members of the corporations are in favor of the unionists and that the unionists are in favor of the corporation. We have among us some members representing the different corporations. They are secretaries of the corporations for production and consumption—administrators or directors or secretaries of the associations or syndicates; at the same time they are administrators or secretaries of what we call universities or popular institutions of education. We also have among us two members who represent what we call the State Superior Council of Labor. These are composed in part of some functionaries, or officials, nominated by the government and in part of labor members—working-men—returned by the unions for the purpose of looking after social legislation.

"It is needless to say we are great admirers of America. We admire it from two points of view; because here we get lessons of democracy and we also get lessons of industry. We are learning much in New York, and we hope to learn much more in our trip through the United States. We admire your institutions because we find in them many useful lessons, and we also know by experience the magnificent qualities of the people of the United States. We know, too, that the people of the United States are ready to do the same justice to the old nations of Europe. It is a pleasure for me to unite in the same sentence the names of the Presidents of the American and French Federations of Labor.

"I toast to the better organization of our working-men and to the friendship of our nations and people and Democracy all over the world, for social progress and for union and peace." (Applause.)

Francis L. Robbins spoke as follows:

"I would invite the attention of our foreign guests

to some practical methods of preserving industrial peace now in operation in this country.

"Probably the most conspicuous example of a trade agreement in practical operation is that between the bituminous coal miners and operatives. The method of settlement in that industry is reached through a joint conference held each spring in Indianapolis. We leave nothing to arbitration, believing that we are better able to agree between ourselves as to wages and conditions of labor than anyone could agree for us.

"In the last convention it was unanimously resolved that any agreement made must be kept inviolate and that no sympathetic strike and no other cause whatever could be an adequate reason for breaking the contract. The company of which I have the honor to be the president, employing nearly 75,000 men in mines, on docks, in transportation and in selling agencies, has not to-day a single dispute with an employee. This is due largely to the conservatism of those labor leaders with whom we have relations, notably, John Mitchell, President of the United Mine Workers of America, and Daniel J. Keefe, President of the Longshoremen's International Union.

"The Pittsburg Coal Company, shortly after its organization, inaugurated a method to enable the employees to share in its profits. It formed an employees' association through which the employee can purchase the preferred stock of the company by the payment of \$1 per share per month, the company carrying the loan at 5 per cent. interest. This plan has been the means of permitting a great many of the company's employees to make savings that otherwise they would not have made. The plan has interested them also in the success of the company, and its indirect effects are everywhere visible in the spirit of industry prevailing among the workers and in their attitude toward their employer. The company has also inaugurated a death and accident association, with a lodge at each mine, the expense of which is in part borne by the company. We have also established an old-age pension fund, to which the company contributes aid and co-operation.

"We regard our plan of profit-sharing, of accident insurance and of pensions as a practical and satisfactory solution of the problem which arises with the present tendency to concentrate the control of the management of business in large corporations. In this process there is a constant increase in the percentage of those whose only interest in the business is their daily, weekly or monthly wage allowance. This tends to widen the separation of the employer and the employee, without some such uniting factor as the Employees' Association of the Pittsburg Coal Company. The organization of the lodges sharing in the insurance and pension benefits is voluntary at each mine. No lodge is organized until the majority of the operatives of the mine agree to be governed by the general by-laws adopted at a convention of the employees, at which each of the company's mines was represented by delegates elected by the men. The treasurer of the Coal Company is treasurer of each of the lodges. All disbursements, therefore, are made from the company's general office by the treasurer of the employees' association.

"The dues paid by the men are at the rate of 40c. per month per man. The benefits are graded into seven classes, ranging from \$150 for a fatal accident while at work, of which the company directly contributes one-half, down to benefits of \$5 per week for minor accidents. The pension fund received at the start a contribution of \$10,000 by the company. This fund is invested in the preferred stock of the company, and is to remain intact and grow for a period of ten years. At the end of that time the principal and earnings of the fund in excess of \$100,000 may be used in the payment of pensions to operatives who have paid into the fund continuously for a period of ten years and who through old age, accident or sickness are not able to earn their livelihood. All expenses of the employees' association are paid by the company. It is believed that the development of such a movement in such practical lines is a source of strength and progress, and students of

social economy have stated that the furtherance of this movement goes a long way towards solving the problem of industrial peace."

In bringing the occasion to a close, Mr. Straus said:

"I have endeavored to call on a representative from each country. I should be glad to have it called to my attention if I have omitted to call upon a gentleman from any country represented here.

"I thank you again on behalf of the Civic Federation for the honor you have done us by your presence. I trust that you will carry with you the mission of peace which we place in your hands, with the hope that the work in which we are all engaged will contribute to elevate the standards of life and bring happiness and contentment to the peoples of our several lands."

THE EDUCATION OF UNIONS.

Sound Advice as to the Social and Intellectual Utilization of the Winter Evenings.

The desire among trades-unions to promote education among their members is strikingly illustrated by the following editorial from the "Machinists' Monthly Journal," the official organ of the International Association of Machinists:

The shortening of the days and the increasing coolness of the nights will remind the local committees who have been appointed to look after the entertainment and educational features of their respective lodges that the time has come when they must show their greatest activity. If these committees have been alert and active and with a due appreciation of their duties and what was expected from them, they will have their work well in hand and everything prepared for the winter's campaign of education. The importance of this work is very great, for the whole success of the local lodge as an educational factor depends upon its thoroughness. Nothing should be omitted from the plan of education, and no subject of an economic nature, however small, should be considered unworthy of consideration. The range is wide and the field is great, and no one will fail to gain additional knowledge—no matter how perfect may be his learning—when a subject is discussed with intelligence and moderation and an honest desire to get at true solutions.

When subjects are under discussion their success, which is really their value, will depend in a great measure upon the tolerance shown for the opinion of others by those who participate. Every one has the right to think, though every one doesn't always think right, and it is only when our mistakes are pointed out and we receive enlightenment which shows us our error, and we acknowledge and see that we have been in error, that our true education begins. It is, therefore, wise for all of us to refrain from considering ourselves above criticism until our thoughts and theories have run the gauntlet of honest discussion. Then, if no great flaws have been discovered in them, and they have been strengthened in their weak places, we may feel assured that not only have we added a little to our own knowledge, but we have contributed to the knowledge of others. Any subject that cannot bear honest investigation and honest discussion is not worth while considering, and can not be of educational value. It will be the educational committees' duty to see that the time placed at their disposal is not wasted in fruitless theorizing or profitless discord. It ought also to be seen to that no member be considered too intellectually insignificant to give expression to an opinion. All have a right to be heard, and the man who says least may think most, so that when he does speak he may solve a difficult problem. Wisdom isn't always the attribute of the man who talks loud and long, neither is it the mark of wisdom to show impatience and intolerance when a quiet man has the temerity to express a difference of opinion. Upon the education committees' work and the intelligence therein displayed will depend the success or failure of the local lodges of the International Association of Machinists to aid in the intellectual development of their members or add to their economic education.

AGAINST SYMPATHETIC STRIKES AND FOR ADHERENCE TO TRADE AGREEMENTS.

SOME PRACTICAL POLITICAL ECONOMY LUCIDLY DISCUSSED BY THE HEAD OF A STRONG INTERNATIONAL UNION.

The annual address of the President of the International Longshoremen, Daniel J. Keefe, discusses several subjects of interest and importance to both capital and labor. He makes an ingenious comparison between war and strikes:

"Universal Reason does not yet understand the Arts of Peace. Divine Providence has seemingly postponed the emancipation of Nations. War and Conquest are still popular. The world still sings the Song of War. But humanity is not without hope, commencing with the abolition of slavery, and advancing over the ruins of aristocracies and thrones, the White Angel of Peace will ere long teach that standing armies are a paralysis of humane activities, and their maintenance the wanton waste of the nations' bone and sinew and the pillage of the sweat and blood of labor.

"Under the head of strikes let us think of war, let us pause and contemplate the terrible object lesson now being presented by the Russian and Japanese War. The frightful loss of life and wealth that must ensue to both the victor and vanquished. This enormous loss to be sustained in greater part by the masses of the people, and represents the patient toil, the misery, and privation of generations, not to speak of the cruel sacrifice of thousands of lives.

"This great waste of millions of the wealth of both nations, if economically applied in the alleviation of the misery of the masses of these countries, would be productive of relieving want and poverty and creating a paradise on earth, by the uplifting of these vast hosts, now chained down by oppression, ignorance, and superstition; and whose abject condition on earth to-day is akin to hell. Yet, these miserable wretches furnish the sinews of war and 'twas ever thus."

"Strikes are but another species of war, industrial war—so-called. But humanity is being fast converted to the idea of conciliation and arbitration, as a method of settling the disputes and differences between nations and between the forces of capital and labor. Strikes are like war, part and parcel of our civilization, and must be dealt with on broad lines of public policy, through an enlightened public conscience.

"As modern war owing to the invention of modern appliances for the destruction of life and property becomes more terrible, so also does the strike of to-day become more serious, owing to the great strength and intelligence of the forces of labor; and the loss to the victor and vanquished correspondingly heavy.

"Let us try and consider the meaning of a strike in the United States, where the entire force of organized labor was arrayed against capital. The mere contemplation of such a crisis makes my blood run cold. Imagine for a moment what this would mean. It would mean nothing, if not war. But let us hope that such a contingency will never arise. While strikes at times are unavoidable, as, for instance, when the soulless and sordid greed of a coal baron sneers at labor with the hiss 'that he has nothing to arbitrate.' Whose impious utterances cause the human soul to shiver with the cold-blooded blasphemy of the Divine Right' for the exploitation of humanity. Happily, the Baers are but few, and the employers, as a general rule, are ready and willing to meet labor half-way.

"While the strike is labor's only weapon to resist the unjust oppression of greedy capital, it should be employed only when all other means of settlement have been exhausted and failed to avert it. Under these conditions a strike may be justified, yet the so-called sympathetic strike should not be thought of.

"Sympathetic strikes should never be countenanced or sanctioned by this organization. We may give our moral support, or we may lend financial assistance, where the same he merited and the cause found worthy. But our honor and integrity as an

organization is bound up in our contracts and agreements, and our very manhood at stake; to violate those contracts by a sympathetic strike would be suicide and dishonor. Public sentiment says that arbitration is the most equitable medium for the solution of differences and disagreements between the industrial forces.

"With public sentiment," said Abraham Lincoln, 'nothing can fail; without it, nothing can hope to succeed.'"

Upon the relation between wages and cost of living, Mr. Keefe makes the following remarks:

"The question of wage agreements must be based on the standard of life of the American wage-worker.

"It is the purchasing power of our labor that should be the real basis, that should determine the rate of wage.

DANIEL J. KEEFE,
President International Longshoremen's Ass'n.

"To make this more clear, let me say, that in Alaska gold fields, where labor is paid \$10.00 per day, and where the cost of a flannel shirt is \$10.00, and everything that goes to sustain life in the same proportion, no rational man will believe that the laborer in the Philippines, whose wage of fifty cents per day, that will provide him with the necessities of life for three days, is not better off physically, and the purchasing power of his labor greater than the fellow in Alaska with his \$10.00 per day. And any reference to the low wages of Europe can have no force or effect in arriving at an equitable and just compensation measured by our standard of living.

"This question of the cost of living in its relation to wages should be studied carefully and its importance duly considered. The wage-worker has only one thing to sell, the skill of his hands and brain, and he never claims a price which will destroy his employment by destroying his employers' profit.

"As a preventive of labor disputes and strikes, and the great and ultimate factor in the solution of the industrial problem, annual trade agreements between employer and employee will, in my judgment, not only accomplish this, but will in the near future establish an economic unity of interests between the two great contending forces, that will eventually become co-operative in its broadest sense, and the final relations will be that of business partnerships.

"My experience is that no bond or surety furnished by the worker will inspire the confidence, or guarantee the satisfaction that trade agreements have produced.

"The acceptance of a moral obligation of the workers by our employers, is certainly a glowing tribute to the fidelity, the honor, and integrity of any labor

organization, and our contracts should be revered and held as sacred as our lives.

"He who prevents an epidemic or an illness, is the greater physician; so also are trade agreements the greater moral force in the solution of the question; they eliminate industrial strife, in so much as they prevent or render strikes, lockouts, etc., impossible.

"The cost of labor, or rather the current rate of wages that can permanently exist depends on, or should depend on the cost and necessary expenses of living; and those expenses depend—in turn—on the condition of the worker.

"Hence, other things being equal, the more educated, morally and intellectually elevated, any community of workers become, the higher will be their standard of living, and of necessity, their wages must correspond to the standard. The higher the American standard of life attained by labor, the greater the benefit to the nation.

"Although wages rise and fall with the general rise and fall of the commodities, they do not in equal proportion. For nearly all products there is both an actual and speculative value or present demand; and no one speculates in wages. The price of any commodity or merchandise may rise to a very high point in value, yet no person ever claimed that the wages of labor in those particular lines advanced in proportion. As, for example, when the price of steel went soaring a few years since, no writer on economics has ever contended that wages rose pro rata; the miners of iron ore, the longshoremen, and all engaged in the transportation of the iron ore, never felt their wages swell in proportion to the increase in the price of steel. The same is true of cotton, and those whose labor puts it on the market; in fact, the same is true of all speculative commodities. While it is true that our wages have advanced with the prosperity of the last eight years, yet, the cost of living has advanced and continues to advance in the face of a general decline.

"The wants of the wage-worker have immensely increased and the standard of living will continue to rise, and the workers' necessities to-day may have been luxuries a few years past; and absolutely unknown a generation ago; and it is upon these points that great stress must be laid in making our annual agreements; and it behooves each and every member to study the question thoroughly, so as to be able to meet with intelligence any and all phases of the question relative to wages.

"In the making of contracts, or annual agreements, we must clearly understand our rights, and at the same time recognize the necessity of respecting the rights of those with whom we are dealing. The real point to contend for is simply the adjustment of our relations on a basis of mutual interest and justice, with no desire to kill the goose that lays the golden egg."

Mr. Keefe pronounces organization of labor to be "the greatest moral force of the century" and declares that it has accomplished the following things:

"Organization removed the child of tender years from the mill and mine, and brought sunshine into the lives of the little ones.

"Organization has limited women's toil in the sweat-shop and improved the surroundings and sanitary conditions.

"Organization has promoted economy and encouraged sobriety, taught the worker not to waste his opportunities, has removed ignorance and prejudice.

"Organization has been a positive force in the awakening of a higher duty in the parent in the education of his off spring; that they may be better equipped to fight the battle of life.

"Organization has eliminated many of the burdens and evils that were the inheritance of centuries.

"Organization has made us better men and to-day our actions are controlled by sentiments of justice, equity, and humanity, promoting peace, comfort and happiness."

NEEDS OF THE NEW ENGLAND COTTON INDUSTRY.

AN ADDRESS URGING THE STUDY AND SOLUTION OF THE LABOR PROBLEM, AND THE ADOPTION OF IMPROVED METHODS.

Herbert E. Walmsley of New Bedford, Mass., President of the New England Cotton Manufacturers' Association, in his address to the semi-annual meeting of that body in September, dwelt upon the importance of industrial peace. He also declared it to be an economic principle that no industry that depends for its life upon undue restriction of wages, in order to atone for loss caused by failure to employ the most modern methods, has a right to exist. Mr. Walmsley said:

"First and foremost of all questions for consideration and elucidation is, without doubt, the so-called labor question; the standard of prosperity of the cotton trade in New England, depending so largely upon the presence or absence of a correct and good understanding between employer and employed.

"In the spirit in which the concerns of a great industry ought to be conducted, and on the principle that we are totally and absolutely opposed to strikes and lock-outs, favoring on the other hand an equitable adjustment of differences between employer and employed by conciliation or any amicable method that will preserve the rights of both parties, I do not hesitate, as president of this association, to again submit that the question of industrial peace is a perfectly legitimate topic for investigation and discussion by this association. At the same time, let me say that I am not unmindful of the fact that one must expect to have one's motives scrutinized and one's every word sifted with no ordinary jealousy and with no sparing criticism, when attempting to deal with the subject.

"As you are aware, the cotton trade of this country is one of the very important, if not the most important of our great staple industries, some millions of our population being directly or indirectly dependent upon it. Its dislocation or stoppage brings in its train every kind of disaster without parallel; its prosperity is the guarantee of comfort and well-being to an enormous section of our people, and is to be earnestly labored for.

"Is there any man who does not see the extent of the burdens placed upon the industry and the community through the disastrous and ever-recurring conflicts between employer and employed, with their desolating effect, destroying as such conflicts do, hundreds of thousands of dollars of capital taken from the profits of the mills and the thrift of the workers, benefitting our competitors to the lasting and permanent injury of New England, imperiling the very existence of the trade?

"Is there anyone who does not acknowledge that it is a matter of intense concern to all of us that the smooth working of the great cotton manufacturing industry of New England should, if possible, be insured? Surely not! Let us then endeavor to infuse the genius of common sense into the question.

"Is there anyone among us, any employer of labor, who does not fully realize the absolute necessity of harmonious co-operation and combination between employer and employed? Who does not recognize the fact that the road to trade prosperity lies through the region of mutual understanding?

"There is small need to point out or recount reasons which demonstrate the evils of strikes or lock-outs; at best they are a clumsy, uncivilized and outrageous remedy. The pity is that such occurrences so often become inevitable. We can ill afford these wretched conflicts, entailing such severe loss upon capital and such untold misery and suffering upon labor; these 'fights to a finish,' jeopardizing the very existence of the cotton industry, are to be deprecated and discountenanced, dislocating the trade and driving much of it into the hands of our competitors. Recognizing, therefore, to the full, the dangers of future strife, provision should be made for the settlement of disputes, in an amicable and broad-minded manner.

"A trade quarrel is an occasion, not for a mere display of endurance, but for argument, for statistics,

for careful investigation of facts and principles. There must be union if the cotton trade is to prosper.

"All must admit the desirability of conciliation in the place of the violent methods of the past; the evolving of some definite method of adjusting disputes which would preclude the possibility of extreme measures and even make disputes a remote possibility. The common sense, no less than the common interest of both parties, should supply any want so apparent. Let both sides do what they can to agree upon the principles upon which they alone are competent to speak.

"With a reasonable security against strikes and lock-outs over long periods, the possibilities of a permanent return upon capital would be more stable than they are at present; panic competition would be checked, and the maintenance of our markets rendered more secure; more capital would thus be

HERBERT E. WALMSLEY,
Pres. New England Cotton Manufacturers' Ass'n.

attracted to the industry with added security for the investment; production would be strengthened with beneficial results all around.

"The matter is one of public concern, and it should therefore be the great effort of all alike to establish a permanent industrial peace, so that, united, we may all the longer withstand the unequal competition of longer hours and lower wages, and preserve for New England the inestimable advantages of the great cotton manufacturing industry that has served New England so long and so well.

"Is there anyone holding any position of authority and responsibility in our great hives of industry who is not prepared to concede and admit that labor, in asking for what is moderate and just—in asking for what is necessary for the protection of its interests, without inflicting unnecessary injury upon capital—is not perfectly within its rights?

"Let us without reservation concede to labor its legitimate and indisputable claim as an important factor in the situation. It is incumbent on each to respect the rights of the other, for both have their respective rights.

"The point desired to be made is, that there must be combination of purpose between employer and employed, that the laborer is worthy his hire, that labor is entitled in all equity and expediency to as fair and full return as circumstances permit of.

"With respect to the hours of labor in the cotton mills of New England and the rate of wages to be paid the operatives. As regards the former, the hours of labor, or the working hours per week. Fully realizing the force of Southern competition and its daily increasing severity, it is perfectly plain that the cotton industry of New England, in view of

this rapidly increasing competition, cannot afford to have its power of successful competition further weakened by reducing the hours or having any further burdens whatsoever imposed on it. There can be no two opinions as to this. On the other hand, however, it is equally perfectly plain and certain that the working hours in the New England workshops cannot and will not be increased beyond the present legal and lawful limit. No retrograde movement of any such character is possible in this twentieth century, no matter by whom contemplated or thought of. Any suggestion of this nature may be at once dismissed without further words or consideration.

"As to the rate of wages. Far better look this problem squarely in the face also, and equally, freely and candidly admit that the normal or standard rate of wages in the New England cotton mill never can nor will be brought down to the level of the Southern standard. The difference in the cost of living alone, between these two sections of the country, makes such a thing impossible. I do not hesitate to say, in the most emphatic manner, that in my judgment any such reduction or levelling down is neither desirable nor necessary. Rather should we aim for higher standards in the interest of the well-being, advancement and prosperity of the entire community, regarded from any and every point of view. The real and true self-interest of the employer will not permit of any forced and continued attempt to reduce wages below a normal or legitimate standard.

"Good wages are not incompatible with our position in the world's market. Such, at least, is my deliberate judgment of this delicate and vexed question.

"It is high time to speak plainly and without equivocation. The time for smooth words and evasion has gone by. Where conditions have arrived at such a pass that mills are in such an unfortunate and unenviable position that they cannot any longer be run with any degree of profit, let them close down and go out of business altogether, and the sooner the better. They are nothing less than a demoralizing and disturbing element in what would otherwise be a healthy, vigorous and satisfactory situation. Mills of this undesirable character,—and, unfortunately, it is to be feared there are too many such in New England,—could not compete with the well-equipped Southern mills, even were they to pay the same wages and run the same number of hours, from the fact and for the simple reason that their machinery is antiquated, fit for little else than the scrap-heap. They are in no condition to meet any kind of competition on any class of work, or under any circumstances. In the face of it, on their own admission, they cannot compete with their worn-out, obsolete machinery, barely able to make even the cheap low-grade goods they have so long and so blindly persisted in making and still continue to make, and for which there is not a sufficient demand at anything like remunerative prices. No such short-sighted policy can nowadays succeed in New England, or anywhere else for that matter. If to-day the management of any individual mill or of any particular group of mills in New England will still persist in the production of such yarns and fabrics, in which particular line of product, competition is the keenest, and margins are the narrowest, they inevitably invite defeat and disaster, which they can alone expect and will surely encounter.

"If again the cotton industry of New England or any particular section of the industry has arrived at such a pass, such a stage in its history, that all that can be done in the endeavor to make ends meet is to reduce wages below a legitimate standard, below what is fair, equitable, humane or expedient, by all means, let such portion of the industry leave us, and go elsewhere, we want none of it. Such condition is sufficient to warrant, to demand drastic action. There is no hope for them."

MONTHLY REVIEW

OF THE

EXECUTIVE COMMITTEE.

ON THE PART OF THE PUBLIC.

Grover Cleveland, ex-President of the United States, Princeton, N. J.
Andrew Carnegie, capitalist, New York City.
Cornelius N. Bliss, ex-Secretary of the Interior, New York City.
Oscar S. Straus, member of the Court of Arbitration at The Hague, New York City.
Charles W. Elliot, President Harvard University, Cambridge, Mass.
Archbishop John Ireland, of the Roman Catholic Church, St. Paul, Minn.
Bishop Henry C. Potter, of the Protestant Episcopal Church, New York City.
David R. Francis, President Louisiana Purchase Exposition, St. Louis, Mo.
Isaac N. Seligman, of J. & W. Seligman & Co., New York City.
James Speyer, of Speyer & Co., New York City.
Charles Francis Adams, Publicist, Boston.
John G. Milburn, lawyer, New York City.
V. Everit Macy, capitalist, New York City.
Charles J. Bonaparte, lawyer, Baltimore.
Ralph M. Easley, Chairman Executive Council, New York City.

ON THE PART OF EMPLOYERS.

Henry Phipps, director United States Steel Corporation, New York City.
August Belmont, President Interborough Rapid Transit Company, New York City.
Lucius Tuttle, President Boston & Maine Railroad, Boston.
Frederick P. Fish, President American Bell Telephone Company, Boston.
Francis L. Robbins, President Pittsburgh Coal Company, Pittsburgh.
Henry G. Davis, Coal Operator, Wilkes, W. Va.
H. H. Vreeland, President New York City Railway Company, New York City.
Samuel Mather, of Pickands, Mather & Co., Cleveland.
Charles A. Moore, Manning, Maxwell & Moore, New York City.
Franklin MacVeagh, of Franklin MacVeagh & Co., Chicago.
Charles H. Taylor, Jr., President American Newspaper Publishers' Association, Boston.
Dan R. Hanna, of M. A. Hanna & Co., Cleveland.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
Otto M. Eldlitz, Chairman Board of Governors, Building Trades Employers' Association, New York City.
William H. Pfahler, former President National Founders' Association, Philadelphia.

ON THE PART OF WAGE EARNERS.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President United Mine Workers of America, Indianapolis.
E. E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
James Duncan, General Secretary Granite Cutters' National Union, Washington.
Daniel J. Keefe, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.
Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers.
P. H. Morrissey, Grand Master, Brotherhood Railroad Trainmen, Cleveland.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit, Mich.
Theodore J. Shaffer, President Amalgamated Association of Iron, Steel and Tin Workers, Pittsburgh.
J. J. Hannahan, Grand Master, Brotherhood of Locomotive Firemen, Peoria, Ill.
James O'Connell, President International Association of Machinists, Washington.
John Tobin, General President Boot and Shoe Workers' Union, Boston.
Joseph F. Valentine, President Iron Molders' Union of North America, Cincinnati.
James M. Lynch, President International Typographical Union, Indianapolis.
Denis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.

AN INTERNATIONAL CIVIC FEDERATION.

The projected formation of an International Civic Federation was the natural outcome of the luncheon tendered by the National Civic Federation to members of the Interparliamentary Union and to representatives of labor organizations and industrial corporations and societies sent to the United States by the French Government. Civic Federations are now being organized in England and Canada. The nations represented in the Interparliamentary Union are those in which constitutional government is most developed. Its purpose of promoting international peace is in essence dependent upon the good will of peoples, to which national prosperity is essential; and that in turn depends upon industrial peace in each country. The establishment of industrial peace is, therefore, precedent to the discouragement of war. General industrial conditions would also be affected, if treaties of arbitration should cause any large degree of disarmament, through a material increase in the world's productivity. The extension throughout every industrial nation of a systematic betterment of the relations between capital and labor would increase the world's consuming capacity.

An International Civic Federation could perform work that would accord perfectly with the mission of every society that favors the abolition of war, which has been an ideal for centuries; while its deliberations might contribute valuable additions to world economics if not to world politics.

LABOR CANNOT DO IT ALL.

The editorial spirit of the "Wall Street Journal" on labor matters has been notably fair and broad. That paper has not hesitated to criticize employers or capitalists whenever it thought they were unfair, and it has been generous in its treatment of the shortcomings of organized labor. The following paragraph from a recent article, however, contains a proposition that even its editor, we think, will admit is rather untenable:

If organized labor would drop its programme of monopoly and would strive for the uplifting of the industrial classes by intelligent education, and agitation, by methods of co-operation, by plans for insurance against old age, sickness and accidents, and by the establishment of schemes of fair adjustment of differences with employers, it is safe to say that nearly every wage-earner in the United States, as well as thousands of broad-minded employers, would hasten to join the unions.

The fact is that organized labor is more and more striving to do these very things. It must be granted that for one of them,—“the establishment of schemes of fair adjustment of differences with employers,”—labor is constantly making its share of effort. But how absurd it is to expect organized labor to accomplish this alone. The very statement of that ideal relation implies co-operation by the employers. Yet the head of the Manufacturers' National Association openly declares: “This is not the time to talk conciliation. Neither is it the time to talk arbitration or trade agreements. To arbitrate questions of wages and hours is to introduce artificial methods,” etc.

Why should organized labor be enjoined to work out this scheme alone? What would it be worth to Wall Street, to all industry, and to society generally, to establish “schemes of fair adjustment of differences with employers”? And yet, the “Wall Street Journal” asks: Why does not organized labor bring this about by itself? If, as the editor of the “Journal” will doubtless admit, the purpose of organized labor is to secure better conditions for wage-earners, should it not have the hearty support and co-operation of employers, bankers, and in fact of all of the “non-producing classes”?

Indeed, organized labor has had to struggle for the improvement of the mass, not only alone and unaided, but against opposition, even against persecution. It is a far cry from the collared serf of the dark ages to the upright, free work-

man of to-day. The march upward from the market place at Magdeburg in 1301, where ten handiworkers were burned alive for resisting the oppression of the patriciate, from Cologne where thirty-three weavers were executed in 1371 after losing a strike against the ruling families, through wholesale massacre and exile, through the nights when the tramping journeymen were required to have masters present at their tavern meetings to prevent the crime of making demands for better treatment, through the years when men were thrown into jail for the heinous offense of mere membership in a union, through the slow conversion of public opinion to the acknowledgment of the right to organize, has traversed centuries of time and has endured an infinitude of suffering. The way has continually led over the worse to the better. Brentano well summarizes this halting advance: “The dawn of every new epoch of progress has been accomplished by steps backward.”

This march has been made the harder because labor has had to evolve its own leadership. It has made all the mistakes of unskilled generalship and of undisciplined following. It makes them still. Its successes have been won despite the follies of its own ignorance.

But the time has come when employers and public-spirited citizens, who have some understanding of the awkwardness, blunders and misdirections that hamper the advance of labor, and who realize that the betterment of labor is the betterment of the entire social structure, are lending a helping hand; and we are glad to state that the editor of the “Wall Street Journal” is one of them.

WHAT CAUSES RAILWAY ACCIDENTS?

Everybody shares the shock of reading daily agonizing reports of fatal railway accidents. Everybody is interested in any effort to learn and to eliminate, if possible, their cause. The charge has been made that the frequency of preventable accidents is a decadence in the personnel of trainmen, brought about through the destruction of ambition by the rule of seniority. But the agreements between the principal railway companies and the brotherhoods show in their text that seniority is theoretically coupled with ascertained merit in making promotions. This is confirmed by statements from both railway officials and representatives of brotherhoods, presented on page 16. They suggest a comparison with the operation of the rule of seniority in the civil and military services.

OUR ENEMIES.

The National Civic Federation promotes industrial peace through securing rightful relations between employer and employed. Any organized effort to array employer and employed in hostility must oppose its mission. Hence the employers' associations and citizens' alliances, formed to war upon organized labor, and the socialists, organized to war upon capital, join their voices in similar criticism of the Civic Federation. Diametrically opposed in their ultimate purposes, they share a common opposition to the only organization that would bring labor and capital into harmony.

It is an officer of the Citizens' Industrial Association of America who said that employers were to be delivered “from the bondage of organized labor, not by continuing the policy of organized labor's colleague, the National Civic Federation, which is the greatest menace to industrial peace now in existence.”

The President of a socialist railway organization in a confidential letter advised his organizer to stimulate public sentiment

against capitalism and the Gompers faction, which is working in harmony with Marcus A. Hanna and the infamous Civic Federation to keep down the masses.

A report in the Chicago Tribune of a meeting to form a federation of employers' associations contained the following:

In the evening a majority of the delegates gathered in an informal meeting and talked over the general situation. It was then that the National Civic Federation was condemned for its policy of "conciliation and arbitration."

"Our association has nothing to do with the Federation," began Secretary Job. "One reason why we are to meet in October is to overcome the influence of that body."

"The Federation is made up of politicians who are looking for their own interests," said J. West Goodwin.

"What do they represent anyway?" asked Secretary Du Brul of the metal trades. "I have found them a lot of meddlers."

"The Federation is a costly plaything," was the comment of Secretary Marshall of Dayton. "Chicago was its birthplace, and the city has been paying the penalty for the last two years."

"The whole question is this," began President Parry. "Has a body a right to institute an arbitration court to take precedence of the courts of the land and tell the people—the workers, the business men—what they should do?"

"Stalking back of it all is the ghost of the Homestead riots," said another, and that ended the first attack the Federation has received from an organized body of employers.

Of the same meeting, the *Chicago Record-Herald's* account said:

President Parry paid his respects to the National Civic Federation, which he styled a "mutual admiration society of 'butter-in' with a \$10,000 a year secretary," by saying that it was a question whether the Federation shall decide the laws of the country and tell men what to do, or leave the interpretation of the laws to the courts.

The national leader of the socialist party, Eugene V. Debs, brandishes this red flag at the Civic Federation:

The time is not far when the socialists will be in the majority in the trades-unions, and they will rescue the union movement from the withering band of the leaders who dominate it, and from the blighting control of the Civic Federation, which has entered into an unholy alliance—the slaughterers of the laborer and those leaders in joint conspiracy against the union man.

The "Call to Arms" of the New York section of the socialist labor party says:

Betrayed by the Civic Federation and the labor fakir, or defeated by the Parrys in every big conflict, finding the pure and simple union a hollow reed to lean upon, the workers are beginning to turn to the socialist labor party.

The *People*, the organ of the socialist labor party, says:

Led by the late Mark Hanna, who saw the necessity of keeping the working class in line while a commercial conquest was made of the world, the ultra-capitalist class formed an alliance with the "labor leaders," the Gomperses, Mitchells, Keefes, et al. The result was the Civic Federation and the various agreements recognizing the Gompers type of unionism. . . . It was no miracle that D. M. Parry first became famous through his attacks on Hanna and the Civic Federation.

The platform of the socialist labor party declares that the Civic Federation and the American Federation of Labor "threaten to throttle the labor movement," and says that they have become "one of the strongest obstacles in this country to socialism."

The *Brauer-Zeitung*, a Cincinnati socialist paper, pays us this compliment:

The National Civic Federation, the most infamous, cancerous ulcer which has been inoculated upon the trades-union movement of this land.

and predicts that the time is coming when the capitalist influence of the Civil Federation will be condemned and spurned by the workers and eradicated.

These quotations sufficiently show that the Civic Federation receives the vituperation of the socialists simultaneously with the criticism of their foes.

The socialists seek to excite class hatred and to inflame the minds of wage-earners against the Civic Federation. They aim to grasp control of trades-unions and pervert them from a purely economic force into a political army, as is shown by their futile efforts to capture the American Federation of Labor. Mr. Debs says: "I welcome the assaults upon unionism by David M. Parry and his kind, because Mr. Parry is doing as much to array class against class as any other

individual, although he aims at the 'opposite effect.'"

The bulk of the membership of employers' associations will be surprised to learn that their leaders are regarded as allies by the socialists; but these quotations speak for themselves.

A FALLACIOUS COMPARISON.

It is a frequent but misleading statement that organized labor includes only a small minority of the wage-earners of the country. The purpose of the statement, which is based upon a deceptive comparison, is to give force to the claim that it is monstrous tyranny for the small minority to dictate to the great majority of workers the wages, hours, and conditions of their toil. Figures are cited that, on their face, prove that labor organizations contain only 8 per cent. of all wage-earners. But it is only in trades where the union has included nearly all the workers that it is strong enough to become a potent factor. In such cases, the mass of unorganized labor does not figure. If a union contains 95 per cent. of the skilled workers in its craft and demands better conditions, it is no argument to say that the farm hands or the washerwomen are not organized.

Whatever one's attitude toward labor organization, it is well to have a correct perception of its strength. The comparison most frequently quoted credits organized labor with a membership of about 2,400,000, which is only 8 per cent. of the more than 29,000,000 persons engaged in "gainful occupations" in the United States in 1900. But an analysis of the "gainful occupations" shows the fallacy of the comparison. These 29,000,000 include: In agriculture, 10,000,000; domestic and personal service, 6,000,000; the professions 1,200,000. Practically none of these are organizable, and they should be excluded from the comparison. Trade and transportation engaged 4,700,000 persons. But from these should be deducted bankers, brokers, merchants, officials of banks and corporations, bookkeepers, commercial travelers, agents, accountants, foremen and overseers, hucksters and peddlers, livery stable keepers, undertakers, and miscellaneous workers.

Moreover, in most cases, this considerable minority has the sympathy and following of the unorganized majority. There is a distinct community of purpose between the union and the non-union man. Shorter hours, higher wages, and improved conditions are just as much desired by those without as by those within the unions. Occasional brutal combats do not impugn this broad truth.

When 6,000 union strikers went out of the Fall River cotton mills, they took with them 24,000 non-unionists. The two are standing shoulder to shoulder, the families of the non-union strikers being supported from the treasury of the union, to the best of its ability. The 8,000 anthracite union miners who struck in 1900, were joined by 140,000 non-union miners. When the railway brotherhoods contemplate a strike, they submit the question to a vote of all the employees, non-union as well as union, the vote of every man counting equally. So that, in many occupations, the potential strength of organized labor is far greater than its exact enrollment, while in some crafts it represents 95 per cent. of the workers.

A LESSON FOR NEW ENGLAND.

All who have investments and all wage-earners in textile industries will be directly interested in the address of President Walmsley to the New England Cotton Manufacturers' Association, which we present on another page. The address will be of interest as well to all those whose prosperity is associated with the continuance of an industry that is "the guarantee of comfort and well-being to an enormous section of our people."

The critical stage that cotton manufacturing has reached in New England, in its competition with Southern mills, is frankly recognized in this

address, and the establishment of industrial peace and the introduction of the most improved machinery and processes are pointed out as essential to maintain the Northern industry. Conflicts between employer and employed, with the loss they entail to both capital and labor, injure New England and benefit its competitors.

There is a lesson to be learned from the agreement between the operatives and operators in the North of England cotton trade. There committees of both organized employers and employees determine the wage-scale, subject to change at any time by mutual consent. The way is left open, in case of failure to agree, to the lock-out or strike. But the agreement has worked so well that the scale that went into effect in 1892 has undergone but one change, when an advance of 2½ per cent. was made in 1898. Old England thus shows New England a trade agreement, with a provision for joint consideration of a scientifically adjusted scale, that in practice has produced a long period of peace.

It is profoundly true that no industry that depends for success upon taxing wages for the greater cost of defective or antique processes deserves to survive. That is a law of civilization that cotton manufacturers should face with a courage equal to the candor with which it is recognized.

PARALLEL METHODS OF PEACE.

The sessions of the Interparliamentary Union in St. Louis and of the International Peace Conference in Boston developed a remarkable parallelism between international peace and industrial peace. The speeches of their delegates, with little paraphrasing, would apply as well to the solution of the world-wide labor problem as to the establishment of world-wide peace. The terms of the methods of securing each are readily interchangeable. The proposal that an international parliament shall consider periodically questions of international law parallels the proposition to form an International Civic Federation, in which representatives of employers, employed and the several peoples may formulate conclusions of importance to the entire industrial world, regardless of national boundaries.

A PRESCRIPTION FOR LABOR DIFFICULTIES.

By "Dr." Marcus M. Marks, President of the National Association of Clothing Manufacturers.

R:
ice for the excited.
pins for the sluggish.
brains for the stupid.
light for the prejudiced.

Mix thoroughly and administer at least once a day in conciliation conferences until the head and the hand work harmoniously.

P. S.—Perhaps ice should have been written with a capital I, as it is the most important ingredient in the prescription.

If rightly conducted, unionism may be made a force helpful alike to its members and to society in general. Standing on sound principles and wisely led and guided, it will encounter more help than hindrance from employers and from the public. If its course is marked by foolish and unjustifiable strikes, it will encounter only opposition and ultimate defeat, in precisely that danger unionism now stands. An often offended and sometimes outraged public is rapidly forming itself into a national jury, on whose verdict the fate of unionism will depend.

Both parties to industrial conflicts, employers as well as organized employees, are now on trial. A vast problem is in process of solution, and the fate of unionism is in its own hands.—New York "Sun."

"The motive of industry is money making. The motive of life is good-will. That which one cannot justly do, another cannot justly require. When the requirements of justice are understood and complied with strikes will cease to be with us.—"Public Policy."

Miss Gertrude Beeka, Secretary

"A LABOR DEPARTMENT."

ITS IMPORTANCE IN EVERY LARGE INDUSTRIAL ESTABLISHMENT.

Its Need Caused by the Loss of "Personal Touch" Between Employer and Employees—its Personnel and its Work to Establish Just Relations.

BY CHARLES U. CARPENTER.

CHARLES U. CARPENTER

Every great industrial establishment should maintain a distinct department of labor, with a special head for its administration. The purpose of this department would be the avoidance of friction and the adjustment of the relations between labor and its management. It is a fact that grows more and more surprising with consideration that while every large business has its executive heads of departments, who are selected for their especial fitness, labor alone has rarely received such treatment. Yet the cost of labor is a factor in the cost of production and the price at which the product can be put upon the market. The necessity of meeting competition, therefore, should make obvious the importance of a special department of labor.

The necessity of this department is increased by the loss, in this day of huge corporations, of the former "personal touch," which exists now only in the small shop. There is seldom trouble in the small shop, because difficulties are usually met by the em-

ployer himself before they can grow into unwarranted importance. Why not adopt a plan, in the case of the large corporation, which will insure the meeting of difficulties in the same manner?

What work requires more specialized and more continuous and practical attention than does the handling of the labor question? And yet, upon whom does this delicate and difficult problem actually fall? Is it handled by a department composed of men especially fitted for this question by their education and broad study of labor and knowledge of conditions in every country? By men selected for their fair-mindedness and practical experience in handling large bodies of men and of such character as to gain the confidence of the workmen; and by men of experience in making labor contracts, who know where the rights of labor end and the transgressions of the rights of capital begin?

No! this is seldom the case. The active, actual every-day policy of handling labor, the part that is vital to the workingman and the manufacturer, is dictated not by him but by his foremen.

The superintendent is usually so loaded down with duties and responsibilities that it is almost impossible for him to give the subject the close attention it deserves. Again, he is often in the same condition as the higher officials. He is seldom in close touch with the workers. The foremen who are superintending the departments are exercising the direct and consequently the real potential influence over the men for good or bad. No matter what the manufacturer may desire to do for his men, no matter what his actual policy may be, their feeling toward the firm is governed more by their feeling toward the man who has them in daily control than by any other factors. If this man is weak, the workmen will impose upon him and the company. If harsh, unjust, or inclined to "play favorites," they will be discontented. The foreman will either augment or annul the effect of any good action or purpose of the employer.

"The time to stop trouble is before, it begins." Some plan of organization must be adopted to make this possible. Some method should exist whereby employer and men could get together and discuss their mutual difficulties before trouble begins. When once trouble does arise and it has become so acute as to require the attention of the employer, the feelings and prejudices of all who have attempted to handle the proposition have, by that time, been aroused to a high pitch.

Workmen may often make a proposal too absurd for the employer's consideration. But, embittered by delay in consideration by foremen, the workmen may at times insist upon its acceptance. Or the employer, who might have granted some fair demand if it had reached him directly, may feel obliged to stand by his subordinates who have refused it. This means trouble that might have been avoided.

These considerations emphasize the necessity for a special labor department. This department should be in control of the labor question, with full authority to settle all questions that the men and foremen cannot settle. There should always exist a right of appeal to this department on the part of either workmen or foremen. It should be its constant aim to settle all questions before they reach an acute stage and assume an unwarranted importance. The questions should be considered directly with the employees affected. The department should also investigate those practices of the workmen which are unjust to the foremen, and endeavor to have them corrected. In actual experience great good has been accomplished by the investigation and taking up with the workmen such matters as restriction of output, opposition to improved machinery, unjust wage demands, unreasonably high wage rates, demands for a shorter work-day, unreasonable opposition to justifiable discharges, etc. The writer's experience has been with several large factories, and especially with one concern employing four thousand men. In that factory there were represented eleven international organizations, twenty-four local unions, and thirty-eight shop committees. These local organizations were new and undisciplined. They restricted

output and the employment of men, and caused the greatest difficulties in discharging incompetent men. The success of the policy outlined has been proved by a change in the attitude of the workmen. The men now seem to try to limit their complaints to those which are fair.

A standing advisory committee should be formed, composed of men who are highest in authority in the company, before whom shall be brought all important matters of labor policy and any very serious affairs that cannot be satisfactorily settled. This advisory board should be called together by the labor department on emergencies, and also for monthly reports, which should indicate clearly the nature of the troubles settled and the progress made.

This work should not be undertaken in a spirit of hostility to the workmen. It should be carried out along lines of justice to all concerned, coupled with firmness in demanding and insisting that that which is right should be granted, and that which is wrong should not be tolerated.

The labor department is as valuable in a non-union as in a union factory. It is as important in one as in the other to establish relations of confidence; to give the men opportunity to earn a fair wage and to have their complaints heard, and in no other way can this be satisfactorily accomplished.

Thorough investigation, prompt action, just decisions, and a firm stand for what is right should mark the work of the labor department.

It can do nothing more important than to establish a just and scientific wage system, both to satisfy the workmen and produce work with the greatest economy. The lack of attention to this matter causes much of the trouble between employes and the employer.

This department can, with great advantage, watch for undue shrinkage in output or any tendency toward its limitation.

The important questions of "employment" and "improving the personnel of the factory force" have a most important connection with efficient production. That the efficiency of the factory force can be largely increased by scientific methods is a fact not generally recognized. Systematic steps for the separation of the poor workmen from the efficient for their education and improvement, or, in case they prove totally inefficient, their discharge, are important factors in improving the factory's efficiency. In a properly systematized factory, it is not difficult to obtain accurate information concerning the character, ability and earning capacity of different workmen, even though they number thousands. Such data are also valuable in checking up discharges, as any discharge for an unjust cause can be noted at once.

The labor department should investigate and have installed such improvements in sanitary and working conditions as experience has found to be practical.

An acquaintance with legal decisions bearing upon the rights of capital as well as of labor and with the associations of labor and capital and the conditions of both throughout the world is necessary.

The work of the labor department will be largely ineffective unless it has the support and co-operation of the foremen or men who are in direct charge of departments. These men should be brought into sympathy with its aims and purposes. Generally the responsibility for this labor question is something which they will gladly relinquish, but the seeming interference with their preconceived ideas of the boundaries of their own authority, which this work must involve, will be at first resented. Nothing, however, need or ought to be done to interfere with the necessary authority of a foreman.

These foremen must be instructed in the best methods of handling men; most effective ways of increasing their working efficiency, in a manner not detrimental to their health; of increasing their interest in their work, and, especially in union shops, the most effective methods of securing the best results for the company and the men under union conditions.

In order to gain the desired results, weekly meetings of all the foremen and assistants for the purpose of discussing these problems and difficulties, are of the utmost importance. Their discussions will give

A LABOR DAY CELEBRATION IN AN INDUSTRIAL COMMUNITY.

SOME RESULTS OF WELFARE WORK SHOWN IN A FAIR, WITH EMPLOYEES' EXHIBITS, MUSIC AND ATHLETIC SPORTS.

Labor Day is observed in one manufacturing community in New England as nowhere else in the country. The peculiar observance of this national holiday there is an outcome as well as part of organized welfare work. Labor Day has there become an annual holiday of the most wholesome, instructive and inspiring nature.

The central features of its observance are a Fair, containing exhibits of fruit, flowers, vegetables, fancy work, poultry, and various domestic products; work of the kindergarten, manual training and cooking schools; Athletic Sports; a Baseball Game; a plenitude of music by the Employees' Band, and unrestrained social freedom throughout the day.

Hitherto this popular celebration has been entirely under the executive direction of the Welfare Manager. This year various committees of employees were entrusted with the preparations for the exhibits and the arrangements of the sports, in accordance with the general plan outlined by the Manager. This participation in the work of making the celebration a success by the employees was suggested to the Welfare Manager by an address delivered by the Chairman of the Welfare Department of the National Civic Federation at its conference in New York last March.

More than ten thousand employees and their families attended the fair and its adjuncts this year. The exhibits were collected and arranged in a large tent erected at one side of a wide athletic field.

The exhibits were remarkable for their own excellence as well as for the taste and ingenuity displayed in their arrangement.

An official of the State, whose duty it is to visit all the county fairs, declared that this Labor Day fair was surpassed by only two other fairs in New England. It is interesting to observe that some of the exhibits shown here, especially of poultry and eggs, have acquired such a reputation as to command particularly high prices, thus adding materially to the prosperity of the employees. There were so many applications from the employees to present exhibi-

relief to the views of the most radical and disseminate the ideas of the more conservative. Thus there is developed a tendency toward harmonious action and uniform policy among the foremen. They will learn much that will result in direct economies in their departments. There will also be developed a desirable esprit de corps among the foremen themselves.

Where union conditions exist, workmen should be encouraged to attend their union meetings, and to act as officers and members of union committees. In many cases, foremen are found making it so unpleasant for union shop committeemen that only the worst and most radical men, who are continually stirring up trouble, will serve. The conservative men, bound by their obligations, and by the company's acceptance of unionism, are compelled to follow the lead of these men whenever trouble arises. It should always be kept in mind that these committees are not only representatives of the men before the company, but also practically the representatives of the company before the unions.

More will depend upon the ability, character and

tions of highly bred fowls that there was not room to receive them all.

The athletic field stretches before the exhibit tent, a rolling expanse of green, beyond which is a lake surrounded with the lawns and attractive homes of many of the wage-earners. Throughout the morning there were run a wide variety of races, stimulating a wholesome rivalry in athletics, and exciting the keenest interest and applause, for the victors, among the spectators.

While the athletic sports were in progress during the morning, the official judges were inspecting the

was as much interested to see whether the vegetables from his garden had taken a prize as was any of the workmen.

The centre of interest in the afternoon was the baseball game. This is a spirited contest every year, the local nine being always matched against a visiting team worthy of its prowess. This year, although the visiting team was defeated, there came back from their town subsequently expressions of the most cordial recognition of their treatment by their manly hosts.

During the sports, both morning and afternoon, the thousands of men, women and children scattered over the grounds all the miscellaneous debris incident to such an occasion. No objection whatever was made to this, but a force of men was kept constantly at work gathering this scattered rubbish into buckets and taking it away. This process afforded an object lesson in cleanliness to all the people.

When the concourse was assembled for the ball game, Gideon F. Holmes, Treasurer of the Company, awarded a cup offered by the Welfare Manager to the member of the nine who had made the highest all-round average during the season previous to Labor Day. His encouraging remarks concerning the success of the exhibition and the enthusiasm displayed in the field sports were warmly applauded. There was evident appreciation, also, of his outline of the origin and progress of baseball.

The visitors at this fair were especially impressed by the happy faces of the throng, men, women and children all seeming to be filled with the most hearty spirit of enjoyment and interest. The assembly presented a cosmopolitan appearance, because of the different nationalities represented among the employees.

The entire success of the celebration is an evidence of the executive ability of W. E. C. Nazro, the Welfare Manager. His thoughtfulness also had provided every facility for the visitors to observe each phase of the day's amusements, and had made every provision for their material comfort.

exhibits in the tent and awarding prizes.

At noon, when the sports were over, the tent was thrown open to the populace. The signal for this was the blowing of a whistle by the Welfare Manager, and an example of the careful organization of the plans for the day was shown by the celerity with which a force of men removed, as in the twinkling of an eye, from the athletic field all the paraphernalia that had been used in the races.

The scenes in the tent during the examination of the exhibits were most animated. It was pleasing to observe that the highest official of the company

experience of the man at the head of the labor department than upon any other factors. He should have had a wide experience in the handling of large bodies of men, both union and non-union. He should have an acquaintance with the heads of existing manufacturers' associations and prominent labor leaders, as well as a thorough knowledge of union methods. He should be thoroughly informed on modern factory systems and methods, especially as applied to wage systems. Mechanical experience is very desirable. Inasmuch as many of the disputes that will arise will concern the question of wages and output, he should be able to devise methods of ascertaining the output that could be fairly expected from any job. He should be capable of introducing methods of increasing the interest of workmen in their tasks. Such work requires a combination of tact, good judgment, experience in handling men, executive ability, and firmness. In short, the man guiding such a department, formed to undertake such work as a safeguard to the company's interests, should possess no small degree of ability.

No work is more worthy of the close attention of

those high in authority in the company. It is indissolubly linked with the highest and most important interests of the employer. The commercial success of any business depends not only upon the securing and developing of markets, and the development of the economic possibilities of the factory, but also upon the existence and continuance of satisfactory relations between employer and employee.

A UNIQUE BEQUEST.

A Permanent Fund Created for Employees out of Work.

Herman Stursherg, who died recently, in disposing of his large fortune, placed in the hands of two sons, his executors, \$10,000, and expressed a wish that it be used by them in a manner that they might deem best for the benefit of the operatives of the Germania Mills, of Holyoke, Mass., especially at times when the mills might be shut down. He suggested that they invest the principal and use the income from it for this purpose.—"New York Herald," October 5, 1904.

AGRICULTURAL INTEREST IN INDUSTRIAL PEACE.

THE FARMER'S PROSPERITY DIRECTLY RELATED TO HARMONY BETWEEN CAPITAL AND LABOR, WHICH SHOULD "GET TOGETHER AND BE REASONABLE."

By JOHN M. STAHL, Secretary of Farmers' National Congress.

The final verdict in contentions between employer and employed will be written by public opinion. If wise, both employers and employed will be concerned about the rights and the attitude of the public. In labor wars it is frequently the case that the innocent public suffers almost or quite as much as the belligerents. I would speak as special representative of the most important element of the public—the farmer.

Who is this farmer that asks to be considered in your contentions? Not the man depicted by stale newspaper wit and cartoon. The remarkable increase in the use of machinery and of force other than human energy to farming has made it a light employment, and the farmer, of necessity, a student and skilled workman. The farmer to-day takes full advantage of the telephone in his house, of the daily delivery of mail, of up-to-date business methods, and is in close touch with social and economic affairs.

Of our population "at least ten years of age, engaged in gainful occupations," more than one-third are engaged in agriculture. Farmers employ more than twenty billion dollars of capital—and it is actual wealth, not watered stocks—in their business. Our annual corn crop alone is worth on the farm more than three times the value at the mine of all the coal mined in this country per year, and of our exports farm products are much more than twice the value of all others combined. Of the population of this country, we own more homes than all others combined, we own more homes free from debt than all others combined, and we have fewer mortgaged homes and less than one-third as many hired homes as the rest of the population. And consider that the farm home is not merely a house, but a house with other buildings and broad acres.

We have a direct interest in disputes between employers and employed, as when such disputes will not permit the handling or transportation of freight. Then our grapes must rot on the vines and our vegetables become unmarketable, and our other products cannot reach the place of demand. But our concern about the relation of employer and employed comes from a broader view, the conception of a fact that employer and employed too often ignore, that our industrial life has become so complex and our economic interests so interdependent that any violent disturbance in one field of labor ultimately injures those in all others. For example, every strike or lock-out lessens the capacity of laborers to buy farm products from their wages and of employers to buy farm products from their profits. An enforced lower plane of living in the city means lower prices and a duller market for the products of the farm. On the other hand, the farmer profits by the increased purchasing power of urban people resulting from the steady, peaceful employment of capital and labor. The strike or lock-out that reduces the trade of merchants reduces their purchases of the products of manufacturing capital or labor and of agricultural capital or labor. Neither employer nor laborer can hurt the other without in the end hurting himself and others. "No man liveth unto himself."

It may be profitable to consider the opinion of that class that in itself combines the employer and the employed as none other does, and that is farthest removed from the scenes of industrial conflicts and presumably is the freest from prejudice. We farmers would offer a solution of what are termed labor troubles in just five words:

"Get together and be reasonable."

It is unfortunate that the development of the factory system and of the corporation has to such degree differentiated the employer and the employed and has put them so far apart. The first step in securing better relations between employer and em-

ployed is to correct this separation by coming together for discussion. Each side will gain respect for the other. This will be all the more certain if back of each is a compact organization—an organization not created to fight, though it will if need be, but to make more effective the results of conference or arbitration.

There is no inherent antagonism between employer and employed. Their interests are antagonistic only as the interests of buyer and seller are antagonistic. There is really no more ground for the buyer and the seller of labor to quarrel than there is for the buyers and the sellers of shoes or lumber or hay to quarrel.

If conference fails, then arbitration. Compulsory arbitration is linking two contradictory words.

JOHN M. STAHL,
Secretary Farmers' National Congress.

Leaving aside any constitutional hindrances, I doubt the advisability or the possibility of enforcing a law that will take from either employer or laborer so much of his liberty as to compel him to go to a third party to settle differences. Certainly, before we attempt to enforce such a law we would better see if we cannot accomplish as much by other means.

Even though the parties to labor controversies were forced to submit their differences to arbitration, it might be found impossible to compel them to abide by the decision. You cannot compel a man to carry on a business against his will, nor can you compel a man, as a general statement, to work for some one he does not wish to serve.

Undoubtedly the laborer in private employment may, as a general proposition, quit work when he pleases and for whatsoever cause he pleases. It is a corollary that trades-unions ignore—something to which the public will not much longer remain indifferent—that the same freedom of action must allow a laborer peaceably and without violence or harm, to work when he pleases and for whomsoever will hire him to his satisfaction.

This much for what is termed private business. The public has the right to demand that such things as the mails, the telegraph service and transportation by railway shall not be stopped to the great public injury by any strike or lock-out. These things enter too closely into our lives, they are too essential to our livelihood and the public welfare, for them to be at the mercy or the whim of a narrow-minded stubborn capitalist or labor leader. Would it not

be feasible to have the laborers of all grades in these lines of activity enlist for, say, a year, their desertion from service being a misdemeanor if certain facts are ascertained by the courts, and they being secure from dismissal except for certain causes? As no one would be compelled to enter this service, there would be no dangerous invasion of personal liberty of action.

The certainty of uninterrupted mail, telegraph and transportation service would greatly aid business and increase the general prosperity and welfare. Those enlisted in this public service would constitute a grand army, soldiers of peace, men valiant, not in destruction, but in service. Years of faithful service would be indicated to the public and would secure hearty public approbation. Those who, by unusual ability and fidelity, became captains and generals of this host, would be esteemed even more highly than the captains and generals whose business it is to destroy.

If the union man does not wish to labor with the non-union man, he has a right to labor where only union men are employed. But the American believes in fair play, and the violence and brutality inflicted on non-union workmen have done much to draw public sentiment away from organized labor. It would be strange if, among the hundreds of thousands of organized laborers some were not brutal and lawless; and probably many misdeeds are wrongfully charged to organized labor. But the public, not forgetful of the thousands of law-abiding union laborers, cannot fail to note that the brutal beating of non-union workmen has not been denounced by organized labor, and that labor organizations have not made enough effort to have punished those guilty of lawlessness in their name. Undoubtedly when, as in cigar-making or tailoring, the union label is evidence of not only competent workmanship, but that the manufactured goods are not disease-carriers, the union label shall mean union labor; but the public does not believe that a union painter in Chicago should refuse to work on lumber from Arkansas until assured that it was manufactured by only union labor. The public has grown heartily tired of some of the preposterous stands made by union labor in this particular, as it has of the sympathetic strike, sometimes three degrees removed! Furthermore the public believes that the man who takes the risks and pays the bills should have a considerable voice in the management of the business.

A gradually increasing disrespect for law has reached such degree that public sentiment is shaking off its sleep. It is beginning to move. Woe to him, employer or employed, that defies it. In the industrial field it will be true that they that draw the sword shall perish by the sword. The American people are aroused concerning lawlessness. It is not so safe as it was to buy city councils, state legislatures or the officers of the law.

Of all people, we should most respect the law. We are the law-makers. If our laws are not what they should be, we have only our apathy or prejudice to blame. The law is our sleepless servant and our only protector. It is so faithful and unobtrusive that we do not regard it. It fences about our fields and shops and homes with security. It locks our doors against the intruder, it guards the sleeping households in city and country. It pays the laborer his wages, the seller for his goods. It broods over our homes. The law touches with kindness and help our daily, commonplace, homely life at a thousand points. We have no arbitrary power to help or harm us—only the laws we ourselves have made. Let us consider what the law is to us, what it does for us, and we will exclaim, the Law and our Liberties forever!

PACKERS AND BUTCHERS BOTH LEARN LESSONS FROM THEIR CONTEST.

A STRIKE THAT FAILED TEACHES THE WORKERS CONSERVATISM AND THE EMPLOYERS GREATER CONSIDERATION.

LUKE GRANT

Lessons for both capital and labor, in the underlying causes and inner history of the strike against the meat-packers, are summarized herewith by Luke Grant, Chicago Secretary of the State Board of Arbitration of Illinois, and labor writer for the Chicago "Inter-Ocean."

On the surface the unions lost the strike, and it was probably the best thing that could happen to them that they did lose. They will build up stronger and better organizations for the experience, after they recover from the immediate hardships which must invariably follow great strikes.

Looking at it with a view to the permanency of the butchers' organization and its possibilities to do good to its members, the union has gained, and that fact will be generally recognized within the next twelve months.

The packers will never again return to the old system of dealing with their employes that prevailed before the formation of the union. Of that there is no danger; the experience has been too costly. A more liberal policy will be adopted by the packers in treating with their employes than ever before, and this policy will continue to grow more liberal as time goes on, not for any sentimental reason, but simply as a business proposition. Strikes are expensive, and the packers have learned that fact.

On the other hand many of the petty and annoying exactions that the unions have demanded in the past year or two will be stopped, as they should be. The shop stewards and business agents have been brought to a realization of the fact that their powers are not supreme, as they supposed, and that the packers are to have something to say about the conduct of their own establishments.

But did the packers ever seriously consider the causes of this usurpation of power on the part of the unions which they so much resented? It is fair to assume that they did not. They have been accustomed too long to regard wages as mere "fixed charges" and their employes as part of their machinery. In that respect they were no different from many other large corporations, who, while paying the strictest attention to every detail of their business, fail to notice the social unrest in the world that is constantly throbbing around them on all sides. They have applied scientific methods to every other part of their business and overlooked the most important part of all—their wage workers.

The organization of the men, the attaining of power through that organization, the strike and all its attendant suffering, were simply a reaction from conditions that preceded it.

The packers justly complained of the limitation of output exacted by the unions. In some instances production was curtailed 50 per cent. from what it was before the men were organized. This, taken in connection with the increased wages granted the men, made dividends dwindle. Contrary to the general belief, the profits of the packers have not been enormous in the past few years.

But what caused the unions to restrict the amount of work to be done in a day? Was it not the pace-maker employed in the old days who forced men to work at a nerve-racking speed almost beyond the limit of human endurance? The limitation of output, while wholly indefensible, was simply a reaction from the pace-maker. The excesses of the packers and their foremen paved the way for the future excesses of the unions.

With the attainment of power the unions ran to excess. The limit of production was not placed at a

fair day's work for a fair day's pay, but at an amount that could be easily accomplished by the most inefficient. Those conditions are certain to result in an open rupture as soon as an opportunity arises.

The pace-maker is inhuman and in the long run unprofitable; the restriction of output is economically unsound and indefensible from any standpoint, and neither one should be tolerated in an establishment where labor is dealt with on a scientific basis. The late strike has in all probability abolished both, and for that reason alone it will prove a blessing in disguise to both sides. After all the "world does move."

As to the strike itself and the manner in which it was conducted, the public is familiar. The immediate cause is also well known, but it is the underlying causes that are interesting and should be studied if good is to come out of the experience.

Many have condemned Michael Donnelly for calling the strike in the first place in the face of an offer to arbitrate. The excuse was made that arbitration was not offered until the strike order had been issued and it was too late to stop it. That was not the real reason for calling it, however. Donnelly could have stopped the strike had he chosen, but if he had he would, figuratively speaking, have signed his own death warrant at the same time.

Had Donnelly tried to stop the strike on an indefinite offer to arbitrate, even though his own judgment told him he should do so, it would have been taken as conclusive evidence by the radical element that he was a packers' man. It would have caused a revolt and aroused a wave of mistrust that might have been fatal to the organization. Of all the ungrateful human beings in the world the members of labor unions are the worst. They are always ready to mistrust their leaders, and are usually so blind that they cannot see one day ahead.

That was the case with the stock-yards men. They wanted to strike, and would have done so without orders. Secretly Donnelly was not averse to a short strike, as he believed it would prove a revelation to the packers that would be useful in future dealings with them. In that he was not mistaken, for the spontaneity with which the men walked out took the breath of the packers away and made them anxious to settle. The strike was orderly and well conducted during the first week, and everything appeared satisfactory when the first settlement was made. Had it been observed by the men it would have proved a decided victory for them.

But the day following the settlement the same radical element had to be heard. Donnelly was unmercifully scored for making the settlement. His honesty is well known to every one who has ever come in close contact with him, but even that was questioned by some of the radicals who were not sufficiently chastened by the ten days' strike. So they determined to ignore the settlement and provoke another strike if possible.

Donnelly is sensitive to harsh criticism. He knew in his heart that the settlement was a good one, and he did not like to have his motives impugned when he knew there were no grounds for it. So he weakened at the supreme moment, when he should have stood firm, and, listening to the advice of radicals, he ordered the second strike.

It was one of the most gigantic mistakes ever made during a strike, and Donnelly realized it before the message had reached its destination, but he was in an excitable frame of mind and still smarting under the unjust accusations that were made against him by some of his own members.

Had he stood firm it would probably have resulted in a revolt against his authority, but he would have had the consolation of knowing that he was right, even if it meant his resignation. The men, however, had to be well beaten, and they were not beaten at the time the first strike was settled.

The packers knew also that the men had to be thoroughly beaten, and they set about it. The result was never in doubt after the second week of the second strike. Had the packers given in to the radicals they could not have continued in business because of the conditions that would have been imposed on them. That would have meant another fight later, and that is why it is a good thing for the men themselves that they did not win. The men have learned that the packers can operate their plants without the unions, even if it is a costly and unsatisfactory experiment, and it is well that they have learned that lesson.

There are times in the history of every labor organization when success is more to be feared than defeat, and the butcher workmen had reached that stage. Now it is past, although at great cost; but it had to come. Each side has been brought to a realization of the fact that the other side has rights in this great question. Neither side will be so anxious to force another fight and each will have a whole some respect for the fighting qualities of the other. That may maintain the equilibrium for several years.

When an employer exercises his authority to the point of tyranny there will surely be a revolt, and the same is true of labor unions. A union is sometimes apt to exercise its power to the point of tyranny until it has been chastened by a good beating. Then it goes steadily on making for progress without running to excess.

After the allied trades were drawn into the fight and the management of the affair partially left the hands of Donnelly the conduct of the strike was one series of blunders. There is not enough space here to recount them, and, besides, the subject is too painful, although it is due Donnelly to say that he was opposed to most of the foolish things done. The calling out of the men from the independent plants and the boycotting of meat are but two of the illustrations where "too many cooks spoiled the broth."

The struggle presents so many interesting phases that it is impossible to treat with more than one at this time. From a sentimental point of view the fight the skilled men made to protect the unskilled workers is one of the most remarkable things in labor history. The improved standard of life among the workers since the organization was formed furnishes one of the most striking examples of the benefit of trades-unions that the country has ever seen.

The most advanced students of the question are agreed that the joint trade agreement and arbitration as a last resort when conciliation has failed, is the best method so far found for maintaining friendly relations between employers and employed. That agreements are sometimes violated by both sides, and that strikes sometimes occur in spite of offers to arbitrate, should not be taken as conclusive proof that the joint trade agreement plan is a failure.

The trouble is that neither employer, trade-union, nor the outside public is educated up to the point where the joint trade agreement can be successfully put in operation in every case. But all are slowly becoming better educated on the subject, and every big strike helps along the work, even if such education proves exceedingly costly.

Too much is often expected of the joint trade agreement, and when it fails extreme radicals on both sides are ready to declare the whole scheme a failure. But it is not.

When a trade-union violates an agreement the whole country hears of it in short order. When an employer violates an agreement the country does not hear of it quite so readily, if at all; but employers sometimes do it, nevertheless. And it frequently happens that when an agreement is violated each side accuses the other of being the guilty party, and strange as it may seem, each side may be acting in entire good faith in making the accusation.

THE SHORTER WORK-DAY.

ITS ECONOMIC REQUISITES AND EFFECTS.

Mankind May Take the Benefit of Greater Productivity in Either Larger Income or in More Leisure, but Prosperity is Essential to Either, Says Professor F. W. Taussig of Harvard University.

To most workmen the shorter work-day presents itself simply as a form of higher wages. For less hours of work, they wish as high pay, or higher pay. To most employers it presents itself in the same way. It means to them that for the same wages they get less output.

It is true that in some trades and under some conditions there may be shorter hours and yet the same

F. W. TAUSSIG,
Professor in Harvard University.

output. The pace may become faster. Whether work is done by the piece or by the day, some gain in this direction can probably be achieved in most industries. Where there has been an understanding among workmen, tacit or explicit, for a restriction of the amount to be accomplished by them in a given time, there is now more clearly a possibility of such gain. Whatever is secured in this way brings greater leisure for the workmen, very rarely, if any, excessive intensity of labor, and no less for employer or for the community.

But there is a limit to this possibility, and not a very wide limit. At bottom, and in the long run, the shorter day means higher wages; the same pay, or higher pay, for a less amount of work. The demand for a shorter work-day raises the same questions in the main as are raised by a demand for an increase of wages. This broad fact must be frankly faced in any discussion of the topic.

In any particular trade, better terms for the workmen, whether in the form of less hours or of higher wages, can sometimes be secured at the expense of consumers, sometimes at the expense of employers. The conditions of a trade for the moment may be such that the prices of goods are less than the demand would permit, or that employers are getting less profits, to have their capital and management normally secure.

But a general rise in wages, or a general shortening of hours, depends on other conditions. Such a general increase is what chiefly interests the economic student, and obviously is of most importance to the workmen and to the community. It can take place, to any substantial extent, only in consequence of a general advance in material prosperity. It can come if industry is more productive. Improvements in the arts, inventions, good management, intelligence and willing spirit among laborers, rich natural resources,—all the factors that promote prosperity tend to raise wages. And a considerable, general rise can come in no other way. The actual industrial income of the people must be greater. Trade-unions may enable workmen to secure the benefits of a

general advance in industry more quickly, perhaps more fully, than would otherwise be the case, but the basis of the advance must be there, in diffused productiveness of industry.

As the arts progress, and labor becomes more productive, mankind may take the benefit in two ways: in greater income, or in shorter hours and more leisure. Or something may be taken in each of the two directions,—both higher returns for labor and lessened hours of work. The great advance in material prosperity which the enlightened world has made in the last century, and especially in the last half-century, has brought gain in both directions. Similar gain is probably in store for the future. We are likely to see both higher wages and less hours.

Shorter hours of work are a natural and beneficent outcome of the forces of civilization. The great mass of men need not only an increase of income, but an increase of leisure,—leisure for rest, for play, for education, for happier and higher living. No doubt leisure is sometimes abused; but in the main it is a needed means of raising the sum of happiness. Therefore, the short-hour movement should have the sympathy of every friend of humanity. But it must be remembered that it rests on the same forces that underlie all prosperity. It cannot come, as a general change from restriction of output, from redistribution of work among laborers, from mere pressure on employers. It can come only if employers and workmen unite in making industry as efficient as possible.

Like any general change in industrial conditions, this one has not come in the past, and will not continue in the future by a simultaneous movement all along the line. It takes place by a succession of steps, one here, one there, each apparently independent; yet possible as a whole only because industrial conditions are favorable, while the change in each case seems to depend on the conditions of the particular industry for the time being, it depends even for the particular industry on the causes that affect industry at large. It rests on widely different prosperity, it rests also in some degree in the attitude of the persons directly concerned. It comes more easily and quickly if employers are fair-minded and public-spirited, and desirous of doing what is in their power to promote the well-being of their workmen. And it comes more easily and quickly if employees are moderate and considerate, do their best to make industry efficient, and ask no more than in reason can be granted.

Harvard University.

F. W. TAUSSIG.

OPEN SHOP DISCRIMINATION.

A Statement that it Injures Union Workers in the Ladies' Garment Industry.

JOHN A. DYCHE

The assertion is frequently made on behalf of employers that the closed shop means such a loss of control of their business as to be ruinous, while the open shop means the fair employment of both union and non-union men, John A. Dyche, General Secretary of the International Ladies' Garment Workers' Union, makes to *The Monthly Review* a statement showing that in that industry the closed shop is essential to the maintenance of prices and of fair treatment, while the open shop gives opportunity for such discrimination as to make it in practice a shop closed against all union workers. Mr. Dyche says:

"Nine-tenths of the workers in our trade are employed in making ladies' cloaks and skirts. The rest make ladies' wrappers, waists and underwear. The nine-tenths are almost wholly piece work. The bulk of the prices are fixed twice a year, at the beginning of the spring and fall seasons, according to the samples then designed. But in our business, styles are constantly changing. Any shop may be making from fifty to three hundred styles at the same time,

and in the course of a season there may be five hundred styles. Thus it is that there is a constant bigging over prices running through the season. Prices for work must be agreed upon for each new style.

"A worker's earning capacity depends not so much upon these prices as upon the kind of work that the foreman gives him to do. Some fabrics are easier to handle and finish than others. Again, if a worker has a single style to make constantly, or goods of one color to make, he can accomplish much more in a given time, than if he is compelled to make frequent changes. Thus it is possible for the foreman, who gives out the work, to cause a favorite to earn as much as \$10 or even \$15 a day, while he can cause a worker whom he dislikes to earn less than \$1.50 a day.

"It is to the interest of a foreman to run a shop as economically as possible, so as to please his employer. In a non-union shop, when the question of price for a new style arises, the worker is afraid to hold out for a figure that will be in proportion to the general scale fixed at the beginning of the season. The foreman may say to him, 'You take a lower price for this garment. It is a style that will run steadily and I will see that you get plenty of it, without changes.' If the worker refuses to accept a reduction, he is known as a 'sticker out' and the foreman can, as we say, 'freeze him out' by 'troubling' him. That is, he can arrange his work so that he can make only starvation wages, while the man next to him, although no better a workman, will be making high pay. This makes the non-union shop a place of scramble for 'cream.' This discrimination is exercised in the open shop against a worker who is known to belong to the union, or who is suspected of membership. Conditions are made so intolerable for him that he must quit that shop or starve.

"The following quotation from a Chicago correspondent shows how the open shop works in our trade there: 'Wherever an abuse was to be remedied, the manufacturer increased the amount of work in the open shop and decreased it in the union shop. In the so-called open union shops, the union had no power and worked for less money, so that the saying was: If you want a good price, go to a union shop with no work. If you want work, go to an open shop at a small price.'

"In the union shop the purpose is to see that the earning capacity of a worker does not depend upon the amount of 'cream' he gets. Any discrimination would at once be called to the employer's attention and justice would be secured. The prices agreed upon at the beginning of the season would be maintained. No worker would be afraid to refuse a reduction at the whim of the foreman. Any change of price would be because the employer and the representative of the union had agreed upon its fairness. The result is harmony, justice and mutual satisfaction. Just as soon as non-union labor is introduced in a union shop in our trade, a stampede begins. The union workers will either leave the shop or leave the union, for the non-union workers will at once begin to get the 'cream.' The union men who work in open shops do so either because their membership is secret or because their skill is such as to make them indispensable to the employer."

The union, like the corporation, is a natural product of civilization. Evolution has brought the time when collective bargaining cannot be avoided. The time came when business on a large scale, like continental railway construction, could not proceed without combination of capital, and the corporation was a necessity. The time is here when business cannot be done without collective bargaining and the union is equally a necessity.—"Labor News," Los Angeles.

It is impossible to revolutionize the customs of years in a day, but the time will come when honest capital and honest labor will meet upon common ground, and reason together, and when that day comes the labor question will have solved itself.—Portland "Labor Press."

In demanding justice from employers, let us be sure that we are just to them ourselves. Let us practice what we preach.—"Labor Compendium."

TRADE UNIONS ARE FOR PEACE.

They Advocate Conference and the Honorable Adherence to Trade Agreements.

BY JAMES DUNCAN, SECRETARY GRANITE CUTTERS' NATIONAL UNION, AND MEMBER CIVIC FEDERATION.

The time is fast approaching when the great majority of corporations, as quite a number have already done, will realize that the proper and business-like way is to meet the representatives of organized labor to discuss and agree upon properly defined working rules and carefully prepared wage scales. Distrust and misunderstanding are the two greatest disorganizers of modern industry, and as long as the two great factors, capital and labor, stand aloof and fire at long range, that long will indiscriminate and unfriendly acts be perpetrated by each toward the other. Trade-unionism stands for peace and prosperity. In crafts where it is strongest and best administered, conditions for the worker are the most desirable and the greatest amount of industrial tranquility is obtained. Capital is there found to be in its soundest realm. Great financial bonanzas may not be visible, but neither do we find the misery

JAMES DUNCAN,
Secretary Granite Cutters' National Union.

and despair of the poorly organized worker or of the non-unionist.

No contract should be more sacred than the trade agreement of organized labor. It is a matter of honor between the contracting parties, that is circumscribed neither by surety companies bonds nor by compulsory edicts which enslave the body or dwarf the mind. It is regrettable that in too many instances these principles are violated both by the unscrupulous employer and by ignorant or unadvised workmen; but such mistakes should not be viewed as failure of the labor movement any more than the collapse of a business venture should be considered a slap to civilization. The bar has members with a peculiar itching in the palm of their hands, which only unearned greenbacks will soothe; the church has within its fold men who fall by the wayside or hear the voice of God calling them to a larger salary, and the labor movement has its bribe takers. The more is the pity that such should exist, but those who expect the trade-union to be perfect, while to that extent complimenting it, are expecting too much for the time in which we live.

Again, asserting that the economic movement is one of honor, words fail to express sufficient contempt for the official who harters the confidence of his fellow workmen, either for lucre or for other personal preference. Such a man may revel in notoriety for a brief time, but honest and practical procedure will assert itself and, distrusted both by bribe-giver and by his old constituents, the dishonored official will be relegated to the rear and will be remembered only as one recalls a disease. So much for the individual. No organization can long maintain the respect necessary to success, a majority of the

members of which permit an agreement to be openly violated or even casually disrespected, and in the trade-union movement the young organizations, which have not yet learned to follow the lead of older unions in that particular, cannot do better than pattern after such of them as have by experience proved that a fair and square observance of craft settlements is an essential and fundamental principle of the labor movement.

That such violations sometimes occur is true, but it is also true that in every such instance a great mistake has been made. Sometimes the cause is found in hasty action by the oppressed or over zealous workman, but often employers in a mad desire to outdo some competitor, inflict unbearable conditions on workers which arouse their antagonism and retaliation, and thereby violate the spirit of the agreement as fully as the other case, and both causes are equally reprehensible. This feeling will be in evidence on both sides as long as either retains the idea that the other has no rights to be respected,—but if the up-to-date method fostered by trade-unionism and advocated by the Civic Federation, of each conceding that the other has inherent rights and that both should meet and adjust their differences in conference if possible, and if not by arbitration, is followed, ninety per cent. of the labor disputes causing suspension of production and inconvenience to the public would be prevented. Along this line of thought the moral effect of such a body as the Industrial department of the Civic Federation, standing as preceptor for the logical, rational and pacific adjustment of commercial affairs, will go a long way toward bringing otherwise discordant elements in unison. It is not only essential to provide or suggest a way to adjust affairs of this kind after trouble has ensued, but they will be statesmen indeed, of the highest rank, who can formulate and put into use either customs or rules which will bring employers and representatives of labor together to formulate new agreements a month or more before the expiration of the old ones. Men's minds are then cool and calculated to reason well, but when the excitement of a change is at its height, ill digested advantage takes the place of better judgment and less satisfactory settlements are obtained.

In conclusion, a word on limitation of production may not be out of place. Unless in a few instances where physical endurance is at stake, organized workers do not limit production. In their collective bargain they declare for a minimum wage rate and leave the individual to produce what he can. Too often, however, the minimum rate in the bargain is considered a maximum rate by the employer, and the public is thereby led into a misconception of conditions, and trade-unionism is again required to bear a burden which should be on the other fellow's shoulders. If law will continue to tolerate the sweating system, for instance, sapping the vitality of men, women and children in their effort to earn a mere pittance, it becomes a question of practical consideration if trade-unionism should not supply the deficiency, as it does others, by seeing to it that human beings shall not be treated as mere machines, and be ground to death at the behest of a false commercialism.

THE DUTIES OF FOREMEN.

Fairness, Impartiality and Firmness in Discipline Will Beget Loyalty and Harmonious Co-Operation Among the Employees of a Great Corporation.

Edward E. Loomis, vice-President of the Delaware, Lackawanna and Western Railroad Company, delivered an address at a recent dinner of the mining and engineering staff of that company, at Scranton. A portion of his address, as to the delicate and important responsibility of those in immediate command of the body of employees, is here reproduced:

"The duties of a successful foreman are somewhat complex in these days of competition and strife. I first wish to call your attention to the fact that from time almost immemorial, the Delaware, Lackawanna and Western Railroad Company has enjoyed the reputation of dealing justly with its employees. We de-

sire this same course of treatment to be continued. All men, whether their complaint be real or fancied, are entitled and should receive a courteous hearing. Much trouble can be avoided in handling men by the little things receiving their full measure of attention. We are all liable to error, and the employee may not be wrong all the time, and if one of you is placed in a position of doubt, the man should be given the benefit of it.

"You should not, however, construe this as in any way interfering with discipline, which is most necessary for the successful handling of any concern employing a large number of men. You can be fair and impartial, and yet firm. Your position calls for tact and judgment.

"In a majority of cases the foreman is reflected by his employees, and loyalty on the part of the foreman will induce a loyalty on the part of the employee. No one can hope for advancement in any line of business, unless he gives to it his unquestioned loyalty. And it should be the endeavor of each foreman to cultivate the best that is in each employee, and aid them to realize that the company has a personal interest in each of them, and desires to be their friend.

"Hence, I say, in all your dealing be fair, equitable and impartial. Such treatment, you will find, will cause every man to reciprocate that harmonious feeling that should exist between employer and the employee; friction will be avoided, and the results that follow will be the best.

"Again, in selecting your workmen, we desire that you select only such men as will in your estimation merit promotion. Look well into the person's qualifications; for instance, when an ashman is hired, question yourself as to whether or not he will eventually prove to be such a man as you can trust as a fireman, pumpman, or engineer. Merit should always receive recognition and promotion when the opportunity arises, and the man who does not desire promotion, who does not care whether he merits praise or condemnation, is not a good man to have in any position, at any price.

"A man to succeed to-day must excel in the work assigned to him. A man without courage and ambition, or a man satisfied to work a few hours as possible, without the real interests of his employers at heart, need never expect promotion. He is getting all he deserves.

"We trust that no necessity may arise whereby a repetition of 1902 will occur; and that your course will be such that harmony and good feeling will be the rule amongst not only the superintendents and foremen, but that it will reach to and exist between you and all the employees, and you all will extend that hearty co-operation without which we cannot succeed. We also trust that your course will be so wisely planned; your judgment so equitable, that no necessity will be found to call upon the services of any hoard of mediators to sit in arbitration, but, should any questions arise, we confidently expect that your course will be such as to merit approval and the endorsement of the management of our company."

One of the incidents of the Mining Congress at Paris, to which President Mitchell and Secretary Dodds of District 5 are delegates, was the offering of a resolution that when a strike occurred in Europe among the miners a sympathetic strike should be started in the United States and vice-versa. It is hard to comprehend the state of mind which could evolve such a phantasm. It was the pinnacle of folly. Suppose that a strike occurred in Austria, Belgium or Wales, what justification would that be for the miners of the United States to break their contracts? It would, as urged, "show that the miners were a world power," and it would also show that reason had been dethroned and folly had usurped its place. It would have been more to the point to have entered upon a scheme to render mutual financial aid. It was due to the eloquence and sound reasons advanced by Messrs. Mitchell and Dodds that this chimera was side-tracked. The two have won renown for themselves and shed lustre upon their organization for the sensible, many and wise course they have pursued upon all questions discussed.—"Miners' Journal."

RAILROAD ACCIDENTS AND SENIORITY.

HAS THE PERSONNEL OF TRAINMEN UNDERGONE DETERIORATION?

A General Denial of that Suggestion by Both Employers and Employees, who Speak from Experience.

Public attention is attracted and public apprehension is excited by the many recent horrible railway accidents. The figures of the Inter-State Commerce Commission show that during 1903 there were 11,006 persons killed on American railways, and 89,872 injured. During the year ending June 30, 1901, there was a record of 8,455 killed and 53,339 injured.

The last quarter of 1903 exceeded all records in its disasters. The number of passengers killed during that period was three times as great as in any previous equal period.

What is the underlying cause of these accidents? A recent article in the New York "Sun" quoted a prominent railroad official as saying:

The fault lies with the employees. In spite of everything discipline is lax. The tone of the men is deteriorating. There was a time twenty or twenty-five years ago when every railroad employee was right up on his toes trying to do the best he could because promotion was on merit. . . . But now promotion is not made on the basis of merit but according to seniority. The labor unions have done this. They have made seniority alone the basis of promotion. There is no chance now,—at least on roads where the men are thoroughly organized,—for a spectacular career. There is no chance to rise through alertness and faithfulness. And so the men have no interest except in getting the biggest day's pay for the smallest day's work.

How far is this assertion true? This inquiry has been put to several railroad officials, as well as to several editors of railway periodicals and officers of the railway brotherhoods, in an endeavor to ascertain the facts.

President L. E. Johnson, of the Norfolk and Western Railway, says:

The rapid and unprecedented increase of traffic throughout this country in the past few years may have temporarily impaired the standard of employees in railroad service, but on the whole I believe the personnel of railway service has improved to a greater extent than that in any other class of business.

President Frank N. Flinn, of the Missouri, Kansas and Texas Railway Company, made the following statement:

I believe that the rule of promotion by seniority is one that should be subject to certain modifications. Everything else being equal, I think it should be the rule, but in a great number of cases, perhaps in the majority, mere seniority would not secure the best men for promotion. I think all offices should be filled by the very best men that can be secured, and that ability and fitness for the positions should be the requisites upon which the appointments should be made. There is no question but that the esprit de corps on railroads is not as high as it used to be, and I think that the reason for this is that the employees feel that their chances for promotion are so limited by this rule of seniority that they have no ambition nor incentive to do their best. In my opinion the labor unions should look upon this matter in this light, so that they might work in harmony with the best interests of the companies they serve. Labor unions are all right when led by men of sense and good judgment, and instead of hostility between labor and capital there should be the greatest friendship and good feeling. When this exists the best results will be insured. I have always been and am thoroughly in sympathy with the laborer and desire nothing more strongly than to bring labor and capital into the closest relations that will establish peace and prosperity for both.

President, F. D. Underwood, of the Erie Railroad, said:

I think the causes of the increase in the number of railroad accidents are susceptible of being divided into three grand divisions:

First: Increase in the speed and weight of trains and engines with the attendant increased number of train miles run, resulting in an increase in the percentage of accidents. This must continue to increase with the increase in the number of trains operated.

Second: Inability to apply remedy through lack of knowledge of the causes.

Third: Lack of esprit de corps among employees.

President George W. Stevens, of the Chesapeake and Ohio Railroad Company, said:

While the unions do, to a certain extent, dwarf individual ambition, yet it is within the power of the appointing officer to distinguish between merit and mere seniority; in other words he is only compelled to recognize seniority when other things are equal.

An examination of trade agreements, or of the regulations in force upon the principal railroads of the country shows that almost without exception the rule of seniority is accompanied by some such statement as "other things being equal" or "merit being taken into consideration."

The representatives of the brotherhoods deny entirely the theory that deterioration of service through operation of the rule of seniority is responsible for an increase in railway accidents.

John F. McNamee, Editor of the Locomotive Firemen's Magazine, writes:

Nothing but blinded prejudice could charge railway accidents to the personnel and morale of the men employed in the railway train service. The efficiency of train service men to-day is much advanced over the conditions that prevailed under the old system of promotion by the method of personal favoritism, and the improvement has been brought about largely by the railway labor organizations. The standard examinations through which railroad men are required to pass before being promoted have made it necessary for these men to become thoroughly informed upon all subjects pertaining to their business. Seniority only secures for the men the right to be examined for promotion in their regular turn, and a failure to pass the standard examination adopted by the railway company means no promotion. In the days before the labor organizations brought about the rule of seniority, the travelling public was at the mercy of trainmen, engine men who were promoted without the form of an examination and solely upon the personal choice of some railway official, who had authority to place whomever he might see fit in a position.

H. D. Perbam, Chief of the Brotherhood of Telegraphers, said:

I have had exceptional opportunities during thirty years for observing the growth and development of railway employees. There are few, if any, experienced railway men who will disagree with me when I say that the personnel of railway employees, especially those connected with train movements, has improved steadily in that period, and intelligent management and employees' organizations are responsible for it.

Thirty years ago railway employees were notoriously a reckless roving class who cared little about their positions or anything else. The organizations came with their discipline in regard to temperance and their seniority rules, and the result was that the men had to stick to their jobs to work their way up to desirable positions. These who years ago were living a hand to mouth existence perhaps without family or other responsibilities, have changed places with men who have families to provide for, a stake in the country, and a home of their own. Considering the risks in their calling, they constitute the most careful, conscientious, right-minded, sane and sober set of citizens any country ever produced.

There is no such thing as straight seniority in the railway service. The oldest man in the service does not, by reason of being the oldest man, get promotion. He has to be capable, and his superior officer always reserves the right to be the judge of capability. Even the contracts that the employees have mutually agreed upon with the officials, provide for that supervision.

In my opinion the growth of traffic in the country has outstripped that of the installation of safety devices. The desire for economy in operating railways very often leads to an appalling disaster. In one place we find the track walker's services dispensed with to save \$50 per month, and a passenger train crashing through a bridge with its abutments undermined by a torrent. In another place we find a signal report man with too many signals to look after and keep in order, and the train gets into a block where it had no right to be. In many instances we find signal towers and telegraph offices operated by mere children working for half wages. This feature is a most prolific source of danger. There are exceptions to the rule, but it may be stated without fear of successful contradiction that motives of economy are responsible for a large majority of the railway accidents in the United States.

John T. Wilson, President of the International Brotherhood of Maintenance of Way Employees, said:

In 16 years' experience as an officer of a railway brotherhood, I have never seen a single trade agreement between the officials of a railway and their organized employees in which seniority was made the sole basis of promotion. On the contrary the stipulation always runs in words of similar import to the following: "other qualifications being equal the employee longest in the service of the company shall be promoted to fill any vacancy in rank above him." In one agreement I find the following statement which is well understood and accepted by the railway brotherhoods generally as admitting of no contention: "The responsibility in the operation of the road rests on the Management, and they will therefore pass upon the question of the competency of the employee in line of promotion."

Judge Caidwell, of the United States Circuit Court, in a decision rendered April 5, 1904, stated: "Two of the ablest railroad managers ever in the service of Union Pacific System, and probably as able as any this country has ever produced,—Mr. S. H. H. Clark and Mr. Edward Dickinson,—testified that these labor organizations on this system had improved the morals and efficiency of the men and had rendered valuable aid to the company. The managers testified that their efforts have been seconded and materially aided by the labor organizations."

In 1892 one passenger was killed for every 1,491,910 carried in the United States, while in 1902 there was one killed for every 1,883,706 passengers carried. This shows an actual decrease in the ratio of fatalities to the number of passengers.

I do not dispute that many serious accidents have occurred, which might have been avoided by the exercise of official prudence in various ways, but I do not know of a single instance where the labor unions have arbitrarily forced an incompetent employee into a position where his subsequent blundering has caused disastrous results.

CONCILIATION AND ARBITRATION.

A Permanent Tribunal to Adjust Labor Differences Established at Hamilton, Ont.

A plan for the adjustment of disputes between employers and wage-earners has been organized in Hamilton, Ont. In its development, the example of the National Civic Federation in promoting better relations between employer and employee in the United States was cited as an edifying and encouraging example. The plan consists of a permanent tribunal of conciliation and arbitration, formed by the joint action of the local Trades and Labor Council and the Hamilton Board of Trade. The tribunal has been organized in accordance with the recommendation of a joint committee of those two bodies, ratified by them:

"That the Board of Trade appoint a permanent committee of seven, to be known as a 'Board of Conciliation and Mediation,' out of which there shall be selected from time to time a committee of three to co-operate with a similar committee to be appointed by the Trade and Labor Council, which shall constitute a board, which, at the initiative and upon the request of any employer of labour or any body of wage-earners, shall offer its services to secure the adjustments of disputes as they may, from time to time, arise."

This is the outcome of an original proposal by the Trades and Labor Council that there should be formed a committee of conciliation, composed of three or five members of the Board of Trade, and the same number from the Trades and Labor Council; this committee to be ready at all times to tender its services whenever a strike or lock-out should be threatened or should have occurred.

This proposal was submitted by the Council merely as a basis for conciliation, with the statement that it would be happy to appoint a committee to confer with a similar committee of the Board of Trade.

The Board of Trade expressed immediate concurrence with this suggestion, and appointed a special committee of three members to confer with the committee of the Council. The scheme of organization now in operation was evolved at a series of conferences between these committees. Their joint report made special reference to the proceedings of the National Conference on Industrial Conciliation, held in New York under the auspices of the National Civic Federation, and observed that the public, the employers and the wage-earners were there represented by many of the most notable public men in the United States. The words of the late Senator Hanna as to the supreme importance of bringing labor and capital into closer relations were quoted, as were several of the recommendations adopted by the conference, including the following:

That all the industries in the United States should establish boards of conciliation within the several and varied interests, to which boards of conciliation all differences and disputes arising between employer and employee, if not readily adjusted between the immediate interests concerned, may be referred for settlement.

"The Labour Gazette," issued by the Dominion Department of Labor, notices prominently the movement in the United States, under the auspices of the National Civic Federation, for industrial peace through conciliation and conference.

TEN CENTS

THE VOICE OF THE CHURCH RINGS OUT FOR LABOR.

THREE WORLD-WIDE ECCLESIASTICAL BODIES DECLARE THEIR SYMPATHETIC, UP-LIFTING ATTITUDE TOWARD WAGE-EARNERS.

The growth of interest in the moral and social aspects of the labor question is indicated by the increasing attention paid to that subject by churches. Both the Protestant Episcopal and the Congregational Churches have made inquiries into the subject through committees and their reports just made public are highly instructive. Pope Pius X, through an official letter, repeats the interest in labor expressed by his predecessor.

"The organization of labor is essential to the well-being of the working people," is the conclusion of the Standing Commission on the Relations of Labor and Capital, of the Protestant Episcopal Church, after three years' investigation.

The members of the Commission are: The Bishop of New York, Henry C. Potter; the Bishop of Massachusetts, William Lawrence; the Bishop Coadjutor of Chicago, Charles P. Anderson; the Rev. R. H. McKim, D.D.; the Rev. George Hedges, D.D.; the Rev. C. D. Williams, D.D.; Samuel Mather, Jacob Riis, and George Pinckard.

Concerning the causes of industrial disturbances, the Commission reports:

"We are agreed in the conviction that the causes of the violence of the past three years in Pennsylvania, in Colorado, and in Illinois, are not so much economical as moral.

"The strike commonly begins in distrust. The reason at the heart of it is that the master has as little confidence in the good will of the men as the men have in the good faith of the master. The employer and the employed, separated by our industrial conditions at such a social distance as to make fraternal understanding difficult, make their bargain one

with another, under these conditions, not as partners, but as competitors. Where distrust and antagonism are well founded, there is nothing for it, so far as the Church is concerned, except conversion. They who

are at fault are to be admonished, on the one side against prejudice and passion, and on the other side against covetousness and the sins which proceed from the inordinate love of riches.

in the same building; that is largely a matter of locality. But there is as much loyalty to the Church and to the Divine Head of the Church in the one class as in the other. The voice of the Christian religion reaches

both capital and labor. The Church helps to remove the moral causes of industrial strife when she brings these different members of her family into better acquaintance."

Concerning the "aim and spirit of labor organization," the report says:

"We perceive among our clergy and laity alike, much ignorance (frankly confessed and deplored) as to the principles which are involved in the conflicts of the industrial world. At the same time, it is plain that an enlightened public opinion is one of the determining factors of the situation. Every industrial dispute involves three parties,—the employer, the employed, and the public; and the public eventually casts the deciding vote. Thus a serious social responsibility rests upon every Christian citizen and, more especially, upon the Christian minister.

"We call attention to the analogy between certain offenses of the union, and like offenses, past or present, of both the capitalist and the churchman. Thus the employer's black-list corresponds to the union's boycott, and both are akin to the major excommunication. The lock-out and the strike are of the same nature, and there is no great difference between such endeavors to employ the argument of famine and an interdict which deprives a people of the blessings of spiritual life. The question of the closed shop is like the question of the closed state. Men whose Puritan ances-

tors strove to maintain a state whose privileges should belong only to members of the Church, ought to be able to understand the struggle of their

PRESIDENT ELIOT OF HARVARD ON UNIONS AND EMPLOYERS' ASSOCIATIONS.

THE RIGHT OF WORKERS TO CONFERENCE ASSERTED AND THE UNION PRONOUNCED INDISPENSABLE IN GREAT INDUSTRIES.

President Charles W. Eliot of Harvard University delivered an address before the Economic Club of Boston, on Nov. 16, in which he declared it to be the right of workmen to advise employers about the conduct of business, and pronounced the maintenance of unions to be essential. He would test the worth of employers' associations by their regard for variety of industries, for personal and public liberty and for good will. The following is a verbatim report of Dr. Eliot's address:

Employers Forced to Organize.

Since the first meeting of the Economic club the most striking fact in the development of the industrial combat—for combat it has been—is the organization of the employers. The employers were forced into these compact organizations. They found the force that could be exerted by the organization of labor; they found that these labor organizations could defeat any single employer.

They found that their only safety was to organize firm, trustworthy associations, and these associations have been formed in great number all over our country. They are, of course, various, because the interests and needs of the different trades and industries are various, and we cannot expect that the employers' association has a uniform policy.

The effort after the uniform policy which characterizes the labor-unions is, in my view, a dangerous one, whether for the unions or for the employers' associations. The diversities in the industries and occupations of the country are so great, the different conditions under which different industries are prosecuted are so widely different that I think we may reasonably distrust any efforts at universal policies, universal legislation—policies which cover a great variety of trades, or policies and legislation which are intended to produce the same rates of wages, the same hours of labor, etc., all over wide areas of our country.

I think we may reasonably distrust, I say, legislation or policies which aim at universal application. It is clear that a mode of conducting one industry which is almost indispensable to it may be entirely inapplicable in another industry, and these diversities extend to rates of wages, to the hours in a day's work, to the distribution of the hours of work through the 24 hours of the day. I look, therefore, to see the employers' association generally acting against uniform legislation affecting either wages or hours.

How should the employers' policies be characterized in general? Are there any tests which we may apply to them to distinguish the good and safe policies from the dangerous or evil policies? That is a very interesting inquiry, because the efforts of the employers' associations are becoming very strenuous,—they are becoming keenly directed against the labor unions and their policies, and it is all-important that the employers' policies should as a rule in all their diversity command public confidence and approval.

Monopolies Unwelcome.

I need not say that it is the effort after a monopoly of labor in a given trade which characterizes the fundamental policy of the labor-union. Now, if the employers show that their effort is after all directed to the attainment of a monopoly, they will lose, not command, public confidence in their efforts. Monopolies are no more welcome to the free people of the United States to-day than they were to our English ancestors 400 years ago.

The contest against monopolies granted by the sovereign for the profit of his government was one of the great steps in the development of public liberty; and it is a striking thing that under free institutions there should have arisen in our day such elaborate efforts toward the seizing of monopoly, first on the part of bands of working people, and second on the part of bands of capitalists.

Now, public confidence can be no more commanded by men seeking the first sort of monopoly than by men seeking the second sort of monopoly—the monopoly of labor on the one hand of a given trade or the monopoly of capital on the other hand. Therefore, employers' associations must acquit themselves in the public view of the suspicion that they are searching for monopoly and the means thereof.

But again, is there a test by which a rightful employers' policy may be recognized? I believe there is. And I should state it thus: An employers' association is rightful if it clearly appears that in the prosecution of that policy a single employer or the great association of employers are tending toward the development of private and public liberty.

But if the employers' policy is tending the other

way—toward the restriction of either private or public liberty, the chances are that that policy is wrong, not right, dangerous to the public weal, not beneficial.

Employers' Objects Analyzed.

Let me illustrate what I mean by this test. I have here a list of the objects of the Boston employers' association, formed within the last six months. They state their objects in this way:

- "First—No closed shop.
- "Second—No restriction as to the use of tools, machinery or materials, except such as are unsafe.
- "Third—No limitation of output.
- "Fourth—No restriction as to the number of apprentices and helpers when of proper age.
- "Fifth—No boycott.
- "Sixth—No sympathetic strike.
- "Seventh—No sacrifice of the independent workman to the labor-union.
- "Eighth—No compulsory use of the union label."

Eight objects are thus stated. Do they tend toward liberty or toward the restriction of liberty? "No closed shop." That means contending against the effective weapon of the labor union toward the establishment of a complete monopoly. This, then, is a measure toward freedom.

CHARLES W. ELIOT,
President Harvard University.

"No restriction as to the use of tools, machinery or materials." There again clearly the effort is to prevent bonds being put upon the development of the trade, or the introduction of improvements. It tends toward freedom.

"No limitation of output." That principle not only tends toward freedom, but it tends to the development of independent, different powers in the individual workman, and that is indeed a most important element of individual liberty. It tends, of course, against the most demoralizing doctrine and practice of the labor union.

"No restriction as to the number of apprentices and helpers when of proper age." Is that a policy which tends toward freedom or towards the restriction of freedom? In education we should not for a moment doubt that that policy tended toward freedom. Even Napoleon stated, and stated very briefly, the liberty which this policy tends to promote—"Every career open to talent."

"No boycott." A boycott is an illegal attack on individual traders or workers or producers. It of course is a great attack on liberty, so that this policy also works toward freedom.

"No sympathetic strike." Here again the tendency is to resist the use of a powerful weapon to promote the boycott or to cripple the producing power of a single firm or factory.

"No sacrifice of the independent workman to the labor-union." I need not say that employers have until within times still neglected extraordinarily the observation of the principle here stated. Here in Boston, for instance, we have seen strikes in industries the continuity of which was very important to the owners, non-union men called in to occupy the factories in spite of the strike, but in a few weeks the strike was settled, all the non-union men that had been called into the factories were driven out and the entire body of strikers reinstated.

We have seen that right here in our city re-

peatedly. Now is it not clear that such a policy as that on the part of employers works directly in restraint of liberty?

Is it not clear that it is the duty of every employer suffering from a strike not only to protect every man who comes to his help, but to make sure that that man continues to be employed?

Trivial Strikes Rebuked.

Is it not sure that one of the great causes of the frequency of strikes for trivial reasons—very trivial reasons even,—is the assured belief on the part of the strikers that they are only to be out a week or a few weeks, or at worst a few months, and then that they would all return to their jobs?

That is, I believe, the fundamental reason for the frequency of strikes and for the inconsiderateness with which they occur. If only this principle of this new association of employers can be enforced, "no sacrifice of the independent workmen to the labor-union," we shall see that men will strike only for serious reasons and when they feel that in striking they are endangering their jobs permanently; that they are putting themselves at risk, making themselves liable to a complete change of residence, for example,—making themselves liable to a change of occupation. I know no more valuable principle or method for the promotion of industrial liberty than this principle, "No sacrifice of the individual workman to the labor-union."

Finally, "No compulsory use of the union label." Is that a regulation which tends toward liberty?

Let us observe that the union label is, after the closed shop, the most effective weapon for securing to the labor union in any trade a complete monopoly.

The union label is an effective weapon and it is directly for the promotion of a monopoly, for the securing of monopoly, holding it up, and for enforcing the penalty of disobedience to the union.

Importance of Liberty.

I find every one of these principles to be in defence of private and public liberty. They bear that test, and I conceive that this test is one we should always apply to any proposed employers' policy. It is not in industrial affairs alone that this test may be as I conceive safely and wisely applied. I am sure it should be applied to every educational policy. It is only when the policy of school government, college government, university government tends towards liberty, that is, tends to give play to the free spirit of youth, that the policy will have any hope of living or much hope of conferring practical benefit on the community.

So with our wars and with governmental policies. Are there any wars which other generations remember with gratitude or praise except those out of which came some increase, some development of public liberty? Are there any policies safe, prudent even, except those which do away with restraint of freedom or give freer play to the native human instinct for liberty?

Good-will the Highest Essential.

But there is another test which I conceive should be applied to all employers' associations. Do they tend to promote good-will between employers and employed? After all, the great thing to be done to make the industries of any people productive is to secure the good-will of the men that labor in those industries. What is the reason that slavery is notoriously unproductive and costly? There is no good-will in it. What is the reason that any man working as he feels for himself and for the benefit of his family will work a great deal harder than a man will who has no such belief?

It is all a question of good-will. If the unions of work people in our country to-day all felt that they were working with a will for their own benefit, for their own uplifting, for their own happiness, the productivity and efficiency of labor in this country would amount to an inconceivable height. The ultimate question, therefore, is the promotion of good-will.

Now, must we not all desire that all the employers' associations and every individual employer should constantly bear in mind this test of his own tendency, of the association's tendency—Does it tend towards good-will between the employer and the employed?

How can these tendencies be secured? Only by thoughtfulness, by considerateness, by sympathy, by constant care for the right relation between the employer and the employed.

How can these feelings be expressed? Not by any form of benevolence or condescension, not by the giving of privileges or favors, but by the giving of rights, by the giving of earned privileges.

(Concluded on page 10.)

A YEAR SAVED ON THE SUBWAY BY A SANE TRADE TREATY.

HONORABLE ADHERENCE MAKES EFFECTIVE A TRADE AGREEMENT BETWEEN ORGANIZED CONTRACTORS AND ORGANIZED CRAFTSMEN.

"We saved a year," said John B. McDonald, the general contractor for building the New York Subway. "If it hadn't been for the labor agreement between the Rapid Transit Contractors' Association and the Central Federated Union, the public wouldn't have ridden in the Subway before October, 1905."

Amid all the oratory and congratulation that celebrated the opening of the New York Subway in October, there could be found not a reference to the part that the trade agreement named by Mr. McDonald performed in its construction. Yet the history of its building is a signal illustration of what can be accomplished by amicable conference between capital and labor, and of the influence of a trade agreement in preventing, with one exception, industrial disturbances and in encouraging good relations between employers and employed.

All the skilled labor employed in the actual construction of the Subway was union labor. The terms of its employment were defined by a truly collective contract, since the two parties were each composed of a number of constituents.

The smooth and successful operation of this contract excited amazement among large employers in all parts of the United States. Contractors who were having trouble with labor wondered at the reports that reached them of the steady progress of work, day and night, upon the Subway in New York. Many of them wrote requests for copies of the agreement which produced results so enviable.

This device for industrial peace was born out of discord. After the contract to build the Subway for \$35,000,000 had been awarded to John B. McDonald, and he had divided the work among sub-contractors, it became evident that mutual co-operation among them would be needed. This need became more and more apparent every day after the first spadeful of earth had been turned on March 24, 1900. The sub-contractors had acquired widely different methods of dealing with labor, through their experience in various states, with various bodies of workmen, and in various kinds of work. Co-operation was needed also among the various organizations of labor, representing many trades, employed in the tunnel. The machinery for united action among the labor organizations already existed in the Central Federated Union, a body composed of delegates from constituent trade-unions.

The general contractor, John B. McDonald, sought some corresponding method to harmonize the different ideas and methods of the sub-contractors. Work on the tunnel had not progressed far before it became evident that divers systems were developing in the several sections into which the total length of the Subway had been divided. These clashing

systems threatened to become fertile sources of discontent and trouble. Labor was quick to compare its treatment on one section with its treatment on another. Complaints and friction multiplied until they culminated in a strike involving several of the unions employed on the line. It was plainly necessary to extend over the entire line of the tunnel a system that should be uniform in every section, and that should protect equally and equitably the rights of all the contractors, while securing fair treatment to all the trades employed.

drawing of this agreement involved considerable discussion and many conferences between committees representing the two organizations. The agreement was finally perfected and formally signed on June 4, 1901. Thereafter it was the chart by which the relations between the contractors and the unions were guided until the Subway was finished. The violations of this contract were rare, and they served to increase on both sides the appreciation of its practical value in averting trouble and securing justice. The contract provided that no strike was to be declared during the progress

of the work; that if at any time there were differences that could not be decided by the Joint Committee of the Contractors' Association and the Central Federated Union, they were to be referred to arbitration. But during the years of its operation there never was a resort to arbitration, the Joint Committee succeeding in settling any disputes referred to it.

This agreement provided for the employment of union skilled labor, with the exception of foremen and master mechanics; for the eight-hour day, in accordance with the New York statute relating to public work, and for the adjustment and arbitration of grievances. The total number of organized skilled wage earners affected by the contract varied from 2,000 to 3,000. The variety of skilled labor involved is indicated by the list attached to the agreement, which includes:

Architectural Iron Workers; Plumbers and Gasfitters; Sheet Metal Workers; Pavers; Ramblers; Blue Stone Cutters; Flaggers; Bridge and Curb Setters; Marble Cutters; Polishers and Helpers; Copper-smiths; Electrical Workers; Eccentric and Standard Engineers and Firemen; Safety Engineers; Steam Fitters and Helpers; Granite Cutters; Painters; Tile Layers and Helpers; House Movers and Shorers; Double Drum Hoisters; Machinists; Pipe Caulkers and Tappers; Rock Drillers and

Tool Sharpeners; Tar, Felt and Waterproof Workers; Forgers and Blacksmiths.

The contract was signed on behalf of the Contractors' Association by George W. McNulty, Frederick Holbrook and E. J. Farrell; and on behalf of the Central Federated Union by William J. O'Brien, Edward Friday and John J. Pallas.

The members of the standing Joint Committee on Grievances for which the contract provides were three on behalf of the contractors—Messrs. McNulty, Holbrook and Farrell. On behalf of the unions there were also three members who, at various times, were John J. Pallas, William J. O'Brien, James P. Holland, Edward Friday, Matthew McConville, James P. Archibald and John A. Kilgus.

JOHN B. McDONALD,
Pres't. Rapid Transit Contractors' Association.

WILLIAM C. DOUGLAS,
Sec'y Rapid Transit Contractors' Association.

JOHN J. PALLAS,
Pres't. New York Federation of Labor.

JAMES P. ARCHIBALD,
Of Painters, Decorators and Paperhangers.

Accordingly, Mr. McDonald called a meeting of all the sub-contractors, and the Rapid Transit Contractors' Association was organized on June 4, 1901. Its officers were John B. McDonald, President; and William C. Douglas, Secretary and Treasurer. Its members were Degnon-McLean Contracting Co.; Holbrook, Cabot & Daly; Ira A. Shaler; Naughton & Co.; William Bradley; Capt. John Shields; Farrell, Hooper & Co.; John C. Rodgers; McCabe Brothers; John B. McDonald; Rufus C. Hunt; Terry & Tench Contracting Co.; E. P. Roberts; Sicilian Asphalt Paving Co., and United Building Material Co.

This Association entered at once into negotiations with the Central Federated Union for the purpose of forming an agreement which should apply to the entire construction of the Subway and include, so far as practicable, all the crafts employed. The

PRESIDENT GOMPERS' ANNUAL MESSAGE TO ORGANIZED LABOR.

THE HEAD AND THE SECRETARY OF THE AMERICAN FEDERATION ANNOUNCE GREAT GAIN IN MEMBERSHIP DESPITE ADVERSE CONDITIONS.

The address of President Gompers to the annual convention of the American Federation of Labor contained many important statements relative to the strength and the policies of that organization. Of its spirit, Mr. Gompers said:

"The immediate future is pregnant with good or ill for the people of our country. It devolves upon the organized labor movement to determine by its course the form which it shall assume.

"The constant improvement in machinery, the division, subdivision, and specialization of labor, the wonderful development in industry, and the concentration of wealth, give to the wealth possessors such extraordinary power, which, when coupled with the cunning and greed for gain, unless intelligently and comprehensively met by a well organized labor movement, will tend to the deterioration of our race, the destruction of all our achievements, and the dissipation of all our hopes.

SAMUEL GOMPERS,
President American Federation of Labor.

"On the other hand, if we are faithful to the history and traditions of the struggling masses in the past, if we shall prove true to the interests and the welfare of the hosts of labor of our day, the power calculated to injure will be diverted to the common weal, and thus open up vistas of larger opportunities and a broader conception of human rights and ennobling aspirations.

From workshop, factory, mill, and mine comes the appeal to you for comfort, aid, and relief. The yearning cry of the children of labor for emancipation from the drudgery of incessant toil to the freedom of home, the playground, and the sunshine is not heard in vain by you. The sufferings of the past, the struggles of to-day, and the hopes for a brighter and a better day for all are represented by the united and federated labor movement of our time and of our country.

"While the eyes and hearts of our fellow workers are fervently turned toward this convention, hopeful and confident that the broadest and best interests of the working people will be safeguarded and forwarded, the scrutinizing vision of our opponents and antagonists is concentrated upon our gathering and our work, ready to turn to our disadvantage and discomfiture any error of judgment of speech and action. May we not hope so to conform our course as to satisfy and gratify our friends, confound and disarm our would-be despoilers?"

The address thus treated the growth of the movement:

"The law of growth in organized labor is little understood. From the formation of the first bona fide trade-union movement in modern times it has grown with each era of industrial activity and receded to some degree with each industrial depression, but with each recurring revival in industry the degree of growth has been greater, and with each recurring period of depression it has receded to a lesser degree than its immediate predecessors. All students of our movement appreciate these facts and count with them. The antagonists and the ignorant view these natural economic changes with exultation or alarm.

"When it is borne in mind that the trade-union movement of America is, comparatively speaking, still in its infancy; when there is taken into consid-

eration the vast extent of territory as well as the makeup of different nationalities speaking foreign tongues, the great development in industry and the concentration of wealth, using its powers to prevent or crush out organizations; when all these things are given due consideration, that we have brought about any degree of fraternity and homogeneity should be counted to our credit rather than to our detriment.

"It is not necessary here to recount the advantages which have been secured by our movement in the interests of our fellow workers. Not only are our records of achievements available to all, but the better results in the home, the more material improvement, the social and moral advancement, as well as political independence, and the character and manhood of our working people, are the best attestation, demonstration, and proof of the efforts, the work, the aims, methods, and ennobling purposes of our movement.

"Our opponents must lamentably fail to prove to the toilers that their freedom is curtailed or impaired in becoming organized when the workers themselves have the indisputable proof of their enjoyment of larger vision, occasioned by fewer hours of daily, burdensome toil, as our antagonists must also fail to impress upon the wives and the children of workmen that the freedom of action of their husbands and fathers is impaired when they themselves enjoy the fruits of brighter homes, more material improvements, and the opportunities of leisure and education.

"But, despite the destructive purposes of labor's antagonists, I am in a position to report that there has been a sum total of great gain in the membership of the organizations affiliated to the American Federation of Labor."

Mr. Gompers discussed the economic effect of resistance to wage reductions:

"In former periods when an industrial reaction was manifest, employers generally viewed the situation from their own immediate standpoint only, without regard to their own broad interest or the general good. Their first recourse was to that which to them seemed the easiest course to continue the operation of their plants—to find markets. They reduced wages. Reduction of wages followed in quick order; the consuming power of the masses was curtailed and still more limited, entailing wholesale discharges of workmen who were formerly employed in producing the things the masses, the workers, formerly consumed, inducing and giving the further cause to still further entailment of consumption and production and still more discharges of workmen, until millions were unemployed; the wheels of industry and commerce paralyzed; until men were walking the highways and byways of our country in idleness, while poverty, hunger, and misery stalked through our land.

"It is held now that there can be no real natural famine in the world because of the easy facilities with which the remotest corners of the earth can be reached. Surely if this be true, and no informed, sane, reasonable being disputes it, there is an utter absence of excuse for non-employment, hunger, poverty, or misery in our land, a land so richly and bountifully blessed. When idleness and its consequent misery are permitted to come among our people it is due entirely to rapacious, sordid avarice, mismanagement, and incompetency on the one hand, or to ignorant indifference and culpable piliancy on the other. The employers generally typify the one and the workers formerly typified the other.

"If the employers followed their policy of wage reductions in previous years as a supposed way out of industrial stagnation, and thereby simply accentuated the situation and made it worse, is it not a logical inference that the same ruinous policy would be pursued in the present era?

"Are all the dire experiences and sufferings of our people to go for naught? Should we permit ignorant indifference on our part to make us culpable for a repetition of the awful conditions which followed in the wake of the former mischievous and wrongful course of our employers, or shall we continue the course which we last year declared when we had the prescience to foresee the danger with which we were threatened? Organized labor then called a halt and declared the entire policy of wage reductions unwise, wrongful, and dangerous to the well-being of labor and of all our people.

"We were fully aware that it would be impossible to prevent all wage reductions, but we can view the result of our last year's declaration of policy of resistance to wage reductions with satisfaction and pride. We can challenge our critics and opponents to compare the past year, when we were confronted with an industrial reaction, with a year of a similar industrial situation, and it will demonstrate beyond cavil or doubt that

"First. Wage reductions have been checked.

"Second. The industrial situation has not become acute, as was the uniform course formerly.

"Third. Much idleness, poverty, suffering, and misery have been prevented.

"Fourth. The era of industrial stagnation, as compared with former like conditions, has been shortened.

"Fifth. The prospect for a revival in industry and commerce in the future is brighter, as compared with any similar previous period.

"Sixth. There is less acute feeling of unrest among workmen and employers generally, business men and all our people.

"Seventh. There are more workmen and employers in agreement and understanding.

"Eighth. There is a more general effort to bring about more rightful relations between workmen and employers.

"Ninth. There is a better conception of the rights and duties of man to man, a more general satisfaction

FRANK MORRISON,
Secretary American Federation of Labor.

among our people with the present, and a more gratifying and hopeful outlook for the future.

"The results of labor's policy are our best justification.

"It is a science becoming more generally understood by labor to know when to strike and when not to strike; to know for what to strike and for what not to strike. It is said that it is not wise to strike on a so-called 'falling market.' It can not, however, successfully be gainsaid that a strike or preparedness to strike in resisting an offer of wage reduction will prevent the market from falling still lower. It may not be, and undoubtedly is not, wise or prudent to strike for wage advancement on a downward industrial trend, yet it is better that even this economic error be committed than a complacent acceptance of wage reductions.

"At the risk of criticism I repeat last year's paraphrase that in the offer of wage reductions it is better to resist and lose than not to resist at all. The resistance will at least demonstrate that labor is an equation and factor which must not be ignored in the material, economic, industrial, commercial, and social affairs and welfare of our people and our country.

Mr. Gompers declared "preparedness to strike" to be "the determining factor to bring about industrial peace on a more equitable basis," and said:

"We would abolish war, industrially as well as internationally; but its abolition must come, and it will come from conscious power, intelligent and broader humanity. May the day never come when peace is proclaimed or maintained because of the inanition of the workers. Peace, to be desirable, to be lasting, advantageous, and humane, must come from a virile and intelligent manhood. We want no peace, and there will never be peace, founded upon the servility and degradation of the workers.

"The vantage position now occupied by labor was not brought to it on a silver platter, but was contended for and won by the unity of the workers, by the burdens which they have borne, and the sacrifices they have made. More thorough organization, a greater

THE THREE CONSPICUOUS FOES OF ORGANIZED LABOR.

THE TASKS OF UNIONISM ARE TO CONVERT "PARRYISM," TO RESIST SOCIALISM AND TO CORRECT ITS OWN INHERENT WEAKNESSES.

(BY THE EDITOR.)

Organized labor is triply beset. It is assailed by its two outward foes, "Parryism" and Socialism, and is at the same time endangered by its own inherent weaknesses. It is the purpose of this article to analyze the methods of each of these outward foes and to examine the inward weaknesses of trade unionism which must be corrected if it is to survive assault from without. All society must be interested in these three perils, if in truth the movement represented by organized labor is in the interest of civilization. That is the truth that the organized labor must incessantly demonstrate, for therein lies its right to live. Unless it can maintain this warrant for its existence, organized labor must be overthrown by assault or disintegrate from essential errors.

There are organizations of capital that seek and find the establishment of honorable business relations with corresponding organizations of labor. These are composed of employers on the one side who represent the greatest investments of capital in the United States in the basic industries, such as mining, and the manufacture of iron and steel and fabrics, in the metal trades and in transportation by rail and ship; and of unions on the other side, in which the great mass of organized wage-earners is enrolled. While there are sometimes serious conflicts in these industries, the ultimate purpose of their organization is to bring about and encourage peace through negotiation. This characteristic is only emphasized by the fact that some of these organizations were formed originally to fight the unions, but have learned from experience the superiority of trade agreements to trade battles.

THE ASSAULT BY "PARRYISM."

There are other organizations of capital whose present aim is to "smash the unions." Sometimes this policy is boldly avowed, sometimes it is disguised. "Parryism" is a coined word that has grown into current use to describe the uncompromising hostility to organized labor that inspires this class of employers' associations and "citizens' alliances." These have not been formed to negotiate with labor, since they aim to destroy all organization of labor with which negotiation is possible. It is conceivable that these societies may appeal to employers whose experience has been restricted to the arrogance, excesses and brutalities of some particular union or labor leader, and who feel a natural impulse of hatred and revenge against all organized labor in general. But this attitude becomes inexcusable on the part of employers when they have looked beyond these incidental outrages and have learned to comprehend the history and philosophy of unionism. Such employers are able to understand that the organized effort to uplift labor is as distinct from labor's intolerance as is the church from the tortures inflicted in its name by the Inquisition.

"Parryism" discloses its purpose through its literature. It is a peculiar literature. Its characteristics are adroitly disguised misstatements, studied persistence in associating unionism with crime, socialism and anarchy, and, above all, constant pretense of friendship to organized labor, while advocating every conceivable plan for its disruption and disbandment. This literature, while professing friendship, is in reality the propaganda of war. It extends one hand to labor in pretended amity, and with the other would stab it in the back.

The bulk of this literature is addressed to employers, but it is designed also to deceive all of the so-called non-producing classes, and to convey to a miscellaneous audience the impression that organized labor is a foe to republican institutions and that it must be destroyed if constitutional government is to be preserved. This literature is in the form of periodicals, newspaper reports of speeches, reports of employers' associations in pamphlet form, and inflammatory circulars. Even fiction is to be employed as an agent of excitement; for a new periodical has appeared, which announces that it is "conducted under the personal guidance of David M. Parry, President of the Citizens' Industrial Association of America," and "devoted to the interests of free and independent labor; opposed to organized lawlessness, Socialism and Anarchy." A prominent feature is a serial by Mr. Parry, entitled "The Scarlet

Empire." This serial essays to treat of the relations between capital and labor "as they might become." Its lurid title suggests a red-handed reign of terror, when the "brutal tyrant," organized labor, shall have overthrown the republic and shall wave its sceptre over a wholesale massacre of capitalists, lighted by a universal conflagration of property.

"Parryism" voices incessantly the cry, "Organize." Its one perception is that of the power of well-disciplined combination. Its aim is to organize the employers of the country as a class. Its entire spirit and purpose are to inflame a class warfare. Since the class spirit is un-American, its literature is un-American.

It is both singular and lamentable that this noxious growth of appeal to selfishness and hatred should spring up at the very time when the trade-unions are growing more and more conservative. The persistent preaching of all those union labor leaders who have appreciable influence is against violence and in favor of obedience to the law. All of them oppose strikes, except as a last resort; all of them discountenance violence whenever a strike does occur; all of them advocate the establishment of industrial peace through conciliation, conference and trade agreements. But those employers' associations whose officers and organs oppose this policy aim to reduce the individual wage-earner to the lowest standard of living that can be forced upon him when he shall be deprived of the benefit of collective bargaining. They would conquer the peace of an industrial Warsaw. Despotism can not long maintain peace. The enforcement of such a relation between capital and labor could only be followed by an outbreak of abnormal virulence.

The literature of "Parryism" runs the gamut from extravagant, outright denunciation to sly insinuation.

An example of the bold, open style of assault upon organized labor is that employed by John Kirby, Jr., an officer of the Citizens' Industrial Association of America. This is a sample of the Kirby manner:

"No organization of men, not excepting the Ku Klux Klan, the Mafia, or the Black Hand societies, has ever produced such a record of barbarism as has this so-called organized labor society which, through misdirected sympathy, apathy and indifference has been permitted to grow up to cripple our industries, and trample in the dust the natural and constitutional rights of our citizens."

The following is another example of the extravagant language of Mr. Kirby:

"The labor leaders are trying to force upon the American people a universal system of slavery even more degrading and more damnable than that to which the Negro was subjected."

It is to prevent this weird and impossible culmination that this violent pleader would have all employers organize to make war upon what he calls a "Turbulent body of hohoes and aliens, who must not be permitted to turn America into a Bedlam."

President Parry of the same organization is responsible for this statement:

"Carried to its final analysis, the theory of unionism would be that if all capital were destroyed and men dug the soil with their fingers to raise the crops of the world the millennium would be here and wages would be at the top notch."

But usually the form of attack upon organized labor is more insidious. It is cloaked in the garb of solicitude for the welfare of the workingman. A pamphlet of advice as to how to organize associations of employers declares it to be the duty of the employer "to deal honorably, justly, generously with each employe." But this excellent advice is coupled with the admonition "to decline to accede to any and every demand made by officers or committees representing organized labor." Generosity is to be extended only to the individual who is willing to trust all of his interests to the tender care of the philanthropic employer. The employes must not organize. The employers must organize and their organization must, forsooth, be the sole court of appeal for questions of wages, hours and conditions of toil!

A monthly magazine published at St. Louis in the interest of the Citizens' Alliance movement, devotes many pages to a recital of all the outrages committed by or charged against the socialists of Colorado. The apparent purpose is to convey the impression that this is a proper arraignment of organized labor in general. One writer says suavely: "No one denies that labor has rights," and from this seemingly friendly premise leaps to the statement that when union by-laws "conflict with the constituted government of this country, they should be swept aside." That is absolutely true, but the implied assumption that union by-laws do conflict with constituted government is wholly unwarranted. Yet the effect of such writing upon the mind of the careless reader is to create the belief that they do. A similarly in-

sidious method is employed in an editorial which groups in one phrase "unions, socialism, crime"; which attributes to the closed shop contract "intimidation, assault, dynamiting, assassination"; which makes the sly statement: "The union man may be an ex-convict; the independent workman may be a gentleman"; and which wishes that "all Governors would enforce the law as Governor Peabody did," in order to make the open shop universal. That is, this writer advocates militarism in order to prevent the legal exclusive contract! In some comment upon disorder in Chicago, a similar suggestion is made: "If the law officers will not act, remove them and put in officers who will enforce the law. It can be done anywhere. It should be done in Illinois. It has been done in Colorado." Here is an extremist who would imitate "everywhere" the "citizens' alliances" in Colorado that presented to a sheriff his resignation and a noose and bade him take his choice of signing the one or hanging by the other; that deported citizens without trial and that burned co-operative stores.

Another article, addressed to "The Farmer," asks him to study what unionism means, and undertakes to tell him by asking such questions as this: "Suppose your barns and haystacks were burned, or suppose that some neighbor's conflagration lighted up the sky every evening?" To this supposition, the farmer is expected to reply that the only remedy would be a soldier in every barnyard and a vidette in every pasture,—all because of the grotesque spectacle of a farmhands' union that would carry the torch through the agricultural counties of the United States!

The National Association of Manufacturers is issuing a series of what may be called "fire-alarm" circulars designed to frighten employers into taking out insurance at \$50 a year. One of these quotes the advocacy of certain legislation by the American Federation of Labor and states:

"The labor organizations gained 1,024 new unions last year, embracing a membership of 300,000 individuals. Where is it going to end?"

Another circular calls attention to the use of organizers by the American Federation of Labor, and thus seeks to disturb the dreams of the pacific manufacturers:

"You may be at peace with your workmen now, but the organizer comes like a thief in the night. You go to bed in fancied security; you say boastfully 'I never had any trouble in getting along with my men. Please let me run my own business. I have been doing it for twenty-five years and I guess I am able to continue it.' This kind of talk makes the organizer laugh. You wake up out of your dream and you have a strike on your hands. The organizer has been at work while you were asleep."

If this does not frighten the manufacturer who is on friendly terms with his employes into declaring his factory in a state of war, another circular employs cunning to alarm him. The careless eye, upon glancing at this circular, would convey to the brain the inference that the American Federation of Labor had adopted a rabid socialist resolution, declaring for the "overthrow of the wage system and the establishment of an industrial, co-operative democracy." The words quoted are in big type. Only close scrutiny discovers the statement, in smaller type, that this resolution "came within four hundred votes of being adopted." The fact is omitted that the vote was taken upon an amended resolution, from which the socialist proposition had been stricken out. The rest of the circular proceeds upon the assumption that, unless all employers make war against organized labor, "Chaos and anarchy" will come "from a proposition to seize the private property of individuals,"—a proposition that the American Federation of Labor has repeatedly and overwhelmingly rejected, repeating its rejection in its recent convention.

One of the circulars with which employers are being flooded sets forth the purposes of the Dayton Employers' Association as follows:

"To protect its members in their right to manage their respective businesses in such lawful manner as they may deem proper."

This is a smooth paraphrase of the fallacious proposition that every one may do as he will with his own, without regard to the general welfare. This doctrine is the acme of selfish sordidness, and is repudiated by broad-minded employers.

"The adoption of a uniform legitimate system whereby members may ascertain who is and who is not worthy of their employment."

This is a disguised way of saying: "To form a black-list of all employes who for any reason are disliked by any employer."

"The investigation and adjustment . . . of any question arising between members and the employes."

This means the settlement of questions exclusively

by one of the interested parties, organized into an employers' anti-union union.

"To make it possible for any persons to obtain employment without being obliged to join a labor organization, and to encourage all such persons in their efforts to resist the compulsory methods of organized labor."

This is the equivalent of a declaration of discrimination against members of labor-unions, on the ground of their alleged "compulsory methods."

The circular exultantly states that as a result of the "aggressive and defiant" action of this Citizens' Association, the Labor Day parade dwindled from 9,000 in 1900 to 1,914 in 1903. It advocates a "non-union policy" which will "enforce a reorganization of trades-unionism," whatever that may mean.

But even in this circular of defiance, the pretense of friendship crops out. It declares the belief that "it is the right of labor to organize for the purpose of improving the condition of wage-earners, and that organization for the purpose of promoting the real interest of the workingmen of the country will subserve public welfare." Yet its entire programme is that of actual antagonism to unionism. It professes approval of its theory, but advocates methods whose undoubted effect would be to break up organized labor. It exults in the evidence it adduces of the loss in union membership.

The circular concludes by advocating a National Federation of Employers, which "can meet the American Federation of Labor on its own ground, defeat its unlawful undertakings, counteract its baleful influence and restrain its evil tendencies."

The Rev. William H. Boeteker is described as "a personal representative of D. M. Parry" and the editor of a publication of the Citizens' Industrial Association. A report of a recent address delivered to a "secret" meeting of manufacturers, merchants, contractors, and professional men at Evansville, Indiana, quotes him as declaring himself "the earnest friend of the workingmen, and as saying:

"The Citizens' Alliance consists of both employers and employees. It is secret because in secrecy is its greatest strength. It has signs of recognition, passwords and signs of distress.

"The organization is friendly to workingmen. In nine days I saw in one city 1,200 union men reduced to 62, and join the Citizens' Alliance. We are not opposed to unionism as such. They have a perfect right to organize. The unionist says the world owes every man a living. He never thinks that he owes something to the employer as well. We believe a man ought to get good wages because he earns them, not because he belongs to the union."

It is appropriate that such a hodge-podge of self-contradictory pretense of friendliness to unionism and frank declaration of hostility to its purposes should be addressed to a "secret" meeting. It would have run the risk of correction in an open meeting, which might have been attended by some one more accurately informed as to the philosophy and history of organized labor and its true relation to wages and conditions of work. Pretense accompanied by flagrant misstatements of fact can never withstand the light of day or the illumination of free speech.

Herbert George, President of the Citizens' Alliance of San Francisco, boastfully emphasizes its especial antagonism to the trade agreement:

"Up to date we have not lost a single fight we have gotten into, nor has there been a trade agreement signed up to our knowledge since the first day of May."

Some of the "alliance" literature advocates various plans, characterized by legal ingenuity, to undermine organized labor. The "Bulletin" of the National Metal Trades Association publishes a form of agreement with individual employees which is an adroit anti-union device. It makes the employee agree that "he will not quit such employment during the life of this agreement because of the grievance of any other person or persons, or in the furtherance of any strike or demand of any other person." That is to say, the contracting employee who is a member of a union binds himself not to strike, if his union orders a strike. To secure the keeping of this pledge, the employer credits each contracting worker with five cents for each ten-hour day, and the worker agrees to the deduction of an equal amount from his wages, also to be placed to his credit. The total of this accumulated joint fund is to be paid to the worker at the end of the agreement, provided he has kept all its terms. The effect of this arrangement is that in case a worker should strike, or should vary one jot or tittle from shop rules, he would lose both the accumulated deduction from his wages and the equal sum placed to his credit by the employer. He both loses a premium and incurs a penalty. The two sums in the course of a year would amount to \$30. In order to clinch legally the employer's hold upon this fund, the agreement makes the employee responsible for \$40 as liquidated damages to the employer from any breach of the contract. These damages are to be paid out of any wages due and from the joint fund previously described. The union man who signs such a contract would thus sign away his right to strike upon any issue whatever; and would sign a lien upon any balance due him in wages to an

amount greater by \$10 than the possible accumulation of the premium-penalty fund in the course of a year.

Incidentally, the employer would make a substantial gain. If he employed 5,000 men, he would have deducted from their earnings at the end of a year the tidy sum of \$75,000. For nine months he would have the use of \$18,000; for six months of \$37,000; for three months of \$56,000—all without interest and with the opportunity of absolute confiscation at his caprice. Such a fund would be a constant temptation to provoke a strike against unendurable conditions.

Advocates of the "smash the unions" policy are encouraging a subtle plan to undermine the influence of organized labor. Taking advantage of a period of industrial depression, which has increased the number of unemployed and lessened the strength of unions in negotiating terms of labor, employers' associations have established employment bureaus in various trades. The management of such a bureau in Chicago asserts that it is not formed to fight the union, and yet admits in the same breath that no man can hold one of its certificates and be loyal to his union. The pretended friendship of such employment bureaus to organized labor can not be taken seriously.

The method of these employment bureaus is to issue certificates to applicants who meet their approval. The bureaus require that those who receive these certificates must have worked at least one year in their present employment, or at least sixty days during a strike. The certificates are to show that the holder has rendered faithful service to members of an employers' association "at certain times"; commend the holder to all employers' associations, and promise "to permanently take care of the men who have worked for members of the association during labor troubles."

The true purpose of such a bureau is disclosed in the latest report of the Commissioner of the National Metal Trades Association, who stated:

"The Association has established a certificate system for tried and true workmen, who have been faithful to us during strikes. While the number of these certificate men is not large, it grows with each strike, and we shall soon have quite a body of these men whom we know can be depended upon in case of trouble."

There is no hypocrisy about that statement. It is the frank announcement of a tactical method in industrial war.

This discrimination is warmly urged upon employers by F. C. Nunemacher, of Louisville, who said in an address to the United Typothetae of America:

"The open shop means much to the non-union workman, and as he is the only helper that the employer has in preserving his own individual rights in his own plant, there is no question as to the duty of the employer in the premises. He must, as a true man, see that these non-union men who have been his helpers in time of trouble are at all times treated with greatest consideration and given all needed protection."

A conspicuous feature of the new organ of "Parryism" is an "Independent Labor Bureau." This is announced in this language:

"Independent or free labor is as much entitled to employment as union labor. In fact, if the whole truth be told, it is more entitled to employment than union labor. As union labor takes the position that independent labor shall not be employed, it cannot complain if it finds that it itself is the kind of labor discriminated against instead of independent labor. Simple justice dictates that those who are denied their rights should receive special consideration at the hands of all who have employment to offer."

Are not all these devices and declared purposes direct incitements to organized labor to fight for the closed shop? Are they not direct appeals to employers to discriminate in favor of the non-union worker? If all fear of such discrimination could be dissipated, the question of the closed shop would work its own practical solution in the various crafts. But when the open shop is openly declared to mean special consideration for non-union men, it is equivalent to a declaration of war against the union. It is but natural that the union should fight for its life.

THE ASSAULT BY SOCIALISM.

It has been shown that the "smash the union" class of employers' associations and citizens' alliances assail organized labor with every variety of language, from extravagant denunciation to insinuation veiled with pretended friendship.

But organized labor faces another foe. That foe is Socialism.

It is a favorite charge of the agents of the hostile associations of employers that the trades-unions are synonymous with socialism.

There is no doubt a widespread confusion of mind as to the relation between trades-unionism and socialism. They are in fact absolutely antagonistic in both doctrine and method. The socialists and the

unionists understand this well. The general public does not, because not one in a thousand clearly knows what socialism means. The average mind confuses socialism with its antithesis, anarchism, or with half a dozen other isms, most commonly perhaps with the public ownership of such utilities as gas and water works and street railways.

If a clear definition of socialism be made, the reason for its enmity to the labor union will be plain.

Socialism, in its own words, (in the platform of the Socialist Labor party) demands "the restoration of the land and all of the means of production, transportation and distribution to the people as a collective body, and the substitution of the co-operative commonwealth for the present state."

Eugene V. Debs, the Socialist candidate for President, went about the country shouting these sentences:

"The tool-less worker is an industrial slave."

"The tool-owning capitalist is an industrial master."

The socialist, through political action, would turn over to the state the factory, the machinery it contains, the land on which it stands.

This is wholly opposed to the programme of the trades-unions, which would negotiate for the employees just terms with the employing owner of the factory.

The socialist would eliminate the employer and confiscate his property. This purpose is stated by the "International Socialist Review," in a manner especially interesting to the anti-union employers' associations: "Socialism will not ask for shorter hours or a few cents more wages, but will ask the whole produce and point the way for the employer to pass down and out of the industrial field. . . . They (the socialists) ask no arbitration. They do not recognize that the employer has any rights to arbitrate."

The Trade-Unionist would treat with the employer for the development of his factory for a fair share in the profit of its productivity.

The programme of trade-unions is strictly economic.

The programme of socialism is economic and political.

The two theories are absolutely opposed. The two methods are absolutely contradictory.

Hence, the socialists logically seek to destroy the trade-unions, either by outward assault or internal perversion, and to gather their disintegrated membership into a political party, to whose programme of confiscation their suffrage is essential.

Socialists regard every benefit to wage-earners, achieved by organized labor, as a palliation of discontent and a postponement of the revolution that they hold to be necessary and inevitable. The socialist is always painting the picture of society in the darkest colors. The trade-unionist assents as to existing evil, but contrasts that with the past and shows that the picture of to-day is brighter than the picture of yesterday. The socialist abhors every present betterment of industrial conditions. The unionist exults in such betterment. The socialist denounces what he calls industrial slavery; the unionist asserts that he represents industrial freedom.

The union leaders recognize this incompatibility. Delegate White said at the Boston Convention of the American Federation of Labor:

"To throw our movement into the political arena would be injecting a firebrand of discord that would soon scatter it to the four winds of heaven. When it is so difficult to get the workingmen to agree upon the simply every-day issues, how can you expect to get them to agree upon the complex propositions that political action involves?"

The socialists have two methods of attacking organized labor. One is to assail it from without, the other is to pervert its membership; to sink its ship by "boring from within."

The method of assault from without is exemplified by the platform adopted by the socialist labor convention, which declares that:

"The bulk of what is called the Trades-Union Movement of America now threatens to throttle the Labor Movement, and as such has become what the capitalist 'Wall Street Journal' triumphantly greeted it with,—'one of the strongest obstacles in this country to socialism.'"

"Gompers Unionism befores the workingman's intellect with capitalist economics and it hounds Socialist or working class economics out of its camp, under the false pretense that such economic teachings are 'politics' and that they 'divide the working class.'"

"Gompers Unionism acts as a parachute to the downward course of Labor's condition, rendering the decline insensible and even seeking to conceal it."

"Gompers Unionism is a prop of capitalist society; it is a wheel in the machinery of capitalism; it is essentially the revamped guild of capitalism in the days of capitalist infancy; it is a job-trust, and as such has no part in the Labor Movement."

The same declaration suggests also the organization of straight, out and out socialist unions, to fight the present labor unions:

"We consider it the duty of the militant socialists of the land to join to their political endeavors the economic endeavor of promoting the industrial organization of the working class into unions that shall remain true to the class struggle spirit that gives unionism its birth, instead of degenerating into hand-maids of capitalism."

The Socialist party of Texas adopted a plank pronouncing the American Federation of Labor a futile failure and declaring:

"There is one form of trade-unionism, and only one, that can be made to subserve the interests of the working class. This kind of union must be committed to the program of the international movement for the emancipation of the working class, and must be in the nature of a training school for the political expression of that movement. It is already taking form in what is known as the Socialist Trade and Labor Alliance of the Socialist Labor party in the East and in the American Labor Union allied with the Socialist party of America in the West."

This expression was hailed by the "People," the organ of the Socialist Labor party, as heralding the time when, "as the rushing of mighty streams, the socialists of the East and of the West will join indissolubly and, a resistless torrent, crash through all the fakir out-posts of the capitalist class (The labor unions) and sweep capitalism out of existence."

The Socialist Labor party issued a "call to arms" for the recent campaign that throws some interesting light upon its attitude toward unionism. This "call" declares that the workers are "finding the pure and simple union a hollow reed to lean upon" and announces that now "is the psychological moment of which the Socialist Labor party must avail" itself. A part of its campaign plan is thus stated:

"Wherever dissatisfaction exists amongst members of pure and simple trades-unions in consequence of sell-outs by the fakirs, lost strikes, or other causes, let no stone be returned to make these men acquainted with the Socialist Labor party position on trades-unions and with the Socialist Trade and Labor Association, by distribution of suitable literature, meetings, personal contact, and in every other way that can be devised."

"The systematic distribution of leaflets at factory gates, morning, noon, and night, and in workmen's districts on Sunday mornings, is working well in New York State. On with the war against Capitalism."

A recent instance of the quickness with which the socialists seize a lost strike as an opportunity to invade the field of organized labor occurred in the Chicago stock-yards. Promptly after the end of the meat strike, socialists began forming in the stock-yards organizations antagonistic to the Amalgamated Association of Butchers, a branch of the American Federation of Labor. They distributed a circular reading:

"Why have you lost your strike? Your union was affiliated with the American Federation of Labor, which boasts of 2,000,000 members. You have suffered the most crushing defeat in the history of organized labor. Why? You are not properly organized. The whole mass is loosely connected with the American Federation of Labor, which is absolutely powerless to make a united successful fight against anything and whose leaders hobnob with your enemies in Civic Federation."

The "People" gloated over the diminution of the Labor Day parade this year as much as did the unfriendly employers' organs:

"Despite the big expectations of the Central Federated Union fakirs and their cringing Kangaroo trades who have deserted May Day to cater to the pure and simple by taking part in a capitalist Labor Day parade, yesterday's turnout of the 'marching hosts of labor' was not so vast and glittering a cavalcade."

But the most dangerous effort of the socialists against organized labor is that directed to its disintegration from within. It is the votes of the unionists that the socialists are after. Jack London, a socialist writer, has defined, in the "Independent," the partisan aim of socialism, with an open candor whose almost brutal frankness bespeaks the confidence of fatalism:

"This revolt in the form of demands for an increased share of the joint product is being carefully and shrewdly shaped for a political assault upon society. . . . The leaders intend to direct the labor revolt to the capture of the political machinery of society. . . . With the control of the police, the army, the navy, and the courts, they will confiscate, with or without remuneration, all the possessions of the capitalist class which are used in the production and distribution of the luxuries and necessities of life. They mean to apply the law of eminent domain to the land and to extend the law of eminent domain until it embraces the mines, the factories, the railroad and the ocean carriers."

The "insidious," instead of the violent, method of disrupting the unions is described by the same writer:

"The socialists turned their energies upon the trade-union movement. To win the trade-unions was well-nigh to win the victory."

"Instead of antagonizing the unions, the socialists

proceeded to conciliate the unions. 'Let every good socialist join the union of his trade! Bore from within and capture the trade-union movement.'

"To-day the great labor-unions are honey-combed with socialists. At work and at play, at business meeting and council, their insidious propaganda goes on. Night and day, tireless and unrelenting as a mortgage, they labor at their self-imposed task of undermining society."

"The battle plan of the socialists is to organize the working class and those in sympathy with it into a political party, with the object of conquering the powers of government and using them for the purpose of transferring the present system of private ownership of the means of production and distribution into collective ownership by the entire people."

This is the "insidious" campaign that the leaders of organized labor are fighting, and successfully. Year after year, the American Federation of Labor, in its convention, rejects socialist resolutions. Its convention last year in Boston defeated a socialist resolution, upon a clear-cut issue, by a majority of 10,000 to 1,000. That the leaders of the American Federation of Labor thoroughly realize the hostile animus of the socialists was shown in the speech delivered by Samuel Gompers in Faneuil Hall, Boston, at its twenty-third annual convention. Mr. Gompers said:

"I shall not refer at this time to their very many detailed acts of treachery to the trade-union movement; but I shall show you that though they may believe themselves to be trade-unionists, they are at heart, and logically, the antagonists of our movement."

"When the socialists formed the American Labor Union in rivalry to the American Federation of Labor, I took occasion to continually say in the 'American Federationist' that it was but another attempt to form another Socialist Trade and Labor Alliance, without its practical courage to openly declare its enmity to the American trade-union movement."

"I want to tell you, Socialists, that I have studied your philosophy; read your works upon economics, and not the meanest of them; studied your standard works, both in English and German—have not only read, but studied them. I have heard your orators and watched the work of your movement the world over. I have kept close watch upon your doctrines for thirty years; have been closely associated with many of you, and know how you think and what you propose. I know, too, what you have up your sleeve, and I want to say that I am entirely at variance with your philosophy. I declare it to you, I am not only at variance with your doctrines, but with your philosophy. Economically, you are unsound; socially, you are wrong; industrially, you are an impossibility."

This year's convention of the American Federation of Labor in San Francisco defeated another socialist resolution by a majority so overwhelming that its advocates did not even ask a roll-call. A socialist anti-militia resolution was also overwhelmingly rejected.

But despite these rebuffs, socialism continues to strive for the overthrow of the trade-union movement, both by bitter denunciation and by luring it into a political morass with the ignis fatuus of a "co-operative commonwealth."

As politics is said to make strange bed-fellows, the common antagonism to the unions of the socialists and the radical employers' associations has brought them into apparent alliance. The "People," the daily socialist paper, heartily endorsed the speech of President Parry at New Orleans, quoted in the previous chapter, in this language:

"President Parry is right. An equitable arrangement of wages and hours can not be effected by the 'artificial' method of arbitration or conciliation. An 'equitable arrangement' can only be effected by allowing the class struggle full scope, and as a means to this end nothing is so much to be welcomed as the 'straight-out tactics' of the anti-union employers' associations. Socialism will triumph as a result."

Eugene V. Debs said recently in Faneuil Hall, Boston: "Parry is doing a better work for us than we could do for ourselves. As Mr. Pure-and-Simple Union Man is crushed, his eyes are opened to the fact that he must transfer his efforts to the political field."

That this friendly feeling of the socialists is reciprocated is indicated by the following complimentary statement by President Parry in an interview in the Indianapolis "News" just after the presidential election: "The great personal magnetism of Mr. Debs also counted for much in the large vote polled for him. As a labor leader he has kept himself clean and above suspicion in every way. While I can not approve of the methods used by him in the railroad strike, yet all fair-minded men must admit that he has much ability and force of character. Naturally, such a man is bound to have a large following."

THE INHERENT PERILS OF UNIONISM.

These assaults by "Parryism" and Socialism make it the duty of those who are convinced that the movement of organized labor is in the interest of civiliza-

tion to aid in perfecting its discipline. If it is to win success it must discover its own weaknesses and remove them. What, then, are the inward weaknesses of organized labor? What measures are its leaders and its councillors taking to correct them, and with what success?

Some of the perils that sharply beset organized labor may be discerned in the attacks of its enemies, who naturally direct their assaults against its weakest points. Its most bitter assailants select for their attack violence during strikes; venality among officers of unions who are authorized to deal with employers; and failure to stand by trade agreements.

Now, every one of these indictments can be supported in individual cases. Every one of them is an admitted wrong, whenever and wherever it occurs. Every one of them is indefensible. It is no defense to say that violence is exceptional and may be provoked; that there is vastly more "graft" in politics and in commerce than in the unions; that vastly more agreements are violated in the world of business than in the field of labor. Neither can arbitrary and unreasonable restrictions be defended on the ground that there are some restrictions that can be justified. Nevertheless, these indefensible evils are not in themselves the greatest weakness of organized labor. Rather are they symptoms of weakness, and they will progressively diminish only as the weakness that causes them is overcome.

The real, underlying weakness of organized labor is the apathy of the mass. In that respect unionism suffers as does every other organized movement. The leaders of political parties have no greater task than to overcome apathy in recurrent campaigns. It is apathy of citizenship that makes possible malfeasance in public office. It is moral apathy that permits the growth of "graft" in business. The church itself incessantly struggles against apathy in recruiting and maintaining its membership. Now and then there is an upheaval of sentiment that substitutes energy for this apathy, as in the culmination of a political campaign, or when political "graft" and business corruption are exposed, or when a religious revival sweeps thousands into the fold of the church. At such times, these organized movements exhibit their greatest strength. They have made real progress only if the pendulum does not swing all the way back to its extreme former position.

Because of the nature of its constituency and because it is nearly a pure democracy, the labor-union is peculiarly susceptible to this weakness. A chilling inertia often characterizes its membership. This is born of the lack of self-assertion, which is the natural characteristic of the average son of toil. By inheritance he is accustomed to his lot. Even in a land of opportunities, it is hard to overcome this temperamental inertia and arouse the worker to the actual practicability of improving his condition through organized effort. The real work of the union, it must be remembered, demands constant effort. But this necessity is often not realized by members. Moreover to maintain that effort is an addition to the necessary burdens of the day that it is a strain to meet. The temptation is constant to shirk the obligations of the union in attendance upon meetings, in activity for mutual improvement, and in payment of dues.

It is this apathetic inertia that every now and then permits the management of a local union to fall into the hands of a ring. The rough, boisterous element may attend its meetings. The better element, including the married men, may stay at home. The result is that the reckless gain control, and an unwarranted strike may follow, under turbulent leadership. Violence will be widely advertised and the blame charged against the whole body of organized labor. Or instead of recklessness, crafty cunning may gain control; and then a Parks or a Weinshelmer is evolved. Or men without moral fibre or education in business honor may break a trade agreement; and then the "faithlessness" and "lack of responsibility" of unionism will be proclaimed.

Another outcome of this apathy is the poor financial condition of many unions. The contrast between British and American unionism in this respect is familiar. The British unions have developed systems of payments of benefits for out-of-work, for traveling to places where work is available for injury or sickness and for death, simultaneously with maintaining a "defense" fund in anticipation of strikes. While similar systems exist together with insurance, in some bodies of labor in this country, as in the railway brotherhoods, the cigar-makers' union and the typographical union, in many crafts they are still to be brought into extensive and efficient operation. The American workman is keenly suspicious about the financial conduct of the union. "What becomes of my dues?" is his jealous query, that can be answered only by the regular publication in the journal of his organization of detailed financial reports. This spirit is wholesome in so far as it compels honestly conducted treasuries; but it adds to the inertia to be overcome. Again, the average worker does not always comprehend the actual pe-

(Concluded on page 16.)

MONTHLY REVIEW

OF THE

National Civic Federation

Offices: 281 Fourth Avenue, New York City
RALPH M. EASLEY, Editor

The Editor alone is responsible for any unsigned article or unquoted statement published in THE MONTHLY REVIEW.

The National Civic Federation

OFFICERS.

Samuel Gompers, First Vice-President.
Oscar S. Straus, Second Vice-President.
Henry Phipps, Chairman Executive Committee.
August Belmont, Chairman Finance Committee.
Cornelius N. Bliss, Treasurer.
Charles A. Moore, Chairman Conciliation Committee.
H. H. Vreeland, Chairman Welfare Department.
Francis L. Robbins, } Chairmen Trade Agreement Com.
John Mitchell, }
Ralph M. Easley, Chairman Executive Council.
Samuel B. Donnelly, Secretary.

EXECUTIVE COMMITTEE.

ON THE PART OF THE PUBLIC.

Grover Cleveland, ex-President of the United States, Princeton, N. J.
Andrew Carnegie, capitalist, New York City.
Cornelius N. Bliss, ex-Secretary of the Interior, New York City.
Oscar S. Straus, member of the Court of Arbitration at The Hague, New York City.
Charles W. Eliot, President Harvard University, Cambridge, Mass.
Archbishop John Ireland, of the Roman Catholic Church, St. Paul, Minn.
Bishop Henry C. Potter, of the Protestant Episcopal Church, New York City.
David R. Francis, President Louisiana Purchase Exposition, St. Louis, Mo.
Isaac N. Seligman, of J. & W. Seligman & Co., New York City.
James Speyer, of Speyer & Co., New York City.
Charles Francis Adams, Publicist, Boston.
John G. Milburn, lawyer, New York City.
V. Everit Macy, capitalist, New York City.
Charles J. Bonaparte, lawyer, Baltimore.
Ralph M. Easley, Chairman Executive Council, New York City.

ON THE PART OF EMPLOYERS.

Henry Phipps, director United States Steel Corporation, New York City.
August Belmont, President Interborough Rapid Transit Company, New York City.
Lucius Tuttle, President Boston & Maine Railroad, Boston.
Frederick P. Fish, President American Bell Telephone Company, Boston.
Francis L. Robbins, President Pittsburgh Coal Company, Pittsburgh.
Henry G. Davis, Coal Operator, Elkins, W. Va.
H. H. Vreeland, President New York City Railway Company, New York City.
Samuel Mather, of Pickands, Mather & Co., Cleveland.
Charles A. Moore, Manning, Maxwell & Moore, New York City.
Franklin MacVeagh, of Franklin MacVeagh & Co., Chicago.
Charles H. Taylor, Jr., President American Newspaper Publishers' Association, Boston.
Dan R. Hanna, of M. A. Hanna & Co., Cleveland.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
Otto M. Eldlitz, Chairman Board of Governors, Building Trades Employers' Association, New York City.
William H. Pfahler, former President National Founders' Association, Philadelphia.

ON THE PART OF WAGE EARNERS.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President United Mine Workers of America, Indianapolis.
E. E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
James Duncan, General Secretary Granite Cutters' National Union, Washington.
Daniel J. Keefe, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.
Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers.
P. H. Morrissey, Grand Master, Brotherhood Railroad Trainmen, Cleveland.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit, Mich.
Theodore J. Shaffer, President Amalgamated Association of Iron, Steel and Tin Workers, Pittsburgh.
J. J. Hannahan, Grand Master Brotherhood Locomotive Firemen, Peoria, Ill.
James O'Connell, President International Association of Machinists, Washington.
John Tobin, General President Boot and Shoe Workers' Union, Boston.
Joseph F. Valentine, President Iron Moulders' Union of North America, Cincinnati.
James M. Lynch, President International Typographical Union, Indianapolis.
Dennis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.

ARBITRATION TREATIES AND LABOR.

The natural sympathy between the movements for international peace and for industrial peace, illustrated by every speaker at the luncheon tendered to members of the Interparliamentary Union of the National Civic Federation, receives further recognition in the preparations for the mass meeting in New York in the interest of arbitration treaties. The executive committee in charge of that meeting, appointed by the chairman of the American Conference on International Arbitration, includes men prominent in the movement for industrial peace. The recent announcement that the terms of an arbitration treaty have been agreed upon by the representatives of the United States and Great Britain is significant of the spirit that views with pitying horror the enormous sacrifices of war and that encourages the adjustment of international disputes by the very methods of conciliation and arbitration that are invoked to settle controversies between capital and labor.

PRESIDENT GOMPERS' ADDRESS.

Conservatism and intelligent enterprise characterized the proceedings of the twenty-fourth convention at San Francisco of the American Federation of Labor. Socialism met its overwhelming annual defeat. Its proposed overthrow of the wage-system and its opposition to membership of wage-earners in the militia except by conscription after the Swiss plan, were rejected overwhelmingly. This action by delegates representing 1,676,200 workers should carry conviction to the public mind that organized labor repudiates industrial revolution and associates patriotism with humanity.

With these victories there deserves to rank an affirmative declaration. That is the exhortation to the rank and file of organized labor to devote a large share of the time spent in local union meetings to studies and lectures upon economic subjects. The adoption of this resolution for education will go far to refute the assertion,—which is now made seriously by but few employers,—that the shorter work-day will mean abuse of added leisure by the mass of wage-earners. The prevailing spirit among the toilers of the land is that of self-helpfulness; there surely will not fail a response of encouraging reciprocity from those who work more with the brains than with the hands to this self-reliant determination to supplement manual skill with mental expansion. Education, as is pointed out elsewhere, is the best correction for that inertia of the mass which is common to all democratic organization.

The address of President Gompers is marked by breadth of view and economic insight. He makes a strong argument in support of the policy, which many question, of resistance to wage-reduction in periods of industrial depression. He exults in the progress of agreement and understanding between employers and workmen and in the extension of effort to bring about more rightful relations between them.

There will be surprise at Secretary Morrison's announcement of an increase in membership of 210,400, during a year of adverse conditions. Such a growth during such a time indicates sturdy increase in a movement that requires wise leadership and invites thoughtful counsel.

FOR ECONOMIC EDUCATION.

The Department of Industrial Economics of the National Civic Federation has been formed to extend education in the subjects that are vitally associated with the relations between capital and labor. These topics are largely economic, and require the most thorough elucidation. Even conscientious students of the labor question, who approach it from the point of view of either the capitalist or the wage-earner, are liable to deception by plausible fallacies. Editors, scholars and publicists are sometimes puzzled to detect the flaw in an ingenious proposition. Speakers from platform and pulpit and learned college professors have been known to enunciate as *ex cathedra* doctrines which are open to debate. The keen interest in these topics is indicated

by the ready acceptance of the invitation to join in their consideration.

This Department promises to be the most comprehensive and far-reaching movement for education upon industrial topics ever inaugurated in this country. It aims at the evolutionary rather than the revolutionary method of dealing with capital and labor. It enlists as co-operative forces the metropolitan press, the labor press, the magazine and book, the bar, the platform, the university and the church.

DR. ELIOT FOR UNIONS AND CONFERENCE.

President Eliot of Harvard University, in his address which we publish upon another page, advances two propositions of the highest importance as bearing upon the relations of employers and employed. This eminent scholar and thinker recognizes that workingmen "have a right to confer with" their employer and "advise him about the rules of the works." This advanced view discards absolutely the old-fogy notion that the employer may do as he will with his own and that he may run his own business in his own way with utter disregard to the feelings and the welfare of the human beings who work with him as well as for him. Dr. Eliot's other notable declaration is: "It is essential that the organizations of the workpeople themselves should be maintained and should be recognized by the employer and the associations of employers." These words are a clear-cut and definite rejection of the design of certain employers' associations to destroy the unions. Dr. Eliot's approval of the avowed objects of one local employers' association arises from his insistence upon the preservation of individual liberty, of which some sacrifice is implied in all organized effort for the up-lifting of a social group. The eight objects which he avers are consistent with the maintenance of individual freedom are in large part debatable questions of detail which, with the two chief policies established, that Dr. Eliot advocates without reserve, would soon work out their solution in practice. They are objects that we will undertake to discuss in detail in the next issue of THE MONTHLY REVIEW. He well estimates as "inconceivable" the effect upon productivity of those two methods of establishing good-will between organized employers and wage-earners.

THE SOCIALIST VOTE.

There is a misapprehension in certain quarters of the significance of the vote cast for Eugene V. Debs, the Socialist candidate for President. Some of the "smash the union" employers' associations would add to this misapprehension by efforts to confuse Socialism with organized labor.

The vote for Debs is not a true measure of the growth of Socialism. Its estimated total of 500,000 in 1904 seems impressive at first glance, when compared with Debs' 97,730 votes in 1900. But it is of general knowledge that a large number of citizens cast their vote for Debs as a negative protest. A large fraction of the Debs vote is not, therefore, indicative of a growth of Socialist sentiment, but is expressive of the discontent of certain radical groups with the principal parties. For instance, in Chicago the Single-taxers, who are Individualists, not Socialists, openly exhorted their followers to vote for Debs.

In Massachusetts, where the election of Douglas was a conspicuous result of scratched ballots, Socialism lost ground, its vote falling from 33,629, in 1902, to 20,000 in 1904. It is especially significant that in a State where Socialism has elected several mayors and members of the legislature, its lack of administrative and legislative ability has been such as to forfeit whatever political positions it had gained. The theory of political Socialism did not stand the test of practice.

In Colorado the "labor vote" was undoubtedly largely cast for Adams, as the direct way of getting at Peabodyism. It was Peabodyism, not Socialism, that was the issue in Colorado. The Socialist leaders themselves recognize that they cannot claim the increase in the vote for Debs as an increase in the vote for Socialism. The Debs organs are exhorting their readers to make special efforts to make real Socialists

out of the various groups of the discontented whose votes for the Debs ticket may be lost to that party another year.

A WELFARE DEPARTMENT CONFERENCE.

The conference of members of the Welfare Department, held in New York City on November 15, was characterized by consideration of several specific subjects. The papers and their discussion were of such importance as to warrant their verbatim publication in pamphlet form. Many inquiries addressed to the Welfare Department are evidence of widespread interest in these and kindred subjects. The paper upon "Railway Provident Institutions," of which the first instalment appears in this issue of THE MONTHLY REVIEW, presents the views of one qualified to write as an expert upon that subject. The Assistant Comptroller of the Pennsylvania Railroad Company, Max Riehnack is a member of the Advisory Committee and Chairman of the Supervisory Committee of the Relief Department, and Secretary of the Board of Officers of the Pension Department. He has been largely instrumental in maturing and promoting the provident undertakings of that railway system. He was selected by the Permanent Commission of the International Railway Congress, whose membership is recruited from the highest officials of the leading railways of the world, to report upon "Railway Provident Institutions," for discussion at the seventh session of that Congress, to be held at Washington, D. C., next May. In another paper, E. H. Perley describes interestingly the operation of an employees' bank in a newspaper establishment. Its purpose is to enable faithful employees to escape loan sharks when emergency causes their expenses to exceed current income.

AN INTERESTING DISAVOWAL.

The call for the fourth annual meeting of the National Executive Committee of the Civic Federation pointed out that the organizations of employers having the largest investments of capital in the United States in the basic industries sought and found honorable business relations with organized labor. But the call also stated:

There are other organizations of capital whose present aim is to smash the unions. Sometimes this policy is boldly avowed; sometimes it is disguised. Uncompromising hostility to labor inspires this class of employers' associations and citizens' alliances. These have not been formed to negotiate with labor, since they aim to destroy all organization of labor with which negotiation is possible.

To this statement, exception was taken by David M. Parry, President of the Citizens' Industrial Association of America and of the National Association of Manufacturers, in whose behalf the following reply was published:

We know of no organization of employers whose aim is to smash unions, and if this passage is aimed at us it is altogether wide of the mark. We certainly do not aim to smash the unions, and have no hostility to unions as such. We are opposed, however, to the principle of coercion or force in unions and believe that unions which are conducted properly are not only not a disadvantage, but may be a benefit to the workers. At the same time we have not, like the Civic Federation, a Bishop or a Gompers or a Mitchell in our body, and we do not invite the general public to mix in our affairs.

This announcement that the "smash the union" shoe does not fit Mr. Parry and that the organizations of which he is President have "no hostility to the unions" is news as welcome as it is surprising. It is possible that an erroneous impression of the purposes of his organizations has been caused by the great mass of utterances concerning organized labor that have been attributed to Mr. Parry and his associates. Certainly his announcement is in welcome contrast to statements here quoted selected at random from several hundred. The Rev. William J. H. Boeteker said at Evansville, Ind.:

The Citizens' Alliance consists of both employers and employees. It is secret, because in secrecy is its greatest strength. It has signs of recognition, passwords and signs of distress.

The organization is friendly to workingmen. In nine days I saw in one city 1,200 union men reduced to 62, and join the Citizens' Alliance. We are not opposed to unionism as such. They have a perfect right to organize. The unionist says the world owes

every man a living. He never thinks that he owes something to the employer as well. We believe a man ought to get good wages because he earns them, not because he belongs to the union.

The reverend speaker was introduced to the meeting to which he addressed these remarks as "a personal representative of D. M. Parry" and the editor of a publication of his Association. In view of this relation, Mr. Parry's denial that any Bishop belongs to that body appears rather technical. It is true that the Rev. Mr. Boeteker has not yet attained the rank of a Bishop, but his activity indicates that he is not devoid of ambition.

But surprise grows into amazement upon reading the following, ascribed to Mr. Parry himself:

This is not the proper time to talk conciliation. . . . An attitude of conciliation would mean an attitude of compromise with regard to fundamental convictions. . . . Neither is it the time to talk arbitration or trade agreements. To arbitrate questions of wages and hours is to introduce artificial methods. . . . An equitable arrangement as to either cannot be effected artificially. . . . Arbitration is only putting off the day of reckoning.

Amazement becomes astonishment, when the Chairman of the Executive Committee of the Citizens' Industrial Association, John Kirby, Jr., is quoted as saying to his annual meeting:

The only way to settle a controversy with organized labor is to have absolutely no dealings with it.

Astonishment becomes wonder when Mr. Kirby also says:

No organization of men, not excepting the Ku Klux Klan, the Mafia, or the Black Hand Society, has ever produced such a record of barbarism as has this so-called organized labor society which, through misdirected sympathy, apathy and indifference, has been permitted to grow up to cripple our industries, and to trample in the dust the natural and constitutional rights of our citizens.

And still the wonder grows when "American Industries," the official organ of the National Association of Manufacturers, of November 15, quotes Mr. Kirby:

The fact is that the fundamental basis of all such joint agreements is recognition of the union, and there would be no recognition if there were no coercion and no restriction upon the employer's lawful rights. Once you are in the toils of the union you are its victim, to be tossed about at its dictation.

Thus Mr. Parry and his friends abolish conciliation, arbitration, trade agreements, the unions themselves as worse than the Ku Klux, Mafia and Black Hand societies, shut the door in the face of the impertinent general public and reject every method that civilized society has yet devised for treating the problem of capital and labor. Otherwise, the English language has lost its meaning.

UNION PAYMENTS FOR BENEFITS.

The annual report of Secretary Morrison of the American Federation of Labor shows benefit payments of various kinds by sixty-six International Organizations during the past year of \$1,739,796 could not include the amounts, in many cases larger, paid in benefits by local unions.

For example, Secretary Morrison's report credits the International Typographical Union with \$38,925 for death benefits. But this represents probably less than half the total expenditure for death benefits alone in that Union. The New York local, "No. 6," pays an additional death benefit of \$80, making with the \$70 paid by the International a total of \$150 for each death benefit. The same local union paid \$46,000 last year for out-of-work benefits. Its members also maintain voluntary shop sick benefit associations; a hed in every hospital in New York City and are constantly making contributions for charity at every meeting of the union. None of these expenditures appear in the financial statement of the International. The future collection of these local data would go far to prove that the benefit treasury of organized labor is larger by far than its war chest.

FOR INTERNATIONAL ARBITRATION.

A mass meeting will be held in Carnegie Hall, New York City, on the evening of December 16, to give expression to public opinion in favor of the ratification of the arbitration treaties which have been and are now being negotiated between the United States and other Powers. This movement is under the gen-

eral direction of the Executive Committee of the American Conference on International Arbitration, of which ex-Secretary John W. Foster is chairman. The New York executive committee, which is to conduct the meeting, is composed of the following:

John Crosby Brown, Hon. Oscar S. Straus, Hon. George B. McClellan, Prof. John B. Moore, Dr. Leander T. Chamberlain, Francis Lynde Stetson, Hon. Nicholas Murray Butler, Morris K. Jesup, Hon. Cornelius N. Bliss, Hon. John W. Griggs, Hon. Carl Schurz, Charles A. Moore, Hon. Stewart L. Woodford, Hon. Lyman J. Gage, Hon. Charles S. Fairchild, John A. McCall, James Stillman, Horace White, John E. Parsons, Spencer Trask, John D. Rockefeller, Jr., George Haven Putnam, James Speyer, Andrew Carnegie, Hon. Whitelaw Reid, Hon. Elihu Root, Robert C. Ogden, Samuel Gompers, Jacob H. Schiff, Melville E. Stone, Hon. George L. Rives, Ralph M. Easley, Dr. John H. Finley, Edward M. Shepard, Hon. Charles E. Schleren, Alexander E. ANNUAL MEETING AND DINNER.

The Executive Committee of the National Civic Federation Will Transact Important Business and Entertain all its Departments.

The fourth annual meeting of the Executive Committee of the National Civic Federation will be held in New York City on December 15. It is expected that this meeting will be the most important in the history of the organization. The Executive Committee will hold two business sessions in the morning and afternoon, and in the evening will entertain at its annual dinner the members of all the Departments of the organization. Among the speakers at the dinner will be Andrew Carnegie, Archbishop Ireland, Bishop Potter, August Belmont, Cornelius N. Bliss, Oscar S. Straus, John Mitchell, Samuel Gompers and E. E. Clark.

The Department of Industrial Economics will hold its first meeting, for organization, prior to the annual dinner.

The business of the Executive Committee will include the election of a president to fill the vacancy caused by the death of Senator Marcus A. Hanna. The selection of his successor was entrusted to a sub-committee of twelve, representing employers, wage-earners and the general public.

Reports will be received by the Executive Committee from the Chairman of the Executive Council, and from the Departments of trade agreements, conciliation and arbitration, welfare work, publication, and organization. An international committee will be named to form an International Civic Federation, the suggestion of which has elicited encouraging responses from England, Canada, France, Belgium and Germany.

The call to the members of the Executive Committee contains the following:

"The country is at the threshold of a new era of industrial activity. It is to be hoped that all producers, including both capital and the wage-earners, as well as all consumers will share in this revival of prosperity. This new era succeeds a period of depression which has had at least two wholesome results. The 'water' has been 'squeezed' out of inflated securities and a sounder measure of values has been reached. Organized labor has gone through an almost parallel succession of inordinate expansion and reformation. During the boom period that preceded the recent depression, labor had its organizers everywhere, and pressed aggressively its demands for a larger share in the increased profits of production. When the industrial reaction came, organized labor found itself extended beyond a sound basis, and unable to avoid its share of the hardship caused by industrial depression.

"But for both capital and labor the outlook is now more hopeful. When the National Civic Federation was organized four years ago, the country was going through the craze of indiscriminate trust capitalization. Direful predictions of resistance, which might go even to the point of revolution, were heard on every side. Within six months of that time the greatest of these trusts, the United States Steel Corporation, encountered its first great struggle with organized labor, and no revolution followed. There have been similar experiences in other encounters between organized capital and organized labor. As in the anthracite strike, they have been guided to a sane and sound conclusion. In all the United States, but one city, Fall River, to-day suffers from an industrial struggle of any moment."

DEPARTMENT OF INDUSTRIAL ECONOMICS OF THE NATIONAL CIVIC FEDERATION.

A MOST COMPREHENSIVE AND FAR-REACHING MOVEMENT FOR POPULAR EDUCATION UPON FACTORS IN THE PROBLEM OF LABOR.

INDUSTRIAL ECONOMICS.

The initial membership of the new Department of Industrial Economics of the National Civic Federation is herewith published. A perusal of the list will show that it is composed of editors of the daily press, and of politico-social magazines, trade papers whose readers include all the great employing interests of the country, and labor journals that reach millions of wage-earners; and of economic and legal authors, lecturers, the heads of the departments of political economy in universities and representatives of the pulpit.

The National Executive Committee of the Civic Federation will tender an informal dinner to the Department, following its annual meeting in New York City on December 15. Prior to this dinner, the members of the Department will be called together to organize and to define its mode of procedure at future meetings.

This Department represents the most comprehensive and far-reaching movement for popular education upon industrial subjects yet inaugurated in this country. Its members are to meet at informal dinners to discuss such practical topics as "Trade Agreements," "Wages and Cost of Living," "The Shorter Work-Day," "The Open and Closed Shop," "The Minimum Wage," "Restriction of Output," "Piece-Work and Day-Work," "Arbitration," "Apprentices," "Introduction of Machinery," etc. That these discussions will have both practical and scientific value is apparent from the character of the participants. All of them are instructors of the public, each in his own field, and all of them are able to teach and to learn from one another. Besides the reports of these gatherings by the Associated Press, a special summary of their proceedings, in the form of a syndicate article, will be furnished to 5,000 newspapers. A verbatim report will be published in THE MONTHLY REVIEW.

The following have accepted membership:

ABBOTT, LAWRENCE F. Editorial Staff Outlook, New York City.
ADAMS, HENRY C. Professor Political Economy, Ann Arbor, Mich.
ADLER, FELIX, Professor Columbia University, New York City.
BAINE, C. L. Editor Shoe Workers' Journal, Boston, Mass.
BOARDMAN, W. H. Editor Railway Gazette, New York City.
BOWKER, R. R. Editor Publishers' Weekly, New York City.
BRAMWOOD, J. M. Editor Typographical Journal, Indianapolis, Ind.
BRANDEIS, LOUIS D. Corporation Lawyer, Boston, Mass.

BRIGHT, F. D. Editor Railway World, Philadelphia, Pa.
BROOKS, JOHN GRAHAM, Lecturer, Cambridge, Mass.
BUTLER, NICHOLAS MURRAY, President Columbia University, New York City.
CALL, E. PAYSON, Publisher New York Commercial, New York City.
CASSIER, LOUIS, Publisher Cassier's Magazine, New York City.
CEASE, D. L. Editor Railroad Trainmen's Journal, Cleveland, O.
CLARK, E. E. Editor Railway Conductor, Cedar Rapids, Ia.
COMMONS, JOHN R. Department of Political Economy, Wisconsin University, Madison, Wis.
CONANT, CHAS. A. Treasurer Morton Trust Company, New York City.
COOK, FREDERICK H. Author and Lawyer, New York City.
DAVIS, BEN. I. Editor Amalgamated Iron Workers' Journal, Pittsburgh, Pa.
DONNELLY, SAMUEL B. Typographical Union, New York City.
DOYLE, REV. A. P. Editor Catholic World, New York City.
DUNCAN, JAMES, Editor Granite Cutters' Journal, Quincy, Mass.
ELIOT, CHARLES W. President Harvard University, Cambridge, Mass.
ELY, R. T. Professor Political Economy, University of Wisconsin.
ESTERBROOK, HENRY D. General Counsel Western Union Telegraph Co., New York City.
FAIRCHILD, E. M. Editor Daily Trade Record, New York City.
FARNAM, HENRY W. Professor Political Economy, Yale University, New Haven, Conn.
FISKE, AMOS K. Editorial Staff, New York Journal of Commerce, New York City.
FORD, E. A. Editorial Staff New York Tribune, New York City.
FOSTER, FRANK K. Typographical Union, Boston, Mass.
FREEMAN, REV. JAMES E. President Hollywood Inn, Yonkers, N. Y.
FREUND, JOHN C. Editor Music Trades, New York City.
FREY, JOHN P. Editor Iron Moulders' Journal, Cincinnati, O.
GIDDINGS, FRANKLIN H. Head Sociological Department, Columbia University, New York City.
GILDER, R. WATSON, Editor, Century Magazine, New York City.
GLADDEN, WASHINGTON, Author, Columbus, O.
GLEED, CHARLES S. Attorney-at-law, Topeka, Kan.
GOMPERS, SAMUEL, Editor American Federationist, Washington, D. C.
GREEN, JOHN, Editor Bradstreet's Journal, New York City.
GUNTUN, GEORGE, Editor Gunton's Magazine, Washington, D. C.
HARVEY, G. B. M. Editor North American Review, New York City.
HOLT, HAMILTON, Editor New York Independent, New York City.
HOWLAND, EDWARD C. Economic Writer, New York City.
IRIELAND, JOHN, Archbishop, St. Paul, Minn.
JENKS, J. W. Professor Political Economy, Cornell University, Ithaca, N. Y.
JUDSON, FREDERICK N. Attorney, St. Louis, Mo.
KEEFE, D. J. International Longshoremen's Association, Detroit, Mich.
KIRCHHOFF, C. W. H. Editor Iron Age, New York City.
LENNON, JOHN B. Editor The Tailor, Bloomington, Ill.
LORIMER, GEORGE C. Editor Saturday Evening Post, Philadelphia, Pa.
MAHON, W. D. Editor Motorman and Conductor, Detroit, Mich.

MARTIN, T. C. Editor Electrical World and Engineer, New York City.
MERRILL, BRADFORD, Editorial Staff New York World, New York City.
MCGRAW, JAMES H. President McGraw Publishing Co., New York City.
MCKELWAY, ST. CLAIR, Editor Brooklyn Daily Eagle, Brooklyn, N. Y.
MCNAMEE, JOHN F. Editor Locomotive Firemen's Magazine, Indianapolis, Ind.
MILLER, C. R. Editor New York Times, New York City.
MILLER, FREDERICK I. Editor American Machinist, New York City.
MITCHELL, JOHN, President United Mine Workers of America, Indianapolis, Ind.
MOFFETT, EDWARD A. Editor Bricklayer and Mason, New York City.
MOODY, JOHN, Author of Moody's Manual, New York City.
NEILL, H. H. Editorial Staff New York Mail, New York City.
O'CONNELL, JAMES, Editor Machinists' Journal, Washington, D. C.
PAGE, WALTER H. Editor World's Work, New York City.
PATTISON, W. J. Publisher Evening Post, New York City.
PECK, GEORGE R. General Counsel, Milwaukee & St. Paul Railroad, Chicago, Ill.
PHILIPS, ROLAND, Managing Editor Harper's Weekly, New York City.
PIERCE, D. T. Editor Public Opinion, New York City.
POTTER, HENRY C. Bishop, New York City.
QUICK, L. W. Editor Railroad Telegrapher, St. Louis, Mo.
RAINSFORD, WILLIAM S. Clergyman, New York City.
RIECK, W. C. Executive Manager New York Herald, New York City.
RHS, JACOB A. Sociologist, New York City.
ROOT, C. T. Editor Dry Goods Economist, New York City.
SALMONS, C. H. Editor Locomotive Engineers' Journal, Cleveland, O.
SEXTON, S. M. Editor United Mine Workers' Journal, Indianapolis, Ind.
SELIGMAN, EDWIN R. A. Head Department Political Economy, Columbia University, New York City.
SLEICHER, JOHN A. Editor Leslie's Weekly, New York City.
SHAW, ALBERT, Editor Review of Reviews, New York City.
SKEMP, J. C. Editor Painter's Official Journal, Lafayette, Ind.
SINCLAIR, ANGUS, Editor Locomotive Engineering, New York City.
SULLIVAN, J. W. Editor The Unionist, New York City.
TAUSSIG, F. W. Department Political Economy, Harvard University, Cambridge, Mass.
TAYLOR, C. H., JR. President American Newspaper Publishers' Association, Boston, Mass.
TAYLOR, GRAHAM, Editor The Commons, Chicago.
THOMPSON, SLASON, Chief Statistician Railway Managers' Association, Chicago, Ill.
TOBIN, JOHN F. Editor Shoe Workers' Journal, Boston, Mass.
VANDERLIP, FRANK A. Vice-President City National Bank, New York City.
WARDMAN, ERVIN, Editor New York Press, New York City.
WATSON, HENRY C. Editor Dun's Review, New York City.
WHEELER, E. J. Editor Literary Digest, New York City.
WHITE, WILLIAM ALLEN, Author, Emporia, Kan.
WILLIAMS, TALCOTT, Editorial Staff Philadelphia Press, Philadelphia, Pa.
WOODLOCK, THOMAS F. Editor Wall Street Journal, New York City.
WRIGHT, H. J. Editor The Globe, New York City.

PRESIDENT ELIOT'S ADDRESS

(Concluded from page 2.)

Welfare Work and Good-will.

Of course, we all believe that the arrangements called "Welfare" arrangements tend in the direction which I am now speaking of, but the welfare arrangements should never be presented as if they were a benevolence. They are really means of promoting efficiency, means of promoting productiveness,—above all, they are means of promoting the natural good-will, the natural co-operative effort between employer and employed. All health arrangements come under this head. The great incubus that weighs on all our industries is ill-health, sickness, premature death, the failure to take care for the body of the workman.

Then there are various contrivances for making the workman feel as if he had a share in the industry. We need, however, many more inventions in this direction. There is the premium method, the commission on sales method, the sharing of a profit with the employees. All these are experimental; they have their ups and downs, and there is a difficulty with all of them, namely, that method which works well when the establishment is profitable may work very ill when the same establishment is unprofitable. I say, therefore, we need inventions in this direction to promote the sense of common interest between the employer and the employed.

But we must go much farther than this if we are to manage wisely these delicate relations. We must see the employer interesting himself, not only in the

efficient productiveness of his workmen, but in their social surroundings and their opportunities for pleasure. There is no separating this general physical and mental well-being from the problem of establishing good-will. I hope you have all seen, as I have, industries where all these conditions have been thoughtfully worked out, where even the state of the town enters into the thoughtful calculation of the employer, where municipal well-being is made a part of the industrial well-being.

The Workers' Right to Confer.

There is another place where the employers' constant attention can be profitably applied. It is in the region of discipline, of works or shops. IT IS A REASONABLE EXPECTATION ON THE PART OF THE WORKINGMEN WHO FEEL THAT THEY ARE IN PARTNERSHIP WITH THE OWNER THAT THEY SHOULD HAVE A RIGHT TO CONFER WITH HIM AND ADVISE HIM ABOUT THE RULES OF THE WORKS. IT IS A REASONABLE EXPECTATION THAT COMPLAINTS SHOULD BE PROMPTLY ATTENDED TO AND HEARD, LISTENED TO BY THE RIGHT PERSON AND NOT BY THE WRONG PERSON. THIS EXPECTATION, I SAY, IS THOROUGHLY REASONABLE. AND, MOREOVER, SINCE THESE THINGS ALL TEND TO THE ESTABLISHMENT OF GOOD-WILL IN THE WORKMEN, THEY WILL BE HIGHLY PROFITABLE IN ANY COMMERCIAL OR INDUSTRIAL ESTABLISHMENT.

I find then, three tests which may be applied to the policies of employers—

Do they take sufficient account of the immense var-

lety of industries, shops, stores, employments, occupations? Uniformity is not to be expected.

Second, Do they promote personal and public liberty?

Third, Do they promote good-will?

The Union Indispensable.

NOW, ONE THING I WANT TO SAY FURTHER, NAMELY, THAT IT IS PERFECTLY CLEAR THAT IF THE BEST RELATIONS ARE TO BE ESTABLISHED BETWEEN EMPLOYER AND EMPLOYED, PARTICULARLY IN THE INDUSTRIES WHICH EMPLOY THOUSANDS OF WORK PEOPLE, MEN AND WOMEN, IT IS ESSENTIAL THAT THE ORGANIZATIONS OF THE WORK PEOPLE THEMSELVES SHOULD BE MAINTAINED AND SHOULD BE RECOGNIZED BY THE EMPLOYER AND THE ASSOCIATIONS OF EMPLOYERS. THE UNION IS INDEED INDISPENSABLE IN THE GREAT INDUSTRIES, AND IT IS A FACILITY FOR THE EMPLOYERS AND FOR ASSOCIATIONS OF EMPLOYERS THAT THEY EXIST, AND EXIST IN A FIRM AND JUDICIOUS FORM. WHAT WE HAVE TO REGRET IS, NOT THE EXISTENCE OF THESE ASSOCIATIONS OF WORK PEOPLE, BUT THAT THEIR POLICIES HAVE IN SEVERAL IMPORTANT RESPECTS BEEN MISDIRECTED. WHAT WE HAVE TO HOPE IS THAT OUT OF THIS CONFLICT BETWEEN THE ASSOCIATIONS OF WORK PEOPLE ON THE ONE HAND, AND OF EMPLOYERS ON THE OTHER THERE WILL ARISE TWO SAFE, PRUDENT, WISE LINES OF POLICY,—ONE IN THE ASSOCIATIONS OF WORK PEOPLE, THE OTHER IN THE ASSOCIATIONS OF EMPLOYERS.

WELFARE DEPARTMENT OF THE National Civic Federation

OFFICERS.

H. H. VREELAND, Chairman.
CYRUS H. McCORMICK, First Vice-Chairman.
JOHN H. PATTERSON, Second Vice-Chairman.
EDWARD A. FILENE, Third Vice-Chairman.
CORNELIUS N. BLISS, Treasurer.

EXECUTIVE COMMITTEE.

George W. Brown (Treasurer United Shoe Machinery Company), Boston, Mass.
W. A. Clark (President United Verde Copper Company), Butte, Montana.
Ralph M. Easley (Chairman Executive Council, National Civic Federation), New York City.
G. E. Emmons (Manager Schenectady Works General Electric Co.), Schenectady, N. Y.
Edward A. Filene (Treasurer Wm. Filene's Sons Co.), Boston, Mass.
Frederick S. Fish (Chairman Executive Committee, Studobaker Bros. Mfg. Co.), South Bend, Ind.
W. C. Fish (Manager Lynn Works General Electric Co.), West Lynn, Mass.
G. Watson French (President Bettendorf Metal Wheel Co.), Davenport, Iowa.
Orrin S. Goan (Manager National Biscuit Co.), New York City.
Wm. C. Greene (Treasurer Peace Dale Manufacturing Company), Peace Dale, R. I.
B. J. Greenhut (Treasurer Siegel-Cooper Co.), New York City.
F. R. Hazard (President The Solvay Process Co.), Syracuse, New York.
H. J. Heinz (President H. J. Heinz Co.), Pittsburgh, Pa.
Edwin M. Herr (Vice-President Westinghouse Air Brake Co.), Wilmerding, Pa.
Charles W. Hubbard (Treasurer Ludlow Manufacturing Associates), Boston, Mass.
Charles H. Hulburd (President Elgin National Watch Co.), Chicago, Ill.
John S. Huyler (President, Huyler's), New York City.
M. E. Ingalls (President C. C. & St. L. Ry. Co.), Cincinnati, Ohio.
John F. P. Lawton (Assistant Treasurer & Secretary Gorham Mfg. Co. of Rhode Island), Providence, R. I.
Arthur T. Lyman (Treasurer The Boston Manufacturing Co.), Boston, Mass.
W. G. Mather (President Cleveland Cliffs Iron Co.), Cleveland, Ohio.
Cyrus H. McCormick (President International Harvester Co.), Chicago, Ill.
L. A. Osborne (Vice-President Westinghouse Electric and Manufacturing Co.), East Pittsburgh, Pa.
John H. Patterson (President National Cash Register Co.), Dayton, Ohio.
A. J. Pitkin (President American Locomotive Co.), New York City.
Thomas G. Plant (President Thomas G. Plant Company), Boston, Mass.
Elison A. Smyth (President Pelzer Manufacturing Company), Pelzer, S. C.
Nathan Straus (R. H. Macy & Co.), New York City.
H. H. Vreeland (President New York City Railway Co.), New York City.

Miss Gertrude Beeks, Secretary

A WELFARE DEPARTMENT CONFERENCE.

Papers and Discussions Upon "Railway Provident Institutions," "Banks for Employees," "The Labor Department," and "A Factory Lunch Room."

A conference of members of the Welfare Department of the National Civic Federation was held in New York, Tuesday, November 15. The Chairman, H. H. Vreeland, presided. Papers were read by M. Riebenack, Assistant Comptroller of the Pennsylvania Railroad Company, upon "Railway Provident Institutions"; by E. H. Perley, Secretary of the Globe Employees' Bank, Boston, on "Banks for Employees"; by C. U. Carpenter, Vice-President of the Herring-Hall-Marvin Safe Company, on "The Labor Department"; and Edward F. Weston, Secretary of the Weston Electrical Instrument Co., delivered an extemporaneous talk on "A Factory Lunch Room." Those who participated in the discussions were: H. H. Vreeland, President, New York City Railway Co., New York; R. E. Danforth, General Manager, Rochester Railway Co., Rochester, N. Y.; George R. Elder, Manager, The Ingersoll-Sergeant Drill Company, Easton, Pa.; W. C. Fish, Manager, General Electric Company, West Lynn, Mass.; Frederick C. Fletcher, Treasurer, Pocasset Worsted Company, Boston; B. J. Greenhut, Treasurer, Siegel-Cooper Company, New York; George H. Harries, Vice-President Washington Railway and Electric Company, Washington, D. C.; H. Gilbert Hart, President, Hart & Crouse Company, Utica, N. Y.; T. H. McInnerney, Siegel-Cooper Company, New York; Charles T. Page, Treasurer, Page Belting Company, Concord, N. H.; Edward F. Weston, Secretary, Weston Electrical Instrument Company, Newark, N. J.; Arthur A. Fuller,

Superintendent, Providence Engineering Works, Providence, R. I.; George W. Brown, Treasurer, United Shoe Machinery Company, Boston; Thomas G. Plant, President, Thomas G. Plant Company, Boston; M. Riebenack, Assistant Comptroller, Pennsylvania Railroad Company, Philadelphia; E. Horace Perley, "The Globe," Boston; C. U. Carpenter, Vice-President, Herring-Hall-Marvin Safe Company, Hamilton, O.; Mr. Anderson, Pennsylvania Railroad Company, Philadelphia; Charles W. Hubbard, Treasurer Ludlow Manufacturing Associates, Boston; Edward A. Filene, Treasurer, William Filene's Sons Co., Boston.

All of the papers and a verbatim report of the discussions will be published in pamphlet form. The paper of Mr. Perley appears upon a subsequent page of THE MONTHLY REVIEW. The paper of Mr. Riebenack will be published in two parts. The first, which treats the subject generally, follows; the second, relating particularly to the Pennsylvania Railroad, will appear in the next issue.

RAILWAY PROVIDENT INSTITUTIONS.

Their Status in the United States Reviewed and their Statistics Analyzed.

By M. Riebenack, Asst. Comptroller, Penna. R.R.

The principal avenues of provident effort in which the railways of the United States are interested on account of their employees may be enumerated as: Insurance and Relief Provision, (embracing (a) regular or commercial insurance, (b) insurance societies and organizations conducted exclusively by railway employees, and (c) the relief departments created and conducted wholly by the railroad companies); Superannuation Funds; Pension Funds; Savings Funds; Hospital Service, (including (a) hospital departments, (b) contractual hospital service, (c) emergency stations, (d) ambulance crews, (e) "first-aid" relief, (f) hospital cars); Libraries and Reading-Rooms; Young Men's Christian Association Railway Branches; Co-operative Stock Sharing Plans; Public and Private (Outside) Provisions; and Miscellaneous Provision.

Eliminating the independent or outside insurance and relief organization with which employees are affiliated, and confining attention to the strictly Railroad Relief Departments, it is found that, unlike the practice commonly obtaining with roads in foreign countries, membership is purely voluntary.

Relief Fund Statistics.

Out of upwards of twenty-four roads conducting insurance plans of different kinds in which their employees participate, nine are interested in strictly Railway Relief Associations, the others being concerned, under varying conditions, in (a) regular life and accident insurance, (b) mutual insurance, (c) endowment insurance, and (d) employees' relief associations or societies, and are not under the direct control nor operated as a department of the railroad companies.

The nine purely relief department roads represented an aggregate of 31,000 miles of roadway, or about 15 per centum of the total railway mileage of the country, with employees numbering 318,000, or about 24 per centum of the total number of railway employees in the United States, and an insurance membership of 206,000 employees, or practically 65 per centum of the total number of employees identified with the roads involved, and this membership percentage would be largely increased were the computations based by excluding non-membership employees who are so because of ineligibility for membership, owing to age or physical disqualifications. The average annual disbursements of these departments aggregate \$2,230,000, while their combined disbursements since organization reach close on to \$37,150,000.

Superannuation provision is confined exclusively to the Pennsylvania System East of Pittsburgh and Erie, Pa.

Railway Pension Funds.

Railway Pension Funds in the United States originated with the pension feature of the Baltimore and Ohio Railroad Company, instituted October 1, 1884, participation in which is based on four years' membership in the Company's Relief Department, of which the pension feature is an auxiliary. The operations of the Baltimore and Ohio Fund were originally on a small scale. The Company's annual appropriation up to July 1, 1900, was \$31,000 (consisting of an annual appropriation of \$25,000, and use of the \$6,000 reserve fund of the Relief Department when the same was not needed by that Department); on the date named, however, the annual appropriation by the Company was increased to \$75,000, with reversionary interest in the \$6,000 reserve fund of the Relief Department. It will therefore be apparent that the present standard of the Pension Fund

operations dates practically from the year 1900, from and after which year all of the funds were established on the prevailing scale of allowances.

The objects of the pension departments are to provide for compulsory or involuntary retirement from service at ages sixty-five or seventy years, with service ranging from ten to thirty years, on a fixed allowance, usually computed at 1 per centum of the average pay for each year of service, and voluntary retirement, growing out of incapacitation, between ages sixty-one and sixty-nine years, with a specified period of service.

Data on pension undertakings furnished by eighteen different roads, show sixteen pension funds in operation, and two practically ready for introduction, while, besides, several roads announce plans either under consideration or in course of preparation, the lines of the "Vanderbilt System" being in the latter category.

The roads reporting pension funds embrace upwards of 50,000 miles, or about 24 per centum of the total railway mileage of the country, and close to 500,000 employees, or about 38 per centum of the total number of employees of all roads in the United States.

These funds represent an aggregate annual appropriation not to exceed \$1,350,000, when necessary to make payment of pension allowance, while eight of the roads set aside originally, as the basis of pension or working funds, an amount aggregating about \$600,000. Twelve of the funds have expended since organization an aggregate of \$2,500,000, and the same roads, at the end of the year 1903, were carrying on their pension rolls the names of 3,200 pensioners, while the aggregate mortality among pensioners, since fund organization, had been 1,150.

A prominent characteristic of the railway pension fund is that the undertaking is wholly financed and supported by the railway company concerned, the beneficiaries making no contribution whatever thereto. The financial demands of the fund are sometimes met by setting aside originally a certain amount as an investment, the interest accruing therefrom constituting a pension or working fund, this amount being in some cases supplemented by provision for a maximum appropriation when necessary; in other cases the railway company simply assumes responsibility for a maximum annual disbursement.

Railway Saving Funds.

Saving Funds have not found widespread foothold among the railroads of the country, the three now in operation being identified with the Baltimore and Ohio Railroad Company and the Pennsylvania System of the lines East and West of Pittsburgh and Erie, Pa.

The Baltimore and Ohio Saving Fund differs from the Pennsylvania System Funds, in that it provides that the wife, mother, or child of an employee, or the beneficiary of a deceased member of the Relief Fund, may deposit under the same terms and conditions as employee, and the Fund, which was established in August, 1882, also has an important adjunct known as the "Loan Feature," which enables employees members of the Relief Fund to borrow money at a reasonable rate of interest and on easy terms of repayment for the purpose of acquiring and improving homesteads.

The combined total of depositors for the three roads as of December 31, 1903, was 14,807, and depositaries 1,895, their deposits and withdrawals since organization having aggregated respectively \$14,877,724.99 and \$10,047,776.47.

Recapitulation of results from investigations made shows that the railroads of the United States are interested in insurance, superannuation and pension undertakings on a very extensive scale, and that these roads represent a mileage aggregating 73,351.76 miles, or 35.8 per centum of the country's total railway mileage, and employees numbering 646,690, or 49.3 per centum of all railway employees, while the combined disbursements, for the features named, run well up into the millions of dollars annually.

Railway Hospital Service.

Hospital service was one of the earliest forms of relief adopted by the railroads on behalf of their employees, the first Hospital Department, as conducted at the present time, having been organized in conjunction with the Southern Pacific Railway, in California, in 1868.

The average monthly contributions by members are 25 and 50 cents, while the railway company usually furnishes the hospital building and other quarters, also free transportation to and from the same, and not infrequently assumes responsibility for financial deficiencies.

Many roads, particularly in densely populated sections, rely upon State, municipal, and private hospital service, and to that end have agreements with such institutions for the treatment of their sick and injured employees on reasonable terms.

There is also in vogue provision for extending first-aid relief to injured persons, consisting of the "First-Aid Packet" and the "Emergency Box"; while the hospital car and the "system of furnishing baggage, wrecking, and maintenance-of-way cars with stretchers" are finding general adoption.

A list compiled from data supplied by thirty-five

railroads with distinctive hospital organizations, represents an aggregate of about 70,000 miles of roadway, and employees numbering upwards of 360,000, the number of cases treated annually approximating 275,000.

Libraries and Reading-Rooms.

Upwards of fifty roads, representing over 100,000 miles of roadway and nearly 800,000 employees, were on record on December 31, 1903, as being interested in library and reading rooms for their employees, these features being very largely associated with the railway branches of the Young Men's Christian Association, the number of volumes involved being about 250,000.

Two notable instances of libraries conducted exclusively by railroads, and wholly dissociated from Association railway branches, are the Baltimore and Ohio Railroad Company's Circulating Library, with 15,000 volumes, and the Pennsylvania Railroad Company's Mechanics' Library at Altoona, Pa. (at which point are located the principal car and machine works of the Company), with 35,000 volumes.

Association Work.

The Young Men's Christian Association first found lodgment in America at Montreal, Canada, November 25, 1851, and in the United States at Boston, Mass., December 29, 1851.

The Railroad Department of the Association has its principal and most exclusive standing in the United States, the work having started on the Cleveland, Cincinnati, Columbus and Indianapolis Railroad, at Cleveland, O., in the fall of 1872.

On December 31, 1903, roads representing 79 per centum of the total railroad mileage of the country recognized and supported the Association. Investigations concluded for the same year resulted in forty odd roads advising of direct and active operation and promotion of railway branches, embracing, in round numbers, upwards of 100,000 miles of roadway and 785,000 employees, quite 55,000 of whom were identified with the branches, whose annual operative cost approximated \$500,000. The railroads covered by these figures are regular contributors to the movement. There are many others, however, which while not directly identified with the work, are systematic subscribers thereto.

Membership rates are purely nominal, ranging from \$3 to \$5 a year for the privileges extended. The bulk of expenditure is, however, borne by the railroads concerned.

Educational courses, conducted for the most part throughout the fall and winter months, and which are evidencing pronounced increase in the variety and usefulness of the studies comprehended, are growing in popularity and value. These courses embrace in their curriculum those commercial and railroad branches a knowledge of which is of prime importance to the ambitious and progressive employee, and particularly to those employees who would otherwise be debarred from enjoying that encouragement and opportunity for general intellectual training and improvement which experience has shown to be essential for individual advancement in any chosen vocation.

Tuition rates are nominal, while the classes are in charge of specialists of well known ability and highest endorsement.

It is to be noted that one of the prominent features in the success of the movement rests on the fact that it is free from sectarian complications, the religious work being of such a broad general character that it can be participated in without intrenching upon denominational affiliations—being based upon the simple principles of morality that are accepted and recognized by all Christian people.

Stock-Sharing Plans.

Co-operative Stock-Sharing Plans are in operation with the Illinois Central Railroad and the Great Northern Railway Companies, representing an aggregate of 9,900.10 miles of roadway and 64,010 employees, in 1903.

Illinois Central employees are enabled to purchase the Company's capital stock upon an easy payment basis, receiving a fixed rate of interest during the time payments are being made for the shares. An employee may subscribe for one share at a time, payable by instalments in sums of \$5 or any mul-

tipile of \$5, on the completion of which the Company delivers to him a certificate of the share registered in his name on the Company books; and he can then, if he wishes, begin the purchase of another share on the same plan. The rate of interest allowance is 4 per centum per annum. Any officer or employee making payments under the plan, and for any reason desiring to discontinue them, can have his money returned with accrued interest, by making application to the head of the department in which he is employed.

Under the Great Northern plan provision is made for investments by the employees. A certain number of shares of stock was originally issued by the Company's Board of Directors, to be handled by a specially created Employees' Investment Association. Certificates are issued against these shares, in multiples of \$10. The Company guarantees 6 per centum interest on certificates taken out between dividend dates, from the dates of such certificates to the next following dividend date (interest being paid in the form of quarterly dividends); and also guarantees the same rate of interest on certificates redeemed from the last dividend date to the date of such redemption. Between dividend dates the Company guarantees that the holder of a certificate shall receive the same percentage and interest on his certificate as the Company pays in dividends on its stock. At the present time there is outstanding about \$710,000 worth of these investment certificates, and the amount is gradually increasing.

SOME PARTICIPANTS IN THE WELFARE CONFERENCE

Outside Provident Endeavor.

Public and Private (Outside) provision represents provident endeavor through the intervention of capital or its equivalent emanating from sources other than those directly identified with active railway interests. In this class may be enumerated "The Andrew Carnegie Relief Fund," effective January 1, 1902, based upon an endowment of \$4,000,000, the interest on which is applied in providing relief for employees of The Carnegie Company in all its works, mines, railways, shops, etc., injured in its service, and for those dependent upon such employees as are killed; also to provide small pensions or aids to such employees as, after long and creditable service, through exceptional circumstances, need such help in their old age, and who make good use of it.

Another instance is "The Moses Taylor Hospital" (established March 29, 1882; incorporated July 22, 1884), located at Scranton, Pa., and endowed by Mr. Moses Taylor, Sr., and Mrs. C. A. Taylor, the endowment principal being invested in such manner as to net an income sufficient to take care of all operating expenses. Cost of building and equipment was \$355,333.05, and total cost of operation to close of 1903, \$450,524.92; while 3,293 surgical and 1,170 medical cases had been cared for up to the end of the same year. This hospital is conducted principally in the interest of the employees of the Delaware, Lackawanna and Western Railroad Company and the Lackawanna Iron and Steel Company. The Iron and Steel Company having removed from Scranton, Pa., to Buffalo, N. Y., another hospital, known as

"The Moses Taylor Hospital of Buffalo," was opened in the latter city during the present year.

The late J. Edgar Thomson, a former President of the Pennsylvania Railroad Company, provided in his will that the net income from the estate, after the decease of his wife, was to be used for the education and maintenance of female orphans of railway employees killed while in the discharge of their duties on the Pennsylvania Railroad, as well as on other railroads of the United States, as far as the net income will permit.

In 1882, Mrs. Lavinia F. Thomson, under the will of her husband, started the St. John's Orphanage in Philadelphia, where have been domiciled a number of orphan girls, who have been cared for and given the privilege of a good education. Since her decease in 1903 the Orphanage has been under the supervision of the trustees of the estate.

Efforts of Allied Companies.

In the course of investigation it was deemed advisable to examine into and discuss the methods pursued by Express Companies, Sleeping Car Companies, and the Railway Mail Service, on account of the provident undertakings already mentioned. These interests are closely and inseparably identified with the railways, and are therefore properly subjects for consideration in this relation.

Six Express Companies in the United States,—the Adams Express Company, the American Express Company, the United States Express Company, the Southern Express Company, the Pacific Express Company, and Wells, Fargo & Company,—representing an aggregate mileage operated of 198,503 miles, and 62,574 employees, as of December 31, 1903, are interested in insurance and pension measures, also Young Men's Christian Association Railway Branches and Libraries and Reading-Rooms, on behalf of their employees.

One of the Express Companies,—Wells, Fargo & Company,—has libraries located in five of the principal cities of the United States and in the City of Mexico, carrying a total of 15,523 volumes, and also provides what are known as "Terminal Libraries" at twenty-two points, through the territory traversed by its service.

The Pullman Company, operating over 175,761 miles of roadway, and with 20,398 employees, as of December 31, 1903, encourages its employees to carry good insurance, and has under consideration a pension plan in their behalf. This Company conducts a "merit system" for its transportation men, under the operation of which employees with over five years' service to their credit are rewarded with having placed conspicuously upon their service uniforms "meritorious marks" indicative of their years

of service with the Company. This feature is highly appreciated by the travelling public, as the presence of these evidences of special distinction inspires confidence and security, in that they grow out of long and faithful discharge of assigned duties.

BANKS FOR EMPLOYEES.

By E. Horace Perley, Secretary of the Boston Globe Employees' Bank, Boston, Mass.

When I became an employee of the Boston Globe, nearly twenty-three years ago, one of the first things that impressed me was the very general practice of borrowing money. Some would get their wages advanced from week to week by some fellow-worker. Some would borrow a sum that would tide up their wages for weeks at a time, while some made a practice of borrowing to such an extent that they could never draw their own wages.

Looking around, I found that the same state of affairs existed in all the newspaper offices. As time went on, and I asked questions here and there, I found that to be a condition which existed in almost every establishment where there is a large body of employees. There is always a large class willing—yes, anxious—to borrow, and a smaller class willing to lend—for a consideration. The department stores have it. Among the factories, the shoemakers especially, are noted for it. I know quite a number who derive a considerable income from fellow-workmen on the railroad.

But to get back to my own field. I soon found that the borrowing capacity was unlimited, many taking all they could get, on any conditions; in fact, no questions were asked usually as to interest rate. If a loan could be obtained at ordinary rates it was a "cinch" for the borrower, but the lender was considered anything but bright. The usual rate was five per cent. per week—in fact, I knew one man who, at that time, kept out at that rate between \$600 and \$700 continuously. Ten per cent. per week, however, had no terrors for many, and I think I could have then named persons with quite a number of hundreds of dollars out at that rate.

The newspaper grew rapidly in public favor, and with its growth there was a corresponding increase in the working force, which meant an equal increase in the number of borrowers. When I joined the force there were about a hundred, I think, while now we number nearly an even thousand.

The foregoing will, perhaps, give an idea as to how I have arrived at the conclusion that the workmen, when they want to borrow, will borrow, actually giving no thought to, or seemingly caring nothing about, the cost. Their one aim is to get some money.

About the time I began to form definite ideas on this subject, I took out some shares in a co-operative bank, and, as I grew accustomed to the bank methods and purposes, I advanced quite a stage in my reasoning. I began to ask why it was not possible to get the men to establish a fund and borrow their own money. I argued that they seemed to care nothing about what they paid in the way of interest. Therefore, they would pay a pretty high rate of interest to the fund. That being received, a substantial dividend could be paid from the earnings at stated intervals, and a substantial dividend would be a sufficient incentive to cause the deposit of a dollar or more each week by quite a number of men.

My argument bore fruit. A dozen or more formed an association, and by the end of the first year we had about sixty members. This was about twelve years ago. Now we have 275 members, and the business has grown until now we loan on the average about \$800 each week, and receive as deposits on an average about \$900 each week.

I was, at the outset, chosen as working executive; that is, all the detail of the business devolved upon me, and has continued to ever since. With experience, I evolved a system of keeping accounts that seems to fill the bill perfectly and give satisfaction to all.

Our plan of operation is, in some respects, similar to the co-operative bank, except that we do business weekly instead of monthly. They sell the use of money at auction, and we fix an arbitrary scale. Any employee can join or withdraw at pleasure, the only prerequisite being the payment of the first deposit.

When one joins he agrees to deposit a certain sum each pay-day. He must deposit the same sum, no more, no less, each pay-day. Failure means a fine of two cents on each dollar which should have been paid, and a double payment on the next pay-day. The earnings are divided each six months pro rata, according to the number of dollars each member has on deposit when the books are closed.

To accommodate the borrower who wanted money only for a week, a rate of one cent on a dollar was established. At first \$100 and over was loaned at 12 per cent. per year, \$200 and over at 9 per cent., \$300 and over 6 per cent. Now, experience has proven it is better to have an arbitrary graduated scale, not based on a regular percentage. \$1 to \$25 is 1c. to 25c. per week; \$50 is 33c. per week; \$100, 38c.; \$150, 42c.; \$200, 45c.; \$250, 48c.; \$300, 52c., etc.

The men seem to have no care how much interest they pay, and the only way to attract and keep them is to pay good dividends. These rates have enabled us to pay an average, for eleven and one-half years, of 12 per cent. per annum. Net earnings the last semi-annual term were about \$1,200, and total deposits average more than \$800 each week.

At present we receive, as a deposit, not less than \$1 per week, nor more than \$5 per week. A dividend is paid on nothing above \$350, and no one is allowed to borrow more than \$200 above what he has on deposit, except, as provided by a recent amendment, that he give real estate security. The treasurer is executive in making loans, and the secretary makes all collections and keeps all accounts and records. Deposits are placed in bank so as to require the signatures of both president and treasurer for withdrawal. A depositor wishing to borrow more than \$20 above what he has on deposit can do so only with the approval of a majority of the thirteen directors.

Security is largely the character of the borrower; sometimes the treasurer has the right to draw the man's pay, sometimes a legal assignment of the man's wages is made, in some cases life insurance is

assigned, and, if the borrower is married, the note must bear the wife's indorsement. This latter practice has a tendency to prevent some classes of needless borrowing—husband and wife having a mutual knowledge of the transaction.

As I have said, the men will borrow. Our aim is to control their borrowing, and let them have back the proceeds. The membership has increased constantly and steadily from the beginning. The president receives \$1 per week, the treasurer \$3 per week, and the secretary \$6 per week, the latter volunteering to give the association half of the time necessary for keeping the accounts.

The bank is governed in every particular by the employee members, though in the outset the employers showed approval by assisting financially, becoming depositors during the first two years.

There is a board of three auditors. At least two of them must thoroughly examine all accounts once a month. Each auditor receives \$2 each time he officiates.

The losses have been very few, especially when this method of loaning and the lack of security are considered.

When money comes in faster than it can be loaned, advantage of the dividend period is taken to scale down the capital, returning the surplus cash pro rata to the depositors. Several times the capital has been scaled down a quarter or a third, and once about a half.

When a borrower's deposit, on dividend day, amounts to a sum equal to his loan, the deposit must be withdrawn and the loan paid.

Casualty, perhaps, this plan would seem to indicate that the dividends returned did not compensate for the high rate of interest paid. Still this can be logically accounted for. The average amount out at loan is about \$20,000, and as it is divided among 250 men, it will be seen there must be many of what we call large loans, and therefore at the lower rates of interest charged. (\$250 pays 48 cents per week—10 per cent. per annum.) The "large loans" hardly pay the dividends, therefore, which, as I have said, average 12 per cent. per annum. The small and temporary loans, that is, the \$1, \$2, \$5, \$10, and even \$20 loans, to be paid usually in a few days, which pay one cent for each dollar borrowed, pay the profits of the business, and really reap very little of the benefits—except in the way of accommodation.

All employees are invited and urged to join the bank, that is, become depositors, and participate in all its privileges. There is no let or hindrance to them. They may join at pleasure and withdraw their funds at will. If a loan of more than \$20 is obtained, the borrower must become a depositor. Then if he does not share in the earnings, he alone is to blame. The only rule to be observed is this: "All money that has been on deposit for the three months next preceding the day of the dividend shall receive its pro rata share of all money earned during the six months the dividend day closed." The membership of the bank is coming and going all the time. Some obtain membership that they may borrow for four or five weeks, withdrawing as soon as the loan is wiped out. Many utilize the bank as a place of deposit, because they find themselves unable to withstand temptation to spend when money is in pocket, and then withdraw as soon as they have laid enough away to attain some object.

In fact, withdrawals will average \$250 per week. Many times a borrower will say he does not care for the dividend; what he wants is the money when he wants it. He borrows, pays weekly, and withdraws, repeatedly. Yet I have made it a rule to point out, whenever withdrawal is asked, the loss of dividend by such action, so that all may act with eyes open. These transients will borrow any way and anywhere; if we do not furnish the opportunity, they will go elsewhere and pay five times as much for the privilege. In their coming and going some stick, and the membership grows. We urge the savings idea, and if a borrower, we compel it as long as he borrows. In the several applications, the value becomes gradually apparent, to some sooner, to some later. Of course, there are a few ap-bank, even some of these change their methods and parently incorrigible. But when they awake to the fact that the transients really pay the running of the join the majority, who benefit.

At the last dividend, no depositor had the limit allowed on deposit. Ten or a dozen had \$300 in, and so received \$18 dividend, which was more than they had paid as interest during the term. From my working knowledge of the bank, I estimate that these borrowers who made their deposits regularly during the six months and did not withdraw any portion of their deposits, received a dividend that would average equal to from one-half to two-thirds of what they had paid in interest during the term.

The bank has taught many to save who never before saved anything. It has been of great benefit numberless times to men hard pressed who could

not possibly get money anywhere else. In a number of cases the savings here have been the nucleus of home-buying. Many save here for the larger expenses that come periodically during the year. The chronic borrowers in very many cases, learn gradually the folly of their extravagance. The bank has many times, in promising cases, where a man was nearly overwhelmed with his many obligations, taken his affairs in hand, paid his debts, and let him work it out from week to week until he was again a free man—and the lesson has generally proved salutary and profitable.

The only objection I ever heard to our methods was our high rate of interest. I believe, as I have already said, that the high rate is a necessity. But, to see if others had a similar opinion, I questioned our officers and many members. They were unanimous in saying that the large dividend is a necessity—it is what draws in the deposits, is to some the sole incentive in beginning to save. Even with the prestige of nearly twelve years of success, with all that that implies, only one or two thought it would be safe to reduce the interest rate on even the small weekly loans—those of from \$1 to \$25.

The establishment of an association on the lines of ours, I believe, cannot fail to do much good in any large body of employees.

[The discussion of this paper developed the fact that a Bank for Employees backed by the employer could be operated at a nominal cost and that such a plan would permit lower interest charges for short time loans.—The Editor.]

AN INTERESTING QUESTION ANSWERED.

The following request to the Welfare Department was received from a molder who asked that his name be regarded as confidential:

"Can you not agitate through your publication the necessity of providing relief for molders in the foundries? If the union's business agent approaches the employer on this subject, in our district, he thinks the agent is only trying to stir up trouble and will not listen. For instance, we had considerable trouble because one of our business agents asked to have windows replaced to prevent colds."

"The molders should be enabled to change their working clothes. It makes a great difference in the health of all the men. You can especially notice that the young men age very rapidly, as their clothes are constantly wet with perspiration, and they do not have the opportunities or facilities to bathe."

A reply secured from the National Cash Register Company:

"We think the request of this molder is worthy of the careful attention of every company which has such men in its employ. We believe the moral effect of pleasant environment, which we are trying to establish, is a benefit to both employer and employee, and therefore it should be promoted as a good business policy. With this belief we have made a great effort to improve the working condition of our employees, and we feel the results accomplished show that our endeavors have been appreciated. This acts as an incentive for a continuation of our policy."

"Lockers have been provided for all the foundry employees. Shower baths, with plenty of hot and cold water, have been established; also a number of troughs for those who have not the time or inclination to use the showers. Towels are furnished free by the Company. Ten minutes are allowed at noon and fifteen at quitting time for changing clothes. We have separate baths and lockers for the colored employees."

"A large ice-box has been placed at the disposal of the foundrymen, in which they keep their lunches. Before this was put in use, great difficulty was experienced in keeping lunches free from the dust which prevails in all foundries."

"A milkman supplies his product to those who desire it, settlement being made at the end of each week."

"Employees are permitted to lunch at any time provided they do not abuse the privilege."

"The men in the sand room are furnished with respirators which fit closely over the mouth and nose, effectually excluding the small particles of sand which otherwise would be inhaled. We used a great many windows in the construction of our foundry, both on the side of the building and on the roof. These afford plenty of light and make good ventilation possible. A number of fans are used to aid the circulation. Each furnace has ample space,—a provision which has modified somewhat the extreme heat to which all melters are subjected."

"The effects of this Welfare work are distinctly apparent. The men enjoy better health, they are more content, and therefore give the Company much better service. In no department of our factory has Welfare Work brought better results."

The barons Alphonse, Gaston and Edmond de Rothschild, of the Rue Laffitte, Paris, went recently to M. Trouillot, the Minister of Commerce, to inform him that they would devote the sum of 10,000,000f. to the building of workmen's dwellings, healthy and cheap, and that the income from these dwellings would be employed in social improvements.

MAX REIBENACK

E. HORACE PERLEY

THE VOICE OF THE CHURCH.

(Concluded from page 1.)

brethren to maintain a shop in which no man shall serve except a member of the union. They may not agree with these brethren, but they ought to appreciate their self-sacrifice. The laborer has learned from the capitalist to despise order and break law. He has learned from the churchman to pursue the dissembler with menace and violence. The recent tragedies in Colorado do not follow at a far distance the massacres which in the sixteenth century ensued upon the withdrawal of Holland from the ecclesiastical union.

"While, then, we condemn the tyranny and turbulence of the labor union, and call upon the law to preserve the liberty of every citizen to employ whom he will and to work for whom he will, we deprecate the hasty temper which, in condemning the errors of the unions, condemns at the same time the whole movement with which they are connected. The offenses of the union are as distinct from the cause for which the organization of labor stands, as the Inquisition is distinct from the Gospel.

"In the face of a prejudice and an hostility for which there are serious reasons, we are convinced that the organization of labor is essential to the well-being of the working people. It is based upon a sense of the inestimable value of the individual man. The cause of labor is the effort of men, being men, to live the life of men. Its purpose is to maintain such a standard of wages, hours, and conditions as shall afford every man an opportunity to grow in mind and in heart. Without organization the standard cannot be maintained in the midst of our present commercial conditions.

"This report is designedly general in its terms, but there is one matter which we are constrained to commend in particular to the consciences of Christian people. We do not undertake to say how much of the blame of child labor belongs to the employer and how much to the parent. But we do say this, that the employment of children in factories and mills depresses wages, destroys homes, and depreciates the human stock. Nothing is so important in any community as a human being. Whatever interferes with the education of a child, contradicts the best interests of the nation. We call, then, on Christian employers as on Christian parents to endeavor after such betterment

of the local and general laws as shall make the labor of children impossible in this Christian country.

"In the name of our common Master, we ask the attention and energy of the Church to the removal of this and other crying evils. Thus shall we assist in setting forward the kingdom and obedience of our Lord and Saviour, Jesus Christ."

The Pope and Labor.

The following letter, signed by Mgr. Merry Del Val, Papal Secretary of State, and addressed to the International Society for the Protection of Workmen, indicates the interest taken by Pope Pius X in labor;

"My sublime master, the pontiff, desires me to express to you that, like his predecessor, Pope Leo XIII., he is in hearty accord with all movements intended to benefit workmen.

"The pontiff, in particular, desires it understood that he favors with all his heart any lightening of the burden of the men and women who work with their hands. Work should be so regulated as to conform to the physical ability of the workmen; it should be regulated to fit the sexes; it should be regulated to permit of the stoppage of all work on Sundays.

"The workman should be protected against employment and employers that have no regard for his dignity as a man and a citizen. That endangers his morality and interferes with his family life.

"The holy father trusts that you will devise peaceful means to realize the above ends. If you do, your efforts will be crowned with success, and all good governments will regard them with sympathy. On his own part, the pope will be happy to assist you with advice and prayer."

The National Congregational Council.

The report of the Labor Committee of the National Congregational Council recounts the inquiries into the industrial situation by its members, David N. Beach, Washington Gladden, William J. Tucker and William A. Knight, Secretary. Their investigation has included much correspondence, the study of industrial strife in the field and attendance upon a convention of the American Federation of Labor and a conference of the National Civic Federation. The Committee recommends the appointment of similar committees by each state organization of the church and affiliation with kindred committees of other denominations and with non-ecclesiastical bodies that work for industrial betterment.

Upon the industrial situation, the Committee reports:

"We have a labor problem because we have large freedom, education, democracy, in which aggressive and acquisitive human beings are struggling for personal and social expression and betterment. The deep tendencies and the surface conditions of modern industry result in that consolidation of the forces of the employed, and the forces of the employer, that express themselves in the former instance in unionism, and in the latter in the various types of employers' associations. Apparently unionism is something more than that valuable phase of present-day industry, collective bargaining, for unionism stands for the introduction of democracy into industry, the right of representation in the conduct of business. More fundamental than any other practical question, such as the closed shop or freedom of contract is this underlying demand of representation in the conduct of industrial enterprises. To achieve it is the core of intelligent unionism, which seems fast passing into industrialism, and to resist it is the purpose of much of the counter organization of employers. The result appears on the surface in suspicion, resistance, lawlessness, violence,—the common hard features of much of the present industrial struggle. It is not our part to discuss this phase of the question. We simply state it, as a primary and inevitable element in the present contest.

"We believe that organization of labor and organizations of capital are inevitable, and that these forces are to be dealt with intelligently and humbly, and that any policy that means the utter subversion of one force to that of the other is certain to result immediately in intensifying the already ominous tendency to class division and class warfare. Constructive policies, under the forms of law and tempered by the justly critical force of public opinion, are being framed by conservative leaders on both sides, and for these results we can hopefully wait.

"We urge upon trades-unionists and upon employers in the meantime the right use of power and the cultivation of such a sense of responsibility as will conserve social well-being for the present and for the future. The spirit of the marauder, by whomever shown, should be checked, and industrial organizations both of employees and employers, should become as they may become, strong forces in behalf of law and order."

A YEAR SAVED ON THE SUBWAY.

(Concluded from page 3.)

An example of the good faith with which the agreement was kept, under exceedingly difficult conditions, was its absolute maintenance throughout the six months of general strike in the building trades in New York in 1903. During all that time, when building was at a complete standstill all over the city, owing to labor troubles, the work on the Subway, in which the building trades were largely employed, went steadily and rapidly on.

Again, in May, 1903, there was a strike of all the unskilled laborers, excavators and others, employed in the Subway. These workers, who were not represented in the Central Federated Union and who were not included in the contract, sought the aid, in their strike, of the unions of skilled labor. The Contractors' Association declined to admit the laborers into the agreement, but offered to arbitrate the questions in dispute. The laborers refused to arbitrate. The unions, while presumably sympathizing with the demands of the laborers, stood by their agreement, and the strike of the laborers collapsed.

Experience in the practical operation of the agreement showed that most of the grievances that were brought by unions before the Joint Committee originated with acts of the foremen and other subordinate overseers of labor, such as employing non-union men, or refusing to pay union wages. In every case, the Joint Committee through their secretary, Mr. Douglas, ascertained the facts by thorough investigation. Whatever was found to be wrong was set right; and if the grievance had no substantial basis, it was dismissed. If a union showed symptoms of recalcitrance, the labor members of the Joint Committee acted with the contractor members in insisting upon its compliance with the agreement. Comparatively few unwarranted complaints, however, from either contractors as to unfair union exactions, or from the unions as to attempted violations of the agreement or oppression by the foreman, received the support of a majority of either of the two organized parties to the agreement, which was necessary to bring any grievance before the Joint Committee. That committee adjusted many questions of wages. This was because the rate specified in the agreement was subject to modification from time to time, owing

to changes in the nature and conditions of the work in a given craft. The settlement of such questions grew more and more easy as the contractors and the unions gained mutual confidence in the sincerity and judicial fairness of the Joint Committee. As a result of this feeling not a few of the claims of the unions were waived upon the representation of the Joint Committee that they were unreasonable.

The value of personal conferences received many illustrations. A grievance relating to certain work among the sections caused the Joint Committee much perplexity, until they brought the controversy to the attention of the sub-contractor himself. The sub-contractor went to the heart of the matter at once and corrected the trouble, which had its origin in some arbitrary and unreasonable rule by a foreman. "This is the first I have heard of this matter," said the sub-contractor; "why did you not come to me before?" "Oh, we didn't want to bother you," was the reply of a labor member of the Joint Committee. "But I wish to be bothered about any such trouble. Come to me whenever you think anything is wrong, and if there is a real wrong, I will make it right," announced the "big" boss.

One union largely engaged in the work of the Subway was not a party to the general contract. This was the Housesmiths' Union, which was not represented in the Central Federated Union. Its members drove, with compressed air machines, the millions of rivets that bind together the structural iron work of the tunnel. With this union, the contractors had a separate verbal agreement. Whatever difficulties the contractors had with the Housesmiths, therefore, cannot be charged to any breakdown of the agreement with the Central Federated Union.

The most serious difficulty encountered in the history of this collective contract, and which did not occur until late in the construction, was caused by the interference of a third party. This was the Building Trades Alliance, formed and at that time dominated by Philip Weinseimer, its president. This Alliance admitted to its membership the Amalgamated Painters, a local independent union, not affiliated with the Central Federated Union. To the National Brotherhood of Painters, which was affiliated with the Central Federated Union, the Contractors' Association was compelled to give, under the agreement, the work of painting the Subway or at least the permanent coat. The Building Trades Alliance demanded that the Amalgamated Painters should have half of the painting, and called a strike to enforce its demand. This call was obeyed in the Subway by about 1,000 carpenters, electrical workers, plumbers, plasterers and tile layers. The failure of the Central Federated Union to discipline these unions for violating the agreement is the only blot

on the escutcheon of organized labor during the life of that contract.

The strike called by the Alliance was brought to an end in most of the trades affected through Mr. McDonald's firm attitude. He received a committee of the strikers and told them that he would stand by the Central Federated Union, as that body had stood by its agreement with the Contractors' Association. He maintained that an outside organization, such as the newly-formed Building Trades Alliance, must adjust its grievances through the existing agreement, which had served its purpose admirably and equitably ever since it was signed.

It is calculated that this strike, called by Weinseimer, delayed the opening of the Subway possibly three weeks.

All the members of the Joint Committee, both the representatives of the Contractors' Association and of the Central Federated Union, were throughout the operation of the agreement in thorough accord with the general contractor, John B. McDonald, in the one great purpose of completing the Subway as rapidly as possible. As the chairman of the Labor Committee during more than three years, Mr. John J. Pallas, now President of the Workingmen's Federation of New York State, held frequent conferences with Mr. McDonald.

Mr. Douglas, the Secretary of the Contractors' Association, also served the Joint Committee as its secretary. Many matters were settled by him without the necessity of calling together the Joint Committee, and in those which had to be adjusted by the Joint Committee, his tact and patience usually smoothed the way to an amicable and satisfactory understanding.

Mr. Pallas, the present President of the Park Board, for many years a delegate to the Central Federated Union devoted much of his time to the harmonious working of the agreement.

The constant efforts of the Joint Committee were to forward the progress of the work, so as to remove as rapidly as possible the obstructions to surface traffic along the line of the route. The members always responded promptly and faithfully to the demands upon their time when any question arose that required detailed investigation. Throughout their work they were aided by the support and confidence of their respective organizations. The meetings of the Joint Committee promoted the good fellowship of the representatives of both sides and conducted largely to a unity of purpose to bring this most difficult engineering work to a prompt and successful conclusion. After the opening of the Subway both parties to this agreement pronounced it the most successful collective contract ever made between capital and labor.

A DISSENT FROM SOME SWEEPING ATTACKS UPON UNIONISM.

ITS WHOLESALE CONDEMNATION NOT WARRANTED BY ITS OCCASIONAL ERRORS NOR IN ACCORD WITH ITS BETTER LEADERSHIP.

(By RALPH M. EASLEY, Chairman Executive Council, National Civic Federation.)

Copyright, 1904, by Harper's Weekly; reprinted by permission.

A series of articles upon the labor question by Mr. John Keith, recently published in *Harper's Weekly*, has been of special interest because they are typical of a mental attitude toward this subject that has become unfortunately frequent among magazine and newspaper writers. The prevalence of this mental attitude is not hard to explain. Up to the time of the anthracite-coal strike the public had paid little more than passing notice to the labor question. The direful possibilities when zero weather loomed up before the nation with empty coal-bins at that time set everybody thinking, talking, or writing on the great labor problem. About the same time some of the most conspicuously offensive incidents in the labor movement cropped out, such as Sam Parksism in New York; picketing funerals in Chicago; expelling union men for belonging to the State militia in Schenectady, etc., etc. These occurrences naturally gave the new students of unionism a very unfavorable impression, as their trenchant pens have since given innumerable evidences. Mr. Keith, in his very interesting articles, whether one of the old students or of the new, evidently was not searching for trade-union virtues; and if there were any excesses he overlooked I do not now recall them. If the view were restricted to the array of hostile witnesses he summons, the reader would be quite ready to believe his conclusion:

"It may be set down as a general truth that the labor-union acts in no way as a spur, but in a thousand ways as an obstacle to the development of the country along the most scientific lines of economic advancement."

But suppose this method of criticising labor-unions were applied to other social institutions, what would be the conclusion? Only the other day there was a hurry call for the police reserves to a restaurant to prevent students of Columbia University from pounding one another into bloody insensibility during a class fight. The week before the daughter of a president of a college in Illinois was dragged out of bed by a gang of hazing students. Only a short time before that, in another institution of learning, a young man was taken out at night, hammered until several bones were broken, and thrown into a pond. Is it fair to single out such instances and to say that, therefore, higher education "acts as an obstacle to the development of the country"?

Again, many writers lay undue stress upon the fact that in isolated cases labor-unions have broken "solemn" agreements with employers. Every trade agreement has in truth all the solemnity of a contract. It is no defence of the gravity of such a condition to point out that "gentlemen's agreements," which railroad officials openly state are "solemnly" made between themselves, are often broken just as quickly as some of the officials can reach the telephone; or that when goods are sold for future delivery and the price falls a large number of buyers—about seventy-five per cent., as stated recently by a prominent wholesale merchant—break their "solemn" contracts through some pretext or other. The point is that while the breaking of contracts by labor-unions is a most serious matter, its occurrence is much less common than the public is led to believe. Where one labor-union breaks a contract there are five hundred broken contracts with which organized labor has nothing to do.

Much stress is also placed upon the assumption that organized labor is opposed to the militia. This assumption is based upon the expulsion from a local union, controlled by radicals, of a member of the New York militia; a similar isolated act of folly in Michigan; and the unsupported testimony of a local witness in Boston. If true, this would be a serious charge. A special point is made of the New York statute forbidding discrimination against members of the National Guard, causing the inference that it was passed to meet an unpatriotic phase of unionism. The fact is not stated, however, that this law was equally directed at employers who had discharged or docked their employes for joining the militia and absenting themselves from business to attend to their sworn duties to the State.

Further investigation would show that many labor organizations have repudiated all spirit of antagonism to military service. For instance, the International Typographical Union voted down an anti-militia resolution by an overwhelming majority.

The rousing demonstration of patriotic enthusiasm that followed the speech of the chairman of the executive committee, a printer from Georgia, in closing the argument against the resolution, would have excited, I am sure, the approval of the most severe critic of organized labor.

Still higher authority was the reply made by

Samuel Gompers, president of the American Federation of Labor, to a member who asked if a union man could be a consistent member of the State militia:

"Yes, a member of the State militia can be seated in a trade council. In fact, the matter is so obvious that it ought not to be open for discussion at all."

"A man who is a wage-earner and honorably working at his trade or calling to support himself and those dependent upon him has not only the right to become a citizen soldier, but that right must be unquestioned."

"The militia—i. e., the citizen soldiery of the several States in our country—supplies what otherwise might take its place—a large standing army."

"The difference between the citizen soldiery of the United States and the large standing armies of many of the European countries is the difference between a republic and a monarchy—it is the difference between the conceptions of liberty and tyranny."

The critics of labor-unions rarely omit the regulation statement that organized labor includes only a small minority of the wage-earners of the country. The estimate generally quoted to give force to the claim that it is "monstrous tyranny for the small minority to dictate to the great majority of workers the wages, hours, and conditions of their toil" is that labor organizations contain only from eight to twelve per cent. of all wage-earners. But if a union containing ninety-five per cent. of the skilled workers in its craft demands better conditions it is no answer to say that the farm-hands or the washerwomen are not organized.

The comparison most frequently made credits organized labor with a membership of about 2,400,000, which is only eight per cent. of the more than 29,000,000 persons engaged in gainful occupations in the United States in 1900. But an analysis of the gainful occupations shows the fallacy of the comparison. These 29,000,000 include: In agriculture, 10,000,000; domestic and personal service, 6,000,000; the professions, 1,200,000. Practically all of these are unorganizable and should be excluded from the comparison. Included also in the 29,000,000 are the 4,700,000 engaged in trade and transportation. But among these are bankers, brokers, merchants, officials of banks and corporations, bookkeepers, commercial travellers, agents, accountants, foremen and overseers, hucksters and pedlers, livery-stable keepers, undertakers, and miscellaneous workers, who are also unorganizable, and should be excluded from the comparison.

It is repeatedly asserted that there is no community of purpose between the union and the non-union man. The fact is that shorter hours, higher wages, and improved conditions are just as much desired by the non-union workers as by the unionists. Occasional brutal combats do not impugn this broad truth.

When the 6,000 union strikers went out at Fall River a few weeks ago they took with them 24,000 non-unionists, and the two are standing shoulder to shoulder, the families of the non-union workers being supported from the treasury of the union to the best of its ability. When John Mitchell called out his 8,000 members at the time of the anthracite-coal strike in 1900, the 140,000 non-union miners went with them. When the railway brotherhoods contemplate a strike they submit the matter to a vote of all the employes, non-union as well as union, the vote of every man counting equally.

Such experiences are common, and yet many writers would have us believe that unionists and non-unionists are natural antagonists.

Organized labor is charged with "defiance of the mandates of the courts," because Samuel Gompers, in connection with an injunction issued by Judge Friedman of New York, "against interference with non-union cigarmakers," was quoted as saying, "I am here especially to violate the injunction."

What is there in this charge? It may be said that Mr. Gompers was misquoted. But waving that point entirely, Mr. Gompers would have been clearly within his rights if he had uttered the words imputed to him. As a matter of record, the injunction in question was not "against interference with non-union cigarmakers," but forbade locked-out cigarmakers to contribute to their union treasury or to pay money out of their union treasury to assist cigarmakers who were in distress. The injunction was overruled as soon as it was brought before a higher court, thus sustaining Mr. Gompers.

Whether or not the injunction was sound, it is plain that in disputing its soundness, Mr. Gompers was exercising only a right that is brought daily into use in the courts. Was it a "defiance of the law" for President Baer of the Reading Railroad to refuse

to obey a judicial order to testify before the Interstate Commerce Commission, until the Supreme Court had decided that he must? Did the promoters of the Northern Securities Company "defy" the law when the government of the United States was obliged to appeal to the Supreme Court to establish the constitutionality and pertinence of the anti-trust law? Unquestionably they, as well as President Baer, were within their legal rights. Any citizen may test the constitutionality of a law, whether in the form of a judicial mandate or of a statute, by appeal even to the highest court in the land. To assume otherwise would be to assume the infallibility of single court or of a legislative body. To assume otherwise would be to blot out in an instant all the appeals for which judicial machinery is devised.

In considering here the familiar charges against the unions of broken contracts, tyranny of a minority, antagonism to the militia, and defiance of courts, it is not intended to minimize by omission the array of crimes growing out of violence during strikes, ranging from petty assault to women-beating and murder, or the cases of corruption that have been exposed. But these deplorable offences are as opposed to the true philosophy of unionism as were the *auto da fe* and the sale of indulgences to the spirit of Christianity.

Granting all the charges brought against labor-unions to be true, and multiplying them a hundred-fold, what is the result? They would prove that some labor-unions and some labor leaders have committed grave offences against society and against themselves. That proposition is admitted.

But it remains none the less true that the trades-unions of this country, no matter what per cent. of all the wage-earners they include, or what incidental crimes they have committed, have a fundamental purpose which all will admit to be for the benefit of society as a whole. They are striving to improve the condition of the working masses. Organized labor has been struggling for this end, not only alone and unaided, but against the general opposition of employers, individual and organized, and against the misrepresentations of prejudiced critics, when, in fact, it deserved the friendly co-operation of them all. Labor has constantly had to evolve its own leadership. It has made all the mistakes of unskilled generalship and undisciplined following. It makes them still. But the time has come when those who have some understanding of the hardships and misdirections that hamper the advance of labor are extending the sympathetic aid of their superior intelligence.

There are associations of employers who would beat down the advance of labor with a bludgeon. There are other associated employers who would come to terms of mutual understanding. This second method, I am glad to say, receives more and more the approval of leaders of public opinion and of humane and intelligent employers. In the multiplication of concrete examples of relations between employer and employed that are harmonious because they are just, can be discerned a brightening outlook in the entire industrial situation. In this view national prosperity will be coincident with the uplifting of organized labor, so that its admitted errors may become fewer and its sincere co-operation with capital in increasing productivity more frequent. Some hopeful phases of the mutual progress of organized capital and labor in this direction I shall illustrate in a subsequent article.

INFORMATION FOR EMPLOYERS.

The Welfare Department of the National Civic Federation is prepared to furnish, upon request, a consulting agent to study the especial needs of employes in a given plant, advise the best methods of introducing such features of welfare work as may be deemed most essential, direct their installation, and, when required, recommend a permanent agent or "welfare manager" to administer the work.

A central bureau is maintained at the headquarters of the Welfare Department for the exchange of experiences by employers. Information with reference to the latest efforts by employers to give especial consideration to the physical or mental welfare of their employes may there be obtained. Some of the subjects covered are:

- Sanitary Work Rooms;
- Wash Rooms and Baths;
- Hospital Service;
- The Luncheon Room;
- Recreation;
- Educational Efforts;
- Housing of Labor;
- Pensions;
- Insurance Associations.

THREE FOES OF ORGANIZED LABOR.

(Concluded from page 7.)

cuniary gain to himself, in higher wages that may be secured through effective organization. If the Chicago teamsters could have known in advance that their union would succeed in raising their wages from \$7 to \$18 or \$20 a week, it might not have been difficult to induce them to pledge to the union fund as much as twenty-five per cent. of the increase. But the average contribution to the union in time of peace is only nominal.

Jurisdictional disputes are another source of weakness. These disputes between unions, each claiming exclusive right to do certain branches of work, arise with almost every improvement and invention. They are, however, recognized as a source of weakness. The Executive Council of the American Federation of Labor thus frankly dealt with this weakness two years ago:

"The Executive Council regrets to state that much of its time has been unavoidably taken up with the settlement or attempted settlement of jurisdiction disputes. Despite the fact that your body in convention assembled has repeatedly declared for peace between the unions, and has advocated the submission of all matters in dispute to the arbitrament of third parties, the jurisdiction disputes seem to grow in number and in intensity. We regret to state that while many of the unions so engaged in controversies over jurisdiction are willing to accept any reasonable arrangement arrived at, a number of unions refuse to abide by the decision of an impartial arbitrator and insist narrowly upon their own interpretation of the boundaries of their trade.

"The Executive Council feels called upon to issue to the unions composing this body a solemn note of warning as to the dangers which lie in the continuance of jurisdiction disputes. Many of the unions appear to be more engrossed in the problem of securing new adherents from unions already existing, or to extend the work of their members at the expense of other organizations, than they are in resisting the aggressions of employers, or securing higher wages, shorter hours, and better conditions of work."

Since that time, several important jurisdictional fights have been settled, but there are yet some irritating cases, especially when capital is tied up while two unions, so completely organized as to monopolize the craft, battle as to which shall do the work.

The contest between autonomists and industrialists has been a menace to organized labor. The autonomists would organize each craft in national unions. The industrialists would organize in one body all the craftsmen engaged in a single industry, which method proved a failure in the case of the Knights of Labor. Socialists and socialist writers have thought that they saw in this contest a possible wedge to split in twain the American Federation of Labor, and with that motive have urged industrialism with vehemence. But this controversy is adjusting itself in accordance with special and local conditions.

The boycott, the union shop and the sympathetic strike are targets for the shafts of the enemies of unionism. These are questions that are in the process of solution through the evolution of experience. For instance, the boycott ranges from the "white list" of the Consumers' League, composed in part of wealthy society women, which is a negative blacklist, to such extremes as the organized persecution of a physician who ministers to the needs of a dying non-union man, or of the druggist who sells the doctor medicine, or such as parading with a denunciatory banner before a grocery that offers for sale a brand of soap whose wrapper was printed in a non-union shop. Somewhere between these extremes lies the freedom of action that may be justified by its motive. The courts are progressing toward a determination as to how far it is legal to make effective a force that is recognized wherever men associate together for a common object.

But the most perilous internal weakness of organized labor is the apathy of the mass. That is a peril that must be met and overcome if unionism is to endure the stress of concentrated assault or to resist insidious disintegration. The one obvious process of overcoming that apathy, with its evil results, is education. That is necessarily a slow process, demanding patience and persistence on the part of those who teach and awakened interest and faithful attention on the part of the taught. These are the very qualities essential to the life of any democratic movement; and in its development, unionism is industrial democracy.

Organized labor is doing much on its own account to remove its weakness of apathy. There are indications that the number is increasing of those who work for the cause, not spasmodically, or only in times of excitement, but steadily, faithfully, throughout the year. When a question was submitted to the referendum of the International Typographical Union, four years ago, the return showed that only one member in four in the New York local voted. But in another referendum this year, over 30,000 votes out of a membership of 42,000 were cast. This showing is the more encouraging, because it is more

difficult to poll such a vote in a large city than in a smaller community. The cigar-makers' union shows a similar increase in the active participation of its members in its affairs. This participation is encouraged by the development of benefit funds, which stimulate individual interest. It is also true, as a general proposition, that the greatest advance in overcoming apathy is made in the skilled crafts. The more unskilled the calling, the greater the need of education and the greater the difficulty of stimulating ambition among the workers.

That the vital importance of its own education is realized by unionism is shown by the adoption of the following resolution at the last convention of the American Federation of Labor:

"Whereas, it is evident that this Nation is destined to take the lead in this grand struggle for better conditions and higher culture; therefore, be it

"Resolved, That we hereby recommend to all organizations affiliated with the American Federation of Labor to have their members study the economic conditions; to have lectures upon these subjects in their lodge rooms, homes, and in meetings set apart for this purpose, and to do everything in their power for the enlightenment and intellectual advancement of the proletariat."

There are other evidences that the unions appreciate the necessity and are gaining the advantage of education. The official periodicals of the railway brotherhoods contain technical articles upon the practical work of engineers, firemen and trainmen. The same statement is true of the stationary engineers' publication, and of the journals of the building trades and of other mechanical callings. Many of these articles are illustrated by diagrams and are sufficiently lucid and simple to interest the lay reader. Moreover, the constant discussion of various phases of the labor question in these and other publications can not fail to enlighten the mass of their readers upon social and economic questions.

An example that merits imitation is that of the International Union of Steam Engineers, that conducts a regular winter course of lectures in New York City. The official journal of that union states: "The prime object of these monthly lectures is to educate our men in all the latest electrical and mechanical devices, so as to fit them to perform their duties in the most efficient manner. It is also our desire to teach the employer that a union engineer, while asking for the eight-hour day and the prevailing rate of wages, wants to give in return a class of service of which the non-union engineer is incapable." That is an illustrative method of how to win the "closed shop" through superior union merit; and it is a practical method also of substituting interest for apathy in the membership.

The organized laundry workers of Chicago have arranged a course of lectures this winter, covering a wide range of subjects. Many of these lectures, like those delivered in the evenings in some of the public schools in the larger cities, are illustrated with stereopticon views. The lectures are so arranged as to stimulate systematic reading at home. The legislation authorizing this use of public school buildings received the earnest support of organized labor.

Other efforts at education aim to encourage the reading of papers and the conduct of debates upon the social and industrial topics at the regular meetings of local unions. This is a movement that the labor press generally favors, and it deserves to receive the approval of all friends of organized labor. The more advanced members of a local union have in this method an opportunity for the guidance of the more backward. It is method of self-help that, properly directed, must result in mental development and in improving the capacity of the mass. It is a method that should go far to meet the cynical assumption that the average wage-earner will abuse the additional leisure that a shorter work-day would grant.

Another force at work for moral education among the unions is their machinery for discipline. Almost every offense for which labor organization provides a penalty is an offense against morality. Its prohibitions are directed against disorderly conduct; intemperance; fraud; non-payment of debts; untruthfulness. The trials of such offenses, especially where there is an appeal from the decision of a local union to a higher body, should afford good parliamentary practice.

Thus do we see that, more or less unconsciously, organized labor is striving to overcome its most dangerous weakness through education and through the establishment of systems of benefits. It is the task of education, as endless as the generations, that organized labor should not be left to perform alone. Labor has had to struggle upward, not only alone and unaided, but through centuries of opposition, even of persecution. But, although its progress has been impeded, it has now reached a point where it is receiving the helping hand of those who realize that the betterment of labor is the betterment of the entire social structure.

As Edgar Gardner Murphy has well said: "The problems of labor and capital, like the problems of science and religion, yield to no precise formulae;

they are problems of life, persistent and irreducible. And yet they are subject to approximate adjustments, increasingly righteous, intelligent and effective, and yielding an increasing measure of social peace, of industrial co-operation, of individual freedom and happiness. . . . Toward the establishment of such a working adjustment of any national problem, it is well to labor, in order that the problems of American life may become the occasions of a keener and more widely distributed sense of social obligation, a larger and saner political temper, a purer civic devotion, rather than the occasions of national demoralization."

PRESIDENT GOMPERS' MESSAGE.

(Concluded from page 4.)

willingness to accumulate funds in the unions, the spirit of fraternity and solidarity, will bring their own reward and the recognition not only of employers, but of the world. It may be safely asserted that as a rule, in our time, those who have no power to insist upon and maintain their rights have no rights to maintain."

Of the advantage of trade agreements, Mr. Gompers said:

"The division and subdivision of labor and its specialization, brought about by inventions of machines and new tools of labor, have robbed workmen of their power of individual freedom of contract with their employers. Their only opportunity for anything like fair or advantageous terms under which to sell their labor is in associating themselves with their fellow workmen in making a collective bargain, a working agreement; in other words, a union and a contract by the union with employers for their labor and the conditions under which it shall be sold."

He thus stated the attitude of organized labor toward international peace:

"True to the highest and best conception of human life the trade-union movement, from its first inception, has been opposed to war. It recognizes that though others may fall, the brunt of war is borne by the working people; not only upon the battlefield itself, but the burdens thereafter which war entails. We cannot be indifferent to, restrain our feeling of horror at, nor withhold our sympathies from, the slaughtered thousands of human beings, even in the far east, regardless of the country toward which our predilections lie.

"International wars have become so destructive of human life and property that the world is shocked from centre to circumference at the holocausts now witnessed in battle. While it may not be a practical proposition to ask for immediate disarmament of all countries, the time and the intelligence of our peoples surely demand that the extraordinary increase in the armed naval and military forces be limited and restricted rather than expanded and extended. We welcomed the establishment of the International Court of Arbitration at The Hague. We recognize that in the last analysis, and in order to prevent any reaction that may lead to greater and more repeated wars and bloodshed, the success for international peace by arbitration must come from higher intelligence and a better conception of the sacredness of human life. Out of these well-springs will flow that kindred and humane spirit that will recognize the best maintenance of our own rights by conserving the rights of others. In the broad domain of human activity there is no force so potent and which will be so powerful to establish and maintain international peace and human brotherhood as the fraternization of the workers of the world in the international labor movement."

The report of the Secretary, Frank Morrison, contained a statement of the numerical progress of the organization that was a surprise to those who had assumed that adverse industrial conditions had lessened its membership. The report said:

"The growth of the American Federation of Labor has been phenomenal; particularly so in many localities. Where organizations spring up within a few months, it must be expected that in adjusting the members into unions, the membership must decrease somewhat from the highwater mark which it reached during the time that the organization wave held sway. . . . My report last year showed an average membership of 1,465,800, while the average membership this year is 1,676,200, clear gain of 210,400. A remarkable increase, when you consider the number of strikes that have taken place, and the organized effort of the citizens' alliances to retard organization and disrupt unions now in existence."

The total receipts were \$307,009; expenses, \$203,991, leaving a balance on hand of \$103,018.

The 109 international organizations composing the American Federation of Labor reported 1,806 strikes, involving 245,174, and costing \$2,860,620. The report asserts that these strikes benefitted 121,340 persons and failed to benefit 18,829.

Sixty-six of these international organizations reported payments for death benefits, death benefits to members' widows, sick benefits, traveling benefits, tool insurance, and unemployed benefits, amounting to \$1,739,796.

National Civic Federation

MONTHLY REVIEW

VOL. I. No. 10

NEW YORK, JANUARY 1, 1905

TEN CENTS

AN HISTORIC GATHERING TO PROMOTE INDUSTRIAL PEACE.

THE THEME OF AN ASSEMBLY REPRESENTATIVE OF CAPITAL, LABOR, LETTERS, SCIENCE, PRESS, BAR, PLATFORM AND CHURCH.

An event of such character and of such promise of benefit to industry and all society as to make it of high historical significance was the annual dinner of the National Civic Federation, in the Park Avenue Hotel, New York City, on the evening of December 15. The striking characteristic of the gathering was its comprehensive democracy. Its vibrant keynote was that of confidence in progress toward industrial peace. Its democracy was illustrated in the composition of the assembly. Both the presiding officer, Samuel

Gompers, the head of the largest labor organization in the world, and August Belmont, the capitalist and employer, whose election to succeed the lamented Marcus A. Hanna as President of the Civic Federation was warmly supported by its labor element, pointed out that in no other country in the world could such a gathering be brought together. Only the democracy of American institutions made possible the commingling in unconscious equality and in conscious co-operation for a common purpose representa-

tives of billions of capital, of millions of wage-earners, of scholarship and letters, of the bar, the press, the platform and the church. The list of speakers is a catalogue of active workers for better relations between capital and labor in the United States. The utterances of men eminent in widely different fields of thought and experience concurred in confidence that the era of industrial peace, with all that it implies for national welfare, is not a dream, but can in a measure be realized. The significance of such

ANNUAL DINNER OF THE NATIONAL CIVIC FEDERATION.

a conviction shared by such a constituency is tremendous. Its importance cannot be exaggerated.

It was in itself an impressive spectacle to behold this aggregation of capital and enterprise, labor and thrift, learning and literature, presided over by the President of the American Federation of Labor. Democracy was literally in the chair. It was significant of the prestige which this movement for industrial peace has attained, that the President of the United States should commend in virile terms the work of the organization and express ardent hope for its continued and wider success. Happily appropriate was the President's heartfelt tribute to the patriotism and mentality of the late Senator Hanna, who had made the realization of the purpose of the National Civic Federation the highest aspiration of his life. The modest dignity with which August Belmont, in accepting his unanimous election to its presidency, pledged his "best effort"; and the experience of the other officers who are to uphold his hands, are significantly auspicious. Andrew Carnegie, who had shown his interest in the organization by coming from a sick bed to the meeting of the Executive Committee during the day, made a notable contribution. His address was replete with shrewd and philanthropic wisdom garnered in a lifetime of experience as one of the largest employers of labor in the world.

The record of this historic evening is herewith presented verbatim:

Samuel B. Gompers, 1st Vice-President, in calling the meeting to order at the close of the dinner, said:

"I do not know that I can open any remarks that I may desire to make, or that the duty devolves upon me of making, or that I may take pleasure in making, better than to address you as 'fellow-Americans.' On behalf of the National Civic Federation, permit me to bid you a hearty welcome around this festive board. There are a number of gentlemen with us this evening whom, I am sure, you will be much more interested in hearing than you would be in hearing me discuss anything I could say to you to-night. But I feel confident that you would not permit me, in the capacity of acting Chairman and Toastmaster this evening, to take my seat without a few observations.

"Let me say to you this, then, my friends, that I am deeply impressed, as no doubt you all are, at this splendid gathering here to-night. It is doubtful in my mind whether a gathering of this character, with the types of men that are represented round this festive board to-night, could be brought together in any other country on earth. (Applause.) Men in all the professions, men representing the public, men in public office, men high in the churches of our country, great captains of industry and business and of finance, and men of labor,—all are assembled here in social and intellectual communion.

Many of you have traveled more than a thousand miles,—busy business men, busy labor men,—to be here and mingle with the men of affairs of America.

"A few months ago a number of foreign gentlemen called upon me at my office at Washington. They were sent here by their respective governments to make inquiries into the industrial conditions of our country; incidentally, also, to make investigations into the National Civic Federation, its work and its methods. They asked me how they could institute organizations of a similar character in their own countries. And inquiries of this character are frequently made. My answer was this: that it is not an easy matter to form an association such as this. It was not brought about in a day; it was a matter of growth and development, not only in industry, but in intelligence; that it was not only these, but it was the outgrowth of the possibilities of the institutions of our country. (Applause.)

"Men of capital, men of large wealth, employers of large numbers of men, recognize in the National

Civic Federation an honest effort to arrive at just results. (Applause.) The representatives of labor recognize in the National Civic Federation an honest effort to attain just results, and to accord fairness and honorable conditions to all. (Applause.) Before a National Civic Federation was possible in our country, it was just as essential that the contests and contention should have occurred in our industries as it seems to be one of the essentials for infantile growth into youth and manhood that the child should fall and stumble; and the growths and the falls and our contentions have resulted in both sides having a higher regard and a more mutual respect for each other.

"In other countries, the employers of labor have become accustomed to look upon the workmen, not only as their financial inferiors, but as their social and political inferiors. (Cries of 'No! No!') My friends, I do not know that I ought to allow that to interrupt my train of thought, but I will, for a

occupy opposite seats, but they are all round the table, and we discuss and endeavor to find a way out of the difficulties and the problems by which we are confronted, and a solution of this great labor problem,—the problem of the age; aye, the problem of the ages,—with which all former problems in the history of men sink into comparative insignificance. We do not undertake to solve, nor do we imagine that it is possible for us to solve, this labor problem by our National Civic Federation. We realize that, as we meet and endeavor to solve the problems of to-day, we shall be confronted with new problems to-morrow, and to-morrow, and to-morrow's morrow; but that each problem solved makes us jointly better qualified to meet and to solve the new problems as they daily arise. (Applause.)

"There are a number of men whose hearts yearn for a solution of this great problem, with all the difficulties, and something of the dissensions and disturbances that arise, and that often are incidental thereto; but

the men who have laid the foundations of this National Civic Federation, and have been constantly and intimately associated with every effort, know that we do not undertake too much. We realize that any effort to undertake too much, to realize too much, to accomplish too much, will simply lead us into dismal and lamentable failure. We try to be of some assistance to our fellow-men. (Applause.) We know that if an employer of labor, who may have heretofore looked with suspicion upon any organized or associated effort of the working-people, will come to know our men in the labor movement better, he will not have so profound a feeling of hostility and antagonism to them. We feel, and know, that as we have the opportunity of meeting the representatives of the employers, face to face, discussing with them the great questions which interest us and the great public,—we know that the employers are not such modern monsters as they are often painted. (Applause.) We come to look upon each other as human beings, as men with strength of character, with manhood, and integrity, and faith, and an honest purpose to serve our fellows; and when men meet under such circumstances, it cannot but prove to the advantage of all, not only of our day, but of days to come. (Applause.) We are building day by day.

"I welcome,—and when I say 'I,' in this sense, I speak advisedly for the representatives of organized labor,—we welcome the associations of employers. We believe that in modern industries, and under modern industrial conditions, the best results can be and are achieved by associated efforts of employers and organized efforts of the wage-earners. There has been this difference between the associations of employers. Those who, for instance, will brook no interference whatsoever, will regard every overture for consideration, every attempt for advancement, every objection to deterioration, as an effort to be stifled, and who will undertake or attempt to undertake, in our day, to deal with organized workmen or with workmen as if we were living in the medieval ages when a man applied himself to his work with the commonest tools and by hand labor;—on the other hand, the associations of employers who recognize modern industrial conditions and developments as they have come to be in our age, and who recognize that the best interests of all are served by conciliation and agreement.

"The National Civic Federation has done much to cultivate this idea. It has done much to polish down the rough edges of bitterness and antagonism of both sides, and, as I said at the outset, it has made possible this large gathering of representative men in all the walks and professions in our country, around a festive board such as this is to-night.

"I shall not detain you further with any remarks, but I have been asked to read to you to-night the let-

THEODORE ROOSEVELT
PRESIDENT OF THE UNITED STATES.

minute, to demonstrate the truth of what I say, even in England. England is a country, among other countries, in which the workmen have evolved from slavery to serfdom and wage labor, and the traditions and legends of old are not yet dead, even in free England. The workmen, on the other hand, with the history and the traditions of the past, have not yet been able to free themselves from their mental state of looking up to their employer. In the United States, with our Republic, theoretically, if you please, yet declaring that all men are born free and equal, the workmen have been fed upon that declaration and believe it. (Applause.) In becoming part of, and associated with, this National Civic Federation, no employer, no workman, surrenders his right or his independence. It is, however, an effort on the part of the representatives of employers, meeting with the representatives of labor, and in council with representatives of the public. These come together and, as my friend Marks has so often and appropriately stated, meet around the round table where men do not sit opposite each other. Men do not

ter of President Roosevelt, which was read to the meeting this morning. (Applause.) And, since the letter is equally addressed to the participants at this dinner as it is to those who participated in the conference to-day, it is wholly applicable."

Mr. Gompers then read the letter of President Roosevelt, as follows:

"White House, Washington, D. C.,
"Dec. 14, 1904.

"Mr. Samuel Gompers, 1st Vice-President National Civic Federation, New York City:

"I greatly regret that my duties here do not admit my attending the annual meeting of the National Civic Federation which will be held in New York City on Thursday the 15th inst. But though I cannot take part in the conference or be present at the dinner in connection therewith, I assure you that I am in hearty accord and sympathy with the purposes of the National Civic Federation in its effort for the establishment of 'more rightful relations between employers and employees.' It is a movement so praiseworthy and so thoroughly American in conception that it should as a matter of course receive the earnest support of all good citizens who are awake to the vital needs of our nation.

"Views upon economic and sociological problems often differ. There can be, however, no division of opinion that the highest aim of all should be toward establishing on an ever closer basis of mutual respect and friendship the relations between employers and workmen.

"The men associated in the National Civic Federation have already done much in the direction of settling labor difficulties on a basis of conciliation and just dealing. Among those most prominent in this work and largely and intimately associated with all your work was the late Marcus A. Hanna, President of the National Civic Federation, a large employer of labor, a man of extraordinary force of character and great mental strength, who devoted much of his time and efforts to the material improvement of the wage-workers, not only without injury to employers, but to their marked benefit, as well as to the benefit of the people generally. When he attended the last meeting of your body his condition was such that a less consideration of the interests of others would have prompted him to stay away in the interests of his own life and health. But when he saw what he deemed a high duty he never paid any heed to his own physical welfare.

"You are about to elect a President to fill the vacancy caused by his death, and I am sure your wise judgment will enable you to choose some man able to carry on in his spirit and with his power the great work of your association.

"Again permit me to assure you of my entire sympathy with your organization, which has done so much, and which if rightly conducted will, I am confident, achieve so much more in the interests of the people of our common country.

(Signed) "THEODORE ROOSEVELT."

At the conclusion of the reading of the letter, three cheers were given for President Roosevelt.

The Chairman:—Gentlemen: This morning, attending our Executive Committee, was Mr. Andrew Carnegie. I am informed he is rather indisposed this evening and is unable to be with us. I am sure that you share the regret we feel at his enforced absence, and trust that his health may be improved and his life spared for many years more of the useful and good work with which his name is associated. Mr. Carnegie was invited to address you this evening. He prepared his address, and I now have the pleasure of presenting to you Mr. Ralph M. Easley, Chairman of the Executive Council, who will read Mr. Carnegie's address." (Applause.)

Mr. Easley read the following address by Mr. Carnegie:

Mr. Carnegie:—"I have been furnished with an admirable text,—'Industrial Peace.' This is the day of Peaceful Arbitration Treaties among Nations to promote 'International Peace,'—a beneficent change, even although these agreements reserve two kinds of disputes for the arbitrament of war in the last resort.

"We should always remember with satisfaction that peace reigns in six-sevenths of the industrial world. There are only seven out of twenty-two millions engaged in gainful pursuits, in mechanical and manufacturing occupations. Now, we hear nothing of war in the agricultural branch, which of itself has more than ten millions of workers. The farmer and his farm-hands co-operate peacefully, and their relations are satisfactory, as we safely infer from the absence of quarrel between them. In domestic service, comprising five and one-half millions, all is peace; perhaps in this department the relations of employer and employed are most satisfactory of all. How very few are the homes with servants in which

probably not more than three million of the seven, from whom the blessings of peace are often swept away by industrial war. That is, out of twenty-two millions of workers, six-sevenths may be assumed to have industrial peace. Only one-seventh employed in huge numbers at the large works or mines are exposed to successive and disastrous outbursts of war, and this chiefly for the reason that employers and employees are strangers to each others' good qualities. It is, therefore, to this class,—employers equally with employees, we of the Civic Federation require to devote most of our thoughts and efforts. I am persuaded that quarrels arise quite as often from the employer's ignorance of the fine qualities of his employees as from ignorance of the workmen of the good qualities of their employers.

"As far as the largest manufactories and mines are concerned, I think the great corporation engaged in a dispute with its men makes a mistake if it adopt the policy, or even consider it, of running the works with new men. First, the best workmen are not idle, and to employ the only class that can be obtained is to lay the foundation of serious future trouble. It does not pay to lose a body of excellent workmen and sober, respectable men, nor to employ the class of workmen whose services can be obtained to fill their places. There is another consideration of much weight. Just in proportion that the workman is earnest and efficient in his pride in his work, he feels that the tools he operates or the furnace he works are in a sense part of himself. He has a personal interest in them and in his job. To compel him to stand by and see an outsider,—almost sure to be his inferior both as workman and as man,—take his place, is to subject him to a trial he should be spared. That the support of his wife and children depends upon his labor, of which he is deprived by another, is the most excruciating thought of all. This is a trial to which no workman should be subjected.

"Even when the employer succeeds in running the work with new men, his victory is really a defeat. He will ultimately lose more by the change than he would have lost had he patiently awaited a settlement with his own men. The fact that there are in any works thousands of men who began there in youth and are now middle-aged, all proud of the works and fond of their owners, is the best preservative of peace and successful operation. It is such works that break records.

"If, in case of a strike, the employer promptly informed his men that they need have no apprehension about their jobs, that he would not have any but his own men and knew that he could not get such men as they, and therefore would wait for them until their unfortunate differences were settled, all would soon be well. I think employers

should make this an invariable rule,—never to employ new men in case of a strike, but to wait patiently for the old men.

"In special branches this policy is impossible, such as in street and other railways and wherever the daily wants of the public are concerned. No doubt new men in extreme cases must be employed, but it is a sad necessity, to be avoided whenever possible. In these cases, public sentiment plays a potent part and hastens a settlement.

"We have another branch to deal with, much in evidence in New York. I am told that a contractor building a residence here employs men from no less than thirty-eight trade-unions. In recent years one or more of these have been constantly at war. Seldom are the thirty-eight all enjoying industrial peace. Saddest of all sights, it is often against each other,—union against union,—that war is waged. Union fighting union must surely give the great fiend exalting rapture.

"I have no personal experience in this matter, but such information as I have been able to acquire from

AUGUST BELMONT,
President National Civic Federation.

CORNELIUS N. BLISS,
Treasurer National Civic Federation.

SAMUEL GOMPERS,
1st Vice-President National Civic Federation.

OSCAR S. STRAUS,
2d Vice-President National Civic Federation.

we do not find several old retainers, old nurses or old butlers, old coachmen, old gardeners, who pass their old age in comfort as part of the household and valued friends.

"These facts lead us to the cause of much of the tension and strife found in the manufacturing and mechanical departments. It rests just here: the former bring in the personal equation, and into the latter nowadays that scarcely enters. It is these personal relations, the knowledge of the virtues of the employer and employed revealed to each other, creating mutual regard, that establish the reign of peace in agricultural and domestic service.

"Small manufacturers and contractors, employing each a few men, rarely have trouble with each other. Each man knows the qualities of the employer and the employer knows his men. Naturally they become interested in each other, and mutual esteem, often ripening to affection, ensures not only peace but good-will. Eliminating the class of small employers, there remain out of the seven millions engaged in manufacturing and mechanical pursuits,

some fair-minded employers is to the effect that the fair, competent and quiet workmen do not yet give proper attention to the management of their unions, and that, consequently, these have been hitherto left to the extreme men. This is a stage which organized labor always has to meet, but it often passes that stage, and as the necessity for prudent action is realized, the moderate, open-minded and fair men finally obtain control. In organizations like the Locomotive Brotherhood and other unions of railroad men, we have proof that there is evolved a safe, conservative, fair management, which renders strikes a very rare occurrence indeed. It is not the able, educated workman that favors demands or violent action, but the

ANDREW CARNEGIE,
Capitalist.

ignorant, and just as men become intelligent, there will be greater harmony.

"It were idle to expect that differences between buyer and seller of labor will not arise, for these characterize every kind of exchange. It is naught, sayeth the buyer. It is invaluable, says the seller; and in one point of view the workman sells labor and the employer buys. It is wholesome that capital should be made to pay well for labor, and to pay very high for it when profits are high, and it is inevitable that wages will fall when profits fall, so that we must expect, and not be alarmed at, repeated demands and repeated rejections from both employers and employees from time to time. These are healthy signs. What the Civic Federation should aim at is that strikes or lock-outs should be prevented, and for these I can see no cure so effective as a trade agreement providing for arbitration, after every effort has been exhausted to settle the difference by the employer and his men themselves, as friends co-operating in a vast enterprise to whose success both must contribute, and in the prosecution of which capital and labor are not foes but allies.

"I would not call these conferences ended between employers and employees until not one ray of hope existed, for employer and employee agreeing between themselves is the best proof of mutual respect, esteem, yes, and of regard,—surest foundation of all upon which any enterprise can rest. The employer who does not estimate the cordial co-operation of employees, because their hearts are with him, as worth a very considerable advance in wages does not share my opinion.

"Gentlemen, the most cheering feature in the relations of capital and labor is that there seems a law at work which rejects the extreme men of both employers and employees and slowly evolves the reign of the fair-minded element which continually makes for industrial peace. The mission of our Federation is to bring these together in friendly conference and prove to them that there are always two sides to all disputes, and also many kindred virtues and an earnest desire for harmony upon both sides; that there are fair employers as there are fair workmen, and that it is a bad day for both capital and labor when they fail to settle themselves peacefully any dispute that arises between them."

The Chairman read the following telegram from Chauncey H. Castle, President of the Stove Founders' National Defense Association:

"Your association is accomplishing great things by nearly ideal methods. I regret that I cannot attend."

The Chairman read also the following letter from the Rev. Washington Gladden:

"Columbus, Ohio, Dec. 12, 1904.

"Mr. R. M. Easley, Chairman Executive Council, National Civic Federation:

"I am very sorry that it will be impossible for me to attend the reception and dinner of the 15th inst. To meet the distinguished men whom you announce,

and to hear what they will have to say, would be a great gratification.

"From the abuse which extremists and destructionists on both sides are heaping upon the Civic Federation, I judge that it must be doing some good work for industrial peace. There are, it must be confessed, a good many people in this country who do not want industrial peace; who will be satisfied with nothing less than the subjugation of those with whom they find themselves at variance. There is an element among the workmen of whom this is true; and there are, I am sorry to say, quite a number of employers who are so unjust and unfair that they are ready to deny to their employees the liberty they claim for themselves. I trust that against both these contending tyrannies the counsels of the men of good will may ultimately prevail, and I hope that what is done at your supper may have the effect to make the Christmas bells tell a little more clearly of Peace on Earth.

"Very truly yours,
(Signed) "WASHINGTON GLADDEN."

The Chairman:—"To-day I was informed that I made a very eloquent presentation and argument and urgent appeal to our reverend friend, Archbishop Ireland, and found, after I had concluded my address, that he was not present. However, he is here with us to-night in the flesh and in the spirit, and I ask our friend, Archbishop Ireland, to address this gathering now."

Right Reverend Archbishop Ireland:—"I believe I can, in all truth, address you all as fellow-workers and fellow-Americans. Upon those two titles I would willingly build arguments that would lead to a pacific settlement of all the difficulties arising between labor and capital. I have supreme faith in America—(applause)—in her institutions; in the spirit which her institutions create and foster; I have supreme faith that those problems that can be solved by men, will be solved; and if any social question cannot be solved and is not to be solved in America, I despair of its solution anywhere.

"Fellow-workers,—we are all fellow-workers. I have contempt for a man who does not work, who does not believe that his first duty here on earth is to do something for the general good. (Applause.) It matters not what be the precise nature of the work: the important thing is that it be work conducive to the welfare of his fellow-men. It is a maxim of highest philosophy, as well as of highest religion, proclaimed by the great St. Paul, 'If a man does not work, neither shall he eat'; and this formed the truest social philosophy, in theory assuredly, if it were not always carried out into practice, of the old and the medieval times when it was laid down as a vital principle that a man who owned the property and who lived from his property owned it only in order that he would have greater leisure to serve his fellow-men. We should be all workers. Let it be the work that cleans our streets, let it be the work of him who makes use of his pen for the general information of mankind, let it be the work of him who is seated in the President's chair, or who leads the armies of his country in its de-

FRANCIS L. ROBBINS,
President Pittsburgh Coal Company.

fense. Work because it is work, and because it is serving the general good, is honorable.

"It seems to me that this gathering is an indication, Americans and fellow-workers, that those problems which at times seem to affright people are surely on the road to solution. The two things needed most for the solution of those problems are here made manifest,—intelligence and sympathy for one another. The problems that come before us in the name of capital and labor are the result of a hundred social complications. It is only by serious

thought that we can reach the root of the difficulties. It is only by large-mindedness that we can see the trend of difficult problems. Those problems are to be solved mainly through principles, and it takes mind, it takes thought, to study out and investigate those principles.

"To-night we have with us the representatives of thought in America. I salute with very great pleasure the new Department of the National Civic Federation opened to-day: that of Industrial Economics. We have the representatives of the journals and the professors. They are the ones who give thought to all these questions, who study them in all their relations to put them before us in living form.

JOHN MITCHELL,
President United Mine Workers' Union.

I believe supremely in intelligence, and the hope of the day is this: that the humblest laborer to-day is a man of intelligence. We have educated our people; it is largely because they are educated that they see the difficulties under which in the past labor has often suffered. But the same intelligence will lead them on to seek practical remedies for those conditions which they are anxious to remedy. Let us all approach the study of these questions with thought, with calm, dignified thought, and then let us approach them with sympathy for one another. This is the lesson of America: that a man is a man, and manhood in him demands respect. Whoever he is, we should feel a brotherly love for him, and see that all his family is provided for. We should look one another in the face. This is the great result of the National Civic Federation. Were this meeting of to-night multiplied a hundredfold, or a thousandfold, through the country, it would be well for the country. For this is a meeting which brings men of all kinds together, in which the poorest laborer, because he is a man, is received as a brother by the richest employer,—a meeting in which we are all brothers, whatever otherwise be for the moment our social conditions.

"It has been said that this meeting could be with difficulty reproduced in other countries. There is much truth in the statement, and one of the difficulties in other countries is this: that classes are divided one from the other; that in one class men do not know, do not come to another class, do not shake them by the hands, do not look them right into the eyes; and here is where the democracy of America is accomplishing wonders. It has taught us that it is no crime to be poor, and no crime to be rich. It has taught us that property is to be respected, because property is the very life-blood of the individual. It is the output of his own energies, his own talents. The respect for manhood in America has opened the way for us to meet and believe in brotherhood, and in love for one another. When we do come to honor them, and feel that we cannot build up our own interest without building up the interest of the laborers, we are very near victory. We must realize that we live not merely for ourselves, or for our immediate fellows,—we live for our country. We must know that it is our God-given duty to build up the whole social structure, and no country is safe, no country is prosperous, where there is not a livelihood for all. No country is safe where any one class of citizens has a reasonable grievance, a reasonable cause for complaint; so, the more we know one another, the more all these so-called causes of division disappear. Who among the employers, with a heart in him, is not anxious to know that his fellow-American has a comfortable home, and wife and child growing up to the possession of American liberty and American opportunity? (Applause.) And who among the laborers does not understand that his own interest is linked with the talent and the energy of the employer? We all know that society is a complex institution. It is an army;

some must lead, some must follow, and the more intelligence we have, the more we understand this complexity of society. I am very sure that the soldier marches to battle with much more hope and confidence when he knows that he has as a leader an officer who is sympathetic, who is skilled, who watches out for opportunities of victory; and so it is with the representatives of labor. They are not jealous of their employers; they know they must have employers; they know that they must put men in the front to seek out openings for capital; otherwise there would be no industry, no occupation, for the laborer. And when we work together, we all know that there must be safety for our

JOHN IRELAND,
Archbishop, Roman Catholic Church.

earnings, whatever they are. We talk sometimes of capital as belonging to an especial class. Why, I trust there is not a laborer in America who is not a capitalist. I think there are few industrious workmen who have not an account in the bank. Well, the workman with a bank account is a capitalist, and if he attacks capital in others because, perhaps, he thinks the others have more of it than he has, he attacks by that his own capital. He loses for his own arm, for his own energy, the protection of the law. I mingle much myself with capitalists and the laborers, and sometimes the question is strong, Whither are we drifting in America? Well, from my knowledge of the laborers of America, I have not much fear of the menace of anarchy. (Applause.) I know very well that each laborer wishes protection for his own little cottage, and to feel that his savings belong sacredly to himself and to his family. If there were some danger of this wild socialism, it would come from those who are not industrious, who do not respect themselves; and it is the duty of the employer and the more powerful elements of society to reduce the number of those who own nothing, who have no stake in the country. I know no better solution for all these threats of anarchy or socialism than this: to teach them all to love and revere the Star Spangled Banner. (Applause.) This is a great and blessed country. Those who are employers to-day were themselves employed yesterday. The richest among us, whose name has been applauded,—Andrew Carnegie,—says that the time was when he worked hard for a few dollars. Now, this is the country of opportunity for all. All cannot possibly be in the front, but all may aim at being in the front, and none can say that hard-drawn classifications held them back. We are watched by all the nations of the world; watched with love and watched with fear. We are watched with love by those who cherish the institutions of liberty. There are those who would wish to see America torn to shreds, because America's freedom is a menace to conditions in their countries which they would fain maintain. It is our duty to hold ourselves as exemplars before the whole world. Throughout all nations it is said the one peril of America is the labor question, because there the labor people, having universal suffrage, understanding their power, would be willing to tear down the institutions of America to satisfy their own personal ambitions and greed. We who know the American laborer have no such fear. At the same time capitalist, laborer, writer, minister,—every one,—should feel that one of the great questions of the day is decidedly this of industrial peace, and should bind himself with the best instinct of his soul to its solution.

"Before all else, we are fellow-men, brothers, and fellow-Americans. And with those titles thoroughly understood, and the meaning of them permeating our minds and hearts, we can look up at the flag of our country and rejoice that it is lifted over a great democracy, over a government of the people, by the

people, for the people. May that flag ever wave over free men and over happy men and over men whose motto is Peace and Brotherly Love." (Applause.)

The Chairman:—"Gentlemen: The next gentleman who will address us is a man also well known to the people of our country,—aye, to the world,—a great financier, a large employer of labor, one of the employers of labor who, by his assistance and co-operation in agreement with organized labor, made it possible to save a year in the construction of that great engineering work, our Subway of New York. I have the pleasure to present to you the Honorable August Belmont. (Applause.)

Mr. August Belmont:—"Mr. Chairman and Gentlemen: You have called upon me to say something. On the rolls of our Association I am designated an Employer. I take it, therefore, I am expected to speak from that standpoint. Of the thirty years I have been in active business, my association with transportation companies as an executive officer, dated my commission back only fourteen years. I see around me this evening many veterans of great experience, to whose superior wisdom I bow; and recognizing their grasp of affairs and knowledge of conditions, I address you with diffidence from the standpoint of an Employer.

"One idea has impressed me, this evening, more than all others,—the unequalled value of American citizenship. We must recognize that citizenship is evolution. Its distinctive merit and qualities are the product of social, industrial and political conditions fostered, nurtured and made possible by social, industrial and political institutions which are peculiar and individual to our nation. These find their roots in the principles of democracy; indeed, they are the outward and visible signs of democracy, and, therefore, when revealed in the practical affairs and contacts of life they present in American citizenship a picture of life as shown nowhere else in the world. In no other country, I venture to say, would it be possible to bring together in an unrestrained atmosphere of equality, such a company as we find here assembled. Here are the representatives of Scholarship and Science; Capital and Labor; Enterprise and Thrift.

"Our national life, our national character, our national wealth, our national progress, stand as a structure upon what YOU represent. This company typifies the great democratic idea of co-operation between citizens in all walks of life, that in the end the betterment of all society may be attained. In this idea,—the betterment of all society,—is the inspiration of the Civic Federation. It aims to bring together citizens of every vocation,—all who are interested in 'life, liberty, and the pursuit of happiness,' so by a united effort it may be possible to improve the relations between the so-called Employer and Employed. It enlists the support, and I am fully convinced, the enthusiasm of all gathered about these tables to-night, and draws to its banner from distant points, thousands concerned in great and diversified interests.

SAMUEL MATHER,
Great Lakes Shipper.

"It has been well said, 'Blessed is the nation that has no history.' Unfortunately, history is too often the record of war, of turbulence, of disaster. What is most prized in Peace! Statesmen of all nations unceasingly labor to maintain Peace,—Peace with Honor. To that end the Civic Federation labors in the industrial world. It is patent to all, employer and employed that nothing so profits labor and capital as Peace with Honor. One of the methods advocated by this organization for the prevention, and when required, the cure, of industrial controversies which threaten a breach of Industrial Peace,—the prolific mother of Misery,—is a Conference having in view new, or revised trade agreements, and it

further stoutly maintains that such trade agreements must be conscientiously lived up to by the signatories. Good faith and honest dealing are the basic principles upon which such trade agreements must rest to be enduring and such contracts must be equally binding upon employer and employed.

"I am glad to testify to the efficacy and efficiency of face to face conferences with honorable employees. I pronounce it a practical method of reaching a common understanding upon points in controversy, from which harmonious agreements are possible; and, if I may refer to my own experience, from such conferences, over controverted points, followed a better understanding and a harmonious

DANIEL J. KEEFE,
President International Longshoremen's Association.

agreement in the conduct of a great public service corporation.

"Brains and Muscle; Money and Material are the essentials of a successful transportation company. There are those who find the ways and means for construction, equipment and operation; those who provide engineering, mechanical and technical skill; and those who furnish labor. Capital, labor and material must lie dormant until utilized by brains and muscle, which, controlled and regulated by executive ability provide the energies essential to the profitable employment of capital and labor.

"In the great business of transportation, human beings can only be conveyed from one place to another by the co-operation of other human beings. Human energy, or labor, therefore, is as essential as steam or electricity. This labor is divided between the executive on one hand, which assumes the responsibility for invested capital, for faithful service, and the regulation of subordinates;—and the great army of employees on the other, who discharge their important duties in their respective functions. These two divisions, representing capital and executive management on one hand, and labor on the other, are bound by a common tie,—the success of the corporation. For success implies the capacity to earn wages and pay for the use of invested capital. From which I mean to say the relations between employer and employee are reciprocal.

"Trade agreements, or by whatever name contracts between employer and employed may be designated, should be entered upon in good faith, and maintained by each with scrupulous integrity. The employer, by reason of this contract embarks the capital of the investor, and the employee his capital,—namely labor. Each is essential to the other. Neither is independent. From profitable co-operation flow the conditions which convert the desert into a garden, and confer blessings of life, liberty and happiness. Such contracts are binding alike on employers and employed, and they should be so regarded. They may be likened to a promissory note, which involves the credit of the maker and endorser. Employees making contracts for labor should establish their credit by living up to their contracts,—and it goes without saying,—employers must be equally punctilious.

"It is a pleasure to believe that organized labor is learning more and more the lesson that its share of responsibility for a contract is equal to that of capital. The dignity of labor equals the dignity of capital, where labor adheres as strictly as capital must adhere, to the obligations of a trade agreement. I would emphasize to the leaders of organized labor the prime importance, the absolute necessity, of fidelity to contracts. When they have made a collective bargain, it should be impressed upon all workers whom they represent that the individual honor of every man is pledged to abide by the terms and spirit of that contract. When employers feel assured that the making of a contract with organized labor is as reliable as any of the transactions in the

business world to which they are accustomed,—as I am glad to learn is becoming more and more the case,—then the trade agreement will carry its own recommendation, as an effective solution of the labor problem.

"Gentlemen,—I thank you for your courtesy and attention." (Applause.)

The Chairman:—"Gentlemen, I desire to divert your attention for a few moments to a formal matter which I think will be agreeable to all here assembled. At our former meeting a committee was appointed, and the number of that committee was augmented by the executive committee meeting to-day. The committee was entrusted with the im-

HENRY PHIPPS,
Director U. S. Steel Corporation.

portant mission of submitting the names of gentlemen for the officers of the National Civic Federation for the coming year. The chairman of that committee is Mr. Franklin MacVeagh of Chicago, and I ask Mr. MacVeagh now, and in the presence of this assemblage, to make a report to this committee." (Applause.)

Mr. Franklin MacVeagh:—"Mr. Chairman: I am directed by your committee on nominations, a committee of twelve, to make their unanimous report, first for the position of President of the National Civic Federation. They have considered this nomination with a complete sense of the very great importance of having just the right man to fill it, and their unanimous nomination for the presidency is Mr. August Belmont." (Applause.)

The Chairman:—"For the moment, we shall enfranchise all those assembled and empower you all to vote."

Mr. MacVeagh:—"If you will permit me then, Mr. Chairman, I move the election of Mr. August Belmont."

The motion was seconded by William D. Mahon, President of the Amalgamated Association of Street Railway Employees of America, and by Warren S. Stone, Grand Chief of the International Brotherhood of Locomotive Engineers.

The Chairman:—"It has been moved and seconded that Mr. August Belmont be elected president of the National Civic Federation. I shall ask you gentlemen to vote by rising. All in favor of the nomination will signify by standing."

The motion was unanimously agreed to by a rising vote.

The Chairman:—"I take pleasure in announcing the election of Mr. August Belmont as president of the National Civic Federation for the ensuing year." (Applause.)

President Belmont:—"Gentlemen: This honor has come to me as a great surprise, and the sense of its responsibility I feel very deeply; more so, when I think of my predecessor, the great work which he did, and the position which he occupied with you and throughout the country. I can only say that I will lend to this work my best effort. I do not exaggerate when I say to you that I hardly feel myself capable of filling it in the manner in which I think it should be filled; but it being your desire, I cannot refuse, and I thank you and appreciate the honor gratefully." (Applause.)

Mr. MacVeagh:—"Mr. Chairman, I now report to you the nominations for the remaining positions: "First Vice-President, Samuel B. Gompers; Second Vice-President, Oscar S. Straus; Chairman Ways and Means Committee, Henry Phipps; Treasurer, Cornelius N. Bliss; Chairman Conciliation Committee, Charles A. Moore; Chairman of Welfare Department, H. H. Vreeland; Chairmen of the Trade Agreement Committee, Francis L. Robbins, John Mitchell; Chair-

man of the Executive Council, Ralph M. Easley; Secretary, Samuel B. Donnelly.

"Mr. Chairman, I move the election of these gentlemen."

The motion was seconded, and the question being put, the above-named gentlemen were unanimously elected to fill the respective offices.

The Chairman:—"Having disposed of the election, I think I may assume the function for a moment to say to you who are not members of the Executive Committee that you are disenfranchised herewith. (Laughter.)

"We have had gentlemen address us this evening, who have been accustomed to bear great responsibilities and deal in large affairs, men who have shown their capacity, and their faithfulness to duty to their fellow-men. I now have the pleasure of presenting to you one who has had dealings with large affairs, and large interests affecting his fellow-men, one who has proven his worth by his work. I refer to Mr. John Mitchell, President of the United Mine Workers of America." (Applause.)

Mr. John Mitchell:—"Mr. Chairman and Gentlemen: I esteem it a very great privilege to be afforded this opportunity of speaking to you, however briefly, upon the question of the relationship of capitalists and laborers. It has been my fate, or my duty, to take part in many of the disagreements, as well as the agreements, between employers and employees, and because of my experience and because of my observations, in the industrial affairs of our country, I am here.

"I am glad to be a part of this peace movement. (Applause.) I think it must be obvious to every observant person that we have in America a labor question; that in some departments of industry the relationship between these two forces of our society has become strained almost to the breaking point. It must be apparent to every good citizen of our beloved country that there is a duty devolving upon every man who cares for the progress and the perpetuity of this republic that something be done to bring into closer and more harmonious relation these two apparently antagonistic forces.

"I am very glad to be here for another reason. It is just four years ago to-night since the Civic Federation was born. Four years ago to-night a small committee, some six or seven in number, met in the city of Chicago and proposed the formation of a Civic Federation,—proposed a movement that they believed would do something to minimize the labor disturbances, to lessen the number of strikes, and reduce the number of lock-outs. Even the most optimistic among the number who gathered there had no idea that the Civic Federation would grow in influence, that it would prosper as it has done, and that four years later we would meet here with the representative men of every walk of life in America. I say the Civic Federation has done well. Its work, its efforts and its purposes should commend it to every man who cares for industrial peace.

"I sincerely hope that all those who have met with us to-night will do something, however little, to establish peace within the industries of our country. I want to say to you that from my observations and my experience, it requires something more than resolutions; that resolutions, however eloquent, will not settle the labor question. If the labor question is to be settled at all, it must be by men having courage and honest purpose. It must be settled by men who will not stand upon their supposed rights. It will not be settled by men who are unwilling to give credit to the other man for honest purposes and to concede to him what is his just due.

"I am a firm believer in the trade agreement. I have had many years' experience in the coal industry. I want to say to you, gentlemen, that where the representatives of the employer, the coal operator, have met with the representatives of our association, where we have sat down and talked the matter out, where we have reasoned together, we have been able to avert strikes; we have been able to maintain peace, peace not by surrender on the part of capital, not by surrender of the part of labor. There has been no surrender of fundamental rights. We have met and talked it out. We found, gentlemen, it was better to talk for a week than strike for a year. (Applause.)

"I wish to emphasize, if it is necessary, this fact: I do not think that any employer or any workman will accuse me of being afraid to strike or of not striking hard enough when we have to strike; but, gentlemen, there are many methods better than striking. Peace is preferable to strikes, although, as I have stated in these meetings before, I hope the time will never come when the workmen of this country will surrender their right to strike. (Applause.) I hope the time will never come when the employers of labor will surrender their right to close their mines, their mills, or their factories. I believe the best safeguard, the greatest assurance of peace, is our ability to fight. (Applause.) But strikes, lock-outs, black-lists and boycotts should never be resorted to so long as there are other methods of maintaining peace.

"I hope, gentlemen, to live long enough to see the time when we shall understand each other's rights sufficiently well to be willing to concede those rights. I hope to live long enough to see the day when

strikes and lock-outs and black-lists and boycotts will be unknown. I believe the Civic Federation, denounced as it is by some, not only capitalists, but laborers, is doing more to establish confidence, to bring into closer and more rightful relations the interests of capital and labor, than any other institution in this country.

"It is growing late, gentlemen; there are a number of other speakers. I thank you for the attention you have given me, and I sincerely hope in closing you will join with the Civic Federation and its Executive Committee in making this the recognized tribunal of peace in the industrial affairs of America." (Applause.)

The Chairman:—"The next gentleman who will

P. H. MORRISSEY,
Grand Master, Railroad Trainmen.

address you is one well-known in our own country and the world over, conspicuous in his efforts for international peace and the high science and art of diplomacy, and who is using and has used for a number of years past his high gifts and attainments to contribute much to establish peace in the industrial affairs of America. The gentleman who will address you now is the Honorable Oscar S. Straus." (Applause.)

Hon. Oscar S. Straus:—"Mr. Chairman and Gentlemen: I have only a word to say. We have been engaged in our meetings and in our conferences since half-past ten this morning. I have had occasion to say everything that I ought to say, and I will say very little to-night. The great American who stands very high in my calendar of saints made the wise statement, 'What are all these strifes and struggles about but for larger dishes and bowls of porridge?' He was Roger Williams.

"Our object is to lessen the struggle between man and man and, instead of that struggle, to unite in a struggle against the unrelenting forces of matter. That is the object of our Civic Federation. The object is to teach the man who stands at the head of great employing forces to have a wider conception of the relations of man and man than may be gathered from the size of dividends, and at the same time to teach the labor leader that he has a larger responsibility than may appear to him from the four walls of his workshop,—the responsibility to the community at large. And it is for this reason that we have constituted the Civic Federation, composed of three groups, the one group representing the employers, the other group representing the wage-earners, and the third group representing the general public. And if we can harmonize the interests of these three groups, we have solved the problem of industrial peace.

"We are doing our best in that direction. We have often succeeded in bringing about peace, and there are times when we have lamentably failed. But we ask you to be patient with us. It was only recently that the Civic Federation entertained the members of the Interparliamentary Union, who visited this country for the purpose of international peace, especially those members who were at the same time particularly interested in industrial peace. We conferred together for the purpose of learning from them, and if possible, teaching them, the best methods of preserving industrial peace. I can tell you here that these Parliamentary delegates from the fifteen most enlightened countries in the world, and members of high standing in their Parliaments, were of one accord that they had not discovered a better method to work out this problem than the one that has been evolved by the National Civic Federation. (Applause.) Criticise as you will,—and we welcome criticism; find fault as you will,—and we are conscious of committing fault. But when you do criticise, we ask you to give us a better method than this one, which is not entirely satisfactory, the one that we have adopted in the Civic Federation. We are searching for it.

"We have to-day organized a department of scholars, of writers, of the leading contributors to our magazines and newspapers, to help us work out the great problem that we have assumed, and in all modesty we ask them for their co-operation and for their aid, in educating the public,—the laborer and the capitalist, and the general public,—in understanding our work, and in contributing whatever they can in order to throw light upon our path. This is our object and this is our aim, and it is for this that we are groping along. If we could present you to-night the result of a year's work, and you could know the scores of important industrial conflicts that we have peaceably brought to an adjustment, I think

CHARLES W. ELIOT,
President of Harvard University.

you would feel some encouragement with me in the work that we have undertaken. It is only the tragic cases, the cases that resolve themselves into strikes, that make an impression upon the public mind, which does not know the scores of cases that are quietly adjusted by bringing together around our council table leaders of industry and leaders of labor, and looking into each other's eyes and plainly setting forth their grievances and their complaints. It is in this way that we have brought about the preventive methods which in so many cases have avoided serious and important industrial conflicts. This is the part of our work that we cannot make public, because it is very often upon the pledge of silence that we can bring the two sides together; but we have established a platform, a natural platform, that no man who wishes to do justice is afraid to come to. There he will receive equal treatment without conceding anything, or without lessening his position, until he finds he can do so in justice and in agreement and in accord. This is the main work, the work of conciliation, and not, as is generally believed, of arbitration, that the Civic Federation performs.

"Finally I wish to say this. Deeply as I am committed to and, of course, interested in industrial peace, there is no surer guarantee of international peace than contentment among the nations themselves. In other words, industrial peace is one of the greatest guarantees for international peace. (Applause.) In the name of the National Arbitration Conference, that is to assemble to-morrow night at Carnegie Hall for the purpose of making known to our Senators in Congress the deep feeling of the peace-loving people of this great country for international peace, and in order to let the Senators know that the treaties of arbitration that our government has negotiated and is negotiating with the civilized powers of the world, which will soon be laid before them by the President of the United States,—that they will be interpreting the mandate of the peace-loving people of this great country, not only to confirm them, but to confirm them expeditiously. I invite you heartily, most cordially, to be present at that meeting to-morrow night at Carnegie Hall. Mr. Andrew Carnegie is to preside, and our Mayor, Mr. McClellan, is to be the temporary chairman, and distinguished speakers will present the subject to you. I feel entirely justified, Mr. Chairman, in connecting the two subjects together at this great gathering of peace-loving, patriotic citizens, laborers and employers of labor and the representatives of the general public, that with the inspiration of this meeting they will come to the meeting to-morrow night and unite with us in the great work of international peace." (Applause.)

The Chairman:—"The next gentleman who will address us is one who also has been for a number of years entrusted with large affairs connected with an important branch of the railroad industry. Without further ado, I have the pleasure of introducing to you

Mr. P. H. Morrissey, the Grand Master of the Brotherhood of Railroad Trainmen." (Applause.)

Mr. P. H. Morrissey:—"Mr. Toastmaster and Gentlemen,—Being notified but a short time prior to the assemblage of this evening that it would devolve upon me to fill a place in the program, I feel somewhat like the colored gentleman who was recently tried in a United States Court. He had been charged with selling liquor without a license. The government had made a pretty strong case against him, and his attorney turned to him and asked him if he cared to go on the witness stand in his own defense. The son of Africa replied: 'Boss, I think I had better remain neutral.' (Laughter.) And so, after the very able addresses to which we have listened, I think I had better remain neutral.

"The organization which I represent is committed to the policies and principles enunciated by the National Civic Federation,—(applause)—viz., conference, conciliation, mediation and arbitration. Mutual conferences between employer and employee, with feelings of confidence that should always be evident, form the very keynote of industrial peace. Organized labor has come to stay. No matter what its errors may have been in the past, no matter whether or not it may have been at times economically and ethically wrong, out of this turbulent past it has evolved into an industrial factor which is recognized by thinkers everywhere, and which fixes its permanency in our industrial life. It must be satisfying to every workman who has identified himself with a labor organization to know that no less a person than the President of all our people so recognized the influential force of association and organization among workingmen, that he saw fit to make it an important part of his last message to Congress and the American people.

"Labor organizations will be approved or disapproved by the press, by the public, by our government, and by the courts, just as they conduct themselves. If they are law-abiding, if they show as respectful a regard for the rights of others as they demand for themselves, they will be recognized; but when they evolve themselves into a force that becomes unlawful, they will be disapproved not only by the law-making bodies of the country and its courts, but by that always present factor known as public sentiment. We of the railroad have in the years of the late past tried the Civic Federation's method of solving these differences, and they have been in the main successful. You have not heard of many strikes on railways in the past ten or twelve years. We had not entirely tried the Mitchell formula of talking the strike idea to death,—(laughter),—but we have met each other face to face, established terms of mutual conference, represented in trade agreements, whether known as contracts, schedules, agreements, memoranda, or in whatever form.

"I am glad, indeed, as a representative of organized labor, to add a hearty endorsement of Mr. Belmont's estimate of the duties of organized labor toward the employers in relation to trade agreements and trade contracts. In years gone by, when organized labor was in a more crude state than it is now, we used to accept all of the advantages that would go with organization in increased wages, shortening of hours, and other helpful conditions, and when a difference arose, it was hard indeed to find the responsible party. When labor was called upon to make good its side of the contract, there was considerable evasion and pleas of expediency. Much sentiment was indulged in, and it got to be a serious question with employers whether or not a labor agreement amounted to anything. But out of that came labor's guarantee that its word was good, that a contract made by it would be kept inviolate, for we realized that any other course meant nothing less than labor's dishonor.

"I do not know of any place where you could find as cosmopolitan a set as is assembled here to-night, unless it might be on an elevated train or on the Pike at St. Louis. The gentlemen who have assembled here this evening, coming from the different walks of life, all have influence in their respective spheres. We sincerely hope and trust that with the guarantees that have been given to you to-night of the purposes and desires of the Civic Federation, it will receive your hearty and unqualified support. We believe that it is one of the forces that make for good in our industrial life. We do not expect that it will prove to be a panacea for all of our industrial ills, but as its principles are extended, and as the things that it stands for become fixed in the public mind, we have no doubt that its influence will spread accordingly. As organized labor forms a section of it, we ask you to treat it for the good it promises. It cannot be questioned but organizations properly conducted are helpful agencies in a country like ours; that any movement that is for the betterment of human kind, that will build men up morally, and teach them the requirements of good citizenship, that will make their labor less oppressive and more remunerative, must surely be for the welfare of the whole people, and as such should receive substantial encouragement." (Applause.)

The Chairman:—"Gentlemen, among those here assembled there is perhaps no one who has been

called upon to deal with such large affairs in industry and public life as the gentleman I have in mind. It is true he has not come as a public speaker, but I am sure even a few words from him will be welcomed by you and by us all. I refer to Mr. Henry Phipps, of Pittsburgh—and elsewhere." (Applause.)

Mr. Henry Phipps:—"During the evening I have thought of some of my own experience in business. I remember going out with Mr. Carnegie one afternoon, late in December, to see some of the workmen, and talk over the matter of adjustment of wages for the coming year. One of the men took me aside, and said: 'Now, Mr. Phipps, it seems very hard that in this season of the year, when we ought all to be

WILLIAM D. MAHON,
President Street Railway Employees' Association.

happy, we are most anxious and alarmed. And do you not have the settlements the first of January in order to reduce us in our wages or to keep us from getting better wages?" I told him it was a very fair inquiry, but if he heard the facts of the case, I thought he would not entertain that opinion. I told him the rails were ordered usually in the autumn of the year, and were distributed over some eight months. We bought our ore in the autumn, so they would dig the ore during the winter, and we had to provide money for that. We could not sell our rails unless we knew we had the ore; we could not get the ore unless we had the labor, and we were just as helpless as we could be. He said: 'I never understood it before, Mr. Phipps; I have a better opinion of the employers than I had before.' I only mention this to show how often misapprehension will arise between us when there is really no reason for it. A little explanation will remove it.

"I cannot leave you to-night without expressing the very great gratification I have had in being with you. I cannot help thinking how much nicer it is to be in business to-day than it was when I was a young man. Then it was war. We did not know what was going to happen on a July or January settlement. Now we know there is arbitration, and that there will be peace; that no anger will start up and impulsive action taken. It is real civilization. The other was barbarism. (Applause.) I do not know when my heart has been more touched than at this meeting. I feel that we are really a band of brothers, and I hope we shall each think of the interests of the others as well as ourselves. I thank you very kindly for this opportunity to make these very few remarks, and my heartfelt wishes go out to this gathering." (Applause.)

The Chairman:—"We are all of us more or less eloquent, even those who are supposed to be unable to say anything. We have just had a demonstration of how eloquent one can be. (Applause.) I regret that we cannot sit here in a sort of perpetual session, or take an adjournment and meet some other time. There are a few more gentlemen upon whom I wish to call, and I trust that you will all be enabled to remain with us until the close of the meeting. I take pleasure in presenting to you now a gentleman who is very largely interested in industrial affairs, who has traveled a very great distance to be with us and to spend part of the day and evening with us. I refer to the Hon. James Kilbourne, President of the Kilbourne & Jacobs Manufacturing Company, of Columbus, Ohio." (Applause.)

Mr. James Kilbourne:—"Mr. Toastmaster and Gentlemen,—I am an optimist on the labor question. For more than a third of a century I have been manager of a company between whom and its employees, both union and non-union, there never has existed even the slightest difficulty. When they march together on Labor Day, they carry a banner that has upon it two clasped hands and the words 'Capital

EXECUTIVE COMMITTEE.

ON THE PART OF THE PUBLIC.

Grover Cleveland, ex-President of the United States, Princeton, N. J.
Andrew Carnegie, capitalist, New York City.
Cornelius N. Bliss, ex-Secretary of the Interior, New York City.
Oscar S. Straus, member of the Court of Arbitration at The Hague, New York City.
Charles W. Elliot, President Harvard University, Cambridge, Mass.
Archbishop John Ireland, of the Roman Catholic Church, St. Paul, Minn.
Bishop Henry C. Potter, of the Protestant Episcopal Church, New York City.
David R. Francis, President Louisiana Purchase Exposition, St. Louis, Mo.
Isaac N. Seligman, of J. & W. Seligman & Co., New York City.
James Speyer, of Speyer & Co., New York City.
Charles Francis Adams, Publicist, Boston.
John G. Milburn, lawyer, New York City.
V. Everit Macy, capitalist, New York City.
Charles J. Bonaparte, lawyer, Baltimore.
Ralph M. Easley, Chairman Executive Council, New York City.

ON THE PART OF EMPLOYERS.

Henry Phipps, director United States Steel Corporation, New York City.
August Belmont, President Interborough Rapid Transit Company, New York City.
Lucius Tuttle, President Boston & Maine Railroad, Boston.
Frederick P. Fish, President American Bell Telephone Company, Boston.
Francis L. Robbins, President Pittsburgh Coal Company, Pittsburgh.
Henry G. Davis, Coal Operator, Elkins, W. Va.
H. H. Vreeland, President New York City Railway Company, New York City.
Samuel Mather, of Pickands, Mather & Co., Cleveland.
Charles A. Moore, Manning, Maxwell & Moore, New York City.
Franklin MacVeagh, of Franklin MacVeagh & Co., Chicago.
Charles H. Taylor, Jr., President American Newspaper Publishers' Association, Boston.
Dan R. Hanna, of M. A. Hanna & Co., Cleveland.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
Otto M. Eldlitz, Chairman Board of Governors, Building Trades Employers' Association, New York City.
William H. Pfahler, former President National Founders' Association, Philadelphia.

ON THE PART OF WAGE EARNERS.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President United Mine Workers of America, Indianapolis.
E. E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
James Duncan, General Secretary Granite Cutters' National Union, Washington.
Daniel J. Keefe, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.
Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers.
P. H. Morrissey, Grand Master, Brotherhood Railroad Trainmen, Cleveland.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit, Mich.
Theodore J. Shaffer, President Amalgamated Association of Iron, Steel and Tin Workers, Pittsburgh.
J. J. Hannahan, Grand Master Brotherhood Locomotive Firemen, Peoria, Ill.
James O'Connell, President International Association of Machinists, Washington.
John Tobin, General President Boot and Shoe Workers' Union, Boston.
Joseph F. Valentine, President Iron Moulders' Union of North America, Cincinnati.
James M. Lynch, President International Typographical Union, Indianapolis.
Denis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.

PRESIDENT AUGUST BELMONT.

August Belmont, the new President of the National Civic Federation, has been associated with its work for two years, during which time he has shown his active interest by prompt response, by day and by night, to every request for his aid in putting its principles into practice. He was first attracted to the New York branch through the quiet effectiveness with which it averted a controversy and brought about an agreement with employees at the time the Elevated railroads in New York passed into the ownership of the Interborough Rapid Transit Company. At the semi-annual meeting of the Executive Committee last May, Mr. Belmont accepted the chairmanship of the Ways and Means Committee. Since then, he has had personal experience, during a critical period on the Elevated relating to terms and conditions of employment in the new Subway, of the practical value of conference in adjusting labor difficulties. His attitude throughout that controversy so combined dignified insistence upon the rights of the company with patient discussion of the claims of three national labor organizations, presented by more than a score of representatives, as to command for him the respect and confidence of both capital and wage-earners; while at the same time he showed a keen sense of his official responsibility for the public convenience. It was this happy combination, together with his modest but earnest share in the successful efforts of the National Civic Federation to prevent industrial discord in a number of other highly important cases, that attracted the unanimous support of his name, for President of the organization, of all its three groups. It is significant that his nomination was seconded by two of the national labor leaders with whom, as an employer, he had conferred. Mr. Belmont's speech of acceptance, with its appreciative reference to the high character and standing of his devoted predecessor, is filled with the spirit of quiet and effective executive ability.

FOUR YEARS OF PROGRESS.

A higher and broader conception of its mission was conspicuous throughout the fourth annual meeting of the Executive Committee of the National Civic Federation. All of its proceedings were inspired by this wider view and a determination to put into operation plans to realize larger possibilities. Incidentally, it became evident that there is growing to be a more accurate public understanding of the purposes of this organization. The popular misconception that the sole end of the National Civic Federation was to settle strikes and lock-outs, that it was to be a kind of voluntary tribunal of arbitration, is yielding before the persistent reiteration that arbitration is not one of its functions as a body, although its individual members may upon request act as arbiters; that its ultimate aim is industrial peace; that such an ideal state can only be approached in the great industries through a series of adjustments; that the trade agreement has proved the most practicable method of securing harmonious relations between capital and labor; that, in general terms, the National Civic Federation would examine the underlying causes of industrial conflicts and search for their remedies.

Its definite aim,—the promotion of more rightful relations between employer and employed,—it has become apparent, involves the entire field of industrial economics,—a science so far-reaching as to extend into every department of human life and endeavor, and at the same time so technical as to demand the closest study for the correct ascertainment of facts and the keenest analysis to determine their inter-relations and their interpretation.

The past year has witnessed much work accomplished by the Departments of Trade Agreements and Conciliation and Arbitration in encouraging collective contracts and in avoiding labor troubles. The Department of Welfare Work has been organized, and is in active and practical operation. The reports of these Departments, which appear elsewhere, speak for themselves.

The members of the Executive Committee expressed their confidence that the new Department of Industrial Economics will be a most effective educa-

tional agency. Its periodic meetings, which will discuss specific topics, will be reported verbatim in THE MONTHLY REVIEW, and will thus evolve a body of industrial literature of distinctive quality and high value. The participation in the discussion by economists, sociologists, professional writers and speakers and hard-headed men of affairs must bring about a combination of theory and fact that should confirm or modify recognized principles. The membership of this Department is of a character that warrants its high aims.

The proposed Trade Sections, whose task will be to consider the best solution of especial problems relating to the employment of labor in particular industries, will produce definite results through special investigations and conferences. These technical studies may be carried into all of the great industries.

The formation of an International Industrial Committee may have a practical bearing upon the internationalization of great industries and the development of international unions. Oscar S. Straus suggested an association between this movement and the prevalent desire for arbitration treaties when he said: "Industrial peace is one of the greatest guarantees of international peace."

The four years that have passed since the birth of the National Civic Federation have brought to its founders and promoters ample reasons for faith in a future of progressive usefulness. The organization has endured all the strains which both the scoffing and the doubtful predicted. The labor leaders have found that some of their demands have been defeated, and large employers have learned the necessity of concessions. In the various disturbances with which the body has had to deal. Yet each element has adhered to a movement that has survived the period of excessive sentiment as well as of decided reverses, and that is to-day stronger than ever in the confidence and support of the general public.

AN EVENING OF MEMORABLE ADDRESSES.

The speeches delivered at the dinner of the National Civic Federation were worthy of the occasion and of the highly representative gathering to which they were addressed. In their complete form, as presented in this issue of THE MONTHLY REVIEW, they will reach a wider audience. The address of Andrew Carnegie may well rivet the attention of employers everywhere upon his conviction, born of experience, that "the great corporation engaged in dispute with its men makes a mistake if it adopt the policy, or even consider it, of running the works with new men." The reasons he recites for this proposition are at once humane, sympathetic and business-like. In truth there are victories so dearly bought as to be defeats.

The Toastmaster, Samuel Gompers, whose graceful and pertinent introductions served to place the speakers and the hearers upon reciprocally agreeable terms, thus evinced a singular adaptability. He infused the spirit of good cheer, mingled with high philosophy, into a brilliantly democratic social evening with as much tact and readiness as he displays when, as President of the American Federation of Labor, he directs the annual proceedings of the delegated representatives of nearly 2,000,000 organized wage-earners. The retired ironmaster and active philanthropist and the aggressive leader of the largest labor organization of the world, are but two of the striking figures that by turns dominated the profound attention of an unparalleled assembly. An appreciation of that gathering can best be gained by a glance through the list of those who accepted invitations to the dinner. It is an array of names that made inevitable the comment that in no other country in the world would such a gathering be possible. It is remarkable for the variety of successful achievement that it represents.

TWO IMPRESSIVE WITNESSES.

Representing the largest employing corporation of its kind in the world, whose business of mining and transporting fuel extends from the Great Lakes to the Gulf, enlists \$135,000,000 of capital and employs 75,000 men, Francis L. Robbins, President of the

Pittsburgh Coal Company, gave the eloquent testimony of facts, at the dinner of the National Civic Federation, in favor of the trade agreement. He cited the agreements of his company with the miners' and the longshoremen's unions as typical contracts between a combination of capital and organized labor, accompanied by a system of profit-sharing, insurance and pensions and productive of peace and prosperity throughout a vast industry and a territory imperial in extent.

Representing the largest labor union in the world, whose membership of half a million delves and toils above and below the surface of nearly every State in the Union, John Mitchell, President of the United Mine Workers of America, matched the testimony of capital with the testimony of labor in favor of the trade agreement. Each of these striking witnesses dwelt upon the necessity of conference as a prelude to agreement, and each recognized good faith and mutual respect as essential to conference. Mr. Mitchell expressed the wish that labor would never surrender its right to strike or employers their right to lock-out; but he put a fundamental trait of human nature into his epigram: "The best safeguard of peace is our ability to fight."

THE CONCILIATION DEPARTMENT.

The report of the Committee on Conciliation, presented by its Chairman, Charles A. Moore, to the Executive Committee of the National Civic Federation, was a striking exhibit of effective prevention of industrial conflicts during the past year. The record is one for congratulation. The work involves such confidences and affects such delicate relations that its publication might impair the future effectiveness of the committee.

AN HISTORIC GATHERING.

(Continued from page 7.)

and Labor.' I believe that fully represents the feeling which has always existed between us, and I know of no reason why, if just consideration is given by one to the other, these relations should not be those of labor and capital everywhere.

"I do not believe at all in this theory of an irrepressible conflict between them. I am happy in the belief, on the contrary, that industrial peace in this country is more nearly at hand than is generally supposed. There will always, doubtless, be differences more or less acute between individual employers and their employes, but such serious and widespread disturbances as have occurred during recent years, threatening the general peace and welfare, will, I believe, in the not distant future, become a thing of the past in this country.

"I also believe that the accomplishment of this result will be largely due to what, in the opinion of many, was the chief cause of the violent disturbances referred to, viz., the organization of labor. Before the time when labor became thoroughly organized, wages and working hours in this country were far from what they should be, and the conditions which then surrounded working men and women would to-day be deemed intolerable. Perfection has not yet been attained,—far from it. Labor will ultimately receive a still larger share of the joint proceeds, and capital will have to content itself with less; but a great advance has been made.

"Organized labor has increased wages to the benefit, not to the injury, of the general public; it has shortened the hours of work, not to the advantage of working men and women alone, but of the community at large; it is fast doing away with child labor, to the ultimate improvement of the race, both physically and morally; it has caused the enactment of laws which make it comparatively safe to work in factory and mine when formerly death was always waiting for its victim; it has, in many of the States, amended the fellow-servant law so that the responsibility for death or injury by accident is placed where it rightly belongs. It has so educated public opinion that it is no longer reputable for one man to buy the labor of another as he would merchandise, at the lowest obtainable price, with no other restriction than the supplying of the means of bare existence; it has, in a hundred ways, improved the conditions of working men and women.

"I say that organized labor has done these things. They would have, perhaps, been done in time without it, but the progress would have been slow and halting, with many a backward step.

"As it is, organized labor, while its work is not completed, and perhaps never will be, has removed or greatly lessened the most serious causes of discontent, and thus made possible an industrial peace

which otherwise could not and should not exist. It has also demonstrated to the employer that it is neither wise, profitable, nor safe to defy a public opinion which demands for the workers safe and healthful surroundings and a fair day's wage for a fair day's work.

"In bringing about these results, its methods have not always been commendable; quite the contrary has at times been true. But it is better in the end that disease should be eradicated even by unnecessarily harsh methods. I believe thoroughly that, notwithstanding all the strife and bitterness and injustice that has at times marked the course of organized labor, it has paved the way for an early coming of industrial peace in this country which, but for it, would be long delayed.

"That this is so is owing in no small degree to the able, honest, and unselfish leadership of some of its representatives present here to-night. (Applause.) God grant that they may be strong enough and big enough to put aside all personal ambition, all thought of personal aggrandizement, and continue to use the power their position and the devotion of their followers gives them to seek only the right, with charity, and so hasten the end of strife.

"Amongst the obstacles in the way of an early establishment of industrial peace, there are two which seem to me of prime importance, and in speaking of these I may give offense to some of those present. One is the insistence upon the part of some unions for what is commonly known as 'the closed shop.' I know that these unions say that is a misnomer, but it represents the conception by the general public as to what is demanded. It is not my purpose to discuss this matter now, but merely to read the statement of two members of organized labor as reported some time since in the public press, which statements seem to me to breathe the true American spirit and to be unanswerable. One of these is reported to have been made by a member of the Brotherhood of Locomotive Engineers, and the other by Mr. Warren S. Stone, Chief of that Brotherhood, who is present, and can correct the statement if he is incorrectly reported.

"A representative member of the Brotherhood of Locomotive Engineers is quoted as follows in an interview given to the 'New York Tribune':

We wish it to be distinctly understood that the Brotherhood of Locomotive Engineers takes the stand that, as our forefathers gave us all equal rights we have no right to decide that we will not work with non-union men. The Brotherhood of Locomotive Engineers or its members as a body never said that they should work with none but members of the Brotherhood. What we have insisted on, and will always insist on, is that the standard of union wages be observed all along, whether the men be union or non-union men. We hold that a non-union man has as good a right to work as a union man, if he gets the same wages.

"This declaration was supplemented by the following statement by Mr. Warren S. Stone, Grand Chief of the Brotherhood:

That is true, and it applies not only to the Engineers but also to the four railroad Brotherhoods. In this respect we differ from most of the other trade and labor assemblies. The Constitution of the United States guarantees every man a right to work, and the railroad Brotherhoods have never objected to working with non-union men so long as they were paid union wages and worked under union conditions.

"Now, there is one thing I would like to say right here. In my early manhood I passed a great deal of time in the Hocking Valley, and I saw a great deal of the miners, and was very much interested in their conditions. I made up my mind then, and the conviction has grown with the years, that however it might be elsewhere, so far as the mines were concerned it was better, not only for the miner but for all the operators, that every workman in the mines in this country should be a member of the miners' union.

"The second obstacle in the way of peace to which I referred is the veiled, but in my judgment apparent, purpose of some—not all—of the several employers' associations to disrupt and break up entirely labor organizations. None of them, so far as I know, openly avow such a purpose at this time,—they sometimes, indeed, deny it,—but it is impossible to read their literature and the speeches of those most influential in their organizations without being convinced that such purpose, however concealed for the present, nevertheless exists.

"Any effort in that direction, in my judgment, will be futile, and should be. When united action of the workers is no longer necessary to secure justice, unionism will cease; but that time has not yet arrived. While public opinion is improving and is coming more and more to the laborer's side, while instances multiply of just and kindly relations existing between the employer and the employed, proving by their results the benefits to each of the recognition of the rights of the other, and making in some cases unions unessential; yet in a majority of cases union organization is still necessary in order to secure just wages, and what is of equal, if not greater, importance to American workmen, the acknowledgment of equal manhood. (Applause.)

"As I said some years ago upon an occasion similar to this, the onward march of labor cannot be permanently prevented. The overwhelming weight

of public opinion is on its side, and will be as long as it seeks its rights in lawful ways. Let the laboring man remember that liberty under the form of law is his greatest earthly inheritance; of more importance to him than it is to the rich. Let him be careful, as careful of the rights of others as he is of his own, and in the end he will surely be triumphant, helping the coming of that day, which may God speed, when strikes and lock-outs shall be no more, because all men shall recognize the obligations that pertain to the universal brotherhood of man." (Applause.)

Mr. Chairman:—"I am sure we shall all be interested in hearing a few remarks from a representative of, I think, the largest holding of mining in this or any other country,—a gentleman who believes in trade agreements, and who has done much to help reach the full fruition of the idea for which the National Civic Federation stands. I refer to Mr. Francis L. Robbins, President of the Pittsburgh Coal Company." (Applause.)

Mr. Francis L. Robbins:—"Mr. Chairman and Gentlemen: I am not going to attempt at this late hour to make a speech, and yet if I did not say something it might be misunderstood. Jointly with Mr. Mitchell, as Chairman of the Joint Trade Agreement Committee, of the National Civic Federation, and having represented for a great many years the mining industry on the part of the operators, as he has upon the part of the miners, and therefore speaking not as a mere theorist but from actual practice and actual knowledge, I believe that the interests of capital and labor are reciprocal, and that they are best served by combinations of capital and by organizations of labor. I believe so, because I think it is far more advantageous, far more profitable to deal with the leaders of organized labor than with the rank and file. Leadership tends to conservatism. It makes men think, and because of that, because of the conservatism of the leaders who have preceded Mr. Mitchell,—and none of them was his superior,—the joint trade agreement between operators and miners stands to-day as the most representative trade agreement of this or any other country. I can bear witness to the fairness with which we have met Mr. Mitchell and his colleagues. The interests have been very large. At times there has been a great tension, but at no time was there ever an intimation on the part of either side that the other was not desirous of doing what, in his interest, he felt represented his rights.

"There is another organization which we meet in like manner,—the 'Longshoremen's union, of which Mr. Keefe is the worthy president. In each organization, by unanimous vote, it has been declared that any agreement that was reached should be inviolate, and that under no pretext whatever should any sympathetic strike occur.

"As far as our companies are concerned, the old saying that corporations have no souls is certainly not true, because we have endeavored to and have introduced the profit-sharing system with our employes, which has been most favorably received and has been of great benefit. We have also aided in a death and accident association, in which the company and the men jointly provide for death and accident funds. We are also jointly building up a pension fund, so that to-day in our great army of employes, stretching from Pittsburgh to New Orleans, in every port, and on nearly every craft upon the river, and stretching over all the Great Lakes and in every important port of all the Great Lakes, there is not to-day a single disagreement between the company and its employes. (Applause.) In this way we have endeavored to do our share in wiping out that scathing indictment,—scathing because it is true: 'Man's inhumanity to man makes countless thousands mourn,' and we have supplied the other doctrine in place of it: 'Peace and good-will to our fellow-men.'" (Applause.)

The Chairman:—"Gentlemen, as I stated a few moments ago, we have a number of gentlemen from whom, of course, we should all like to hear, but the hour is growing late. There is one gentleman who has traveled all the way from Detroit to be with us this evening,—a representative of labor,—and I shall call upon him now. He is a gentleman who is dealing with a most important industry, or rather a most important traffic. Mr. William D. Mahon, president of the street railway men's organization of America." (Applause.)

Mr. William D. Mahon:—"I want first to correct the Toastmaster. I did not travel from Detroit. I left New Orleans to attend this meeting, and I put in some forty-eight hours' hard riding to try and be present at this meeting, and arrived here late tonight. With a great deal of anxiety I traveled all this day, and I want to assure the Archbishop that I fasted all day, because we missed our connection and had no dinner. (Laughter.) My reasons for wanting to be present were that I have been connected with this organization for some time, and I had an anxiety as to its future. We have lost our distinguished president, Mr. Hanna, since the last meeting that I attended, and I was worrying as to who would lead this organization in the future. It

so happened that the late president was a street railroad man, and I worried about the future of the organization for fear they would not select proper officers. But when I arrived here to-night I was highly satisfied. I found they had chosen another railroad man to direct the future of the organization. (Applause.) So my anxiety was all for nothing. But I think it was due to my prayers during the day, while I fasted, that the committee made their wise decision, and selected the gentleman they have to represent us during the coming year.

"I realize that the hour is late; but it is a little later than this that we street car men usually hold our meetings. We usually hold them until four

HENRY C. POTTER,
Bishop, Protestant Episcopal Church.

o'clock in the morning. So I am prepared to hold you here from now until four o'clock. (Laughter.)

"I am pleased to be at this meeting and to have listened to the gentleman who preceded the last speaker, Mr. Kilbourne. I remember, years ago, the first attempt that I made to address a public meeting in defence of trade-unionism. The distinguished gentleman, Mr. Kilbourne, was chairman of that meeting. He expressed the same sentiments then that he has to-night, and it is gratifying to find such men engaged in this work. (Applause.) The world has not gone to pieces yet. There are some men, on both sides of the fence, who are interested in its future welfare, and they are working hard for it.

"I was told, after coming here to-night, that the subject for discussion was the question of industrial peace. I was gratified to know that was the subject up for discussion. I was also gratified to hear the president-elect say, 'peace with honor.' I assure you, upon the part of those I represent and the trades-union men of our nation, we are interested in industrial peace, the industrial peace with honor to all alike, regardless of whether we are captains of industry or the toilers of the land. Archbishop Ireland said that it was no disgrace to be poor, but those of us who happen to be on that side of the line find it, sometimes at least, disagreeable. Yet with all of that, with all our environments, we never forget that we are American citizens, striving, not for wealth, not for riches, but to improve our conditions as American citizens; and I assure you, upon the part of the wage-earners of this country, of whom I know something, and whom, in my lifetime, I have come in contact with, and worked with, that the great army of labor is also interested in industrial peace,—interested in seeing the wheels of progress roll on, and men rise higher and higher to better conditions.

"So, my friends, I congratulate this organization to-night upon its good work in the past. The Civic Federation has done a good work, and at this time, when there are rumors of war and of strife between men of capital and the men of labor, this organization stands out as a bright star, pointing the way to true industrial peace. I have not time to relate the good work which I know the Civic Federation has done for the cause of labor and the cause of capital jointly, but it is doing a noble work, and upon the shoulders of the men engaged in this movement rests the future, under the circumstances and conditions that now surround us, of leading both capital and labor to a better understanding, and the establishment of industrial peace in our country.

"I have just come from a long campaign. Seven weeks ago I left my office, and I have been among the workers of this nation from that time until to-night. Once in a while we condescend to associate with you captains of industry, and this is one of the occasions. (Laughter.) There are times when we would hesitate to meet you. I know something of the feelings that exist. A few nights ago, after closing

an address at a public mass meeting largely attended, there came to my room in the hotel a committee of earnest men. They came to talk of the industrial conditions, of the threatenings of the Citizens' Alliance. I listened to their story attentively, and when they had got through I said, 'Gentlemen, now be collected; do not have any alarm. First of all, realize this fact: We have got our organizations; we have established them after a long and hard-fought battle. They are here. They are here to stay. We have not only our organizations, but we have our labor press. Every organization controls—or almost every one—a journal. We have got our batteries back of us to defend our position. We have established them in the face of opposition, and they are here to stay. You cannot remove them.' Their proposition was that, on account of the alarming situation, we form secret organizations and do battle against the opposition. I said, 'Gentlemen, no. We want no secret organizations. We are American citizens. Our rights are clearly prescribed by the Constitution of our land. We are interested in its welfare. Every act, and all we do, we have no objection to any man knowing. Our doors are open. We lay everything bare to the world. We need not establish any such organizations, and I will tell you why: Because, gentlemen, the leading men of industry are not engaged in any such a movement. They recognize in this industrial age, in this industrial hour, the necessity of an organization. They form their organizations, and the broad-minded men, the broad-minded representatives of capital, recognize and concede to us the right to organize. That is the organization that will lead and will direct the forces of capital and the forces of labor, and it will go on with its work, its influence and its efforts when the Citizens' Alliance shall sleep in its unknown and forgotten grave.' (Applause.) So I said to them, 'Gentlemen, do nothing of the kind, but stand up for the rights of your organization. Stand up as manfully in the future as you have in the past. Let the leaders of your organization direct its affairs, and you will find them around the consultation boards settling the questions with the leading representatives of organized capital in this nation.'

"So I say to you, my friends, this is my faith in the Civic Federation, and that is the work that is before it to-day. And that is the work it is doing. I doubt if half of you realize the great work that has been done by the few men in this organization,—such men as my friend Kilbourne, such men as MacVeagh and others have done, secretly and unknown. The good work has gone on, and I say to you, if we all determine here to-night to put our shoulders to the wheel, to work as men interested in the welfare of our nation, in the welfare of our homes and our firesides, we will bring industrial peace with honor that will be a credit to this great nation, and the great people that we are so proud of, that we are part and parcel of. There is work, let me say, for all of you, whether you are on the side of labor or of capital. We only want what is fair; we only want what is just.

"I have not time, nor would I take it at this late hour, to attempt to tell you the work of the trade-unions. I know what they have done. I read one article, which I commented on in a speech the other night, which told me volumes as to what the trade-unions are doing, and I thought of it when my friend representing the coal mining industry was speaking a moment ago. The other day it was announced that 2,500 children, under the legal age of 14 years, would be taken from the mines of Illinois and forced to go to schools. (Applause.) I wish that such a law might have been in effect thirty years ago, and then I might have had an education, and I might have been a Belmont, or something like him. (Laughter.) My friends, we have volumes to argue in favor of trades-unions and our organizations and their movement. Do not misunderstand us. We are going to stand by them and, if forced to, we are going to fight for them; but, on the other hand, we stand ready as the representatives of our organizations, as business men and as citizens of this great republic, to meet you around the consultation board, and there to represent our organizations, and,—let me say to Mr. Kilbourne and others,—there to fight out the question of the open or of the closed shop. We do not come to fight it out here. We will discuss that with our employers. We will settle that question with them. The press of this country, the pulpits—no one else can settle that. We will settle that within our own organizations, and with our own employers, around our consultation boards. (Applause.)

"I say to you, friends, again, we are standing for peace, as the chairman of this meeting said, 'honorable peace'—the peace that shall be granted to American citizens, men striving for the rights of their homes and their firesides. That we stand for in our organizations. That we shall insist upon—a fair interpretation of all that peace means. And when that is granted to us you will find us side by side—you, the representatives of capital; we, the representatives of labor. We recognize that the great army of men and women must always be the brawlers of wood and the drawers of water, but we insist upon civil-

ized conditions for them, and when that is granted you will find us in harmony with you for peace." (Applause.)

The Chairman:—"As I have already indicated, I shall call upon a gentleman well known to us all, one whose great attainments and whose great work commend themselves to our earnest consideration,—the great president of that great seat of learning, the University of Harvard, President Elliot." (Applause.)

President Elliot:—"Mr. President and Gentlemen: I am very sensible that I have been listening to oratory on this subject for thirteen hours to-day,—(laughter)—and therefore I propose to be extremely

JAMES DUNCAN,
Secretary Granite Cutters' National Union.

brief. I have the honor to represent in the constitution of the National Civic Federation a vague body known as the public. (Laughter.) It is, however, a body very much larger than all the labor-union men and all the employers in the country. (Laughter and applause.) It is a body at the lowest estimate five times as large as all the union men and all the union men's families and all the employers and all their families. (Laughter.) The total number of the employers, the union men, and their families, in the United States does not exceed 20,000,000. The population of this country approaches, if it does not surpass, 80,000,000. I say, therefore, that I have the honor to represent three-quarters of the American people. (Laughter and applause.)

"Now, I have heard all day and many days before about this strife to which one-quarter of the American people seems to be committed, but where did these two combatants get their power to fight? Where did they get it? They got it exclusively from the fact that free institutions have been created in this country. (Applause.) It is only about fifty years since the first corporation was established in England with limited liability in industry,—only about fifty years. The first American corporation with limited liability,—and that is the root of all corporate action, of course,—was created a few years earlier in this country. But it has only been about fifty years since the liberty was given which has created the army of the employed and the opposing army of the employers. This is a very recent phenomenon, indeed, in the history of the world, and this power of association came to us out of the public liberties of England and America.

"Now, I say that we want something more than industrial peace as the result of the conflicts between these two minorities of the American people; and we want something more than peace with honor, the honor of the combatant: we want peace with liberty. (Applause.) Now, the closed shop and the boycott and the union label will never give us peace with liberty. (Applause.) Never! Those are the means of building up the monopolies. The monopoly of a labor-union is perfect when the union has succeeded; the monopoly of a trust is perfect when it has succeeded. And we have conspicuous examples of the perfect success of both these monopolies in this country. I say, therefore, speaking for the American public,—three-quarters of the American people,—that we want to get out of this Civic Federation peace with liberty, as well as peace with honor. Liberty gave you, the combatants, your chance to fight. Let liberty regulate freedom. Let liberty regulate monopoly. There are a great many natural and inevitable monopolies, and there are a number of gentlemen in this room who are creating with all their might artificial monopolies. (Laughter.) Now, let liberty,—which we all, I trust, love,—deal with those monopolies.

"In the little State of Massachusetts we have

learned how to deal with some monopolies,—railroads, for example,—steam railroads, electric railroads, gas companies, electric light companies. We have learned, I say, how to deal with them. Now, free institutions must learn to deal with all monopolies which are concerned with the necessities of life. These necessities are plainly food, fuel, light, transportation,—we have got to learn to deal by the national government with all those monopolies, and because the monopolies themselves are national in scope. And I am very thankful to see that the present government of the United States is beginning to think how it can deal with a monopoly—the monopoly of transportation. There is the way in

H. H. VREELAND,
President N. Y. City Railway Co.

which progress lies. There is the way where peace lies, and honor, and freedom." (Applause.)

The Chairman:—"Gentlemen: May I ask your indulgence for a moment? I desire to make just one remark which I believe I ought to make, and that is that the laborer for centuries has been a slave until he has developed into a wage-earner and a free American citizen; that any associated effort that shall give the laborer a shorter work-day,—which means larger leisure, more opportunities for the cultivation of his mind and his body, more opportunity to devote his attention to the well-being of himself and his fellows and his family,—any associated effort that shall tend to the uplifting of the wage-earner must of necessity tend to the improvement of the conditions of all the people; and that this means larger liberty and opportunity; that there is no such thing possible as the improved material conditions of the working people involving slavery or the loss of freedom; that freedom, as Heine has put it, is bread; that bread is freedom, and that without bread there is no such thing as freedom and liberty. I would not feel called upon to say this, were it not that the statement made this evening was a repetition of one made to-day, upon which I felt then called upon to express my dissent. I have at this time nothing further to say, and regret that I even felt the necessity of making the remarks that I have.

"I want to thank you for your attendance here this evening. It is good that even these differences of opinion should come up. An exchange of opinion, even though we differ, brings forth the best that is within us and leads to a better conclusion. I am glad and proud of my citizenship in this republic; proud of President Eliot,—(applause)—proud of his independence and his freedom to express his views as he holds them. I am proud of my right as an American citizen to express my dissent from the views of so profound a scholar and thinker.

"Again I want to thank you all for your attendance this evening. I am sure that this assemblage this evening, and our meeting to-day, will contribute much toward the bringing about of better relations between not only the employer and the worker, but between all our people; and after all, that is the great purpose for which we are associated.

"I thank you all for your attendance, and bid you all good-night." (Applause.)

EXECUTIVE COMMITTEE BUSINESS.

Proceedings at the Fourth Annual Meeting of the Central Body of the National Civic Federation.

The Executive Committee of the National Civic Federation held its fourth annual meeting in the Park Avenue Hotel, Dec. 15, 1904, amid circumstances of unusual interest. The meeting attracted general attention because of the growing appreciation on the part of the public of the scope and work of the organization.

There was wide popular interest and some concern as to the selection of a President to succeed the lamented Marcus A. Hanna. The business transacted by the Executive Committee disclosed an extension of the activities of the Civic Federation in many directions, and developed broad plans for the future. Andrew Carnegie received warm greetings upon this, his first attendance at a meeting of the Executive Committee, since his election last Spring.

The Executive Committee received and referred the reports of the Chairman of the Executive Council and of the Chairmen of the several Departments; elected August Belmont as President, to fill the vacancy caused by the death of Marcus A. Hanna, and elected the other general officers; discussed favorably the formation of the new Department of Industrial Economics; amended the by-laws so as to define the Executive Council as consisting of the officers and heads of departments, having the direction of affairs of the National Civic Federation between the meetings of the Executive Committee. The recommendations in the various reports, referred to the Executive Council, included the appointment of a special committee to study the situation presented by the simultaneous expiration in 1906 of the trade agreements in the bituminous and anthracite fields; an inquiry and public report into alleged conspiracies against the public interest in the building trades; the formation of Trade Sections for the special study of labor questions in particular industries; the organization of branches in seven industrial centers, covering the entire country; the employment of conciliation commissioners, an organizer, a business manager for the MONTHLY REVIEW and a Secretary of the Department of Industrial Economics, and the creation of an International Industrial Committee. The financial report was referred to the Ways and Means Committee, and an auditing committee, consisting of V. Everit Macy, Franklin MacVeagh and Daniel J. Keefe, was appointed, at the request of the Chairman of the Executive Council, to examine the accounts of his office.

The following resolution, presented by Marcus M. Marks, was, on motion of Oscar S. Straus, referred to a committee composed of Mr. Marks, Charles W. Eliot, John Mitchell, H. H. Vreeland and Mr. Straus:

"WHEREAS our practical experience has proven that most labor troubles originate from misunderstandings caused in many cases by misconception of the terms in ordinary use in the labor world by either employers or workers, or both; and believing that education is the greatest power in helping to solve the labor problem,

"RESOLVED, That the Executive Committee of the National Civic Federation recommend that the schools throughout the country add to their curriculum, as soon as feasible, a short course of instruction on the labor question, and that free lectures on this subject be generally encouraged."

The Executive Committee transacted its business at morning and afternoon sessions, at which nearly all the members were present. The election of officers was effected during the annual dinner in the evening, the guests participating in the election, which was unanimous. The Committee on Nominations, appointed at the semi-annual meeting of the Executive Committee in May, was composed of the following:

Employers—Franklin MacVeagh, Francis L. Robbins and Charles H. Taylor, Jr.

Labor—John Mitchell, Daniel J. Keefe and P. H. Morrissey.

Public—Right Rev. Henry C. Potter, Isaac N. Seligman and V. Everit Macy.

To these were added, at the morning session of the Executive Committee on December 15: Employer—William H. Pfahler; Labor—Warren S. Stone; Public—Archbishop John Ireland.

The complete list of officers reported by this committee and unanimously elected appears in the report of the dinner.

Among those who addressed the Executive Committee, during its morning and afternoon sessions, were Samuel Gompers, 1st Vice-President, who presided during the business sessions; Samuel Mather, of Cleveland; P. H. Morrissey, Grand Master Brotherhood of Railroad Trainmen, Cleveland; Andrew Carnegie, New York; John P. Freye, Editor of the "Iron Molders' Journal," Cincinnati; Charles A. Moore, New York; William H. Pfahler, former President National Founders' Association, Philadelphia; Oscar S. Straus, 2nd Vice-President, New York; Francis L. Robbins, President of the Pittsburgh Coal Company; James O'Connell, President of the International Association of Machinists, Washington; Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers, Cleveland.

By invitation there were present several members of the Executive Committee of the Welfare Department, including John S. Huyler, President of Huyler's, New York; Harold F. McCormick, Vice-President International Harvester Company, Chicago; B. J. Greenbut, Treasurer Siegel-Cooper Company, New York; Edward A. Filene, Treasurer William Filene's Sons Company, Boston; Henry L. Higginson, head of the banking firm of Lee, Higginson & Co., Boston; James Kilbourne, President The Kilbourne & Jacobs Manufacturing Company, Columbus, Ohio.

The several reports received by the Executive Committee of the National Civic Federation appear in this issue of THE MONTHLY REVIEW.

INDUSTRIAL ECONOMICS.

Organization of a New Department of the National Civic Federation for the Study and Elucidation of Industrial Problems.

The formal organization of the Department of Industrial Economics was begun at a meeting of its members, immediately following the afternoon session of the Executive Committee. In adjourning that body, Vice-President Gompers announced the first

WARREN S. STONE,
Grand Chief Locomotive Engineers.

meeting of the new Department, and at his suggestion Dr. Charles W. Eliot, President of Harvard University, was made the Chairman of the preliminary meeting. Oscar S. Straus explained that the purpose of the meeting was to consider the possibilities of the Department and to take steps toward its practical operation in the elucidation of industrial problems.

Dr. Eliot said in part:

"This Department, as is obvious from its composition, is intended to give instruction to the public, in the first place, as to the facts of industrial strife. I have always felt that one of the calamities attending this strife was the secrecy of it; the separation of the public from the discussions and debates which take place among the separate contending parties, until the strife actually breaks out in view of the public. Now, this Department of the Civic Federation is going to be the means of giving great publicity to all the elements of industrial strife, and I for one believe that the Civic Federation, in its Executive Committee to a man, believes that publicity will be an enormous gain for the general movement in promoting industrial peace. We see in this Department a strong means for a just and rational publicity. We also see in this new Department the means of educating public opinion in the reasoning of the trade-union on the one hand and of the employers' association on the other. The conditions of the industrial strife are very new since the Civic Federation came into existence. The organization of employers is now attended with the firmness and comprehensiveness which before characterized the organization of labor-unions. Under these new conditions, the public needs to be informed concerning the reasoning and the sentiments of both parties to this strife. Here are a hundred or more men in this Department, who will have the means of putting before the public both reasoning and sentiment, and thereby leading public opinion on this greatest of public questions,—far greater than any political question now before the country, far greater than any probable or discernible question of foreign warfare, because this warfare is at home, and because it touches in the most intimate way the very truest interests of human society."

It was announced that there had been received one hundred acceptances of membership in the Department, but that it had not been practicable to gather all the members at this preliminary meeting. Upon motion, the acting Chairman of the meeting, Dr. Eliot, was authorized to appoint an executive committee to take charge of the work of the Department, and to arrange the time of holding the meetings and the topics to be discussed.

Prof. E. R. A. Seligman, head of the Department of Political Economy in Columbia University, in response to a request for his view of the work of the Department, said:

"It is the fact that the great ideas which guide a

movement are not always realized at the time. Mr. Straus in his remarks spoke of modesty on the part of the Executive Committee and of the Federation in general. So far as I venture to represent the guild of economists, of which there are far more prominent representatives here to-day, I would say that we are much more inclined to be modest, because it is precisely in dealing with these great questions of industrial economics, of the relations between capital and labor, that economists have in the past perhaps made their most significant and signal blunders; and now, perhaps, we have been recalled to a sense of what is a little more near the truth, so that I think it will be found that the economist is willing to learn from men

CHARLES A. MOORE,
Manufacturer of Machinery.

of affairs and practical men on both sides.

"In all great industrial questions there are two points. One is a knowledge of the facts,—something which is absolutely necessary to the solution of any problem, economic or otherwise. The other point is the attitude. What attitude are you to take as to the facts? Now, the great value of economists, as I understand it, and the only excuse for their presence in such a body as this, is that they are not themselves conversant with the facts, but must learn them from the men intimately acquainted with the question,—the employers and the employees. But what the economist and thinker can do is to give you an attitude, a way of looking at things which comes from their habit of regarding every action in industrial and social life from the point of view of what has happened before, namely, the historical point of view.

"If there is anything that is home in upon the student of the labor problem, it is that all changes come by imperceptible gradations. Those who live in a certain age are almost unable to see the changes that are going on. It is only after the lapse of a decade, or a century, or a period, that we can see that we have really made great progress; and that is the reason the economist is declared to be a conservative, for it is born in the fact that from his study of history he perceives that all changes are the result of small and almost imperceptible steps."

C. T. Root, Editor of the "Dry Goods Economist," and John A. Sletcher, Editor of "Leslie's Weekly," dwelt upon the value of publicity in elucidating industrial questions.

Prof. F. W. Taussig, of Harvard University, expressed his confidence that economists can approach the subject from the point of view of what conduces to the prosperity of the community. He said that economists in dealing with the labor question are hampered by a lack of familiarity with the constantly changing facts and rapid development of the situation; but that they have one advantage, and that is the sincere desire to contribute to the welfare of the whole community. That should be the constant purpose of this Department.

Chairman Elliot, in adjourning the meeting, stated that he would announce the Executive Committee of the new Department after careful consideration.

REPORT OF CHAIRMAN EXECUTIVE COUNCIL.

By Ralph M. Easley.

The past year has been the most successful in the history of the National Civic Federation. It has witnessed marked progress in the growth of the organization and a higher and wider conception of its scope and plan. Moreover, it has been a year of recovery from depression in the industrial world. A revival of production, consumption and exchange now brightens the skies of the future. We meet amid conditions in sharp contrast to those of a year ago. Then the outlook was oppressively gloomy. A large

part of our discussion turned upon the prospect of general reductions of wages as well as a threatened increase in the number of the unemployed, during a period of general depression whose effects were already apparent. But that period has passed without serious or general disaster. The tide of industry has turned toward prosperity, and material reasons multiply for making still more numerous contracts of peace such as have successfully withstood the trials of the recent past.

What progress has been made since a year ago in the general cause of industrial peace? I believe that it has been such that it would rejoice the soul of our late President could he be with us to-day.

Never before have there been so many evidences of the growth of a spirit of broad conservatism on the part of large employers and on the part of organized labor. The recent convention of the American Federation of Labor throughout its proceedings presented to the country the spectacle of the chosen representatives of nearly 2,000,000 wage-earners repressing radicals and fanatics and giving to the serious questions involved in the labor problem, not the limited view of partisans, but the broad, careful consideration of economists. This is a high estimate to make of any body chosen from the ranks of a very large and democratic organization, subject to all the prejudices of locality and the inherited resentments of past conflicts and laboring at the same time under the necessity of maintaining a militant attitude. But that the estimate is not exaggerated will be acknowledged by any candid observer of the actions of that convention, as indeed it has been generally conceded by a not always unprejudiced press. The millions of lives dependent upon the vigilant efficiency of more than a million engineers, trainmen, signalmen and trackmen are made safer by the discipline and conservatism of the great railway brotherhoods.

On the other hand, the employers who have to deal with large masses of workers in the great basic industries and in the largest enterprises exhibit a constantly growing disposition to approach questions of labor in a spirit of justice. Such employers relax not a whit the zealous fidelity with which they administer vast investments. But these great captains of industry appreciate that intelligent and fair adjustment of the relations between capital and labor is not inconsistent with the prosperity of their enterprises, but actually conducive to their success. The report of our Department of Trade Agreements, whose membership represents on one side hundreds of millions of active capital and, on the other side, millions of wage-earners, affords concrete results of this spirit. The report of our Department of Conciliation reveals a most gratifying readiness among large employers to respond to its overtures for face-to-face conference as a method of adjusting or averting controversies with bodies of employees.

The report of our Department of Welfare Work shows a growing appreciation among employers of the importance and the obligation of improving the physical, mental and moral conditions of workers. Many employers have come into touch with the National Civic Federation through this Department, who would not have become affiliated through any other branch of its work. That antipathy to our general policy has been changed into sympathy through this Department will be indicated by the presence of several such employers at our annual dinner to-night.

Our conception of the mission of this organization has widened. We have all learned that the great purpose of the National Civic Federation is not alone to settle strikes and lock-outs, but to reach and disclose the sources of industrial disturbances and to search for their remedies. The settlement of a strike or lock-out may not prevent its recurrence; but the process is educational to all the participants. Fundamental truths should be our further aim. We strive for peace, but we would ascertain and make clear the underlying causes of war. We must study the phenomena of incessant readjustment of wages, profits and prices. Behind these lie economic laws, whose reading varies widely from different points of view. It is our task to examine first the facts and to make deductions afterward. These studies should be for the elucidation of the public at large as well as of those directly concerned.

It is a significant and encouraging sign that from all sides rings a demand for economic education. This cry comes from the extremists as well as from the conservatives. Those associations composed of employers hostile to trade-unions and "citizens' alliances" prone to the vigilante method of settling honest differences of opinion are incessantly proclaiming the importance of education. Simultaneously, the American Federation of Labor has formally adopted the policy of introducing systematic instruction in social, political and industrial economy throughout its 25,000 local unions; while the periodicals of the railway brotherhoods and of the mechanical occupations are filled with valuable technical articles designed to enhance the practical skill and earning capacity of their readers. All of the crusade against child labor, as well as the movement for the shorter work-day, have the importance of education, as well as of sound physique, as their primary justification.

This demand for education must be met. But with what meat shall this hunger for knowledge be fed? Shall it receive the fads, vagaries and utopian theories of sentimental sociologists and unsound economists? Or shall it receive the sound and nutritious pabulum of whatever economic science the experience of all civilization has been able to evolve?

The relations between capital and labor must be studied through their phenomena; but it would be superficial to observe only the concrete fact without discovering its relation to a general and controlling principle. A fact that excites frequent and vehement objection is the placing of artificial restrictions by union labor. Many of these restrictions may ap-

JAMES KILBOURNE,
Kilbourne & Jacobs Mfg. Co.

pear arbitrary, unfair, and even ridiculous, but there is back of nearly every one of them a reason, whether good or bad, that has its root in some fear that the permanence of and compensation for employment are imperiled. For example, the limitation of apprentices is to prevent the overcrowding of the craft. In other words, the impulse against destructive competition underlies this restriction. But when we thus arrive at competition, we advance from the single fact of restricted apprenticeship into a wide range of phenomena.

That excessive competition is an evil is recognized by every one when it occurs in his own business. It is recognized by capitalists, by farmers, by the professional classes and by wage-earners. The epithets used to describe it testify to the dislike of it. Excessive competition is "destructive," "unfair," and "cut-throat." The "price-cutter," "underseller," and "re-bate giver" are as unprincipled in the eyes of the merchant and railroad manager as the "non-unionist" and "scab" in the eyes of the trade-unionist. When excessive competition occurs in the field of capital, it shows its havoc by depression of trade, long and risky credits, bankruptcy, and "demoralization." When it occurs in the field of labor, its consequences are the sweating system, long hours, low wages, the "exploitation" of labor, unsanitary and dangerous work places, miserable homes and other phases of poverty. And the two series of results are usually found together, for the ruin of the employer's business means the destruction of employment and the exploitation of labor means the survival of the unscrupulous employer.

Volumes might be filled with accounts of the efforts and methods both of capitalists and laborers to do away with destructive competition. And interesting enough is the fact that the methods of the two classes are similar. They all agree not to compete with their fellows beyond a certain point and to deal effectively with those who will not join in the agreement. The capitalists call themselves an "association," an "exchange," a "pool," a "corporation," or a "trust," and the workmen commonly call themselves a "union." The capitalist organizations, of course, differ widely in details, but so do the unions. All originate in what they consider the absolute necessity of preventing ruinous competition, and all are open to the temptation of carrying their methods, which originate in self-protection, over into monopoly and public menace. They have all been legislated against in varying degrees of penalty. They have been haled before the courts, and the courts have handed down hopelessly contradictory decisions. They have been sustained in one State and overthrown in another, and the same courts have reversed themselves, leaving the ultimate policy of the country toward combinations unsettled. Whether they are criminal is not our present concern. We are exercised only with the economic fact that they have sprung into being to meet the real evil of mutual destruction through over-competition.

Thus we have seen that an isolated fact,—the restriction of apprentices,—when its relation to an underlying motive is discovered, leads to the operation, in both capital and labor, of a tremendous and far-reaching principle. If we were to treat of such other isolated facts as the open or closed shop, or the boycott, or the restriction of machinery, or piece-work and day-work, or the shorter work-day, or wages and cost of living, or trade agreements, we would arrive at the more general and immensely more important problem presented by the operation, throughout our industrial and social system, of the same principle.

It may well be asked, in view of these universal efforts to regulate or eliminate competition, What is to be the outcome? and, What should be the policy of the general public toward combinations? We may

WILLIAM H. PFAHLER,
Stove Manufacturer.

ask, Shall all combinations be suppressed and all industries be compelled to submit to the unregulated competition of anarchism? or, Shall these combinations continue to grow and competition be entirely eliminated in the state of socialism? If neither of these extremes should be followed, what shall be the middle ground where competition may continue without being destructive and where the public shall not be exploited by monopoly of capital or monopoly of labor?

The eternal presence of these questions, so vital to all society and to the progress of civilization, invites the most searching and devoted study. If they are insoluble and irreducible, there may be found adjustments that would prove effective so far as they accord with principles. It is for the ascertainment of these principles that the new Department of Industrial Economics has been organized. This addition to our educational agencies should prove the most comprehensive and far-reaching movement ever inaugurated for economic education. Its membership comprises the editors of the daily press and of politico-social magazines, trade papers and labor journals, economic and legal authors, the clergy, lecturers, financial and commercial experts, and university professors of political economy. Their interchange of thought will lead them, as they in turn will lead the public, to a better comprehension of the interwoven problems that they will examine.

Trade Sections.

I wish to renew my recommendation of last year for the working out of trade sections. I am more and more convinced, as I examine this subject, that along that line is going to be some of our most valuable constructive work.

In the metal trades, the problems that arise receive a significance of their own from the fact that there is an intimate connection between the methods of production in this country and the limitation to our so-called invasion of Europe, of which we are hearing so much.

In the building trades, or the public service corporations, the question of competition with Germany and England is not important, but in the surplus manufactured products which must win in competition with the rest of the world, there must be care that no handicaps are to be placed on the manufacturer at home.

This does not mean that the American machinist and molder and blacksmith and boilermaker, and other metal trade craftsmen shall be rushed to death by pacc-makers, or shall compete in wages with the low-priced labor of Europe.

But it does mean that any arbitrary restriction whose purpose is to increase the number of jobs, should be removed.

There is so much to be said on both sides of the problems arising between employe and employer in

the metal trades, that only conferences of men thoroughly familiar with all the technical conditions can make much headway in dealing with the evils, real or fancied.

The labor problems to be met and treated in the manufacture of textiles are totally dissimilar from those in the building trades, or in the metal trades, or in the street railway service, or in mining, or in the reduction of iron and steel. The construction of a building necessitates industrial relations whose adjustment is especially delicate and difficult. There are involved as many as thirty-seven highly organized crafts and an equal number of employers' associations. There must be considered the interdependent relations of the several crafts, including jurisdiction of disputes that arise with almost every improvement and invention and that concern the masters as frequently as the men. The thorough organization of both employers and workers in the building trades in all large cities places their relations in a distinct class. The relations of labor to public service corporations are of peculiar importance. An engineers' strike in a gas or electric plant may plunge a city into darkness. A strike on a street railway may throw into confusion the commercial and social activities of a community. It is expected that the technical studies of these sections will ultimately be extended to all important lines of industry.

Organization.

In regard to local branches, I wish to state that the experience we have had in the past year shows conclusively that it is not a practical proposition to rush out and organize local committees indiscriminately in the large cities.

Eventually I believe that we can have branches all over the country, but it must be worked out slowly and thoroughly. There must be an especially equipped first-class organizer in charge of the work, and this organizer must not only keep closely in touch with every local branch, but keep everlastingly at it.

Instead of attempting to scatter local organizations promiscuously, I would recommend that we establish branch offices at seven large industrial centers, covering as many general divisions of the country. Each center should have a paid secretary, whose whole time should be devoted to the work of organization. As for instance, Boston is naturally the center for New England, and that territory is ripe for organization; preliminary work has already been done. New York is another natural center, including New Jersey and Connecticut. Pittsburgh is the center of the great iron industries. From Chicago as a center, Indianapolis, Detroit, Milwaukee, Kansas City and St. Louis can be dealt with. At Denver we strike the mining world. The growth of transportation in north and south lines parallel to the Mississippi makes New Orleans a center of increasing influence radiating through the South. San Francisco is geographically and commercially a center for the Pacific Coast.

From these centers the question of local committees can be worked out. When once organized, the educational possibilities are great. For instance, the Industrial Economic Department can work out a programme for each center and furnish the ablest speakers in the country, and, if necessary, draw on the Old World. But there is a surprising amount of talent in every locality which could be utilized in such an educational movement. A local organization in a city where they are having practically no strikes, feels that it has nothing to do; but the development of the work of industrial education by these branches will be far more in accordance with the purpose of the National Civic Federation.

International Industrial Committee.

I invite your consideration to the projected formation of an International Industrial Committee. There is progress in the formation of international organizations of labor, and there is also an increasing tendency to the internationalization of production. Some employing members of this organization have plants in a number of countries. The correspondence at our headquarters includes a steadily growing number of inquiries from foreign countries concerning our work and many requests for our publications. The interest thus manifested in our methods found further and sympathetic expression when members of the Interparliamentary Union were your guests in this city on September 26. The nations represented in the Interparliamentary Union are those in which constitutional government is most developed. Its purpose of promoting international peace is in essence dependent upon the good will of peoples; and that in turn depends upon industrial peace in each country. The establishment of industrial peace is therefore precedent to the discouragement of war. The present activity in negotiating arbitration treaties and the organized movement in this country for their ratification, which includes many distinguished citizens who are in accord with the National Civic Federation, have drawn attention to the striking parallelism between prevention of international war through diplomacy and arbitration and the prevention of industrial war through conciliation, conference and arbitration. The advocacy of trade agreements is consistent with the advocacy of international treaties.

The terms of diplomacy and of industrial conciliation are, with slight modifications of verbiage, etc., interchangeable. Movements for the organization of Civic Federations are making progress in England, France and Germany, and in Canada. Their success might logically lead to the creation of an international body to improve the condition of wage-earners and their relations with employers and to forward economic education throughout the world.

REPORT OF DEPARTMENT OF TRADE AGREEMENTS.

By Francis L. Robbins and John Mitchell, Chairmen.

The Department of Trade Agreements, which was organized at the conference upon that subject held

JOHN F. TOBIN,
President Boot and Shoe Workers' Union.

in New York City last May, is able to report a growing appreciation of the trade agreement on the part of both organized employers and wage-earners as a practical method of securing and maintaining industrial peace. There have been several important additions to the more than fifty trade agreements already existing in great national industries, and an extension of their local application. It should be observed that as trade agreements are frequently the outcome of conciliation and conference, the work of the Department upon those subjects is closely associated with the work of this Department.

The experience of this Department has confirmed our conviction that there is nothing so important for the future of this country as the trade agreement as a method of reaching harmonious relations between capital and labor. The trade agreement, in our opinion, offers the most practical way to avert difficulties, dangers and possibly disaster in the industrial world.

Quite as important in some of the great industries as the creation of new collective contracts is their preservation under strong temptations to their dissolution. There was no more important industrial event of the year than the renewal by the organized bituminous mine workers in the four States of Pennsylvania, Ohio, Indiana and Illinois of their agreement with the operators' associations. The acceptance by the miners' organizations of the compromise as to wages, that had been rejected and then submitted to a referendum by the Indianapolis conference, made a red-letter day in the calendar of the current history of the relations between capital and labor in the United States. Not only did the renewal of that agreement prevent a strike that might have literally stopped all the wheels of transportation and production in the country, but it taught the lesson, itself of incalculable moral value, that organized labor has the business sagacity to accept a reduction of wages, forced by lower prices for the product and other adverse conditions of the trade. No longer need silence meet the allegation that the trade agreement, when put to the test, would prove to be an arrangement that would work always in the direction of a share for the employe in larger profits of an industry, but never in the acceptance by the employe of his share of the privation caused by smaller profits. Against that allegation can now always be cited the conspicuous example of the acceptance of a sacrifice by the miners' organizations after they had been convinced of the necessity of the reduced scale.

The conference which resulted in this bituminous agreement was itself an unusual body. Upon the side of the operators were men who, while standing firmly for what they maintained were the rights and necessities of capital, asserted freely their hope that the interstate agreement might not be terminated. Upon the side of the miners were delegates whose appearance and manner bespoke the constant uplift

of education, and whose words were sustained arguments, of course in support of their contention, but in large degree animated by a response to the friendly expressions of employers and inspired by an apparent desire for co-operation. In the debates over the terms of the agreement there were moments of dramatic earnestness, when none might tell how a passionate utterance, a misplaced word or a verbal collision might have widened the breach that it was the effort of the conservative leaders on both sides to bridge.

The agreement between the dock managers at Lake Erie ports and the International Longshoremen, Marine and Transport Workers' Association was

FRANKLIN MACVEAGH,
Franklin MacVeagh & Co.

strengthened this year by a resolution adopted at the annual conference between the representatives of those bodies. That resolution thus emphasizes the inviolability of collective contracts:

"That any and all contracts made between the local manager and the men directly involved shall be held inviolate for all work not specifically covered in exhibits attached to and made part of this contract, and that any one trying to break such agreement, or in any way interfering with its performance, shall be barred as a representative, and shall not be permitted to work under this contract, and in all cases work shall not be interrupted on any account."

This agreement covers an immense territory, and embraces thirty-nine divisions of trade. It is not only for the navigation season of 1904, but includes winter work until May 1, 1905, when every influence of this Department will be exerted for its renewal, as this contract has proved conspicuously effective in preventing strikes and lock-outs.

Members of this Department attended many of the protracted and arduous conferences between representatives of the Lithographers' Association and of the employed crafts, which resulted in a national trade agreement that includes practically all of the industry. After the formation of that agreement, a dispute arose at Cincinnati and San Francisco over its construction, which was referred to a member of this Department. Both sides accepted his decision as satisfactory. A second contention arising under the same agreement in St. Louis, Chicago and Cleveland, each side selected a different member of the Civic Federation, and they chose a third member. This arbitration committee rendered a decision mutually satisfactory to the contestants.

A somewhat difficult and highly interesting case to handle was that growing out of the controversy between the Theatrical Managers' Association and the Musical Protective Union. The conference in this matter extended over a period of several months, frequently resulting in no progress, but finally the members of the Conciliation Committee handling the matter succeeded in bringing the two sides to an understanding which resulted in the introduction of the trade agreement into the new field of the production of grand opera, other musical entertainments and the drama. This trade agreement, national in effect, extends to every place of public amusement in the United States. Here the value of frank and free discussion was disclosed by the fact that when the parties came together many of their grievances proved fanciful. For instance, the managers complained that at rehearsals and performances green substitutes frequently appeared in place of players familiar with their part. They were surprised to find that the union itself had provided in its by-laws against this evil. As they had never before conferred with the union leaders, the managers did not even know of the existence of these by-laws, which afforded them an instrument to correct the evil.

A member of this Department is the chairman of

the labor committee of the United States Brewers' Association. This committee was formed to deal with all the labor difficulties arising in that industry. It has already formed several trade agreements with unions, and is preparing to sign others. Its chairman has been active in adjusting differences as to agreements in Washington, D. C., and Buffalo, N. Y.

A threatened strike of organized teamsters that would have stopped the wheels of every truck in New York City, and have caused inconceivable inconvenience as well as distress throughout the city during the past summer, was not only prevented but was converted into the first trade agreement ever entered into between the parties concerned. This agreement was signed at the headquarters of the Civic Federation by representatives of the New York Truck Owners' Association and of the Teamsters' Brotherhood and witnessed by a member of the Department.

This Department recognizes that trade agreements are not without defects. One of these is an occasional provision that an employers' association shall employ only members of the union, who in turn shall work only for members of the employers' association. Such exclusive reciprocity can not survive adverse judicial decisions. The agreement between the Journeymen Stone Cutters' Association and the Employing Stone Cutters' Association, recently decided by a magistrate in New York City to be a conspiracy in violation of the penal code of the State, is an example of an effort to restrain trade for the mutual profit of the interested contractors and craftsmen, at the expense of the public. This agreement, according to the admitted facts submitted to the court, actually provided for a "rake-off" of 10 per cent. upon all contracts and the distribution of 10 per cent. of the "rake-off" among the union workers on the day before Christmas. Bids for contracts were compared, and only those above an established average were allowed to be submitted. The Stone Cutters' Union was used under this agreement to force independent contractors to join the association, contribute to its treasury and share in its methods of bidding, under penalty of a strike. The union was also used to force an employer to pay his alleged debt to another.

This Department is ready at all times to promote the formation of legitimate collective contracts and to furnish to that end to any intending negotiators the information which it has collected concerning their terms and their operation in many industries. Applications for such information are constantly received and answered. Recently a large employers' organization sent its secretary to our headquarters to study the various devices for arbitration contained in these agreements.

REPORT OF THE WELFARE DEPARTMENT.

By H. H. Vreeland, Chairman.

It will be remembered that practically the last official act of President Hanna's life was the appointment of a committee to organize the Welfare Department as authorized by this National Executive Committee, in the belief that its efforts to better the relations between employers and employees would be materially aided by the promotion of Welfare Work. In a personal conference, Senator Hanna requested me to act as Chairman for at least the first year. I was led to consent, because I had had to do with work in the ranks and had gained an experience, upon both steam and street railways, which had a certain value with reference to Welfare work.

The first meeting of the committee on organization was attended by representative employers from various sections of the country, and it developed that that was the first time employers giving especial consideration to the welfare of their employees had been brought together. The interest in the exchange of experiences was so great that the entire day was spent in discussion, and it was necessary to await an adjourned meeting a month later to determine upon a plan of work for the Department.

As a result of the first invitation to employers to accept membership in this Department, we have over one hundred and twenty-five members. When I can say to you that we find employers "not only willing but anxious" to become members, you will understand the enthusiasm that is being shown in this work. We have not limited the membership to employers who are promoting Welfare work, as we desire to extend the influence of the meetings to those who have not yet given it consideration.

Under its plan of work the Welfare Department undertakes to educate the public as to the meaning and value of Welfare work, which is understood to involve especial consideration for physical comfort wherever labor is performed; opportunities for recreation; educational opportunities; and the providing of suitable sanitary homes. Plans for saving and lending money, insurance and pensions are also included in Welfare work.

The Department interests employers to give especial attention to the physical or mental welfare of their employees, through conferences, the publication of reports, and of illustrated articles in THE MONTHLY REVIEW.

Upon request, a consulting agent is furnished to study the peculiar needs of employees in a given plant, to advise the best way of introducing such methods of Welfare work as may be deemed essential and to direct their installation. When desired, a permanent agent or Welfare manager to administer the work is recommended.

A central bureau is maintained to furnish information relative to the success or failure of experiments in Welfare work, the causes of either, and with reference to the latest efforts of employers in this direction. Some of the subjects covered are: Sanitary Workrooms; Washrooms and Baths; Hospital Service; Luncheon Rooms; Recreation; Educational

ISAAC N. SELIGMAN,
Banker.

Devices; Housing of Labor; Pensions and Insurance Associations.

Conferences and Educational Work.

We have held two conferences this year, their great value lying in the fact that those who participated in the discussions were practical workers and employers promoting Welfare work.

The first conference gave a general view of Welfare work, and the report, which contained illustrations of practical efforts, has not only proven a great revelation, but has stimulated many to undertake similar work. An interesting illustration of the value of this report came from one employer who requested eighty copies to distribute among his foremen, who had been inclined to "knock" all his efforts along this line, the employer having found that those who had read his copy had radically changed their views.

Our second conference dealt with specific subjects, such as Insurance Associations, Banks for Employees, and the Labor Department; and this plan will be continued. In addition, plans have been made for holding local conferences in large cities where we have a number of members, this being by special request and to give publicity to such work in those communities.

In response to appeals from members of different trades-unions, we have begun a series of articles in THE MONTHLY REVIEW on the needs of employees in certain industries. The purpose of these articles is also to show employers how Welfare work has been carried forward in such industries, with beneficial results. Marked copies of such issues are sent to employers in these trades.

For instance, one of the business agents of the International Iron Molders' Association appealed to us to emphasize the necessity of providing relief for molders, stating that any effort on the part of the union to secure these physical comforts was regarded by employers as only an effort to stir up trouble in the absence of any other excuse. He pointed out the need of a place for the men to change their clothes, and how they suffer in the winter, when they are obliged to work in places where there is no heat and there are broken windows, because the work necessitates the removal of their outer clothing. He dwelt upon the desirability of providing baths, and of an opportunity to change the clothing, stating that when the men are through casting, no matter what the temperature may be, ordinarily they have to leave the shop wet with perspiration, simply throwing on an overcoat, and that the outer air strikes them with a deadly chill.

The following letter from a business agent of the Bridge and Structural Iron Workers' Association will illustrate this point:

"There has never been any work looking to the interest of the first trades that are employed in the erection of buildings and in such structural iron work as bridges and viaducts, where no other mechanics are employed. The other trades are in a

measure looked after, inasmuch as a building generally has taken some definite shape before they are long at work, and a room can be set aside within the structure for storing their street clothes in the day and their gloves and overalls at night. Wage-earners in the iron industry would be grateful to your worthy organization if you would get some of the largest contractors to supply us with portable rooms in which to store our street hats and coats in the day time and our gloves and overalls at night. This is our first need, as our clothing is constantly stolen. Second, a place to wash up with sanitary toilet accommodations; and third, an emergency hospital room."

JAMES O'CONNELL,
President International Association of Machinists.

A business agent of the International Association of Machinists has gone so far as to prepare a list of questions, which has been sent to unions throughout the country, asking the men what conveniences have been furnished them. He has appealed to us, however, to aid in securing these comforts, which, from the answers to these questions, seem to be pressing needs.

A high officer of the International Association of Pulp and Paper Makers, has represented to this Department that the sanitary conditions of the wage-earners in his industry in many mills in this country are exceedingly bad, and has asked that his statements be confirmed by an investigation. The purpose of the inquiry would be to bring friendly influence to bear upon employers to improve the conditions, if they are found to be such as reported. This investigation will be made.

A very large corporation, whose operations cover a great extent of territory and employ a variety of nationalities, has, during the last year, had on its hands a serious strike. Despite this fact, which might be expected to create animus against the corporation, a prominent labor leader came to the office of this Department and personally urged the publication of a report prepared by an officer of the corporation on its Welfare work. This labor leader was broad enough to urge that the publication of such an article from such a source would exert a far-reaching influence in encouraging the introduction of the work elsewhere, and would be of benefit to unknown numbers of employees. This union speaker was especially appreciative of the educational features of Welfare work, which he desired to be as widely extended as possible by example.

Information Furnished.

Our Secretary, who has had practical experience in Welfare work, has been called for consultation to a number of large plants.

In one plant, with 11,000 employees, the plans for a luncheon-house, capable of accommodating 1,000 persons, were developed in detail.

Two months were spent in an establishment employing 7,000, investigating the needs of the employees and making recommendations.

Detailed help was extended to a manufacturer who has 10,000 employees, in formulating plans for housing hygienically a large proportion of the employees.

In another manufacturing community all the recommendations made by the Secretary of this Department were adopted.

In one large city visits have been made to establishments, each employing several thousands, for the purpose of giving advice as to the application and administration of Welfare work; while in another, advice has been given with reference to initial steps for Welfare work in several factories. In both cities the Secretary has been requested to pursue the work further.

A prominent manufacturer who had heard of this Department only through its bureau at the Louisiana Purchase Exposition, wrote a request for counsel during his erection of an entirely new plant, his purpose being to provide facilities for Welfare work in every department and also to erect sanitary houses for the families of his employees upon satisfactory terms.

We have furnished a large mining company with accurate information as to the introduction and conduct of savings banks by other employers, this company desiring to act upon the lessons taught by their experiences.

The management of a department store requested similar information in regard to the experience of others in the same State in creating insurance funds as well as in establishing savings banks.

In response to a request we have supplied a Welfare Manager, who is a woman, to supervise the Welfare work in a department store having 4,000 employees. It is believed that the success of the Welfare work in this instance will lead to its introduction in many of the 1,400 other department stores in the United States.

In response to a request from the management of a factory where there are 10,000 employees, we have recommended another Welfare Manager, in this case a man.

One manufacturer obtained the first idea of organizing a Men's Welfare League, and thus making the work of his company less paternalistic, at one of our conferences; and our Secretary was not only able to recommend to three of the men, sent on for consultation, immediate work, but she personally conducted two of them through some plants where these recommendations found support in practice.

In addition to this we have not only supplied various written suggestions where requested, and photographs of luncheon-rooms, workers' houses, bath-rooms, club houses, and other features of Welfare work, but innumerable consultations have been held at our headquarters.

It is impossible to enter into a detailed report of the assistance that has been rendered along this line; and that we have gone into even a wider field is illustrated by a request from a large manufacturing town for advice in formulating a plan of work for a committee of citizens who desire especially to promote social welfare work in their community.

World's Fair Bureau.

A unique effort of this Department was the promotion of a World's Fair Bureau. Circulars were sent to employers throughout the country, informing them as to how their employees could visit the World's Fair within their means, and giving a tabulated statement of daily expenses under our plan. In addition to this, agents of the bureau at St. Louis met arriving employees at the trains and conducted them to their lodgings. They were also furnished with a six days' itinerary that their expenses might not be swollen by losing time in trying to learn what to see. In this way large numbers of wage-earners were enabled to receive the educational benefit of the great Louisiana Purchase Exposition.

Future Work.

Aside from continuing the policy of promoting conferences, both national and local, and our educational work through THE MONTHLY REVIEW, we shall respond to requests for illustrated lectures in such cities as Boston, Baltimore, Philadelphia and New York. We shall also continue to build up our Bureau of information at the Civic Federation Headquarters. Only to-day we have had a letter in which the employer says, "I am desirous of doing the right thing by our people, but do not know just where to begin." It is just such requests as this that are constantly received at our Bureau.

The work of the Welfare Department represents the humane as well as the human side of industrial economics. Nevertheless, its conduct must be intensely practical. It is a realization of the necessity of preserving this practical characteristic that has made of our conferences assemblages of business men, who, while not insensible to sentiment, are thoroughly aware of the practical results of Welfare work in improving the physical, and elevating the mental and moral conditions of the mass of wage-earners. Welfare work is essentially altruistic, but those engaged in it have had repeated to them through experience again and again the lesson that Welfare work is also intensely practical.

LIST OF ACCEPTANCES

For Dinner of National Civic Federation.

EMPLOYERS.

Henry Phipps, United States Steel Corporation, New York.
August Belmont, President Interborough Rapid Transit Company, New York.
H. H. Vreeland, President New York City Railway Company, New York.
Francis L. Robbins, President Pittsburgh Coal Company, Pittsburgh, Pa.
C. A. Coffin, President General Electric Company, New York.
Albert J. Pitkin, President American Locomotive Company, New York.

Adolph S. Ochs, Proprietor New York Times; Philadelphia Ledger; New York.
Frederick P. Fish, President American Bell Telephone Company, Boston.
H. L. Higginson, Lee Higginson & Company, Boston.
Franklin MacVeagh, Franklin MacVeagh & Company, Chicago.
Harold F. McCormick, International Harvester Company, Chicago.
Louis Stern, Stern Brothers, New York.
E. W. Winter, President Brooklyn Rapid Transit Company, Brooklyn, N. Y.
H. T. Ambrose, President American Book Company, New York.
Heinrich Conried, President Metropolitan Opera and Real Estate Company, New York.
Isaac Guggenheim, Treasurer American Smelting and Refining Company, New York.

F. W. TAUSSIG,
Professor in Harvard University.

S. B. Chace, Treasurer, King Philip Mills, Fall River.
Chas. A. Moore, Manning, Maxwell & Moore, New York.
Robert C. Ogden, John Wanamaker's, New York.
P. F. Sullivan, President Boston & Northern Street Railway Company, Boston, Mass.
F. R. Hazard, President Solvay Process Company, Syracuse, N. Y.
William P. Clyde, Clyde Steamship Company, New York.
Anthony N. Brady, Consolidated Gas Company, New York.
J. B. Greenhut, President, Siegel-Cooper Company, New York.
Wm. C. Greene, Treasurer Peace Dale Mfg. Company, Peace Dale, R. I.
William H. Pfahler, Former President National Founders' Association, Philadelphia.
Royal Robbins, Treasurer, American Waltham Watch Company, Boston, Mass.
Frank Tilford, Park & Tilford, New York.
Frederic S. Clark, Talbot Mills, North Billerica, Mass.
George H. Harries, Washington Railway & Electric Company, Washington, D. C.
Thos. F. Parker, President Monaghan Mills, Greenville, S. C.
H. B. Graves, Standard Optical Company, Geneva, N. Y.
Eugene S. Benjamin, Alfred Benjamin & Company, New York.
Wallace Downey, President Townsend-Downey Shipbuilding Company, New York.
C. W. Terhune, Edwin C. Burt Company, New York.
John B. McDonald, Contractor, New York.
G. E. Emmons, General Electric Company, Schenectady, N. Y.
Benedict J. Greenhut, Siegel-Cooper Company, New York.
J. W. Miller, Fall River Lines, New York.
Festus J. Wade, President Mercantile Trust Company, St. Louis, Mo.
Chas. T. Page, Page Belting Company, Concord, N. H.
James Kilbourne, Kilbourne & Jacobs Mfg. Company, Columbus, Ohio.
Emil L. Boas, Hamburg-American Steamship Line, New York.
Robert M. Donaldson, American Lithographic Company, New York.
Maurice Fels, Fels & Company, Philadelphia.
W. M. Pratt, Goodell-Pratt Company, Greenfield, Mass.
C. W. Sweet, Sweet, Orr & Company, New York.
J. A. Campbell, Trenton Potteries Company, Trenton, N. J.
Luddington Patton, Patton Paint Company, Milwaukee, Wis.
Wm. H. McCord, President Post & McCord, New York.
James Talcott, American Hosiery Company, New York.
Irving T. Bush, Bush Terminal Company, New York.
George Haven Putnam, President G. P. Putnam's Sons, New York.
Charles T. Willis, Builder, New York.
John Atkinson, Builders' Exchange, Philadelphia.
James J. Ryan, Builders' Exchange, Philadelphia.
Thos. F. Armstrong, Builders' Exchange, Philadelphia.
Theodore Starrett, Thompson-Starrett Company, New York.
Otto M. Elditz, M. Elditz' Sons & Company, New York.
Benjamin D. Traitel, Traitel Bros. & Company, New York.
John Cooper, Cooper, Wigand, Cooke Company, New York.
George R. Elder, Ingersoll-Sergeant Drill Company, Easton, Pa.
C. H. Ludington, Jr., Curtis Publishing Company, Philadelphia.

VOL. I. No. 11

NEW YORK, FEBRUARY 1, 1905

TEN CENTS

ANOTHER GREAT LABOR CONFLICT AVERTED BY CONCILIATION.

OFFICIALS OF THE GREATEST RAILWAY CORPORATION IN THE WORLD SOLVE DIFFICULT PROBLEMS BY FACE-TO-FACE CONFERENCE WITH ORGANIZED EMPLOYES.

ANOTHER conspicuous example of the value of the method of joint conference, between representatives of employers and wage-earners, in solving a great labor problem, was the success of the recent negotiations that averted a strike on the Pennsylvania Railroad. There are some employers, whose pay rolls include perhaps hundreds of men and whose business demands thousands of capital, who still cling to the obsolete notion that they will have nothing to do with any but their own men about hours or wages or conditions of work. But here we have the spectacle of the executive officers of a corporation whose railway system, with its alliances, represents a capitalization of nearly two billions of dollars, a mileage that would nearly girdle the earth and employs men in army corps numbering hundreds of thousands, holding conferences day after day with the officers of an organization of labor, not confined to their system, but embracing in its membership employees of all the other railroads of the country.

Even after these conferences had been protracted to the point where they seemed to have reached a deadlock, the General Manager of the Pennsylvania Railroad, W. W. Atterbury, welcomed a request for their continuance from P. H. Morrissey, Grand Master of the Brotherhood of Railroad Trainmen. Mr. Atterbury did not say to Mr. Morrissey, "You are not an employe of our company; we will manage our own business in our own way." Instead, the conferences were resumed and repeated until an agreement was reached, satisfactory to both the corporation and the vast number of its employes. The conferences illustrated also the practical value of this method in reaching the truth as to disputed questions of fact. As will be seen, it was widely varying assertions as to the effect of a regulation upon earnings that greatly complicated this difficulty. But when the truth was made plain, the way to agreement was cleared, again illustrating the fact that most labor troubles have their root in needless misunderstandings.

It is needless to say that had not these conferences resulted in agreement, the consequent strike, probably involving all the other employes as well as the trainmen, would have tied up the entire Pennsylvania system, causing enormous loss to both the largest railway corporation

in the world and its army of wage earners, as well as incalculable inconvenience to the public and costly interruption to commerce.

This outcome was prevented entirely through the

ward brakeman on freight trains should go into the engine cab to assist the regular fireman during the pulls up heavy grades. This had long been the custom on the Pennsylvania, which employed one more brakeman

per train for that purpose than was the practice on other roads. But with the adoption of air-brakes on 50 per cent of its freight trains, as required by law, the Pennsylvania had found the employment of the extra brakeman for firing no longer necessary and had issued a regulation that the regular forward brakeman should assist the fireman up grades whenever required by the engineer.

Members of the Brotherhood of Railroad Trainmen objected to this requirement because they claimed that it exposed the forward brakeman to extremes of heat and cold, and because they regarded the increased pay of the brakeman for firing as inadequate. The company, on its side, claimed that the sanitary objection was more fanciful than real; that the increased pay was fair; and offered to add the time served in firing to the seniority of brakemen when promoted to be firemen.

There were involved other questions relating to the wage scale of trainmen in large yards and near terminal points.

These questions had been a subject of futile discussion for months between minor officials of the company and local representatives of the Brotherhood. A demand was formulated and presented by W. G. Lee, Vice-Grand Master of the Brotherhood of Railroad Trainmen, to Mr. Atterbury. This demand, which related chiefly to extra pay for brakemen when required to assist firemen, was preceded by a referendum vote of the trainmen east of Pittsburg and Erie upon the question of whether or not to strike if the demand were refused. By 8,365 to 611 the trainmen voted in favor of a strike in that contingency.

This vote precipitated a critical situation. Had the vote meant immediate action, 10,000 trainmen would have been affected directly. It was claimed that the first strike order would have paralyzed the freight service. But had a strike been declared by them, it was thought probable that all other employes of the road would be at once called out. It was at this juncture, on January 18, that both sides to the controversy began preparations for the threatened

A. J. CASSATT,
President Pennsylvania Railroad Company.

Grand Master Brotherhood Railroad Trainmen.

W. W. ATTERBURY,
General Manager Pennsylvania Railroad.

W. G. LEE,
First Vice-Grand Master Railroad Trainmen.

conferences between General Manager W. W. Atterbury, of the Pennsylvania Railroad, and representatives of the Brotherhood of Railroad Trainmen. The main point at issue was the requirement by the company that the for-

ward brakeman on freight trains should go into the engine cab to assist the regular fireman during the pulls up heavy grades. This had long been the custom on the Pennsylvania, which employed one more brakeman

rupture. A corps of electricians equipped the Philadelphia office of General Manager Atterbury with special telegraphic wires, connecting directly with all points on the Pennsylvania system east of Pittsburgh and Erie. At the same time, Vice-Grand Master Lee sent to officers of each of the eighty-five locals of the Brotherhood in the territory affected explanations of cipher telegrams directing the action of the men under various anticipated conditions. This action was taken by Mr. Lee in conjunction with the Committee of Adjustment, composed of sixteen members of the Brotherhood from as many divisions of the road. A strike could be ordered only by their vote and the signature of the Grand Master.

But just at this time it became known that the heavy vote of the trainmen in favor of a strike might not have been cast had the exact status of the negotiations been more generally known. This lack of knowledge was not caused by concealment on the part of any of the negotiators, but by the fact that proposals and counter-proposals had been exchanged with such rapidity that their final form had not become fully understood by all the trainmen throughout the system when the vote was taken.

Grand Master P. H. Morrissey, of the Brotherhood of Railroad Trainmen, was notified at his home in Cleveland by long-distance telephone of the crisis. He started at once for Philadelphia, informing Mr. Lee that he had in mind a compromise suggestion. The day before Robert Pitcairn, first assistant to President A. J. Cassatt, was summoned from Pittsburgh to Philadelphia for consultation with Mr. Cassatt.

In order that all trainmen might understand the position of the company, Mr. Atterbury had his latest propo-

sition, which he regarded as more liberal than had been understood, printed and posted on the bulletin boards at every terminal and station and distributed to the employees.

Mr. Lee made public a general review of the issue. He pointed out that the brakemen dress to withstand cold weather, and "when compelled to alternately brake and fire, they subject themselves to the risk of contracting pneumonia, or, at least, heavy colds." It was also stated that the increased pay offered by the company would in many instances net the brakeman serving as firemen only \$1.50 a month. Subsequent calculations showed that Mr. Atterbury's proposal would cause an average increase in the earnings of such brakemen of \$6 a month. The clearing up of this fact doubtless did much to bring the subsequent negotiations to a successful result.

Grand Master Morrissey reached Philadelphia on the night of January 19, and arranged for a renewal of conferences with General Manager Atterbury.

Both Mr. Morrissey and Mr. Atterbury openly expressed their desire to prevent a strike if possible, and their determination to exhaust every means of reaching an agreement. Mr. Morrissey made the reopening of negotiations possible through suggesting that the company place firemen's helpers at points along the road where the services of brakemen as firemen were needed.

The subsequent negotiations consumed many hours on January 20 and 21 and were concluded on Monday, January 23, when Mr. Atterbury and Mr. Morrissey issued the following formal joint statement:

Mr. Atterbury has accepted Mr. Morrissey's proposition on the Jersey City situation, increasing the wages of the conductors and brakemen in the Jersey City, Harsimus Cove, Greenville,

Meadows, Newark and Waverly yards, to the standard rates of New York harbor, together with other working conditions.

Mr. Morrissey has accepted Mr. Atterbury's proposition of January 7, as amplified by the results of the conferences of the last few days, in regard to brakemen assisting the firemen, both to go into effect as of January 1, 1905.

Mr. Atterbury will, in addition, take up and put into effect within a reasonable time such other measures of relief, not only to the brakemen, but also to the firemen, as have been discussed and offered by Mr. Atterbury and suggested by the committee.

Mr. Morrissey said, after peace had thus been declared:

"The concessions are accepted in the generous spirit with which they have been tendered. Mr. Atterbury has given his word that the relief of the firemen from unusual strain will be his first regard.

"The stationing of extra men at ash pits, which, I understand, are about thirty miles apart on the middle division, the putting to work at junction points of men who have been laid off, when need for such extra services shall be demonstrated; these are some of the concessions made by the company.

"It was my first meeting in conference with Mr. Atterbury, and I was much impressed by his kindness and his disposition to hear patiently and judge fairly."

By increasing wages for trainmen within a radius of twelve miles of New York harbor, the Pennsylvania company accepts the higher scale recently adopted by the New York Central, Lackawanna, Staten Island, Long Island, Central Railroad of New Jersey and Lehigh Valley. It is estimated that the total increase amounts to more than \$300,000 a year and affects about two thousand men. The negotiations resulting in this increase have been in progress between Messrs. Morrissey and Lee and officials of the several roads since early in December.

ARBITRATION AND CONCILIATION RECOGNIZED IN THE COTTON INDUSTRY.

GOVERNOR DOUGLAS, OF MASSACHUSETTS, MANUFACTURERS AND LABOR REPRESENTATIVES GET TOGETHER IN ENDING FALL RIVER'S ORDERLY, HISTORIC, TEXTILE STRIKE.

"REGARD the recognition of the principle of arbitration as the most important element in the settlement of the Fall River strike," was the significant statement made by Gov. W. L. Douglas of Massachusetts, when that long struggle between the owners and the operatives in the cotton mills of that city was brought

to agree. The arbitration exercised by Gov. Douglas relates to an average margin between the cost of raw material and the price of the product, upon which the manufacturers are to pay a dividend of 5 per cent. upon the wages earned between the date of the end of the strike and April 1. If this arbitral decision prove satisfactory

played in the cotton goods industry, having about three times as many employed as any other State. * * * No single strike in the textile industry in this State has reached such proportions as to duration, number of operatives thrown out of work, financial loss to employees and employers, and such large disbursement of aid

NATHANIEL B. BORDEN,
Cotton Manufacturer.

W. L. DOUGLAS,
Governor of Massachusetts.

JAMES TANSEY,
President Textile Council, Fall River.

to an end, through his mediation, on January 18. Gov. Douglas expressed the hope that the seed of arbitration, thus planted, would grow in a few years to a strength that would prevent a "recurrence of these demoralizing and pitiful strikes." The agreement for the end of the strike was signed by Gov. Douglas, Nathaniel B. Borden, on behalf of the manufacturers, and James Tansey, President of the Textile Council of Fall River, on behalf of the operatives.

The arbitration, whose introduction Gov. Douglas regards as so hopeful, relates to the future adjustment of the wages of the operatives to the margin of profit between the cost of raw cotton and the selling price of manufactured goods. An annual adjustment similar to this has long been made in the cotton manufacturing districts of England by committees representing the manufacturers and the organized employees through conference, although there is a provision for arbitration in case of a failure of the representatives of the two sides

to both sides, it may result in the introduction into the textile industry in New England, and ultimately in the United States, of the principle of the sliding scale. That principle has proved successful in this country in the manufacture of iron and steel and in coal mining.

One of the manufacturers was quoted as saying:

The reduction has been accepted and the strike has been declared off. We have simply done to-day what we have been prepared to do at any time; that is, to treat with the operatives on future wage advances if market conditions warranted it and we could afford to do it. The labor leaders have conceded that we could not pay more wages under conditions prevailing July 25 and that is what we have contended for. In my opinion we will be able to do something about a permanent marginal scale of wages as a result of what has now been accomplished.

The Fall River strike is historic. The latest bulletin of the State Bureau of Statistics of Labor (December, 1904) pronounced it "unparalleled in the history of the textile industry in Massachusetts, which ranks as the first State in the Union in the number of operatives em-

ployed in the cotton goods industry, having about three times as many employed as any other State. * * *

The strike began July 25, 1904, the date of the 12½ per cent. reduction in wages. The strike was ordered by a vote of the five textile unions. That vote was 1513 for a strike and 396 against. About 25,000 operatives, of whom less than one-fifth were members of the unions, thus followed the lead of 1513 organized workers.

The State Labor Bulletin said: "The Fall River strike stands by itself in the manner in which it has been conducted. On all sides the labor leaders have been characterized as being intelligent and conservative men. The mill operatives have proved themselves to be law-abiding citizens. There have been no riots, mobs or acts of violence, such as have been attendant upon all strikes of such magnitude throughout the country."

The strike affected 33 corporations, closed 72 mills; tied up \$21,665,000 of capital and caused a weekly loss of wages of \$150,000 and to the corporations of \$23,000.

“THAT VAGUE BODY KNOWN AS THE GENERAL PUBLIC.”

ITS MEANING AND ITS RELATIVE IMPORTANCE DEFINED BY REPRESENTATIVES OF VARIOUS WALKS OF LIFE.

MUCH comment was caused among professional scholars and writers, as well as among labor leaders, by the remarks of President Eliot of Harvard University, at the annual dinner of the National Civic Federation, concerning “a vague body known as the public.” He estimated this body to be “five times as large as all the union men and all the union men’s families and all the employers and all their families.” He added: “The total number of employers, union men and their families in the United States does not exceed 20,000,000. The population of this country approaches 80,000,000. I have the honor to represent three-quarters of the American people.”

Among those who seemed perplexed by this utterance was a Chicago member of the Carpenters’ Brotherhood, who wrote this question: “According to this, I am not a member of the public because I am a union man. But did not the coal strike affect my bin just as it did Dr. Eliot’s? When the street car strike was on in Chicago, I had to walk just like Dr. Harper of Chicago University. Just who compose the vague body known as the public?”

This carpenter’s inquiry, accompanied by Dr. Eliot’s remarks quoted above, was sent to a number of the readers of THE MONTHLY REVIEW, with a request for answers for publication. Some of the most pertinent replies are herewith presented. The varied interests represented by the writers indicate the wide concern felt in a question that some regard as abstract, or even finical, but whose economic importance is generally appreciated. Definitions are of first importance in discussion. Agreement upon terms is essential to profitable debate. This symposium, including the opinions of both theorists and practical men, representative of both parties to the industrial struggle and of its critical observers, therefore deserves the perusal of economic students.

THE PUBLIC ARE THE OUTSIDERS.

H. C. Watson, Editor Dun’s Review, New York:—While the word “public” in itself possesses no ambiguity the peculiar application in connection with industrial or financial problems is calculated to confuse, and it is not surprising that the Chicago carpenter felt neglected. As used in relation to the Civic Federation, the word “public” is intended to apply to the bystanders or non-disputants in the industrial strife; those who get no direct benefit from the higher wages obtained by a protracted strike, but who suffer all the inconveniences during the controversy. The public differs from the bystanders in that it is possible for the spectator to vacate the scene if the bullets fly too thickly in the case of a street fight, but there is no avoiding the suffering that follows suspension of coal mining.

Strictly speaking, I should think that the carpenter was of the public when there was a coal or street-car strike, but not when his particular craft was holding up a job on a building. It is to be hoped that the Chicago carpenter will not get the impression that those who represent the “public” on the various committees of the Civic Federation are not “workers.” Probably the third class works harder than the organized laborers; certainly its hours are much longer, but it finds time to help keep the peace and to protest against injustice. The “public” often lacks intimate knowledge of facts in regard to many disputes, which leads it into erroneous judgments, but the growing tendency toward publicity is making the conditions much better in this respect.

THE UNION MOVEMENT ALL-COMPREHENSIVE.

John B. Lennon, General Secretary Journeymen Tailors’ Union of America:—The remark of President Eliot made at a recent dinner in New York that he represented a body known as the public five times as large as all the union men and all the union men’s families, and all their employers and all their employers’ families, struck me as a strange remark as soon as I read it. I wondered if old Harvard had departed from that sound democracy upon which her foundation was laid, and had taken up in lieu thereof a belief in class distinctions to separate and divide the people into different sections in this the United States of North America as they are divided in some of the other older countries of the world. There is no such thing as a general public that the trade unionists and the employers of the country are not

a part of. President Eliot himself is a part of the trade-union movement, and from it he cannot escape. It is education that has made our modern trade-union movement as effective and successful as it is. Where ignorance reigns supreme there is no labor movement like we have in the United States, and so long as Harvard University and the other colleges and universities of the country, together with the public schools, continue to enlighten not only the children, but all the people of our country, the trade-union movement will continue and will become more and more successful; and whether we will it or not, we are all a part of the great labor movement of the world, for there is no other movement that from the earliest dawn of civilization has worked for progress, for enlightenment and for a higher life. No matter what form it may take, whether it be that of the plebeians in ancient Rome, or of the serfs in the middle ages, or of the trade-unions at the present time as the foremost factor of this labor movement, there is no possibility for any one to escape being a part of it. While our friend President Eliot may think that he represents some distinct entity from the trade-unionists of the country and from their employers, your humble servant thinks he is mistaken, and that he only represents in part the great mass of the people of our common country.

“THERE IS NO OUTSIDE PUBLIC.”

George Gunton, Economic Author:—Much is said about the interests of society being superior to the interests of either labor or capital, but this is more sentiment than fact. Competitive struggle between large and small corporations for survival and supremacy, and the contest between laborers and employers over wages and conditions, is not limited to the particular contestants in a given struggle, but includes the interests of like units and all the active economic elements of the country. Those who speak of society as something superior seem to imagine that there is a great world constituting an overwhelming majority of the nation outside of the economic elements interested in the industrial contest. Such is not the case. The so-called public not interested directly or indirectly in the profits and conduct of business, on the one side, or the income and conditions of labor, on the other, is too small to be considered. Outside of office-holders, teachers and professional persons, no such public exists. Of course, the purchasers of coal are affected by a coal strike, but these are all either laborers or employers, or people depending upon laborers or the income from the profits from industry. This struggle may be to-day in the coal mines, to-morrow in the cotton factories; or it may be to-day with the railroad corporations, to-morrow with the iron or steel or cotton or woolen or other corporations; but every struggle for industrial adjustment is a part of the general struggle of all society, and there is really no such thing as an outside public. Therefore, it is not true to say that the interests of the public are more important than the interests of capitalists and laborers. There is no public that has any such preponderant interest.

A QUESTION OF INDIVIDUAL AND PUBLIC RIGHTS.

Thomas F. Woodlock, Editor Wall Street Journal, New York:—Every individual is a component part of the public. His social and business life largely consists of an adjustment of conflicting rights, as against other individuals, taken singly or in common. The public has some rights against him as an individual, and he has some rights as against the public. When there is a question as to the public rights against him, he is not one of the public. When there is a question of his rights as against another individual, the public is not concerned. When there is a question of the rights of the public against an individual other than himself, he is then part of the public.

THE INTERESTS OF ONE THE INTERESTS OF ALL.

R. R. Bowker, Editor and Publisher Publishers’ Weekly, etc., New York:—On the inference that out of our 80,000,000 population 20,000,000 are engaged in or dependent upon occupations in which union men constitute the great body of workers, it is of course evident that the whole 80,000,000, as consumers, constitute “the public” in the economic sense, of which three-fourths are affected only as consumers and citizens by the relations of unionism with industrial activity, prices and public order, while the other fourth are concerned both indirectly as consumers and directly as wage earners. So far as unionism tends to increase prices by increasing wages, all consumers are affected alike, and one of the most notable features in strikes has been the willingness

of union men in other occupations, as part of the consuming public, to bear, with cheerful self-sacrifice, their part of the deprivation or burdens resulting from the strike of fellow workmen in another industry. It is not to be taken for granted that a rise in wages means an increase in prices, for though this may be the immediate result, the ultimate consequence of raising the standard of living and of productive skill may be, and should be, to decrease cost and prices. The economic mistake of unionism, from which it is probably emerging, has been in restricting the output of the increased productivity of the more skilled or more competent workers, so that the economic good results of labor organizations have been in some part offset by the ill results of restriction. It is evident, here as everywhere, that the interest of one is the interest of all, and that the union man, as a member of the general public, must share whatever benefits or disadvantages come from union policy. When prices, whether of rent, fuel, food or other necessities of life, rise in disproportion to the increase of wages, as has perhaps been the case in this country in recent “boom” periods, the result is hardest on people of small earnings, and the man who earns \$600 a year instead of \$500 is no better off if it costs him \$600 for what before cost him \$500. It is the whole public of 80,000,000 people, including union men, who suffer by any mistakes of the unions; it is the whole public, outside as well as within the unions, who should benefit by wise and uplifting policy on the part of labor organizations.

EVERY MAN, WOMAN AND CHILD.

C. A. Rook, President The Dispatch Publishing Company, Pittsburg:—Who is the public? Why, the public is the public—every man, woman and child is the public. The union man, the non-union man, the working woman, girl and boy. The boys and girls who have rich fathers and mothers and who can lie in bed until noon and stay up all night and never have to give a thought as to where they will eat and sleep, they are the public. The poor little boys and girls with hearts and ambitions as big and great as other boys and girls, but who know not where they will eat and sleep, if at all, they are the public. The man or woman who is trying to get a fair day’s pay for a fair day’s labor, whether union or non-union, is the public. In fact, the whole 80,000,000 persons who live and labor in this great and grand country of ours, whether he is employed or unemployed, capitalist or laborer, is the public. If I were an employe instead of an employer I would belong to that great public which is called union. If the employes of this great United States would follow the Golden Rule, there would be but little need for unions. When President Eliot of Harvard, either through error or intention, excluded the union men from among the public, then President Eliot makes one big, grand mistake, for they are and will remain a part of our public.

THE PUBLIC MEANS ALL CONSUMERS.

Edward J. Wheeler, Editor Literary Digest, New York:—My understanding of Dr. Eliot’s words is that he included in “the public” the Chicago carpenter and all the rest of the population; but inasmuch as the employers and employes have special interests that may be supposed to transcend in their cases the general interests common to all “the public,” he did not assume to represent them, but to represent the rest of “the public” not affected by the special interests. For industrial purposes, “the public” consists ordinarily of the entire body of consumers of industrial products. That means everybody.

RIGHTS OF THE PUBLIC NOT PARAMOUNT.

D. L. Cease, Editor Railway Trainmen’s Journal, Cleveland:—Who compose the “vague body known as the public?” can be answered by saying, the general people. What are the rights of the public? which I think is the question wholly in keeping with the source of the first inquiry, seems to need more of explanation.

It is admitted that one-fourth of the people, or that percentage of the “vague public,” is affiliated with the organization of labor, either as master, workman, or dependent upon either. A body so large naturally deserves consideration, regardless of the fact that it is not in the majority.

If we will eliminate from the calculation those engaged in agriculture and domestic service, who have not been reached by organization, we will find that one-fourth of the public, so far as its organized representation is concerned, to be materially increased. If we add to this increased body that other portion of the “vague public” which is receiving higher wages and

shorter working hours, secured by labor organization action, we will find that at least one-half of the "vague public" is either thus represented or indirectly affiliated.

If it were made known to the "vague public" that only such employes as were affiliated with the labor organizations would receive the wages and hours that had been granted through labor organization effort, the one-fourth of the "vague public" now allotted to organized labor would visibly swell, and, I believe, would become three-fourths. There are some employments that have not been directly reached by labor organization. Farm and domestic labor has not profited from direct organization of each class, but both classes have benefited from the increased wages of the other occupations, because higher wages must be paid to hold them in their class of service.

I believe that when the entire question is figured out that, aside from the "submerged tenth," the representative portion of the public that stands for itself and apart from the labor organizations will not be three-fourths by any means.

And now as to the rights of the public. This, I take it, means to what extent can the other man make his fellow serve him, and under what conditions can he quit his service without disturbing the rights of the "public."

This question naturally involves service and the leaving of it. A strike naturally inconveniences the public; this includes those on strike just as much as it does those who are not; it disturbs business, embarrasses the employer and perhaps makes the striker suffer from want. But in the question of his responsibilities toward the public, let it be understood that the man who leaves the service does not do so for the purpose of hindering or injuring his employer; he does not aim to inconvenience the rest of the public; he seeks to better his own condition; his relation, or duty, to the public is absorbed in the question of defending that part of the public with which he has been classed from the impositions of another part of the public, or his employer.

If this were a world wherein men sought to assist each other at the expense of themselves, this condition would not maintain; it could not exist; there would be no reason for it. But it is a condition governed altogether by self interest, in which no part of the public rightfully can be expected to sacrifice its well being for any other part. It must be the judge of its duty toward the remainder of the "vague public," and it is asking too much to expect that one part of the general people will sacrifice its welfare for the benefit of the remainder. If this were done, as the question of the duty of labor organizations toward the public is sometimes understood, we would very soon pass from the period of self sacrifice to that of the branding iron, the ball and the chain, in which case the three-fourths of the "vague public" now standing aside would join in the "public" demand for a better condition.

VAGUE TERMS UNDESIRABLE.

James E. Freeman, Rector St. Andrew's Memorial Church, Yonkers, N. Y.:—There is so much vagueness and ambiguity about many of the trite terms and phrases that we employ in every-day speech that we need to exercise greater caution in our utterances. For instance, we talk about that misty, difficult-to-be-defined corporate body, which we call the "public," as though it were a something that were capable of exact limitations. Again, we speak about "Public Opinion" or "Public Sentiment," as though it were an arbitrary and definite object, susceptible to analysis.

We take it that a reasonably clear and adequate definition of what constitutes the "public" is that *whole* body of people of every sort and kind, without reference to occupation or station, who, in the aggregate, make up the body political and the body social. A "public interest" is one that is coterminous with every near and remote concern of our corporate life. We venture to think that it is a somewhat dangerous thing to segregate our people by undertaking to classify them, thus making it appear that their interests are in any way divorced or inimical.

If I understood Dr. Eliot correctly, he was seeking to emphasize, for the purposes of discussion merely, the several elements involved in a common cause; he was not seeking to emphasize points of difference, but rather points of resemblance. Our whole people, of whatever sort or kind they may be, constitute segments in that corporate wheel we call the "public," and the more this cardinal fact is emphasized and understood, the greater will be the responsibility of each, and the more secure the prosperity and peace of all.

A QUESTION OF USE OF WORDS.

Amos K. Fiske, Editorial Staff, Journal of Commerce, New York:—It seems to me that the National Civic Federation has by its own organization established a certain distinction between employers, wage-earners and the public, not meaning that employers and wage-earners are not included in the public in a general sense, but meaning by the latter the mass of those not comprised in the two classes named and having a somewhat different interest in the controversies between capital and labor, or between employers and union workmen in particular. In that sense, it seems to me there is a distinction, which is that recognized in the representation

of the Civic Federation and that intended by President Eliot, and the question of the Chicago carpenter appears rather carping. Of course, "the vague body known as the public," strictly speaking, includes all producers and consumers alike, just as producers include consumers and consumers include producers, but there may be parts of that body which not only have interests different from those of other parts, but interests different from the mass of those who do not belong to those particular parts. In so far as employers of labor, having control of capital, are able to arrogate to themselves any special advantage or any special or excessive part of the common product of labor and capital in their particular industry, and in so far as wage earners by organization are able to arrogate to themselves any special advantage or any arbitrary portion of that common product, they establish interests apart from those who are not included in their own ranks, and may impair the fair share of the rest who do not control productive capital and who are not organized, and may encroach upon their rights.

CONTESTANTS ARE OF THE PUBLIC.

Frederick H. Cooke, Lawyer and Author, New York:—I find that in my treatise of "Trade and Labor Combinations," published in 1898, I had substantially anticipated the phrase used by President Eliot, for I there speak (p. 17) of "that vague combination known as the public," adding, "that is to say, the inhabitants of a given town, city, state or country, as the case may be, or even of a region not limited by mere political boundaries." It is said elsewhere that the word public "may refer to the whole body politic, that is to say, to all the inhabitants of the state, or to the inhabitants of a particular place only" (23 American and English Encyclopedia of Law, 2d ed., p. 303).

This being, I take it, the ordinarily accepted meaning, the Chicago member of the Carpenters' Brotherhood, referred to in your letter, is right. The "public" affected by the coal strike constituted, generally speaking, the entire population of the United States; likewise the "public" affected by the Chicago street-car strike, constituted, I take it, the entire population of Chicago. In each case the Chicago union carpenter was one of the "public."

The real question of difficulty I understand to be whether, in case of a contest affecting the public interests of a given community, the parties to the contest are, if themselves inhabitants of such community, to be regarded as a portion of the public affected. This is a question of words rather than substance. I am inclined to think that they are to be so regarded. Ordinarily, however, the interest of such a person as party to the contest is by him, at least, regarded as far more important than his interest as a member of the public.

DR. ELIOT SUSTAINED.

Henry D. Estabrook, Solicitor The Western Union Telegraph Company, New York:—President Eliot's use of the word "public" to distinguish the people generally from those belonging to unions, was a correct use of the word. Every individual is himself one of the public as a whole, but if he wishes to distinguish himself from the people en masse he would use the words "I and the public." A corporation composed of thousands of stockholders would do the same, and a union composed of millions of adherents would do the same. The purpose is to distinguish a particular or individual interest from a general or universal interest.

"FOUR-QUARTERS OF THE PEOPLE"

Henry W. Farnam, Professor of Political Economy, Yale University:—The question seems to me simple. The word "public" includes in general four-quarters of the people. If, however, one-quarter consider their special interests to be more important than the general interests of the people as a whole, a man who speaks for these general interests would naturally only claim to represent the remaining three-quarters.

MILITANT UNIONS SEPARATE FROM THE PUBLIC.

Charles T. Root, President Textile Publishing Company, New York:—If the Chicago union carpenter feels afflicted by President Eliot's intimation that the unions and the public are distinguishable bodies, he and his associate unionists have themselves to thank for the impression thus indicated. When the unions set themselves apart not as a merely peaceable, mutually helpful association of individuals, but as a militant, quasi-governmental institution demanding universal obedience, willing or unwilling, to all its edicts, and ever ready to turn the homes of non-combatants into the battlefield upon which they wage their desolating struggle for supremacy, they cannot complain and should not wonder at the growth of the feeling that they are, from the industrial point of view, no more the public than the Russians and Japanese are Manchurians.

Whenever, and in so far as the unions themselves feel themselves to be vitally related parts of the public body and not themselves the "whole show," to whom injuries of the public body are of inconsiderable concern, compared to the enforcement of their own rules and demands, then the state of affairs indicated by President Eliot and recognized by the National Civic Federation

in the form of its own organization will give place to actual solidarity in which, in its highest and best sense, the injury of one will be the concern of all.

LIBERTY AND LAW BEFORE THE UNION.

Slason Thompson, Manager of News Bureau, Railway Exchange, Chicago:—There is nothing to the query of your Chicago member of the Carpenters' Brotherhood. President Eliot said that he represented a vague body known as the public, which he estimated to be five times as large as all the union men, etc. Subsequently he divided the public into 20,000,000 union and 60,000,000 non-union. The union had been represented by the speakers who preceded him to the neglect of the non-union portion of the public. He undertook to speak for the three-fourths of the public, which had not been heard from, and also for the whole public, which included union and non-union.

In any republican assembly the man who speaks for three-fourths is entitled to speak for all. In my opinion President Eliot spoke on behalf of liberty for the Chicago member of the Carpenters' Brotherhood as well as for those of the great majority who agree with every word he said.

Yours for liberty, law and union,
But for liberty and law, union or no union.

ONLY DIVISION ONE OF INTEREST.

J. W. Jenks, Professor of Political Economy and Politics, Cornell University:—Members of trade-unions are, of course, members also of the "vague body known as the public," unless, by their actions, they put themselves in opposition to the interests of the public. In that case, they should for the time being be considered no longer members of that body. It can be readily seen that the interests of the member of a union may for the time being be greater in the acts of his union than in his association with other members of the body politic. The unions should keep continually in mind the fact that they are members of the body politic, and so far as possible should make the acts of the union beneficial to the whole of the body politic as well as to the members of the unions themselves. In my judgment, they very generally do keep this in mind, but sometimes they certainly do not. It was doubtless some instance of the last case that President Eliot had in mind in his address.

ALL PURCHASERS AND CONSUMERS.

Franklin H. Giddings, Professor of Political Science, Columbia University:—President Eliot's use of the phrase "the public" was, I think, misleading and unfortunate. From the standpoint of any given individual, combination of individuals or corporation, "the public" is simply everybody else, and there are as many "publics," therefore, as there are individuals and combinations thereof. President Eliot set "the public" over against the corporate employers and their wage-earning employees; but from the standpoint of any one of the farmers or shopkeepers making up President Eliot's "public" the corporations and their employees are themselves a part of a "public." Speaking in terms of economics, it would be approximately true to say that "the public" consists of everybody considered as a purchaser and consumer, as distinguished from everybody considered as a producer. It would not do, however, to push such a definition to far, or to construe it too literally.

AN HISTORIC COMPARISON

S. M. Sexton, Editor United Mine Workers' Journal:—The only parallel to the statement of Dr. Eliot that he represents three-quarters of the American people can be found in an incident that occurred in London in the latter part of the eighteenth century. The people and politicians were greatly disturbed by a manifesto which demanded certain radical reforms. The manifesto began with: "We, the people of England," and had it the support of a considerable body must have borne serious results. But an investigation revealed that "We, the people of England," consisted of "Three Tailors of Tooley Street," and they were snickered down by the whole city. It is highly probable that President Eliot has magnified matters as hugely as the "Three Tailors of Tooley Street."

A UNIONIST ACCEPTS DR. ELIOT'S TERM.

Frank K. Foster, Typographical Union, Boston:—While each person making up our 80,000,000 of the population is undoubtedly an integral part of the "public," yet President Eliot is also fully justified in using the word "public" in the sense he did by the Civic Federation itself, a portion of whose executive committee is selected "on the part of the public."

THE PUBLIC IS EVERYBODY.

Hamilton Holt, Managing Editor The Independent, New York:—I would say that my idea of the "public" is everybody—employers and employed, "scabs" and middlemen, etc.; but I suppose in the sense of the National Civic Federation, the "public" is all that remains after deducting the representatives of organized capital and the representatives of organized labor from the whole population of the United States.

A CONSERVATIVE APPEAL TO THE UNITED MINE WORKERS OF AMERICA.

PRESIDENT MITCHELL, TRIUMPHANTLY RE-ELECTED, REVIEWS THE COAL INDUSTRY AND ADVISES HIS CONSTITUENTS TO STRIVE FOR PEACE IN NEXT YEAR'S CRISIS.

THE re-election of John Mitchell as President of the United Mine Workers of America, announced at its sixteenth annual convention in Indianapolis, proclaims the continued confidence in its chief leader of the largest body of organized labor in the world. It sets the seal of approval by that body upon the policy of President Mitchell last year in advising the bituminous miners to accept the compromise reduction of 5.55 per cent. in wages offered by the operators at the Indianapolis conference.

Other general officers elected are:
Vice-President, T. L. Lewis (re-elected); secretary-treasurer, W. L. Wilson (re-elected). Dele-

JOHN MITCHELL,
President United Mine Workers of America.

gates to the American Federation of Labor—John Mitchell, T. L. Lewis, W. L. Wilson, W. D. Evans, Patrick Dolan, John Fahy, John Demase. Delegates to International Mining Congress—W. H. Haskins, H. C. Perry,

The importance of this convention is widely recognized, because of the fact that a year from next April the biennial contract with the bituminous operators' association and the award of the anthracite strike commission expire simultaneously. The annual report of President Mitchell thus spoke of this impending situation:

"It may not be amiss at this time to call your attention to the fact that one year from next April our joint agreements expire in practically every coal-producing district—both bituminous and anthracite—in the United States. Reference to the reports of commercial agencies and trade journals seems to indicate an approaching revival of business and a period of industrial activity. If these predictions are realized, we should be able to regain the loss in wages sustained one year ago and to improve conditions of employment in those districts in which no reductions were forced upon us. It is, of course, unnecessary to say that our ability to make further advancement—or even to retain our present standard of living and wages—will depend in no small degree upon the strength and solidarity of our union, and in making preparations for that time we should not only strive with all our energies to perfect our organization numerically, but we should also make provision for the maintenance of our people, should we be so unfortunate as to become involved in a strike.

"I am, of course, hopeful that we shall be able to reach a satisfactory settlement upon the expiration of our present contracts, but, nevertheless, there is always the possibility of disagreement, and as far as I am personally concerned, I have determined that—under normal conditions—the present scale of wages, the present standard of living among the coal miners of this country, shall never be lowered with my consent. There are times when workmen are called upon to and should share in the loss of profits which follows periods of industrial depression, but there is a standard below which men cannot maintain themselves and their families, and below this point the wages of organized workmen cannot be permitted to fall.

"A reference to the financial report of your secretary-treasurer will impress you more forcibly than any words of mine could do, with the necessity of providing funds for the maintenance of strikes. In the words of Washington, 'To be prepared for war is one of the most effectual means of preserving peace.' And you should

bear in mind that those organizations which are best prepared for strikes are called upon least frequently to engage in them. Whatever the causes, the strikes that have taken place during the past few years have established a precedent which cannot well be departed from, and when men strike now we are compelled, within certain limitations, to provide them with the necessities of life. The funds for this purpose can come only from one source—unless our membership provide us with the money, we cannot supply it to those who are on strike. And if we are to make adequate preparation for our next interstate convention we must have a large fund at our disposal, so that we may in the interim, resist any attempts to reduce wages in the outlying districts or any efforts to weaken the strength and influence of our union."

Mr. Mitchell declared that the acceptance of the compromise bituminous agreement last year, involving a reduction in wages of 5.55 per cent., was "a monument to the sagacity of the members of our organization and proves that government, whether of unions or of nations, is safe in the hands of the people." He believed that the union is "in a far better condition now than it would be had a strike been inaugurated."

The average membership for 1904 was 251,096. This was an increase of less than 4,000 over 1903, while membership for December, 1904, showed a decrease of 24,900. This decrease is based upon the tax received for the month and is explained by the exemption from dues of about 25,000 miners then on strike.

Mr. Mitchell showed that the operation of the Anthracite Commission's sliding scale had caused an increase of 7 per cent. in the pay of mine workers during the last three months of 1904.

Of the federal injunction, Mr. Mitchell said: "Every year that passes emphasizes more strongly the iniquity of the federal injunction as applied in labor disputes. During the past year injunctions have been issued in every coal field in which a strike has been inaugurated, and members of our association have been confined in jail because of alleged disregard of these injunctions, notwithstanding the fact that after our people had remained in prison for considerable time, the very judge issuing the injunction has reversed his own action and declared that when the injunction was issued his court was without jurisdiction in the case.

"It is difficult to speak in measured tones or in moderate language upon this subject. It is apparent to every one who is acquainted with the facts that many of these injunction judges—and especially Judge Jackson—are totally unfit to perform the functions of their sacred office. In numerous instances members of our union, when brought before these judges, have been treated with indignity and have had such abuse heaped upon them as

unfense, but when judges issue orders restraining trade-unionists from doing that which they have a perfect moral and legal right to do, and which would be no offense if done by other citizens, and when these same judges incarcerate our people without trial, without hearing, because they refuse to surrender their constitutional liberties, then, I say, it is time to call a halt.

"For several years past a bill has been pending in the United States Congress defining the word 'conspiracy,' and limiting to its proper and constitutional function the authority of these federal judges. This bill will again be under consideration at the present session of Congress, and it seems to me that no effort should be left

DANIEL J. KEEFE,
President International Longshoremen's Association.

untried to secure its passage. To that end, I recommend that your president or your executive board be given authority to employ one or more representatives to go to Washington and lobby in the interest of this bill."

DANIEL J. KEEFE ON ORGANIZATION AND CONTRACTS.

The Leader of the Longshoremen Emphasizes to Employers' Associations the Beneficence of Trade Agreements.

Daniel J. Keefe, president of the International Longshoremen, Marine and Transport Workers' Association, delivered an address to the recent convention of the Licensed Tugmen's Protective Association at Detroit, in which he dwelt upon the importance of developing organizations of both employers and employed. Mr. Keefe said in part:

"There is no war between capital and labor, no real hostility, simply the desire of each to get as good a bargain as possible for his side. When both recognize that each is essential to the other, with a mutual recognition of the rights of both, which must be decided upon a basis of equity, where justice will rule, then will begin the era of the Golden Rule, but the conditions we hope for will not come by our sitting down and idly dreaming. We all must, and are expected, to do our part. Every man has it in him to contribute his share and can aid in spreading the gospel of perfect organization.

"A few years ago, in speaking of the late Senator Hanna, I inadvertently referred to him as a 'professional man.' 'Dan,' said he, 'I am a worker, and a worker for wages and profits, the same as any other man in my employ; and let me tell you,' said he, 'when any man working for our company ceases to regard himself as a wage worker, and fails to realize that he is so regarded by me, his usefulness to this company is at an end.' (So much for professional labor.) I accepted his rebuke and now understand the one great element in his character that went to make Senator Hanna great among the modern captains of industry, and one of the great men of progress of our generation. Let us then strive to so shape the laws of this land, socially and politically, so that we may obtain a reward for our labor equal to its full value."

In an address to the Lake Carriers' Association, also in Detroit, Mr. Keefe congratulated that body upon having been the pioneers in leading the way in accepting the moral obligation of organized labor to carry out its contracts.

T. L. LEWIS,
Vice-President United Mine Workers of America.

should be countenanced by no man of impartial mind or of judicial temperament.

"I wish to emphasize the fact that we ask no special privileges over other citizens or other associations; we seek no immunity from the law, but we do demand and insist upon the exercise of all the rights and all the privileges that are guaranteed us by the constitution and enjoyed by other citizens of our common country. If any member of our union violates the law he deserves to be and should be arrested, tried, and convicted for his of-

THE CAUSES AND PREVENTION OF RAILWAY ACCIDENTS.

A BROTHERHOOD CHIEF AND TWO BROTHERHOOD EDITORS DISCUSS THE RESPONSIBILITY OF EMPLOYEES AND OF DEFECTS IN ADMINISTRATION AND EQUIPMENT.

THE shocking totals of death and injury from railway accidents and their cause and remedy continue subjects of keen public concern. The following articles are from contributors familiar with the employes' views of their cause, and continue the discussion begun in the October issue of *THE REVIEW*. The editor has arranged for further articles, expressing the opinions of high executive officers of several large railway systems, one of them the president of a trunk line.

AN EXPERIENCED EMPLOYEE'S OPINION.

By E. E. CLARK, *Grand Chief Conductor, Order of Railway Conductors.*

Much is now being said in the public press relative to the frequency with which fatal accidents are occurring on the railroads of the United States. That such accidents have occurred with alarming frequency and

E. E. CLARK,
Grand Chief Order Railway Conductors.

appalling results none will doubt or deny. No one will question the importance of discovering the cause or causes which contribute to such disasters and of applying the necessary remedy, however drastic, it may be.

It seems to me unfortunate that those who publicly discuss those questions are so prone to lay all the responsibility at the door of some one condition which they hold an antipathy for, or a condition which they claim would be corrected by the adoption of some idea or device in which they are interested.

On one hand we see a disposition to attribute the whole trouble to penurious management, and strong appeals are made to the already existing prejudice against railway companies.

On another hand, we find an energetic effort to make the people believe that insubordination among the employes, encouraged and supported by the labor organizations to which they belong, is responsible for the accidents of which every person hears and reads with horror.

Again, we find the correspondent who attributes it all to the alleged fact that railway officials habitually require employes to remain on duty excessively long hours and after-exhaustion renders them unfit and unsafe. This is answered by some railway official who claims that if men are on duty long enough to be exhausted it is because of their own desire and demand to be allowed to earn more money.

As a matter of fact most of the casualties can be clearly and directly traced to carelessness, neglect, forgetfulness or exhaustion on part of some employe or employes. In a list of fourteen accidents cited by Mr. Slason Thompson no less than five were caused by improper or negligent flagging and three were the result of conductors and engineers forgetting opposing trains or of failure to properly comply with orders relative to meeting of trains.

The working agreements between the railway companies and their employes in the train and engine departments provide that after continuous service of a certain number of hours the employes may demand rest before again being required to go out. The burden of compliance with this proper provision rests

with the employe as he is permitted to be the judge of whether or not he needs rest. Everyone who is at all well informed on the subject knows that there are instances in which employes are required to work against their wishes and in which they are permitted to work in accordance with their wishes when, because of physical exhaustion, they are not in a safe condition.

It is idle to argue that the universal adoption of any particular device would avert the possibility of a recurrence of these sad accidents. Signaling devices depend largely upon human agencies to operate them and even if they did not so depend, the fact would still remain that perfect safety under them would depend upon observance of them by men who are made from the same material as are other men.

Some representatives of the railways assert that the unions have bred and encouraged a spirit of insubordination and that they have enforced a system of promotion by seniority under which ambition is smothered and the worthy and the unworthy, the competent and the incompetent, the bright and the dull, are all placed on a common level.

This, to my mind, is the most unfair and incorrect of all the statements so far made. It is not true that the organizations composed of train and engine employes encourage insubordination in the slightest degree. No instance can be cited in which they have taken the position of arbitrarily upholding their members in violation of the rules of the company by which employed. They teach loyalty, not disloyalty, to their members.

It is true that the practice prevails of generally promoting the older man in the service who is in line of promotion. This is commonly called "seniority," and many would have it appear that the unions are wholly responsible for the practice and that its provisions are inflexible. A reference to a file of working agreements between railway companies and their train or engine men will disclose the fact that the rule for promoting men in accordance with seniority in service is always qualified with the specific provision "all things being equal," or "merit, ability and competency being equal." All men promoted are obliged to pass examination prescribed by the company and at the hands of officials of the company.

The practice of promoting men by seniority is as strongly favored by railway officials as it is by employes, and the managements have contributed as much to its establishment as have the employes.

I offer no excuse for neglect or carelessness or indifference on part of railway employes. They occupy positions of great responsibility and in no other employment can the disastrous results of error or omission be so far-reaching. They have much to account for and, considering the immensity of the industry and the imperative demands of their employ-

D. L. CEASE,
Editor Railroad Trainmen's Journal.

ment, as well as the feverish impatience of our people as a whole and the insistence upon faster and still faster movements, they render a remarkably good account.

The railway employes will be glad to be judged at the bar of public opinion when the public properly understand the true facts.

SOME EXACTIONS OF TRAIN SERVICE.

By D. L. CEASE, *Editor of The Railroad Trainmen's Journal, Official Organ of the Brotherhood of Railroad Trainmen.*

That employes are responsible for many railway wrecks is true; that much of the system of train operation is also responsible is equally true.

There are any number of matters co-incident with the operation of trains that do not appear on the surface, but which are largely responsible for many collisions.

Regardless of the manner of train that is being run, there is the mandate following it from the time it leaves until it reaches its terminus, "make time." To make time and escape the ever pending inquiry and reprimand, or something more severe, the train employes are encouraged to take chances.

This leaves room for very many lapses in perfect train

JOHN F. M'NAMEE,
Editor Railway Firemen's Journal.

management, and it is not surprising that serious results follow. The majority of these wrecks are charged to the men, but really should be charged properly to the lack of intelligent official operation.

I believe that back of this can be found too much technical method, and too little of practical knowledge of the needs of the service. Trains cannot be run, switched and safely controlled by the lead pencil only.

The demands made upon the men are conducive to forgetfulness, for there is a limit to human endurance. The hours are very often too long; the work at best is nerve exhausting, tiring out the employe mentally and physically. Every railroad has its "drags,"—long freights, that are started out with the certainty that they are going to work overtime,—how long will depend upon circumstances. Men can only remain alert for a given time, after that they are worn out. Men will drop asleep on the field of battle. Is it strange, then, that men with the wearying stretch of hour after hour on a locomotive or a train will grow dull or sleepy?

The "drags" are generally so long, and the men employed are so few, that intelligent communication between the members of the crew is out of the question. The engineer is almost a mile away from the hind end of the train. It takes the fireman and the head brakeman to do the firing; the engineer because of the build of the engine is by himself on many of the heavy engines, and is not seen by the other men on the engine unless they climb up where he is; the conductor, looking after his many clerical duties, is on the hind end, or he ought to be, and the flagman is generally back somewhere riding on the following train. Rear end wrecks are not so frequent, by any means, as head end ones. The man behind has all of his attention on his work.

Railways lay particular stress upon their safety equipment and bring it to their defense in freight train wrecks. There are any number of railways that still depend upon the hand brake in handling their trains

(Concluded on page 8.)

EMPLOYERS' POLICIES TOWARD LABOR.**A Declaration in Favor of Encouraging Employees to Join Unions.**

By EDWARD A. FILENE, Merchant, Boston.
(Extract from an Address before the Economic Club.)

American employers have won their success largely by their open-mindedness, by their willingness to change the good for the better. It has been well said that a good measure of the superiority of American manufactures is the greater size of their scrap heaps of displaced machinery as compared with the scrap heaps of manufacturers of other countries.

EDWARD A. FILENE.

But ideas of policies grow out of date as well as machinery, and the successful employer must have an intangible scrap heap of ideas and policies larger than the visible one of machinery. The time has now come to add to that heap some of our policies toward our employees, toward trades-unions.

When the unions were young and weak, and their management and policies so uncertain that that stability which is necessary to the maintenance and growth of business enterprises could not be guaranteed by them, then we fought them in defence of our property and rights; but now the evidence that the union has come to stay is so indisputable that all clear-sighted men admit it and employers must recognize that the question is not, "How can the union be annihilated?" but "What shall our policy be so that the unions can be made to help us in helping themselves? What kind of bargain can we make with our employees, with the union?" remembering that every bargain to be a good one must be mutually advantageous.

The chief difficulty of the past no longer confronts us. That difficulty was that we did not admit at first that the union had come to stay. If I criticize that position, I do it most sympathetically, for I believe, as human nature runs, and recognizing how industrial principles and rights are evolved through contest, that no other position toward the organized form of the new demands of our employees than that of opposition was possible at the beginning.

Be that as it may, the time has now come when clear-sighted men admit that the unions have come to stay, and that only by organization of employers and of employees can best conditions be brought about.

Employers must be better and more strongly organized and unions must be better and more strongly organized in order that the needless part of industrial strife be averted.

If, then, the unions are to stay, how are they to be made more serviceable?

For it is undoubtedly true, and admitted by wise union leaders, that their policies must also be changed, at least in part.

How are these policies to be changed?

The answer is forced upon us that the first and most necessary thing to do is to change our own policies—our employers' policies. In the past, harassed by the unions, we have believed that this harassing would be weaker, would be less, if we kept the unions weak. This is the great, the fundamental mistake we have made. To-day we know from bitter experience that it is the weak union that does the most damage to us—the union controlled by radical, short-sighted men, because larger numbers of our more conservative employees are not active members.

This is a truth we have learned very slowly, and at great cost, and as far as our policies bear witness we have not yet wholly learned it. Otherwise it would be our policy distinctly and definitely to encourage our best employees to go into the unions.

At present our policy towards the existence of trades unions is at best not more than neutral. I urge with all my power that the time has come to change this policy to one of definite purpose to make the unions better by encouraging our best and most valuable employees to join them, and to become active workers in them.

What will happen if we do this?

The first and most important result will be that much of the struggle that has hitherto been fought out to our great loss in our plants will be fought out in the union meetings.

For our best and most valuable men are not only good workers, but they are broader minded than the average: see conditions more clearly than the average employee; and therefore know our difficulties better than the weaker employees. And so when the employees' policies are decided in their unions, these broader-minded, clearer-seeing employees, adding their numbers to those that are already in the unions, will have the greatest weight in determining the union policies toward employers and will help to determine them with more consideration for us and our difficulties.

If we adopt this policy, it will eventually follow that many of the questions that are now "debated" (God save the mark), with strikes, boycotts and lockouts in our shops, will be really debated and fought out in the union meetings.

This policy must and will bring about better things for us. It is an open secret that the wisest and most far-seeing union leaders have often failed to carry out their more liberal policies for lack of the support which this new employers' policy would give them.

More than this. Our new policy would send many of the harmful union policies to the scrap heap, in company with some of our own.

What are these?

To be concrete, let us take a pair of the competing forces: The closed shop and the open shop. As long as employers believe their interests are best served or least harmed by a weak union, so long will the union fight as for its very life for the closed shop.

For as long as we hold that belief, so long will the unions believe—and in many cases believe rightly—that we will use the open shop to weaken the union by dropping the union men in preference to non-union men, as the need of men grows less with slackening work.

Personally I believe that if we adopt this new policy, the unions will soon cease to fight for the closed shop, for it will no longer be necessary.

If employers adopt this new policy of favoring strong labor unions, then the unions will change their policy in regard to apprenticeship. For the further reason that there will then be no longer any attempt to weaken unions by substituting an undue number of apprentices in place of skilled union workers as is done by some at present.

In a word, many of the union policies are war measures adopted to meet our war policies. If from our experience we now see our way clearer, and send these war policies to the scrap heap, the unions will do the same with many of theirs, out of self-interest, if from no higher motive.

For this new policy of ours will help to bring about that which is the most valuable to us for business success—the stability of labor conditions.

Is it not true that we can afford to pay any reasonable wages, or cut the hours of work down any reasonable amount, providing these wages and hours are the same for all our competitors; and are so stable that we can count on them with certainty in making our selling prices? Such stable conditions can only be brought about by strong labor unions.

Is it not true that our interests as producers or distributors are best served by having as consumers employees so highly paid as to be able to make a profitable demand for our wares? Is it not true that one man earning \$20 a week is more valuable as a profitable consumer than twenty men earning \$6 a week?

I am not unmindful that the general public has also its interest and rights in this question of wages and hours, as they affect the cost of production.

But the public can be amply protected, if necessary, through the tariff and other means.

On these final grounds our interests as employers are in accord with the interests of our employees, and the time has come to adjust our policies to these mutual interests.

The virtues of war are the vices of peace. We can change our policies without being ashamed. These policies were called for in the era of individualism that was the chief mark of the century just gone. But the larger men this era has bred have in turn bred larger, better policies, and noblesse oblige American employers will adopt them.

But I hear some one say, "If we strengthen the unions, they will run away with us, ruin us!" Of course I do not urge the policy of making stronger, better unions without taking for granted at the same time the necessity of stronger employers' associations. This need is too self-evident to require urging.

I have already pointed out that as a matter of fact, many of the excesses of the unions are due to their weakness, and by putting in our better men, and in other ways helping to strengthen them, we will stop these excesses. But, more than this, the surest way to make a conservative of a radical is to give him power—to make him assume responsibility. The unions are no exception to this truth, which I know to be a truth from many years of practical experience.

A NEW DEBS SCHEME.

Socialists to Organize to Fight the American Federation of Labor and the Railway Brotherhoods.

Chicago News, Jan. 10.

Plans were secretly laid in Chicago last Saturday at a conference of labor leaders from various parts of the country to organize a new great labor body in the United States and overthrow the American Federation of Labor. News of this became public to-day when the promoters of the new organization issued a "manifesto" outlining its purposes and calling for a convention to be held in Chicago June 27. Back of the movement is Eugene V. Debs. Among the labor organizations which are said to support the plan to overthrow the American Federation of Labor and supersede the American Labor Union are international unions affiliated with both of these.

The scheme contemplates the uniting of all wage-earners in the land under one general organization, whose trend shall follow the teachings of Socialism.

After attacking the present system of labor organization and prohibitive initiation fees the declaration is made that "class divisions foster political ignorance

among workers, thus dividing them at the ballot box as well as in the shop, mine and factory." Continuing, the manifesto says:

"Craft unions may be and have been used to assist employers in the establishment of monopolies and the raising of prices. One set of workers are thus used to make harder the conditions of life of another body of laborers. Craft divisions hinder growth of class consciousness of the workers, foster the idea of harmony of interests between employing exploiter and employed slave. They permit the association of the misleaders of the workers with the capitalists in the Civic Federation, where plans are made for the perpetuation of capitalism and the permanent enslavement of the workers through the wage system.

"Previous efforts for the betterment of the working class have failed because limited in scope and disconnected in action. Universal economic evils can only be eradicated by a universal working-class movement. Such a movement of the working class is impossible while separate craft and wage agreements are made favoring the employer against other crafts in the same industry, and while energies are wasted in fruitless jurisdiction struggles, which serve only the personal aggrandizement of union officials.

"A movement to meet these conditions must consist of one great industrial union embracing all industries, providing for craft autonomy locally, industrial autonomy internationally and working-class unity generally. It should be founded on the class struggle, and its general administration should be conducted in harmony with the recognition of the irrepressible conflict between the capitalist class and the working class.

"It should be established as the economic organization of the working class, without affiliation with any political party.

"All power should rest in the collective membership.

"Local, national and general administration, including union labels, buttons, badges, transfer cards, initiation fees and per capita tax should be uniform throughout.

"Workingmen bringing union cards from foreign countries should be freely admitted into the organization.

"All members should hold membership in the local, national or international union covering the industry in which they are employed, but transfers of membership between unions, local, national or international, should be universal.

"The general administration should issue a publication representing the entire organization and its principles, which should reach all members in every industry at regular intervals.

"A central defense fund, to which all members contribute equally, should be established and maintained."

The document is signed by the following:

Thomas J. De Young, of the United Brotherhood of Railway Employees, Houston, Texas.

Thomas J. Hagerty, of the American Labor Union, Chicago.

Charles O. Sherman, of the United Metal Workers, Chicago.

Fred D. Henion, of the United Brotherhood of Railway Employees, Minneapolis.

M. E. White, of the American Labor Union, Denver.

Ernest Untermyer, Chicago.

W. J. Bradley, Minneapolis.

W. J. Pinkerton, of the Switchmen's Union of North America, Argentine, Kan.

Frank Krafft, International Union of United Brewery Workers, Chicago.

A. G. Swing, of the American Federation of Musicians, Cincinnati.

A. M. Simons, editor, *International Socialist Review*, Chicago.

J. E. Fitzgerald, Fort Worth, Texas.

Wade Shurtleff, of the International Musical Union, Cleveland.

William D. Haywood, of the Western Federation of Miners, Denver.

"Mother" Jones, Chicago.

Frank M. McCabe, Chicago.

John M. O'Neill, editor, *Miners' Magazine*, Denver.

Charles H. Moyer, of the Western Federation of Miners, Denver.

William E. Trautmann, of the International Union of Brewery Workers, Cincinnati.

W. L. Hall, Chicago.

Joseph Schmitt, of the International Union Bakery and Confectionery Workers, Chicago.

Clarence Smith, Chicago.

John Guild, Chicago.

Daniel McDonald, Chicago.

Frank Bohn, New York City.

George Estes, Chicago.

A permanent executive committee was appointed, with William D. Haywood as president, W. E. Trautmann, secretary, and Clarence Smith, W. L. Hall and A. M. Simons as members. An office will be established in Chicago about February 1.

The Labor World of Pittsburg thus interprets the purpose of this movement:

Of course the chief aim, in fact, the only aim, of this proposed movement is to destroy or injure the American Federation of Labor and all other movements designed to perpetuate industrial peace. To accomplish this Debs wants the wild theories of a many-sided socialism put before the wage workers in hopes that they may be led from the oaths along which they have so safely and materially progressed. In this he will be aided by "Comrades" Parry & Co. The latter will be more than delighted at the move of Debs, in fact likely enough Parry & Co. are aiding Debs in his project, for they are working for the same air, viz., the destruction of trade unionism.

A unique union has been formed by Louisville carpenters. It will be known as Independent Carpenters' Union No. 1. Its objects are the open shop, no walking delegates, and no members except first class mechanics, and to prevent strikes and lockouts. It will be independent of all central organizations, and will not affiliate with the international body, but will accept all recommendations made by the Employers' Association, and work in harmony with that body—*American Industries*.

THE CIVIC FEDERATION OF BOSTON AND VICINITY.

THE NEW ENGLAND CENTER ESTABLISHED WITH GENERAL OFFICERS AND AN EXECUTIVE COMMITTEE REPRESENTING EMPLOYERS, WAGE-EARNERS AND THE PUBLIC.

THE New England Civic Federation was organized at a meeting in Boston on Monday, Jan. 23, attended by representatives of employers, wage earners and the general public. Major Henry L. Higginson, of Lee, Higginson & Co., bankers, presided and E. H. Walcott, Secretary of the Boston Merchants' Association acted as secretary. This organization is to be the center of the work of the National Civic Federation throughout New England. Its formation is in accordance with the plan by which the entire country is to be divided into seven sections for that work, each having a center.

The New England organization was effected by the election of officers and an executive committee. The officers are: President, Lucius Tuttle, President Boston and Maine Railroad; First Vice-President, Frank H. McCarthy, President Boston Central Labor Union; Second Vice-President, Louis D. Brandeis, attorney-at-law; Treasurer, Charles H. Taylor, Jr., Boston *Globe*; Secretary, E. H. Walcott, Secretary Boston Merchants' Association; Recording Secretary, Henry Abrahams, President Cigarmakers' Union.

The following constitute the Executive Committee:

On the part of the Employers: Amory A. Lawrence, President Merchants' Association, 89 Franklin Street; Lucius Tuttle, President Boston and Maine Railroad, North Station; Frederick P. Fish, President American Bell Telephone Company, 125 Milk Street; W. C. Winslow, 30 Congress Street; Arthur T. Lyman, Treasurer Boston Manufacturing Company, 50 State Street; Charles H. Taylor, Jr., Boston *Globe*.

On the part of the Public: Charles Francis Adams, publicist, 23 Court Street; Rt. Rev. William Lawrence, Protestant Episcopal Bishop of Massachusetts, 1 Joy Street; Major Henry L. Higginson, of Lee, Higginson & Co., 44 State Street; Hon. Charles S. Hamlin, 14 Beacon Street; John Mason Little, 74 Boylston Street; Louis D. Brandeis, attorney-at-law, 161 Devonshire Street.

On the part of Wage Earners: Dennis D. Driscoll, Central Labor Union, 93 E. Newton Street; Henry Abrahams, Cigarmakers' Union, 11 Appleton Street; Frank K. Foster, Typographical Union, 116 Eliot Street; Frank H. McCarthy, President Central Labor Union, 95 Regent Street; James R. Crozier, 25 Blue Hill Avenue, Roxbury; John F. Tobin, General President Boot and Shoe Workers' Union, 434 Albany Building.

Several of those present addressed the meeting. Lucius Tuttle said that he could name no one who knew just how to settle the labor question. But he was sure that nothing had done so much good as a free exchange of views between the employer and employees. Wrong ideas and misunderstandings were not provocative of disputes. It conduced to calmness to turn the hot tea of controversy into the cool-saucer of confidence. Mr. Tuttle said that, as a railway president, he gave the committees of employees, with whom he conferred, type-written figures of the business of the road in the same confidence as he gave them to the directors. The employees had never violated this confidence.

Henry Abrahams, as a representative of labor, greeted President Tuttle as made of the proper metal,

for he was an employer willing to meet his employees. Most strikes resulted from the acts of superintendents and foremen, when the employees could not reach the head executive. If the Civic Federation did nothing more than to extend the practice of conference, it would have done a great work.

Charles H. Taylor, Jr., said that the Civic Federation was not intended to settle the whole labor problem, nor did any of its members believe that it could. The idea of the New England organization was to encourage conciliation and conference, and to lessen through fair discussion, the probability of conflict.

BROTHERHOOD HAS IMPROVED SERVICE.

By JOHN F. McNAMEE, Editor *Locomotive Firemen's Magazine*, Official Organ of the Brotherhood of Locomotive Firemen.

Twenty years ago the majority of railroad men had no incentive to superior effort, and their principal object was to make a stake. They changed employers almost continually and were hired without any preliminary examinations whatever nor much if any regard to their past record. Their employment was insecure and uncertain, promotions were the result of personal favoritism. They had no

source of appeal or hope of redress when unjustly treated as the result of personal dislike on the part of petty officials or from other causes. Almost every payday there were discharges at every yard office and roundhouse for drunkenness (something rarely, if ever, heard of nowadays). Men were no better off as far as prospects for promotion were concerned after years of service than they were when newly hired. and the term "railroader" was synonymous with that of "floater."

While it is a fact that many thousands of dollars are annually expended in equipping railway rolling stock with safety devices and improvements, these advantages to the men are more than counterbalanced by the greater exactions on the part of railroad companies as to the amount of work to be performed per man in the train service departments; many roads having single track twenty years ago have four tracks now; locomotives now are three times as large as they were then, and have three times the hauling capacity; where twenty cars was an average train then, a drag of seventy-five cars in one train is no unusual thing at the present day; where a freight car of twenty tons capacity was considered large twenty years ago, it pales into insignificance beside the fifty-ton cars that are in use to-day; where a hundred miles or less constituted a division and a day's work back in those good old days, the men are now often required to haul these greatly increased trains over divisions of from 150 to 200 miles in practically the same number of hours; there are certain modern conditions which greatly jeopardize public safety.

Men are not admitted to the Brotherhoods haphazard. A probationary period in railway employment of from nine months to a year is an essential requirement for the determination of their eligibility to the organization representing their occupation.

If at the end of this period they are still in the service and the investigating committee finds them morally eligible, they are accepted as members. Under the vigilant eyes of their superiors and their associate employees their possession of any physical or moral defects liable to incapacitate them from the proper performance of their duties will be quickly detected and the delinquents weeded out before becoming eligible for membership in the Brotherhoods. The Brotherhoods have come to stay. They are a fixture and must be reckoned with. They are universally respected, and railway managements, appreciating their usefulness and conservatism, recognize and encourage them. As business institutions they are conducted on a basis that defies adverse criticism.

LUCIUS TUTTLE,
President New England Civic Federation.

CHARLES H. TAYLOR, JR.,
Treasurer New England Civic Federation.

FRANK H. MCCARTHY,
First Vice-President New England Civic Federation.

HENRY ABRAHAM,
Corresponding Secretary New England Civic Federation.

CAUSES OF RAILWAY ACCIDENTS.

(Continued from page 6.)

down heavy grades; other roads are asking to be relieved from using safety appliances, and to be permitted to use an appliance that is neither fit for service nor emergency use. Train wrecks do occur because of insufficient or defective appliances.

To sum up the situation, I believe that wrecks are the result of carelessness, forgetfulness, long hours, heavy trains, the hurry-up system with discipline when time is not made, too many duties exacted from one employe, lack of a safe system in train running, and the failure to use safety appliances.

'SOCIALISM VERSUS UNIONISM.**A Disclosure of the Ulterior Purpose of Industrial Revolutionists in Entering Trades-Unions.**

The following correspondence concerning the hostility of Socialism to unionism has been exchanged between the editor of *The Worker*, a Socialist weekly, and the editor of THE MONTHLY REVIEW of the National Civic Federation:

THE WORKER, NEW YORK, November 23, 1904.
To the Secretary of the Civic Federation, New York City.

SIR: From the call for the fourth annual meeting of the Executive Committee of the Civic Federation I quote the following:

Another foe simultaneously assails organized labor. That foe is Socialism. Although Socialism is the avowed foe also of capital, it regards as an aid to its cause the radical type of employers' organizations, because of their common hatred of unionism. Socialism sees in unionism a means of bettering the condition of the masses that must postpone indefinitely the confiscation of all the machinery of production and distribution. Before Socialism can deliver its assault upon all capital it must remove from its way the self-improving organization of the wage-earners.

Your organization, Sir, professes to seek a basis for social and industrial peace. Do you think that this purpose is to be served by the publication of such unqualified falsehoods as that contained in the paragraph I have quoted? Or is it possible that, with the means at your disposal, you have made so superficial a study of the question that you can believe what you say in that paragraph? In either case, you deserve a rebuke proportionate in severity to the eminence of the men composing your Executive Committee and to the professions of devotion to the public welfare which they have made.

I speak, Sir, as an authorized spokesman of the Socialist party that has just cast half a million votes in this country, doubling its record of two years ago. I speak whereof I know when I tell you that the Socialists of this and other lands regard the trade-unions as their allies in the attack on capitalism, the movement for industrial democracy; that we rejoice in the victories of the trade-unions and do all in our power to render those victories more frequent and more complete; that our party, by formal resolutions in its national and international congresses, has repeatedly expressed its sympathy with the unions and advised its adherents to join the unions of their respective crafts; that the majority of our organized party members and the great majority of our candidates and party officers are trade-unionists; and that our party organization and its press has again and again raised funds to assist the trade-unions in their days of need. For proof I refer you to the proceedings of the International Socialist Congresses held at London in 1896, at Paris in 1900, and at Amsterdam in 1904; to the proceedings of the national conventions of the Socialist party held at Rochester in 1900, at Indianapolis in 1900 and 1901, and at Chicago in 1904; to the files of the numerous Socialist papers; and finally to the records of such Socialists and trade-unionists as Eugene V. Debs, Benjamin Hanford, James F. Corey, Frank A. Sieverman, Morris Brown, J. Mahlon Barnes, Max S. Hayes, Robert Bandlow and C. A. Hoehn.

I invite you, Sir, and through you the Civic Federation, to retract the false statement quoted, or to stand convicted of wilful mendacity.

Sincerely yours,

ALGERNON LEE,
Editor of *The Worker*.

OFFICE OF THE MONTHLY REVIEW,
NATIONAL CIVIC FEDERATION,
NEW YORK, December 1, 1904.

Mr. Algernon Lee, Editor *The Worker*, New York City.

SIR: I have before me your letter of recent date, in which you assert that a statement, given out by me as part of a call for the fourth annual meeting of the National Civic Federation, is an "unqualified falsehood," in so far as it describes as hostile the attitude of Socialism toward unionism; and you express your opinion that I merit a severe rebuke for either mendacity or ignorance.

In thus addressing me you claim to "speak as an authorized spokesman of the Socialist party that has just cast half a million votes in this country." You surely must advance that claim in a Pickwickian sense, since you must know that the Socialist party cannot truly claim as belonging to its ranks the 500,000 votes that were recently cast for Mr. Debs. You are well aware that many Single-Taxers and other radical groups, who have no more liking for Socialism than for smallpox, voted for Mr. Debs as a protest against the platform or candidates of the two great parties, or as a tribute to his personality. You have recognized in your own paper that the vote for Debs was enormously greater than the membership of the Socialist party. You have lamented that the number of your party members is less than 5 per cent. of the number of your voters (or less than 25,000), because your vote has increased in a larger ratio than your party membership. You have exhorted Socialist leaders to devote particular attention to the States where there was the greatest increase of the Debs vote and to do their utmost to get those who had cast their first "Socialist" vote this year really into the party organization.

You cannot, therefore, "speak as an authorized spokesman" for half a million voters. But you can and do speak as the editor of *The Worker*, a leading organ of what may be termed, for popular understanding, the Debsite Socialists.

In my statement I used the words "Socialism" and "unionism" in their broad, general sense. I freely confess, as you intimate, that I am not thoroughly familiar with the refined shades of distinction between the "fifty-seven varieties," or more of Socialism. Perhaps I would have been more technically correct had I stated that all of the DeLeon Socialist party and a large section of the Debs Socialist party are opposed to the American Federation of Labor and the Railway Brotherhoods. Those two varieties of Socialists are not opposed to all unions because, in fact, they have organized unions of their own to fight the American Federation of Labor and the Brotherhoods. Their names are, respectively, the Socialist Trade and Labor Alliance (the DeLeonites in the East), the American Labor Union (the Debsites in the West), and the United Brotherhood of Railway Employees, which is affiliated with the American Labor Union, and therefore a Debsite organization. The current Socialist literature furnishes incontestable evidence in support of these statements.

In denying my proposition that "Socialism" is inimical to "unionism," you adduce in your support statements that the Socialists regard the trade-unions as their allies in the attack on capitalism; that Socialists rejoice in the victories of the trade-unions, and do all they can to make them more frequent and complete; that your party, "by formal resolutions in its national and international congresses, has repeatedly expressed its sympathy with the unions, and advised its adherents to join the unions of their respective crafts"; that most of your party members, officers and candidates are trade-unionists, and that your "party organization and press have raised funds to assist unionists."

All these professions of friendship and support have an alluring sound, but their charm is somewhat shattered by the delightfully frank disclosure of the sinister object of the Socialists in going into the trade-unions. Mr. Jack London, a Socialist writer, in an article published in the *New York Independent*, in October, 1903, declared:

This revolt in the form of demands for an increased share of the joint product is being carefully and shrewdly shaped for a political assault upon society. . . . The leaders intend to direct the labor revolt to the capture of the political machinery of society. . . . With the control of the police, the army, the navy, and the courts, they will confiscate, with or without remuneration, all the possessions of the capitalist class which are used in the production and distribution of the luxuries and necessities of life. They mean to apply the law of eminent domain to the land and to extend the law of eminent domain until it embraces the mines, the factories, the railroads and the ocean carriers.

The Socialists turned their energies upon the trade-union movement. To win the trade-unions was well nigh to win the victory.

Instead of antagonizing the unions, the Socialists proceeded to conciliate the unions. "Let every good Socialist join the union of his trade! Bore from within and capture the trade-union movement."

To-day the great labor unions are honey-combed with Socialists. At work and at play, at business meeting and council, their insidious propaganda goes on. Night and day, tireless and unrelenting as a mortgage, they labor at their self-imposed task of undermining society.

The battle plan of the Socialists is to organize the working class and those in sympathy with it into a political party, with the object of conquering the powers of government and using them for the purpose of transferring the present system of private ownership of the means of production and distribution into collective ownership by the entire people.

This revelation by Mr. London is supplemented with brutal candor by Mr. Debs, who must be accepted as a really "authorized spokesman" of his party, since he was its nominee for President. In his speech in Faneuil Hall, Boston, just before the November election, Mr. Debs said:

Parry is doing a better work for us than we could do for ourselves. As Mr. Pure-and-Simple Union Man is crushed his eyes are opened to the fact that he must transfer his efforts to the political field.

Why does Mr. Debs welcome Parryism? He tells his audience the reason. It is because the success of Parryism would mean the crushing of Mr. Pure-and-Simple Union Man. If that is not an expression of hostility to unionism, what is it?

The *Indianapolis News*, published in the home town of Mr. D. M. Parry, president of the National Association of Manufacturers, and of the Citizens' Industrial Association of America, calls attention to a remarkable tribute to Mr. Parry by the *Social Democratic Herald*. That official journal of the Socialists of Wisconsin published on its front page an interview with Mr. Parry, accompanied with the words, in display type, "COMRADE PARRY!" and "WAS FIGHTING FOR US!" The *United Mine Workers' Journal*, the official organ of a labor organization containing twenty times the membership of the Socialist party, made the following comment on this economic mesalliance:

The *Social Democratic Herald* is edited by Victor L. Berger who made a scandalous attack upon Messrs. Mitchell and Gompers. What tie binds Berger, Parry, Hayes, et al., in their warfare upon trades-unions? They eulogize Parry, call him "Comrade," and he in turn eulogizes them and calls them true men. It is a strange spectacle to see Parry and Berger link arms and denounce trades-unions, and is a cause for some deep thinking upon the part of trades-unionists. Here Parry denounces trades-unionists as murderers, incendiaries, thugs, grafters and other scandalous epithets, and then Berger, Debs, Hayes, et al., call him "Comrade." Reflect upon this, Mr. Trades-Unionist, and see if there are not

ample grounds for a complete divorce. If "Comrade" Parry, why not "Comrade" Peabody, as the latter only puts into practice what Parry preaches. "Comrade," forsooth!

To return to the attitude of the Socialists toward the American Federation of Labor, there can be no more competent witness than Mr. Samuel Gompers, who has just been re-elected president of that organization. You may read Mr. Gompers' speech in opposition to a Socialist resolution, delivered in Faneuil Hall, Boston, in November, 1903, upon pages 196-197 of the Official Report of the Proceedings of the Twenty-third Annual Convention of the American Federation of Labor. Upon that occasion Mr. Gompers said:

I shall not refer at this time to their very many detailed acts of treachery to the trade-union movement but I shall show you that though they may believe themselves to be trades-unionists they are at heart, and logically, the antagonists of our movement.

When the Socialists formed the American Labor Union in rivalry to the American Federation of Labor, I took occasion to continually say in *The American Federationist* that it was but another attempt to form another Socialist Trade and Labor Alliance, without its practical courage to openly declare its enmity to the American trade-union movement.

The secretary of the Socialist party has severed his connection with the reformed (?) Socialist party, because of his being opposed to the hostile tactics of that party to the trade-unions; and, being at heart a trade-unionist, he was forced out of his position. Since that time he has given to the world the real reasons why he was forced out,—because he dared to stand up in defense of trades-unions and against the policy of antagonizing the trades-unions and hoisting up the American Labor Union.

I want to tell you, Socialists, that I have studied your philosophy; read your works upon economics, and not the meanest of them; studied your standard works, both in English and German—have not only read but studied them. I have heard your orators and watched the work of your movement the world over. I have kept close watch upon your doctrines for thirty years; have been closely associated with many of you and know how you think and what you propose. I know too what you have up your sleeve and I want to say that I am entirely at variance with your philosophy. I declare it to you, I am not only at variance with your doctrines, but with your philosophy. Economically you are unsound; socially, you are wrong; industrially, you are an impossibility.

I trust, Brother Editor, that I have adduced sufficient evidence to establish the truth of the statement that you have, I fear, too sweepingly denied. If the testimony I offer does not seem to you sufficient, I refer you to an article in the November issue of THE MONTHLY REVIEW of the National Civic Federation, which I herewith take pleasure in sending you, and which sets forth in more detail the hostile purposes of the twin foes which unionism faces—Parryism and Socialism.

Sincerely yours,

R. M. EASLEY,
Editor MONTHLY REVIEW.

LABOR PRAISES OSCAR S. STRAUS.***The Motorman and Conductor.***

(Official Journal of the Amalgamated Association of Street and Electric Railway Employees of America.)

We doubt if there is a man among the many friends of the Amalgamated Association that is entitled to more appreciation at the hands of the Amalgamated railway men of America than Oscar S. Straus. Not only has he assisted from time to time the international officers to secure conferences with the various companies and bring about peaceful settlements of disputes that were threatening to lead to serious contentions and strife, but it was he as arbitrator in the San Francisco dispute of 1903 that gave to the street railway men of America the highest general rate of wages ever established for surface railway men.

The situation in San Francisco had become critical. Mr. Calhoun, representing the company, and Mr. Mahon, representing the organization, failed to agree upon the wage question. It was finally agreed that the matter should be submitted to arbitration, and the Hon. Oscar S. Straus was selected as arbitrator. The company spent many thousands of dollars employing the best of lawyers that the country afforded, and in preparing their evidence to, if possible, establish a lower wage rate than the one which at the time prevailed. On the other side, the Association, through the direction of that tireless and fearless advocate and friend of trades-unionism, Hon. Edward J. Livernash, of San Francisco, prepared their evidence at heavy expense and with much labor, and after many weeks of preparation the entire matter was submitted to Mr. Straus, who, after a careful consideration of the facts, established the wage at 26¼ cents per hour for the first two years, and after that time 27½ cents per hour; thus establishing the highest general rate of wage that had ever been established by the street railway workers throughout the country.

We doubt if the importance of this decision has been considered or truly appreciated by the great mass of our people, but here is the position that it places us in: Here is a wage rate established not by strike, or lock-out, or by force of any kind, but by a careful consideration of the entire conditions surrounding the occupation, and then by a man unbiassed and in no way in touch with either side; again, by a man who has a world-wide reputation for his fairness as an arbitrator. The result of this decision is bound, in the future, to be referred to, and to have the effect of assisting the men in other cities, where the wages are much lower, in establishing a reasonable and living rate. So, a moment's consideration of the work done by Mr. Straus cannot help but be appreciated by the great army of Amalgamated Railway Workers throughout the entire continent.

EXECUTIVE COMMITTEE

On the Part of the Public.

Grover Cleveland, ex-President of the United States, Princeton, N. J.
Andrew Carnegie, capitalist, New York City.
Cornelius N. Bliss, ex-Secretary of the Interior, New York City.
Oscar S. Straus, member of the Court of Arbitration at The Hague, New York City.
Charles W. Eliot, President Harvard University, Cambridge, Mass.
Archbishop John Ireland, of the Roman Catholic Church, St. Paul, Minn.
Bishop Henry C. Potter, of the Protestant Episcopal Church, New York City.
David R. Francis, President Louisiana Purchase Exposition, St. Louis, Mo.
Isaac N. Seligman, of J. & W. Seligman & Co., New York City.
James Speyer, of Speyer & Co., New York City.
Charles Francis Adams, publicist, Boston.
John G. Milburn, lawyer, New York City.
V. Everit Macy, capitalist, New York City.
Charles J. Bonaparte, lawyer, Baltimore.
Ralph M. Easley, Chairman Executive Council, New York City.

On the Part of Employers.

Henry Phipps, director United States Steel Corporation, New York City.
August Belmont, President Interborough Rapid Transit Company, New York City.
Lucius Tuttle, President Boston & Maine Railroad, Boston.
Frederick P. Fish, President American Bell Telephone Company, Boston.
Francis L. Robbins, President Pittsburgh Coal Company, Pittsburgh.
Henry G. Davis, Coal Operator, Elkins, W. Va.
H. H. Vreeland, President New York City Railway Company, New York City.
Samuel Mather, of Pickands, Mather & Co., Cleveland.
Charles A. Moore, Manning, Maxwell & Moore, New York City.
Franklin MacVeagh, of Franklin MacVeagh & Co., Chicago.
Charles H. Taylor, Jr., President American Newspaper Publishers' Association, Boston.
Dan R. Hanna, of M. A. Hanna & Co., Cleveland.
Marcus M. Marks, President National Association of Clothing Manufacturers, New York City.
Otto M. Elditz, Chairman Board of Governors, Building Trades Employers' Association, New York City.
William H. Pfahler, former President National Founders' Association, Philadelphia.

On the Part of Wage Earners.

Samuel Gompers, President American Federation of Labor, Washington.
John Mitchell, President United Mine Workers of America, Indianapolis.
E. E. Clark, Grand Chief Conductor, Order of Railway Conductors, Cedar Rapids, Iowa.
James Duncan, General Secretary Granite Cutters' National Union, Washington.
Daniel J. Keefe, President International Longshoremen, Marine and Transportworkers' Association, Detroit, Mich.
Warren S. Stone, Grand Chief International Brotherhood of Locomotive Engineers.
P. H. Morrissey, Grand Master Brotherhood Railroad Trainmen, Cleveland.
William D. Mahon, President Amalgamated Association of Street Railway Employees of America, Detroit, Mich.
Theodore J. Shaffer, President Amalgamated Association of Iron, Steel and Tin Workers, Pittsburgh.
J. J. Hannahan, Grand Master Brotherhood Locomotive Firemen, Peoria, Ill.
James O'Connell, President International Association of Machinists, Washington.
John Tobin, General President Boot and Shoe Workers' Union, Boston.
Joseph F. Valentine, President Iron Moulders' Union of North America, Cincinnati.
James M. Lynch, President International Typographical Union, Indianapolis.
Dennis A. Hayes, President Glass Bottle Blowers' Association of United States and Canada, Philadelphia.
William Huber, President United Brotherhood of Carpenters and Joiners of America, Indianapolis.

THE BODY KNOWN AS "THE PUBLIC"

"The Public" is a term with which some of those who discuss economic subjects would conjure a vision of some supreme and distinct body, separate and apart from the industrial struggle. That struggle is incessant, but varies in intensity. When it assumes an acute phase, because of precipitated conflict over wages or hours or conditions of work, it is a common experience to hear of the interest, the inconvenience, or the suffering of "The Public."

What is this "Public"? Is it possible to differentiate it sharply from the actual participants in any industrial war? Are the non-combatants separate and distinct from those who fight? Is their interest paramount?

It is evident that there does prevail a conception of such a body. It is often stated, for example, that the success or failure of a strike depends largely, if not mainly, upon public opinion. To that opinion employers and employed continually appeal, whenever they are at strife. Its moral force is tacitly recognized in every utterance, in every strategic move of the combatants. But how shall the body, whose verdict is thus regarded as vital to any cause, be defined?

The collection of opinions published in this issue of THE CIVIC FEDERATION REVIEW is interesting, in that it reflects divers methods of using the term, coupled with ingenious efforts at its definition; and it is of value, in that it goes far to confirm the conclusion reached by one writer, that in the industrial struggle "there is no such thing as an outside public." Practically everybody in the community is interested in the profits of capital and the earnings of labor, for these are factors in all production as they are factors in all consumption. The influences and the effects of any industrial struggle are so far-reaching and so interwoven with the structure of all society that they cannot be dissected out of the body politic. A coal strike concerns every fireside; a cotton strike touches every wearer of fabrics; a railway strike affects everything that is carried, and transportation enters into almost every article that human beings use.

But thus "vague" as the general public may be, it undeniably exists. Because it is inseparable, it is none the less real. The important question is whether its interest is paramount. Is not its interest in any industrial strike purely selfish? "The Public" is usually apathetic to the conditions of workers in mines, in factories, upon railways. But when revolt comes, "the Public" is first awakened, through the inconvenience it suffers, to what may be cruel wrongs. The mass of people, preoccupied with a myriad pursuits, practically all workers, whether with hands or with millions, has little time or inclination to disturb itself about the profits of any single business, however great, or about the hardships or income of any class of toilers, however numerous. But let a clash come, let the smooth, everyday relations of supply and demand be interrupted, and the general community is rudely jarred out of indifference into interest whose intensity is likely to be proportionate to the degree of inconvenience caused or the increase in the cost of a product. Then ensues the process of forming public opinion upon a subject probably novel to most of those whose thought is thus aroused. In this way a strike, or a crisis in some industry, may be widely educational. "The Public" learned more in 1902 about the business of mining coal, about hours and wages and transportation and risks and profits, than it ever knew before. In contrast, "the Public" took but a languid, though wide and sympathetic, interest in the strike in the Fall River cotton mills, because the prices of manufactured cotton were not affected. The rise and fall of speculative fortunes in the market of raw cotton was more dramatic; and the recent spectacle of burning cotton in bales in the South has served to make many consider the relations between crops and demand, and to realize the economic crime of attempting to enhance prices by destroying natural wealth.

Thus "the Public" is painfully and expensively instructed. In time the larger lesson may be learned that it is the duty of "the Public," that is, of every one, to take active interest every day in the questions involved in the relations between capital and labor, instead of permitting attention to wait upon disturbance.

THE RIGHTING OF INDUSTRIAL WRONGS.

Recent events in Russia and the strike in the coal mines of Germany illustrate to labor in the United

States the vast difference between Socialism abroad and Socialism in this country. They make it manifest that the reason why Socialism makes so little headway here and is a negligible force in both politics and economics is that under republican institutions all of the people already have the civil and political rights which are denied to the mass of the people in many foreign countries. Socialism thrives upon the denial of rights. Socialism is puny in a land of equal justice to all and of mutual regard for the business success of employers and the welfare and fair reward of wage-earners.

In Russia the demands of the strikers, as formulated in the petition which they sought to present to the Czar, were so elementary, so absolutely essential to "life, liberty and the pursuit of happiness," as to seem shocking to the American mind. To the free citizen of this Republic it seems incredible that tens of thousands of workmen should ask for a wage sufficient to sustain life; should beg for relief from a compulsory day of eleven hours; should humbly ask for laws applying alike to all classes; should seek representative government; should ask for the right to organize and that it be not a crime to choose delegates to present their grievances to employers. When labor has been so oppressed that death is preferable to life, the only alternatives are revolution or extermination. Even in Germany, a land of constitutional government, 270,000 men are described as working naked in water for 96 cents a day, fatally affected by worm disease because their lives are daily in darkness, cursed by the overseers as lazy, required by an antiquated custom of militarism to stand at attention and click their heels together the moment a foreman approaches a subterranean gang, and forced to the gloomy query: "What difference, whether we starve or perish fighting?" To this outcry the only answer of the employers is: "Return to work, or under the law we will mulct you six days' wages."

It is conditions such as these that make Socialism abroad a political and social force of moment. It is able there to appropriate to itself the advocacy of social and industrial reforms that appeal to the fundamental instincts of self-preservation and self-respect.

But the weakness of Socialism in America is the absence of such monstrous wrongs as still prevail in the lands of class separation. This is not to say that we have attained or even approached social and industrial perfection in the United States. Many wrongs are yet to be righted, many crooked things are still to be made straight. In all movements for industrial betterment, organized labor is performing its share with increasing intelligence and efficiency. Particularly of late is it addressing its efforts toward educational advancement.

It is only in abuses that the root of Socialism can flourish. Frequently it seeks to mingle and confuse its propaganda with the advocacy of reforms noble in themselves. In such efforts, wage-earners and well-meaning reformers should be alert to discriminate between their own cause and Socialism, which often assumes the mask of rectitude to disguise its presence in the midst of the righteous.

SOME SELF-ANSWERED CRITICS.

The Editor has received a letter from an employer who is a member of the Citizens' Industrial Alliance of America, and several clippings from papers owned by branches of that organization, finding fault with an article in the November number of THE REVIEW under the caption of "Three Conspicuous Foes of Organized Labor." The burden of the complaint is that this article was "extremely partisan," "unfair," "unjust," etc. We have gone over the article line by line in search for justification for this criticism and confess that our search has been in vain. On the other hand, we cannot believe from the nature of their comments, that our critics have read the article in its entirety.

The purpose of that article, as its heading indicates, was to show just who the foes of organized labor are; the contention being that, while beset with "Parryism" on one side and Socialism ("Debsism") on the other, the most dangerous foe of Unionism ("Gompersism," as it is termed by Citizens' Alliance folk) is its own inherent weaknesses. No offense was intended in using the word "Parryism" as embracing that class of employers' organizations whose real animus against organized labor is openly avowed. We are informed by friends of Mr.

Parry that he is proud of the title, and therefore there can be no personal offense to him in the term. The criticism of the official journals of these employers' associations is expected, as it was from these same journals that the evidence of the real purpose of the Industrial Alliance movement was cited. Nor are we surprised that the Socialists attacked the article as "unjust" and "unfair." In another column will be found the correspondence between the Editor of the official organ of the "Debsite" Socialists and the Editor of the CIVIC FEDERATION REVIEW, which speaks for itself. The response of the Socialists is much franker, however, than is that of the "Parryites." The Socialists make denials in detail, but our other critics bide behind glittering generalities and ignore entirely the specific allegation that their movement is a foe to organized labor.

Here is the point, and the whole point: Did or did not the President of the National Association of Manufacturers and of the Citizens' Industrial Alliance of America, as alleged, formally declare?—

This is not the proper time to talk conciliation. . . . Since the principles and demands of organized labor are absolutely untenable to those believing in the individualistic social order, an attitude of conciliation would mean an attitude of compromise with regard to fundamental convictions. . . . Neither is it the time to talk arbitration or joint agreement. To arbitrate questions of wages and hours is to introduce artificial methods of determining what they shall be and an equitable arrangement as to either cannot be effected artificially. . . . Arbitration is only putting off the day of reckoning.

Did or did not the Chairman of the Executive Committee of the Citizens' Industrial Alliance make, as alleged, the following declarations?—

No organization of men, not excepting the Ku Klux Klan, the Mafia, or the Black Hand Society, has ever produced such a record of barbarism as has this so-called organized labor society which, through misdirected sympathy, apathy and indifference, has been permitted to grow up to cripple our industries, and to trample in the dust the natural and constitutional rights of our citizens.

Did or did not the same officer announce this dictum?—

The only way to settle a controversy with organized labor is to have absolutely no dealings with it.

Did or did not a preacher, described as a "personal representative of D. M. Parry" and as the editor of a publication of the Citizens' Industrial Alliance, state to a secret meeting of manufacturers, merchants, contractors and professional men, at Evansville, Indiana?—

The Citizens' Alliance consists of both employers and employees. It is secret because in secrecy is its greatest strength. It has signs of recognition, pass words, and signs of distress. . . . In nine days I saw in one city 1,200 union men reduced to 62 and join the Citizens' Alliance.

If these representatives of the "Citizens' Alliance" movement did not make these statements, or if they have changed their minds since they did make them, or if the English language has to them a meaning different to its comprehension and use by all others, the columns of THE REVIEW are open to their denial, recantation or explanation.

But, after all, is it worth while to try to discuss seriously industrial questions with the members or the official organs of a body of men who, in spite of the widely published fact that the American Federation of Labor had rejected Socialistic resolutions at its Boston convention by a majority of 13,000 to 1,000, and again at San Francisco, so overwhelmingly as to make a roll call superfluous, deliberately declared in their call for their recent annual convention?—

Insidious and socialistic doctrines as preached, published and practiced by so-called labor leaders have of late so dominated labor unions as to preclude the exercise of free and independent thought on the part of intelligent members of labor unions, and have become a hindrance to business and a menace to society.

Or with men who, in the face of the widely published fact that the San Francisco convention, representing 2,000,000 wage-earners, had rejected, by an overwhelming majority, a resolution opposing service in the militia, its President, Samuel Gompers, emphatically declaring it the positive duty of every able-bodied wage-earner to encourage the citizen militia in convention assembled, deliberately adopted and published this declaration?—

Whereas, Organized labor throughout the country seeks to discourage and practically prohibits membership in the militia.

We hardly think it is.

THE "AGE LIMIT."

Official Testimony Contradicting the Current Assertion That Two Great Corporations Discharge Employees When Thirty-five Years Old.

The *Labor Compendium*, of St. Louis, official organ of the International Building Trades Council, on January 1 contained the following:

"Will the Carnegie Steel Company now rescind the rule which, according to reports, it had adopted against the hiring of men over thirty-five years of age in some departments and over forty years in another? Surely, the address of Andrew Carnegie to the National Civic Federation would indicate a new and more humane policy to be inaugurated in 1905 than has been promulgated in 1904."

It can be stated authoritatively that Mr. Carnegie does not own a single share of stock in the Carnegie Steel Company and that he has no more to do with its management or with its policy as to labor than has the editor of the *Compendium*.

The main point, however, is as to the "age limit." The statement has been going the rounds not only of the labor press, but of the daily press for months, that the Carnegie Steel Company and the Pennsylvania Railroad Company had made it their rule to discharge all employees as soon as they reach the age of thirty-five. These two corporations have been linked in many a paragraph of bitter denunciation.

Last year's files of the NATIONAL CIVIC FEDERATION contain correspondence, which THE REVIEW has permission to publish, that discloses fully and exactly the facts as to the policy of both these companies. They show that the "age limit" relates only to the employment of new men. In response to letters of inquiry from the Secretary of the Welfare Department and from the chairman of the Executive Council, letters were written by W. H. Corbett, Paymaster of the Carnegie Steel Company, and by Max Riebenack, Comptroller of the Pennsylvania Railroad.

The relation between the age limit and the pension fund is more fully discussed in Mr. Riebenack's article upon "Railway Provident Institutions," which appears elsewhere in this issue.

Mr. Corbett's letter states:

"It is not true that our men are discharged when they reach the age of thirty-five years, or any other age for that matter, so long as they can give satisfactory service. To my personal knowledge there are several hundred men over fifty years old, some few over sixty, and about two years ago one of our stationary engineers died in active service who was eighty. Of course the latter is an exceptional case. He had been in continuous service for about twenty-five years, and when the Carnegie Relief Fund was started, arrangements were being made to place him on the pension list.

"From their rules I quote: 'Any employee of a constituent company of the Carnegie Company which has been ten years with the Carnegie interests who shall have reached the age of sixty years, shall have been at least fifteen years continuously in the service of the company and who claims that he is, or should his employing officer consider him, incapacitated for further service, may make application to be retired and the Advisory Board shall decide whether or not he shall be placed upon the pension list.'

"From this you will note that even after they get to be sixty years of age they are cared for if they have seen fifteen years of active service.

"In taking on new men, preference is always given to younger and more able-bodied men for the reason that if we were to take on men well up in years the relief fund would soon be overtaxed on the age limit, and it is of course good policy to arrange for care of those now in the service who, when they arrive at pensionable age, are entitled to the benefits.

"Regarding the savings fund, its principal object is to allow employees to save enough for a foundation to obtain their own homes, which many have done, by using this fund to save until they had enough to buy a lot and then the company would, through trustees of a fund for that purpose, lend enough money to build a comfortable house, which could be repaid in monthly instalments, which would amount to perhaps a trifle more than rent.

"In this way many of our best employees gained homes and became permanent residents of the vicinity, and thus established themselves as permanent employees.

"Regarding men who leave service of this company to go to work elsewhere, and for any reason return later and apply for work again, it could not be expected they would get back their former position, as promotions had been made when they left, and upon their return would certainly not be entitled to consideration other than as new men. Such leaving and reinstatement, however, would not debar them from pension allowance provided not more than two years have elapsed, but would be deducted in computing length of service. Leave of absence, suspension, temporary lay-off on account of reduction of force or disability, are not deducted in computing length of service.

"Our older employees, if not eligible to pension fund, are usually given light work, such as cleaning up the yards, drying sand, carrying oil for lubricating machinery, oiling cars, etc.

"Many of our stationary engineers are men of much

experience and some of them are over fifty years. In that position much valuable machinery is under their care and requires men of judgment and experience that are not always obtainable in the younger men, and as the position is not hard manual labor, they can perform their duties satisfactorily."

Mr. Riebenack wrote:—"I would advise that copies of the original circular issued by the president of this company in regard to the age limit for employment in the service on and after January 1, 1900, is not available. I give you below, however, a transcript of what was embodied in the circular, and amended as of February 27, 1901, bearing upon this feature. The amendment covers the addition of the fourth clause, in regard to the interchange of service between the lines east and west of Pittsburgh, or from one company to another, associated in the administration of the Pension Department.

"As amended and approved by the Board of Directors of the Pennsylvania Railroad Company at their meeting held February 27, 1901, and concurred in by the Boards of Directors of the other companies associated in the administration of the Pension Department.

"No person shall be taken into the service of the company who is over thirty-five years of age, except that, with the approval of the Board of Directors—

"First—(a)—Former employees may be re-employed within a period of three years from the time of their leaving the service, or former employees of any other company associated in the administration of the Pennsylvania Railroad Pension Department, may be employed within a period of three years from the time of their leaving the service of such company;

"Second—(b)—Persons may, irrespective of age limit, be employed where the service for which they are needed requires professional or other special qualifications:

"But:—

"Third—Persons may be temporarily taken into the service, irrespective of age limit, for a period not exceeding six months, subject to extension, when necessary to complete the work for which engaged, and

"Fourth—Persons in the active service of any company associated in the administration of either the Pennsylvania Railroad Pension Department or the Pension Department of the Pennsylvania Lines west of Pittsburgh, may, irrespective of age limit, be transferred to and employed in the service of any such company."

"This age limit has been in force for nearly five years, and we have not experienced any difficulty in carrying out its provisions. The conclusion which led to its adoption was that by restricting the age limit for entrance into service to thirty-five years, all employees upon reaching the pensionable age (sixty-five years) would have been thirty years in the service, which latter is a requirement in order to be pensioned at that age."

A SOCIALIST CRITIC PILLORIED.

The Civic Federation, the organization whose object is to make the slaves satisfied with their lot, has just elected August Belmont, the Rothschild agent, its President! How the Rothschilds do love the working mules! And the mules listen to such men!—*Appeal to Reason*.

Since Mr. Belmont was elected President of the Civic Federation the editor of the *United Mine Workers' Journal* has made diligent inquiry about him among his employees and finds that Mr. Belmont is a fair-minded, liberal employer, who meets committees from labor unions, holds conferences with them, pays union wages and insists upon union conditions. He employs nearly 15,000 men in various occupations and has wage agreements with nearly all of them. He was at the head of the movement which built the great New York Subway, costing \$35,000,000, most of which is a tunnel nearly ten miles long. With the single exception of the few blows of a pick struck by ex-Mayor Van Wyck not a stroke of work was done upon that gigantic enterprise by non-union labor, and it is a monument to the skill of union labor. Mr. Belmont insisted upon that point. W. D. Mahon, President of the street car workers' organization, testified that Mr. Belmont is a fair, liberal man to deal with, and has, upon several occasions, settled strikes or prevented them when the matter was brought to his attention, and keeps the agreements both in spirit and letter and pays the highest wages in the country. Others state that if every member of a labor union would patronize the union label as strictly as Mr. Belmont does, sweat shops and unfair manufacturers would soon vanish.

That is one picture. Here is another: The editor of the *Appeal to Reason* is A. J. Wayland. He is the man who calls the men who made the United States great "working mules." Elegant classification. Well, in 1902, Mr. Wayland's employees asked for an advance in wages. Did he grant it? No; he would not receive a committee of its employees, and locked them out and filled their places with scabs. The *Appeal to Reason's* wage scale showed that the girls got \$3 per week. Mr. Wayland nearly ruined himself by his lavish generosity. Now which, August Belmont, receiving his employees, listening to their grievances, adjusting them fairly and honorably, paying the highest wages, or A. J., locking out his \$3-a-week girls? Which more truly represents the spirit of American manhood? Which could a bona fide trades unionist respect the most? No wonder, with his aggregation of scabs, that he terms working people "mules." Perhaps his are.—*United Mine Workers' Journal*.

WELFARE DEPARTMENT

 MISS GERTRUDE BECKS, Secretary.

THE NEW PROFESSION.

Five Welfare Managers Describe Their Duties and the Growth of Their Departments.

Five directors of welfare work in different industrial establishments contribute to this issue of THE CIVIC FEDERATION REVIEW articles descriptive of their duties, and of the progress they have made in organizing and making effective their departments. In each case the writer is at the head of a distinct Welfare Department. The articles illustrate, therefore, first of all, the prime importance of devoting to the supervision of welfare work in large establishments the entire time and attention of one person. It has been shown by actual experience that even when an employer is willing and anxious to put welfare work into operation, if its direction is entrusted to any official already charged with special duties the pressure of his daily business routine relegates the welfare work to the last consideration. These articles prove that welfare work has been successfully prosecuted when responsibility is concentrated, and all of its branches are placed under the direction of one person. Otherwise, efforts by various heads of departments to be found in any organized business may conflict, or special and, perhaps, pressing needs may escape attention.

The general rule for all welfare work in large concerns, that its successful conduct requires the employment of a welfare manager, has created a distinct profession. Moreover, the profession of welfare manager is new. For example, the writers of these articles are among the first to be placed in charge of Welfare Departments, and yet the oldest of them has been performing his duties less than five years.

It has been shown that the qualifications of a welfare manager, welfare director or welfare superintendent—whichever term may be preferred—while exacting, can be met successfully. This welfare worker should not only possess tact, executive ability, common sense, acquaintance with local jealousies and sometimes with racial prejudices, but a knowledge of industrial subjects involved in the relations between employer and employed. The manager must acquire a comprehensive and definite understanding of the field that welfare work covers.

How can this preliminary but essential knowledge be acquired? After reading all the available literature upon the subject, it will be necessary for the beginner to learn from conferences with welfare workers of experience of their actual successes and failures and their causes. It is highly desirable that one entering this work should have comparatively expert mastery of some one specialty, such as medicine, mill engineering, architecture, domestic science or trained nursing. Equipped with such a specialty the welfare worker will know how to make a definite beginning with confidence. From the point of vantage thus gained, the new manager may take up one by one the most pressing needs and respond to the most obvious opportunities for extending the work. The practical experience gained in meeting these will prove an educational process that will develop the manager's ability to meet the various and larger demands upon these qualities of character that alone can make one adapted to the profession.

It is necessary that the welfare manager, at the outset, should become familiar with the business conditions that confront the establishment in which the work is being applied. The welfare worker must be patient to endure the slow realization of plans. Keen competition or the rapid growth of a business may either retard or temporarily prevent the execution of plans whose desirability is recognized.

One of the difficulties that this new profession encounters is the adjustment of its delicate relations to the superintendents. There must be a gradual process of convincing them that the presence in an establishment of a welfare manager will not interfere with their discipline or lessen their responsibility, but will bring about in time a gain in results of intelligent and harmonious co-operation.

GERTRUDE BECKS.

A VAST FIELD OF ENDEAVOR.

By R. W. CORWIN, M. D.,

Superintendent Welfare Department, The Colorado Fuel and Iron Co., Pueblo, Col.

The welfare work of the Colorado Fuel & Iron Company is organized under the title of Sociological

Department. Its field covers forty properties consisting of coal, manganese, and iron mines, coking and steel plants, rolling mills and two railroads. These properties are scattered through portions of four States and give employment, when in full operation, to nearly 17,000 men, who, together with their families, make a total of well nigh 80,000 persons. This population is settled in many small communities and comprises thirty-two nationalities speaking twenty-seven different tongues, not to mention a variety of dialects.

In a field of such magnitude and highly different topographical conditions, concentration of effort is impossible. What might be done with comparatively little effort and expense were these families all concentrated in one city, becomes at once a much more difficult and expensive task with conditions as they actually exist. For the successful prosecution of the work the Welfare Department enlists the services of a superintendent and assistant superintendent, a superintendent of kindergartens and domestic science, thirteen kindergartners, the superintendent and matron of our Normal and Industrial School, managers and presidents of clubs, directors of reading rooms, teachers of night schools, a director of an orchestra and two directors of bands.

The educational work of the department begins with the kindergartens, of which there are thirteen. The work is peculiar in that many of the children enter with no knowledge of English; nevertheless, the little ones learn to speak and sing in our language with astonishing quickness. At Christmas time there are joyous entertainments in each kindergarten when gifts and candy are provided for all the children. In spite of the strike disturbances of last winter, surprisingly little difference was seen in the attendance at the kindergartens. Even when the strikers were compelled

R. W. CORWIN, M. D.

to keep off the company grounds, the mothers would bring their children to the picket lines and pass them through to school, thus showing their confidence in the teachers. Now that the strike is over the attendance is larger than at any previous time in the history of the schools. The same is true to a much larger extent of the social and industrial clubs and mothers' meetings.

Wherever there is a kindergarten teacher, groups of the older boys and girls are organized for social and recreative purposes, and other groups for industrial education. The smaller children find interest in games and stories that inculcate patriotism, courage, kindness, and gentleness; the older girls and boys in club swinging, dancing, basket-ball and target shooting. Light refreshments add attraction to the club meetings. One of the clubs edits and publishes a little bi-monthly newspaper, the children having their own printing press.

Instruction in simple cooking is given the children at a number of camps, including the use of ordinary utensils; the proper preparation of vegetables, meats, eggs and fruits; the care of cupboards and house-keeping. Similar classes are also conducted for the women of the camps in which cooking, sewing, basketry, child study and literature are the topics discussed.

Separate houses are provided for the use of the kindergarten teachers. These are simply and inexpensively furnished and serve as standards of taste and economy of expenditure for the housekeepers in each community. At the same time they become centers for social work.

Once a month the kindergarten teachers meet in Trinidad, Colorado, under the direction of their superintendent for conference, instruction, and suggestions. Some special phase of the work is taken up at each conference. Thus, the teachers are helped individually and a healthful *esprit de corps* is established.

The department works in very close co-operation with the public schools in the camps. The local school boards have been assisted in securing good teachers, and architects' plans for proper buildings have been furnished. Where the public school funds have been exhausted teachers are being carried on our pay-roll. The yards of three of the public schools have been equipped with play apparatus for children and two more yards are to be so furnished at once. The play is made free and unrestrained and is encouraged, not checked, by the teachers.

Night schools are conducted at several of the camps and also at our Normal School building in Pueblo. In fact, such schools are organized wherever there is a demand. The school at Rouse was composed almost entirely of Japanese.

The commodious lounging, reading, and lecture rooms in our Normal School building at Pueblo are occupied by a polytechnic association, composed of civil, mechanical, and electrical engineers, superintendents of departments and managers of metal producing plants. Smokers, lectures, and social events diversify the winter.

In Pueblo, where our steel plant is located, giving
